The English Dialect Society have published, through Kegan Paul, Trench, Trübner & Co., a very elaborate 'Grammar of the Dialect of Windhill in the West Riding of Yorkshire,' by Joseph Wright, Deputy Professor of Comparative Philology at Oxford, who illustrates his work with a series of dialect specimens, phonetically rendered, and a glossarial index. This deserves the attention of all students of English. The companion volume of the Society's annual issue is part one of a 'Glossary of Words used in the County of Northumberland and in the Tyneside,' by the Rev. Oliver Heslop. It is remarkable chiefly for the great number of technical terms associated with the Newcastle coaling industry. Though this was Thomas Bewick's country, he is seldom quoted among the examples of literary usage. We notice that shall and will are discriminated in the respective abbreviations Aa'll (I will) and Aa's (I shall); that Aln is sounded as *Ale* River, *Yel* Waater and *Yel*-mooth (Alnmouth), and *An*-nick (Alnwick); that the Roman *castra* always becomes chester, occurring in twenty-six name-places; that bang=excel, bastile=workhouse, battledore=hornbook, dark=blind. The word clapboards is obsolete. Odd phrases are Cruck-yor-elbow (write it down, put your name to it), Cruck-yor-hough (sit down), and Cruck-your-thumb—by way of a charm against witchcraft.

The valuable library of the celebrated Austrian encyclopædist, Dr. Constant von Wurzbach, numbering over 8,000 volumes, and especially rich in rare biographical works, is now offered for sale. Also, a collection of 45,000 portraits of eminent persons of all times and countries, which Dr. von Wurzbach has formed during a long and laborious life, can now be purchased at a very reasonable price. It consists of copperplates, steel-engravings, woodcuts, and drawings, some of them very rare, represents all the Presidents as well as many of the most prominent public men of the United States, and contains 800 portraits and caricatures of Prince Bismarck alone. For further information address R. von Wurzbach, Hermannstrasse 74, I., Munich, Schwabing, Germany.

—The most noteworthy, though not the most salient, feature of President Eliot's report on the state of Harvard College for 1891-92 is his insistence on the desirability of gaming a year from the academic course in favor of the post-graduate. The more gifted students are accomplishing it in one way or another, and the degrees of A.B. and A.M. have been bestowed simultaneously; but the University authorities are not in accord as to the propriety of the practice. The increase of students has exceeded 1,000 in four years, and the senior classes have come to be (as appears, permanently) larger than the junior, owing to the number of graduates of other colleges who wish to get a polishing-off at Harvard. The increase in the attendance at the Law School is formidable, but a remedy is intimated in raising the requirements for admission. The Divinity School shows a feeble if not diminishing patronage, and the very liberality of its courses seems to be the direct cause. Men trained there notoriously do not furnish an adequate supply for Unitarian pulpits, and a bid is now made for all sorts of theological students by proposing that professorships be founded representing several evangelical denominations. Whether the products of such special training would find places in competition with the graduates of the regular denominational schools may be doubted, as their orthodoxy would be suspected; but the proposal is a confession that the present genuine university instruction in divinity needs to be bolstered up by chairs for teaching the truth as staked out and limited by sectaries. President Eliot shows that students admitted to the freshman (academic) class without Greek give a good account of themselves in advanced standing, and he speaks well of the novel experiment of bestowing scholarships on students before entering college, on the recommendation of teachers. He is proud of the fact that the new millionaire universities of the Middle and Far West, and other colleges, have tempted in vain with higher pay and higher titles ten Harvard professors and instructors. The examination of the state of secondary schools by the College Faculty has been organized, but no case is reported of its having been requested. An efficient check on college morals has been found in a system of probation, which is well set forth by the Dean.

—An American volume of literary criticism from the Catholic point of view is a notable rarity; and, in addition to this extraneous interest, Brother Azarias's 'Phases of Thought and Criticism' (Boston: Houghton, Mifflin & Co.) affords an unusual example of the application to literature of standards mainly philosophical. He begins his volume with a preparatory exposition of the functions of the soul, and a special examination of its ways of thinking and truth-finding. He decides that the ideal in thought and the cultivation of the spiritual sense of the soul hold a primacy in the intellectual and higher life, to which it is the most important office of literature to minister; and, having thus made straight the path, with copious justification in Catholic teaching to support his particular definitions, he subjects to inquiry the 'Imitation of Christ,' the 'Divine Comedy,' and 'In Memoriam.' The spirit of faith and piety that pervades and governs the discourse, which relates solely to the spiritual sense of these works, gives a predominant religious tone to the matter, and the style is both expository of doctrine and exhortatory to excellence. The first two essays of the critical part are written *con amore;* the last, that on Tennyson's poem, shows traces of the sorrow of the good over the errors of the excellent. The analysis, however, is firm and accurate, the subject is well studied, and the treatment is scrupulously just; there are poetic sympathy and much true appreciation; but, in the nature of the case, judgment is passed on theological grounds, and the poet's errors of faith are pointed out with a warning voice. The echoes of Petrarch in the poem are pointed out, and this is the single purely literary feature that need be specially mentioned. Such a work, starting from Catholic dogma and proceeding on lines of moral and intellectual interest, has little room for the ordinary principles of literary criticism, and must be regarded as incomplete since it employs a method only partially applicable to poetry; for poetry, as other than a form of truth, it has no touch. But the highest value of literature is, no doubt, what this critic states it to be, and such essays as these, which are to be spoken of only with respect for the learning, thought, and spirit distinguishing them, exercise an influence much needed in heightening the sense of dignity and moral power in literature, in strengthening our hold of its ideal elements, and in recalling readers to its great works. This is the service which the author had most at heart, and he honors himself and his church in doing it.

—Among the innumerable pictures to be sent from England to the Chicago Exhibition one of the most talked about at the present moment is the work of an American. The new portrait of Mr. Gladstone by Mr. J. McLure Hamilton has naturally attracted attention, not only because of its subject, but because Mr. Hamilton's first portrait of the Premier,

exhibited last year in the Salon, was, as will be remembered, purchased by the French Government, and now hangs in the Luxembourg. It is a dangerous experiment to try and repeat a success, but in this case, a correspondent writes us, the results are Mr. Hamilton's justification. "The second portrait, in many ways, is finer than the first; in others it is less satisfactory. The latter was painted in the summer-time at Hawarden: Mr. Gladstone, in gray clothes, was sitting in his library directly in front of the window, and the whole arrangement, bathed in soft summer sunshine, made a delightful harmony. The charm of the picture was rather in its beauty as a study of color and light than in its strength as a portrait, admirable though it was in this respect also. In the new portrait Mr. Gladstone, again seated in front of the window, is in a Downing Street room which in ugliness can scarce be outrivalled by a London lodging-house drawing-room. The couch on which he sits is of shiny red leather; a hideous table, somewhat relieved by its cover, is at his side. Out of the window one can just see, through the mist of a London winter day, a few cabs, and the Duke of York's column in the distance. But Mr. Hamilton has never done anything better than the head of the old man. It is hard to say whether its chief merit is its technical excellence or its suggestion of character. Old age is expressed in the very way the straggling white hairs at the back of the head are seen against the light; the energy and determination which have made Mr. Gladstone what he is at fourscore, are in the eyes and mouth. The pose, too, is characteristic: he holds up the book he is reading with an ease which would not ill become a youth. This portrait goes to Chicago with the work of American artists living in London, a section which, it is safe to promise, will prove one of the most striking, for among the painters represented, besides McLure Hamilton, are Whistler, Sargent, Mark Fisher, Mrs. Merritt, Boughton; among the black-and-white men, Abbey and Pennell. Abbey, however, is sending over, not his drawings, but such of his decorations for the Boston Public Library as are already finished."

—London theatrical events are proving that Mr. William Archer, whose pessimistic views in regard to the modern English stage we have more than once had occasion to refer to, will this winter have a liberal opportunity for getting a verdict from an English-speaking public upon the merits of the contemporary Scandinavian drama. On the 2d of last month an afternoon performance of "Ghosts" was given at the Athenæum Hall, with Miss Hall Caine as *Regina*. The play, notwithstanding the unflinching realism of its handling of a repellent theme, was received with marked favor by a house filled to overflowing. The next experiment in putting Ibsen upon the London boards has been a series of afternoon representations of his new play "Bygmester Solness," which was to be brought out in Christiania in December. The play is in three acts. Miss Elizabeth Robins takes part in the performance, and for the translation, which it has been proposed, with the sanction of the author, to entitle "Halvard Solness," Mr. William Archer is himself responsible, in collaboration with Mr. Edmund Gosse. A common devotion to the work of the great dramatist has thus put an end to the feud which has lately divided these two accomplished Norse scholars. Somewhat in the nature of a coincidence with the quickened interest in the dramatist who finds his interpretations of human fate in the laws of science, comes the production, on February 21, by the Independent Theatre, of the promised play by Mr. George Moore. The eminently modern and anti-romantic name of the play, "The Strike at Arlingford," is suggestive of the well-known critical views, literary and theatrical, of the author. Mr. Moore was one of the first critics to portray to the English public, through the columns of a review, the extraordinary dramatic intensity of "Ghosts," as given several years ago in Paris by the Théâtre Libre, under the management of M. Antoine. A little later, in an animated paper on "The Necessity of an English Théâtre Libre," after commenting on Mr. William Archer's sceptical attitude towards such an undertaking, and after canvassing the possibility of getting unconventional plays from the pens of Mr. Hardy and Mr. Henley, and from such professional playwrights as Messrs. Grundy, Pinero, and Henry Arthur Jones, Mr. Moore concluded, in words which now seem to have the ring of prophecy, "One hundred and fifty or two hundred subscribers would include all that is rare among the intelligence and fashion of London, and our monthly performances would be celebrated in the press even as the annual exhibitions at Burlington House or the state balls at Buckingham Palace."

—Those who revisit Oxford during the coming summer will be startled to discover that the beautiful spire of the University Church of St. Mary's has been sheathed in a most intricate scaffolding, which buttresses it on all sides from top to bottom. It has been discovered that the pinnacles were not safely constructed, and that their precarious lodgment had long been a real danger, although fortunately only one or two small fragments have actually fallen. Those who crowded the triforium of Westminster Abbey upon the recent occasion of the late poet laureate's public funeral, have reason to know that, in spite of iron braces plentifully used, the ancient stonework there is not considered safe, for the authorities not only used wooden screens to prevent any undue strain upon the tapering columns, but also detailed workmen to warn the public from time to time against leaning with any weight against these treacherous bits of half-disintegrated stone. It had not been supposed, however, that the spire of St. Mary's was in any such case, since the architect still lives to whose restoration in the thirties much of the great beauty of the steeple is due. Nevertheless it now appears that, unexceptionable as that restoration was from an artistic point of view, it was not structurally sound. The effects of a disintegration, due to the peculiar atmosphere of the Thames valley, are only just beginning to be understood in their full bearing upon the conservation of ancient monuments. A thorough investigation is in progress by competent engineers acting on behalf of the University, and meanwhile £800 have been expended upon the scaffolding. A rough estimate of the cost of restoration places it at £9,000, and there is doubt still whether more may not be involved, since two cracks traversing the whole length of the structure to its very foundations have already been discovered.

—There is a movement on foot to found a memorial scholarship "to be held at Balliol College, Oxford, by a student of music, who should have given satisfactory proof both of his musical ability and of his capacity to profit by one of the ordinary courses of university study." The memory thus to be commemorated is that of the late Mr. Lewis Richard Nettleship of Balliol College, who died in August last from exposure on Mt. Blanc, in the midst of a remarkable career. He was looked upon, both at his school (Uppingham) and at his college, as one who had every quality of greatness, unless the desire to be publicly and widely acknowledged as great is counted as one of them. He moulded the aspirations of many successive generations of pupils in so sympathetic and wise a manner that they all looked upon him as a father or perhaps an elder brother. The unique place which he occupied cannot be filled, and his career must be regarded as an efflorescence of the deeply ethical turn given to philosophic study at Oxford by his friend Prof. T. H. Green as well as by the Master of Balliol. Any attempt to describe adequately for those who were not under him the compelling power of his personality, is foredoomed to failure. One of his many intense convictions about education was that the possibilities for developing character which could be extracted from a clearing up of various current ideals—such as that of "a practical man"—were very much underestimated; and he strongly advocated a system of teaching, based upon modern English poetry, which should do for young men to-day what was attempted in connection with the Greek poets in the days of Socrates. Another cardinal point with him was the function in education of good music. He knew no greater force which could be appealed to for diminishing class resentments than a common meeting-ground for rich and poor alike, which musical practice and study could be made to yield. Hence the peculiar appropriateness of the proposed memorial scholarship.

WRIGHT'S COWPER.

The Life of William Cowper. By Thomas Wright, Principal of Cowper School, Olney. London: T. Fisher Unwin; New York: Putnams.

Cowper is now read by few except in extracts. He is not a great poet, yet he is a poet, and he has at least one peculiar charm: he is of all poets the most restful. The other day a ruthless pessimist, determined to hunt our self-satisfaction out of its last retreat, proclaimed that it was vain to seek peace of mind in books, since care would follow you into your library. His care, it seems, was too carking to be lulled even by the babbling of the Bandusian spring. We wonder whether he had tried "The Task."

As a rule, biographers of literary and scientific men give us too many details of their ordinary life. The career of a man of action affords matter for narrative, but the actions of literary and scientific men are their works. Interest, in their case, properly attaches to events or circumstances which influence thought or are sources of inspiration. What would it profit us to transcribe the entries in the buttery books of Trinity College during the residence of Sir Isaac Newton? It is conceivable, even, that if our passionate desire for the details of Shakspere's personal history could be gratified, the antiquary might be a greater gainer than the worshipper of genius. Johnson is not a profound critic of poetry, but there is something to be said for the succinctness as well as for the good sense of his lives of the poets. The number and bulk of biographies are becoming very burdensome. Mr. Wright, however, in presenting us with this portly volume, may reasonably say that, as Cowper was a microscopic writer, in his case minute things are important. As the principal of Cowper's school at Olney, Mr. Wright has had advantages of which

he has made the best use. We get not only pictures, with full histories, of houses which Cowper inhabited or visited, and topographical details of every kind, but engravings of his armchair and of his poker. Among the biographer's sources are unpublished letters in the British Museum or private hands, the diary, recently discovered, of Samuel Teedon, schoolmaster of Olney, who, though a weak creature, appears to have had influence over Cowper; the ledger and day books of Dr. George Grindon of Olney, who married Lady Austen's niece; the diary of the Rev. Abraham Maddock, containing important references to Cowper, and the parish registers of Olney. Cowper's last letter to Lady Austen unfortunately has not been found.

Mr. Wright thinks that he has made a discovery which throws an entirely new light on Cowper's life. All the biographers have overlooked the "Fatal Dream." It seems that in 1773, when Cowper was forty-two years old, he had a dream in which a word was spoken awful enough to alter the whole tenor of his subsequent existence. "On that night," says his biographer, "he crossed the line that divided a life of hope from a life of despair." The word seems to have been uttered in Latin and to have been *Actum est de te, periisti.* It is true that Cowper does refer to this dream in language such as he uses when the dark fit is on him. But, with deference to Mr. Wright, we can see no reason for investing the incident with such portentous significance. It was after this that Cowper wrote "The Task" and a number of other poems, including "John Gilpin," which breathe anything but despair. It was after this that he wrote scores of playful and cheerful letters. It was after this that he enjoyed some years of happy and many of not unhappy life. It was after this that he wrote:

"Had I the choice of sublunary good,
What could I wish that I possess not here—
Health, leisure, means to improve it, friendship, peace,
No loose or wanton though a wandering muse,
And constant occupation without care?"

In the same poem he says of his spiritual condition:

"I was a stricken deer that left the herd
Long since; with many an arrow deep inflxt
My panting side was charged when I withdrew
To seek a tranquil death in distant shades.
There was I found by one who had himself
Been hurt by the archers. In his side he bore,
And in his hands and feet, the cruel scars.
With gentle force soliciting the darts
He drew them forth, and heal'd, and bade me live."

The crisis to which the opening of this passage refers, evidently is the malady which forced Cowper to leave London and retire into seclusion, not a dream; while the last lines distinctly rebut the idea of despair. So the beautiful apostrophe to the stars ("Task," Book v.) concludes thus:

"So I with animated hopes behold,
And many an aching wish, your beamy fires,
That show like beacons in the blue abyss,
Ordain'd to guide the embodied spirit home
From toilsome life to never-ending rest.
Love kindles as I gaze. I feel desires
That give assurance of their own success,
And that, infused from heaven, must thither tend."

"Animated hope" could not dwell in the same breast with despair, nor "assurance" of a celestial home with a certainty of eternal condemnation. We have another dream of the same tenor later on, but it has a ludicrous sequel: a dray-horse running against Cowper, and Cowper swearing at the drayman. When Cowper was himself, he was a man of sense, and, though he might attach a fanciful importance to the visions of the night, he would hardly have allowed his life to be dominated by a bad dream. Humor, of which he had plenty, might also have shown him that Deity was not likely to display its classical accomplishments by delivering its sentence in Latin.

Too much, perhaps, has altogether been made of Cowper's disease as an influence over his general life and his productions. We might as well be spared the revolting details of his repeated attempts at suicide, and the hideous ravings of his lunacy. The hypochondria which visited him at intervals, and twice at least assumed the form of suicidal mania, and beneath the cloud of which his days ended, had no doubt a physical source. Indeed, there is an intimation in his letters of its connection with his general health. Its first access may very likely be traced to an unwholesome life in Temple Chambers, among companions of intemperate habits. It was intermittent, and in the intervals, happily long, his character and compositions were free from its influence. Its dark shadow nowhere falls upon his "Task," or, indeed, upon any of his poetry that is worth reading, with the single exception of "The Castaway." His letters are frequently playful; far from being hypochondriac, they are not very often sad. In some of his pieces, such as "The Poplar Field," there is a tinge of melancholy. But this is common to him with all sentimental writers. It would be difficult, perhaps, to name any sentimental writer who, on the whole, is more cheerful. Cowper's malady cut him off from active life, and thus led him to take to poetry. This was its most important effect. Without it he would have been a third-rate lawyer and a commissioner in bankruptcy, or Clerk of the Journals to the House of Lords. Mr. Wright aptly observes, when Cowper is called a failure in life, that "if we had no failures in life, we should have no poets." The influence of the malady (when the fit was over) on Cowper's productions was rather the reverse of saddening; they beamed with the happiness of convalescence. Chatham was liable to hypochondria, which in his case is known to have been the result of suppressed gout. But when he was free from the gout, his mind was sound.

Every biographer of Cowper is bound to discuss the question of Newton's influence over him. Newton, as we know, had been in his youth a slave-trader and a profligate. Smitten by remorse, he had become intensely religious in the Calvinistic sense, and had devoted himself to the ministry. He appears to have been a really excellent man, active in good works as well as in preaching his austere creed, and more genial and rational than might have been expected from such a career. His kindness to Cowper during one of the hypochondriac fits was heroic. But it is inconceivable that he should have been a good companion and mentor for one liable to mania which took a religious turn. The sensible Lady Hesketh seems to have settled the question when she deprecated the excessively religious regimen to which Cowper was subjected by Newton, and which condemned him to spend the fine summer evenings in pious exercises instead of taking his walk. Mr. Wright speaks with contempt of those who object to Newton's interference, after his departure from Olney, with his disciple's mode of life; yet it is certain that Newton did interfere and take Cowper to task on religious grounds at a time when he was really enjoying perfectly innocent pleasures in perfectly unexceptionable company. It is also asserted that Cowper resented the interference. If Newton was misled in the particular instance, as it appears he was, by the gossip of Olney, we are not the less led to surmise that his influence must have been oppressive. While Newton was with him, Cowper wrote nothing but hymns, and had Newton remained with him, it is doubtful whether he would ever have written anything else. It was Lady Austen's company that inspired "The Task" and "John Gilpin." The best part of Newton's regimen probably was the practice of visiting the poor, for which Olney, a miserable village of depressed lace-makers, afforded ample scope. This could do neither the man nor the poet any harm.

A critical biography of Cowper, which the present hardly pretends to be, would be incomplete without an assignment of his place in the history of literature. Twice in the poet's quiet parlor, above the hissing of the tea-urn and the sound of the volume made vocal to the fair, we hear thunder peal in the outer world. In the first case it is the American, in the second it is the French Revolution. Cowper treats both lightly, as things remote from his existence; and in regard to the French Revolution it is curious to compare his nonchalant but sensible remarks with the magnificent ravings of Burke. But the events remind us of his intellectual date. He belongs to the commencement of the revolutionary era, and is, by the philanthropic sentiment to which he appealed and which was unknown to Pope, a harbinger, though the most unconscious as well as the mildest, of great social change. His affinity to the distinctly revolutionary poets is traceable though faint, and it is not only on account of his insanity, or even of his sensibility, that his name has become linked with that of Rousseau.

Cowper's Evangelicism is a thing apart. What is called the English Reformation was the third of a series of five movements by which the religion of England detached itself from Rome. The first was the revolt against the abuses of Papal patronage, headed by Grosseteste, in the reign of Edward III.; the second was the movement of Wycliffe; the third was the Tudor Reformation; the fourth was Puritanism; the fifth was Methodism, of which Evangelicism was a wing, though it remained within the Established Church, from which, indeed, John Wesley never formally seceded, while his brother remained until the last within its pale. Methodism, unlike the previous movements, was non-political and almost quietist. It was purely a revolt against the irreligion, levity, and sensuality of the time. In the Established Church, spiritual life had been smothered by privilege and endowment:

"Sweet sleep enjoyed the curate at his desk,
The tedious rector drawling over his head,
And sweet the clerk below."

If Cowper wanted spiritual life and comfort, it was only in Methodism or Evangelicism that in those days he could find them. From Methodism his aristocratic refinement would have recoiled. He has expressed his dislike of the "nasal twang heard at conventicle." Evangelicism was the only haven for his soul.

Mr. Wright presents us with two new poems; one is in Latin alcaics. Mr. Wright thinks Cowper a poor Latinist. In this we cannot agree with him, for Cowper's Latin verses seem to us good. But in the first line of this set, as given us by Mr. Wright, there is an evident omission of the preposition *ab*, which, though not necessary to the sense, is necessary to the metre. The other poem is on a thunderstorm. It exists only in a copy made by a farmer, whose transcription may have been bucolic—at all events, it is in a very rough and faulty state; yet the lines describing the coming of the storm, the prelusive hush, the premonitory gust of wind in the wood, the silence of the birds, the uneasiness of the cattle, the scurrying of the swine, the haste of the travellers to gain shelter, are in Cowper's manner, and show an enjoyment of nature, evinced by

minute observation, which could hardly have dwelt in a morbid and miserable breast. When he was writing such lines, at all events, Cowper was a happy man.

KEARY'S NORWAY.

Norway and the Norwegians. By C. F. Keary, M.A., F.S.A. Charles Scribner's Sons. 1892.

THE present book, Mr. Keary's latest essay in the exposition of matters Scandinavian, is for the general rather than the special reader. Its purpose and scope are tolerably well indicated by two live figures contained in the preface. It has been discovered in his intercourse with travellers in Norway, says the author, that, with only the vaguest ideas of the ancient heroic past of the country, their imaginations at once "rose" to words like Edda, and Saga, Viking, Thor, and the like, as do the salmon of Norwegian streams to the fly of the fisher. The likeness is not carried further, but the inference that the traveller is henceforth to be furnished with a better kind of bait, or, at least, with pabulum upon which more satisfactorily to feed, is strengthened by the other figure at the bottom of the same page. Mr. Keary has, he says, from the information he has gathered together, designedly selected the "plums." But, although this has consciously been done, he has aimed at supplying enough dough to imbed them properly. Of the two the second figure is undoubtedly the better. There are plums in the book of information and of expression, but sometimes they are too deeply imbedded in dough in which a proper measure of the leaven of enlightenment is now and then lacking. All images apart, the author's intention is to furnish the English-speaking traveller in Norway—and his name is legion—with information, usually extremely difficult to get upon the ground, connecting the Norway of to-day with the Norway of the past. Accordingly, his work is in no sense a guide-book. Very little space is given to actual description of the topography or scenery of the country, and none at all to routes of travel. The land in its main physical characteristics is described, but the principal part of the book is devoted to the people, their history, their ancient religion, and their literature, old and new. The last chapter is a contribution by Eva Tindall on the wild flowers of Norway.

Mr. Keary divides visitors to Norway into three classes: those who come for sport, principally fishing; those who come in private yachts, or "yacht steamers," as they are called; and regular tourists. The class first mentioned settle on a salmon river or a lake near the coast, while the second class steam from fjord to fjord, or only occasionally make a short journey inland. Their knowledge of Norway is consequently almost entirely confined to the coast region; and while this coast scenery is confessedly the finest which the country has to show, and in places is grand and magnificent beyond description, it is, after all, but a small part of Norway. The regular tourists of the interior, who, nevertheless, are in a minority, are the only ones who adequately see Norway and the Norwegians, or even get an idea of Norwegian scenery as a whole. The picture of the country gathered from the fjords is greatly modified by a journey inland, where the rounded hill-tops of the coast are replaced by real mountain scenery, and there is a varying panorama of cultured fields and farmsteads, of lakes and rivers and waterfalls, and of pine forests in grandeur scarcely equalled in any other part of Europe. The traveller, Mr. Keary rightly concludes, both for the sake of the scenery and for a sight of primitive Norway, should not leave the country without seeing at least some parts of it back from the coast. This he can now do with but little personal discomfort or inconvenience, although, out of the beaten track, which is, after all, still somewhat limited, there is enough of both.

The section devoted to the land and the people is interestingly written and is plainly based on a somewhat intimate personal knowledge. The chapters, too, on modern Norway, which describe political and social conditions, education and religion, although their information in many instances is necessarily fragmentary, contain much that is valuable and well put, and are, no doubt, adequate for their present purpose, that he who runs, or rather "posts," may read. Theoretically, the author finds in Norway under the Constitution the ideal of a republic where there is no great wealth and no excessive poverty, and where, through the abolition of hereditary titles, there should be a real feeling of social equality. If the condition of the country as he actually does find it is not ideal, it is in some points, at least, not unsatisfactory. There is everywhere an absence of anything like abject poverty, and serious crime in the rural districts is totally unknown, so that in such regions there is no regular system of police or gendarmerie. There is a fair condition of popular education, and the vice of excessive intemperance has been met and successfully grappled with. There is still a very large proportion of illegitimate births. With Ibsen's pictures of the people of Norway in his social dramas the author does not at all agree. He does, however, find the narrow bureaucracy of the towns that Ibsen is so fond of satirizing, and, instead of an expected social equality, a rare chase for Government office and official title for the sake of the distinction they confer. The following chapter, on modern Norse literature, is occupied principally with Björnsen and Ibsen, the former, in a new characterization, being styled "The Muscular Christian of Norway" and compared with Charles Kingsley—a juxtaposition that would probably as much astonish the poet himself as it will any one who knows him and his work.

Mr. Keary dwells at greatest length on ancient Norway, its history, mythology, and literature. Of the three topics, the history, from Harold Fairhair down, has been treated most fully and circumstantially. One may get from it a good idea of political influences and results, and descriptions are helped out by quotations from the historical sagas. These chapters are well digested and not too abstrusely written, as befits their popular purpose. They contain, furthermore, many of the plums spoken of in the preface. There are, however, a few inaccuracies of statement and one or two downright errors. The following, for instance, is a *lapsus calami* whose occurrence it is quite impossible to understand. In the account of the reign of Hakon Hakonsson we are told in unmistakable terms that "Hakon really incorporated Iceland with Norway—a union which has lasted ever since." Iceland, as we all know, fell with Norway under Danish sovereignty in 1388, and although some few of the first officials under the new régime were Norsemen, Danish influence, political and social, has been paramount there ever since.

The chapters on the ancient literature, which include also an account of the Edda mythology, are the least satisfactory in the book. The mythology contains, perhaps, in some form or other, the principal material from the Eddas, but it is given in a haphazard and unsystematic way. The purpose to give a picture of the Northern mythology based solely upon the ancient poetry might be, no doubt, from some points of view laudable, but it is impracticable and unwise for the work in hand, for it is utterly impossible to get even a tolerably complete idea of the old mythology from the poems alone. The picture proves to be merely a series of studies without cohesion or correlation. Some of the statements show a close reading of Rydberg. The desire to be "popular" crops out here and there. On page 99 we are told, for instance, that "there is no 'highfalutin' about Thor." It may be more than suspected that those imaginations which are ready and willing to "rise" to names of the old gods will, after all, in some cases refuse the author's new flies.

The account of the ancient literature itself has, even more than the mythology, an encyclopædic character. It is unmistakably that part of the subject in which the author has read least, and many of its statements are hasty and ill-considered, while not a few are absolutely wrong. There is a certain advantage, to be sure, in this sort of knowledge, since it enables a writer to deal in an off-hand way with mooted points which would else require careful statement. The whole vexed question of the place of origin of the so-called Eddic poems is, in this manner, disposed of in a single paragraph, where the conclusion is arrived at that the scene of this development of Northern verse was in some part of the Norse colonies of the British Isles. "Nay," says the author, "we may say, almost for certain, that it had its origin either in the Scottish or Irish settlements." This is, of course, Vigfusson's well-known theory, and as such is worthy of consideration. It may even be true of single songs, but it is, after all, an unsubstantiated theory, whose greatest support consists principally in the boldness of the assumption. In the statement of the likeness in form of the earliest Germanic verse everywhere a curious mistake occurs. The author, namely, cites the German "Hildebrandslied," from which he quotes, as he says, "the passage where Hildebrand mourns over the son he has slain by his own hand." The last verse cited in reality is: "Now shall my own child smite me with the sword." The "Hildebrandslied" is only a fragment and the end is missing. It may possibly have had such a tragic termination as the author supposes, but the poem itself leaves us in doubt as to the outcome of the combat.

The chapter on the sagas is devoted principally to Iceland, and there is a long quotation from the Njals saga, perhaps the most national of them all. This was hardly necessary, since, although the saga in its development was principally or even almost specifically Icelandic, its scene of action was not infrequently Norway, and its descriptions are often of Norwegian affairs and conditions, which would have been much more appropriate in a book on Norway. In the historical part of the book, the Icelander Snorri's "Lives of the Kings of Norway" in the 'Heimskringla' are necessarily cited. In the chapter on the sagas, we are told that for his material "Snorri seems to have been very largely indebted to the court ballad poetry." If we may believe his own statement in the preface to his history, he undoubtedly was. "Part is written down after old songs and ballads," he says. "We rest the foundations of our history principally upon the songs."

If, as appears from the foregoing, there are blemishes in Mr. Keary's book, there are parts, nevertheless, which are admirably written. Mr. Keary, it must be remembered, is above all a writer of history, and the historical chapters, with those on modern Norway, would, taken alone, have amply justified the volume. As a whole, however, the work is too hastily done to be well done, and in places it needs a rather careful revision.

Bog-Land Studies. By J. Barlow. London: T. Fisher Unwin. 1892. Pp. 104.

Irish Idylls. By Jane Barlow, author of Bog-Land Studies. London: Hodder & Stoughton. 1892. Pp. 284.

THESE books will be opened with interest by any one who remembers the appearance some years ago, in the pages of a short-lived Dublin magazine, of "Walled Out, or Eschatology in a Bog" (one of the above Bog-Land Studies). The two volumes might with propriety have been entitled 'Bog-Land Studies in Verse' and 'Bog-Land Studies in Prose.' Both are dominated by the sombre impressions carried away from the study of winter and spring moorland scenery in Ireland. It is to be regretted that an authoress so capable of interpreting nature and striking the chords of human feeling has not, in these volumes, given us more sketches inspired by Irish bog-land in the glory of summer and autumn, when the furze and heather are in full bloom, when the "bog cotton" is dancing in the breeze, and the tender outlines of the horizon are shrouded in silvery haze. These volumes display undeniable power and tenderness of feeling. They are the most original contributions to the study of Irish character that we have seen for some time. We must be content to take them as they are—for the most part merciless in their portrayal of the sadder side of life. Surely life even in Ireland is not altogether dark, even in bog-land, even through all the gloom of the past half-century and the unsettlement of present years. Miss Barlow's Irish diction does not strike us as altogether perfect—we here meet our old friends "prast" for "priest," and "indade" for "indeed," and the like, which we have never heard in Irish speech. Several expressions not familiar to us may be justified by their use in whatever district she has specially drawn her inspiration from. But we prefer to regard these books as a whole; and, so regarded, they at once arrest the attention of the reader. The feeling and genius are there, the faults are few. They are, we trust, but a foretaste of better work to come, inspired, perhaps, in a more cheerful vein by happier days in the writer's country.

'Bog-Land Studies' consists of six sketches. Of these "Eschatology in a Bog" is the most original. In it we have the thoughts of an Irish peasant on life and death and the beyond, suggested by the casual remark of his young master, whom he accompanies out shooting, anent the small shot-hole through which has been let out the life of a bird:

> "'It's quare to think that a houle ye might bore wid a pin
> 'Ill be wide enough to let such a power o' darkness in
> On such a power o' light, an' its quarer to think,' sez he,
> 'That one o' these days the like is bound to happen to you an' to me.'
> Then Mr. Barry, he sez: 'Musha, how's wan to know but ther's light
> On t'other side o' the dark, as the day comes afther the night?'"

The alternate phases of hope and of uncertainty regarding the future, as we are happy or unhappy, are well touched off:

> "For the blacker this ould world looks and the more ye're bothered and vexed,
> The more ye'll be cravin' an' longin' for somethin' else in the next;
> While whinever there's little that ails ye, an' all goes slither as grase,
> Ye don't so much as consither, bedad, if there's e'er such a place;
> The same as a man comin' home from his work av a winther's night,
> Whin the wind's like ice an' the snow an' the rain have him perished outright,
> His heart 'ill be set on a good turf blaze up the chimney roarin' and red
> That 'ill put the life in him again afore he goes to his bed;
> Tho' on summer evenin's, whin soft as silk every breath that wint,
> He'd niver have asked for a fire, but tarned to his sleep contint."

Miss Barlow's descriptions and similes are often singularly happy, as when she makes one of her characters speak of "Waves poundin' the rocks like sledge-hammers, an' clatterin' the shingle like chains"; of "The colour o' laves in the spring wid a thrimble o' mist between." The "qualitie's quare ways" as compared with those of untrained minds is brought out, in "Miss Honor's Wedding," by a comparison of the quiet despair of the bride on her desertion with the manner in which the narrator's friends act on trying occasions:

> "When me cousin ran off to inlist,
> Troth, the bawls av his mother an' sisthers were fit to ha' frightened the best;
> An' last winter when Norah Macabe had heard tell that her sweetheart was dhrowned,
> It's her scrames 'ud ha' terrified nations—ye'd hare them a good mile o' ground."

There is a homogeneity in 'Irish Idylls' wanting in the 'Studies.' They have all to do with different phases in the life and characters at Lisconnel, somewhere in the west of Ireland, where "the broad level spreads away and away to the horizon, before and behind and on either hand of you, very sombrely hued, yet less blackavised than more frequented bogs"; where in the distance the finely limned shapes of the mountains "loom up on its borders, much less substantial, apparently, in fabric than so many spirals of blue turf smoke"; where the "Curlew cried plaintively across the bog, a cunning tone-poet, who can set a whole landscape to melancholy in one quick chromatic phrase." We are introduced to and soon become interested in the "O'Driscolls," and "Ody Rafferty," "the widow M'Gurk," "Mrs. Quigley," "The Sheridans," "Herself," "Mad Bell," and other inhabitants of the townland. And we come to learn how much of the milk of human kindness and real gentlemanly feeling—the basis of all that is best in a community—is to be found in the untidy cabins, and half-civilized surroundings, and general through-hitherness of the community described. Infinite pathos is over all. How could any Irishman lay aside such volumes as these without feeling how incumbent upon him are self-restraint and self-forgetfulness—the suppression of passions of race and religion and nationality and party, the unbridled exercise of which, on one side or the other, have brought Ireland to her present condition, and condemned a people, types of which Miss Barlow so vividly brings before us, to a condition in which the worst phases of their character are brought into prominence and their best capabilities stunted or held in abeyance?

We wish these books were, as compared to others before us, of sufficient weight to justify examples at length of the wise wit that strikes us as we turn over the pages. What can be happier than the following?

> "She still carried her trouble in both hands, as we do with such things while they are new to us. Afterwards we generally stow them away in the pack which we keep on our shoulders, where they make their weight felt, it is true, but do not hinder us from going, more or less heavily, about our wonted avocations."

Or the following, regarding the mystery of pain and sickness:

> "'But there's a many misfortnit crathurs that onless the Devil does his endeavors to keep them alive in their misery, I dunno who would.' 'True for you, ma'am,' said Peter Sheridan again; 'you might say so if you'd whiles feel the life was skivered into your body wid all the sharp ends of aches and pains.'"

But deep questionings regarding "life, death, and that vast forever" do not form the staple of Miss Barlow's chapters. Their rare merit lies in their appreciation and descriptions of Irish peasant character and life. In writing thus truly and kindly of the Irish people, our authoress may, all unconsciously, be doing better work for her country than many of those whose names as patriots are prominently before the world.

International Humor. Edited by W. H. Dircks.—*The Humor of France.* Translated by Elizabeth Lee. *The Humor of Germany.* Translated by Hans Müller-Casenov. *The Humor of Italy.* Translated by A. Werner. Three vols., crown 8vo, illustrated, pp. xxv, 463; xvi, 437; xxxi, 345. Charles Scribner's Sons. 1892.

THE three handsomely illustrated and well-printed books before us are the first of a series of about twelve volumes devoted to the humor of all nations. The conception of the series is original, and it has been, on the whole, carried out successfully. We say the conception is original, for the attempt is made to present the humor of the various nations from a literary standpoint. There have been plenty of jest-books and collections of facetiæ at all times and in all countries; but a careful selection from the humorous literature is rarer, except in the case of English, where we have our own Burton's excellent 'Cyclopædia of Wit and Humor.' The same method as Burton's, on a narrower scale, has been pursued in the series before us, with perhaps a wider chronological range.

The volume on France will best illustrate the editor's plan, and is in some respects the most scholarly and entertaining volume of the series. The book begins with several *fabliaux* of the thirteenth and fourteenth centuries, followed by Rutebœuf's "The Ass's Last Will and Testament" (thirteenth century), "The Land of Cokaigne" (fourteenth century), "A Confession" by the Monk of Montaudon (erroneously attributed to the fifteenth century, with a query; the author really flourished between 1180-1200. The extract in question is made up of several different poems.) Then come Villon, Rabelais, Basselin, Marot, Despériers, Ronsard, Montaigne, Baïf, and then, with a jump, Voiture, whose famous letter to Mlle. de Bourbon on being tossed in a blanket is here given. The seventeenth century is fairly well represented by Molière (scenes from the "Précieuses Ridicules," "Bourgeois Gentilhomme," "L'Avare," and "Femmes Savantes"), Mme. de Sévigné (letter on Mademoiselle's engagement), La Fontaine, La Bruyère, Régnard, Lesage, and Brueys and Palaprat's version of "L'Avocat Patelin." For the eighteenth century we have Voltaire of course, Gresset (most of whose "Vert-vert" is given), Diderot, Beaumarchais (represented by "The Barber of Seville" alone), Dorat, Chamfort, and Désaugiers. The remaining three hundred pages, about two-thirds of the whole, are devoted to the present century, with too long a list of authors to mention here. We can only say that Béranger, Mürger, Labiche, Daudet, and "Gyp" are fairly well represented, and there are, in addition, aphorisms, proverbs, and newspaper humor, with a biographical index of authors,

and an introduction on the salient features of French humor.

The volumes on Italy and Germany are conceived in the same spirit, but one is struck by the relatively scanty materials in the early period. The earliest selection in the former volume is from Antonio Pucci (end of the fourteenth century); then follow Boccaccio's story of "Calandrino and the Heliotrope," two stories from Sachetti, one each from Parabosco and Sabadino degli Arienti, and we have reached the sixteenth century (with page 21). The case is worse with Germany, where but one extract, Hugo von Trimberg, "Master Fox, the Confessor," is given before Hans Sachs, and one other from Grimmelshausen brings us down to the end of the eighteenth century (page 12).

On looking over all the volumes, we are impressed with the apparent difficulty of the enterprise. It has been only by giving to the word "humor" the negative definition of "something which is not serious," and obliterating the distinction between wit and humor, that a sufficient amount of material has been obtained to fill the allotted space. There are, to be sure, some omissions: In France, Boileau and Scarron are conspicuous by their absence, and Freytag is missing in Germany; but on the other hand, much is included that can hardly be called humor at all, although from undoubtedly humorous works. This is of course apt to be the case with detached scenes from the drama or extracts from novels.

Although there was no lack of both wit and humor among the ancients (the imitation of whom at the time of the Renaissance, notably in France, gave rise to great fields of humorous literature), still they played no such part either in life or in literature as among the moderns. Indeed, humorous literature as we understand it is of comparatively recent date. The constitution of mediæval society was such that humor assumed almost exclusively the form of wit, and that of the malicious type known as satire. With the Renaissance came in humor, or rather satire became broader, less personal, and more literary, and the burlesque *genre* was created. The great line of modern humorists begins with Rabelais, in whom specific satire is combined with general humor. Since his day the rôle that humor has played in modern life has been enormous and beneficent.

When the other volumes of the series before us are completed, it will be in order to make some comparison between the humor of the various countries; just now we have but the three, and of these France is easily pre-eminent, as she will be until England and Spain enter the field, for, as has been remarked before, the most serious nations of Europe have been the most humorous. Why fate has excepted the Germans from this rule we may not explain, any more than the Scotch imperviousness to humor. There are subtle characteristics of race, which manifest themselves in modes of thought and speech, that are beyond the analysis of the psychologist or anatomist.

A Manual of Physics. By Wm. Peddie. G. P. Putnam's Sons. 1892.

Mr. Peddie's work is intended, as he states in his preface, to review the elements of the whole subject of physics so as to show the essential unity and interdependence of the various branches. The work accordingly presents what we can only call a series of sketches, more or less complete, but all too brief for students not already familiar with the descriptive part of the subject, and far too incomplete for reference in teaching. It covers a great deal of ground. We have first of all brief chapters on the physical universe and the methods of physical science; then a short sketch of the fundamental principles of the calculus, followed by chapters on mechanics and on the properties and constitution of matter. These are by no means without merit, but still do not give much more than a meagre sketch of subjects which require a far more thorough handling. Chapters on sound, light, heat, electricity, magnetism, and electro-magnetism follow. Of these that on light is much the best. Under this heading we find what we do not remember to have met before in an elementary text-book, namely, some account of the Characteristic Function employed by Sir Wm. Rowan Hamilton in the solution of optical problems. The notice is an extract from the Life of the illustrious author. Under the subject of heat we are sorry to see the pyrometer and hygrometer of Daniell disinterred. They bear about the same relation to modern instruments and methods which the éolipyle of Heron of Alexandria bears to a triple-expansion steam-engine; yet it seems impossible to keep them out of English treatises on physics. The very important subject of the air thermometer is despatched in a single short paragraph. The author mentions Michelson's experiments on the velocity of light, but omits those of Newcomb. A sketch of thermodynamics is given in a brief chapter. The work concludes with a chapter on modern views of the ether.

Life of Voltaire. By Francis Espinasse. [Great Writers.] Charles Scribner's Sons.

The only justification for this Life of Voltaire is that the series for which it was written would be incomplete without it. It contains nothing new, and has probably been prepared without any original research. It is hardly more than a mere catalogue of the facts of Voltaire's curiously checkered life. Its lack of advocacy and boasting is refreshing in comparison with Parton's superfluity of naughtiness in these directions, and there is something attractive in the clear and colorless style; but those who have read Carlyle's Essay on Voltaire, and the Voltaire episode in "The Valley and Shadow of Frederick," as Mrs. Carlyle called her husband's *opus magnum*, and the Studies of Voltaire by John Morley, and Sir James Fitz James Stephen in his 'Horæ Sabbaticæ,' will wonder how Mr. Espinasse could have been acquainted with such things and after them have written to so little purpose of the spirit and effect of the great heresiarch's life. Those who have not read those better things will make a sad mistake if they remain content with the present representation. There is not sufficient emphasis upon the fact that the "Infamous" which Voltaire would "crush" was not the Christianity of Jesus, but the ecclesiastical dogmatism of the Roman Catholic Church. Mr. Espinasse contends rightly that the theistic belief which Voltaire opposed to the atheism of Diderot and others has not met with due recognition. His creed on page 42 reveals him at his best. The only chapters in which Mr. Espinasse really warms to his subject are those which treat of Voltaire's splendid devotion to the cause of Calas and Sirven and the Chevalier de la Barre, victims of intolerable persecution; and here was no doubt the most valuable and characteristic service of Voltaire to his generation.

There is no exaggeration of his faultier side by his present biographer. "A hardihood of continuous falsehood" in his pseudonymous disguises must be allowed. The funniest was his signing one of his heterodox publications as the Archbishop of Canterbury—a lie unparalleled except by the drunken Sheridan's announcement of himself as William Wilberforce. Voltaire's relations to Mme. du Châtelet are set down without note or comment for what they are worth. The author's disengagement from his subject is nowhere made more obvious than in his resorting to another writer, Du Bois-Reymond, for his final summary. It is, that Voltaire is so little to us at present because the things he fought for, "toleration, spiritual freedom, human dignity, justice," have become, as it were, the air we breathe and do not think of except when we are deprived of it.

La Restauration Impériale au Japon. Par le Vice-Amiral Layrle. Paris: Armand Colin & Cie.

The writer of this readable compilation is a French naval officer who served in Japan waters in 1863 under Rear-Admiral Jaurès, and again in 1887 as chief of the French fleet. The book is dated by neither author nor publisher, and, despite a foot-note or two about minor events in 1891, in the final chapter, the latest view of things in general is that of the year 1887. The author has not read very widely or profoundly in the authorities treating of either Old or New Japan. He naïvely imagines that, "in the country itself, those most interested have for their guidance only a brochure published in 1876, the 'Kinsé Shiriaku'" (brief history). His chief authority for the history of Japan before 1868 is an American author, whose name he, almost as a French matter of course, misspells. His judgment, also, about the author of the 'Kinsé Shiriaku' is wofully at fault. Despite its incompleteness and inaccuracy as to the foreigner's doings, its candor and judicial fairness are remarkable. Further, there is a very creditable vernacular library of scholarly and sufficiently impartial works treating of the civil war of 1868–70, of which the compiler does not seem to know. For the events after the Restoration, his chief if not entire reliance, apart from information derived in conversations with the official men of New Japan, has been obtained from Mounsey's 'The Satsuma Rebellion' (title misspelled) and the French and English blue-books. Evidently, for this reason, the notable action of the United States steamer *Wyoming* in engaging the batteries at Shimonoséki and sinking the hostile steamers of Choshiu is merely alluded to. Apart from these defects, the reader who would enjoy a résumé of the movement of events in the twenty years from 1867 to 1887, with bright and lively comment on the life in imperial and constitutional Japan, will welcome this handy monograph. The best part of this naval officer's work is his brilliant description of the strategy, tactics, and personality of the great Saigo, who, though he led the Satsuma rebellión of 1877, was, at the promulgation of the Constitution in 1889, officially condoned and glorified with remarkable posthumous honors.

A STITCH IN TIME SAVES NINE.

The Hygiene of the Sick Room.

By Wm. B. Canfield, M.D., Lecturer in the University of Maryland, Baltimore. A book for all those engaged in caring for the sick. 12mo. Handsome cloth, $1.50.

Being a plain, practical exposition of infection and disinfection, bacteriology, ventilation, heating, diet, the care of patients with fever, diphtheria, cholera, small-pox, consumption, measles, malaria, pneumonia, etc.

"It emphasizes as nothing can, except contagion, the importance of cleanliness of all things that may come in contact with the sick. This is insisted upon, not only to bring about a more rapid recovery, but to prevent the spread of those diseases which are infectious."—*Public Opinion.*

Accidents and Emergencies.

By C[illegible] W. Dulles, M.D., Physician to the Rush H[illegible] Philadelphia, late Asst. Surgeon N. G. P. Fou[illegible] Just Ready. Cloth, $1.00.

"This is [illegible] edition, thoroughly revised and enlarged, of a [illegible] the treatment of surgical and medical emergen[illegible] bsence of a physician. It is full of valuable m[illegible] very one ought to know and an index renders [illegible] tion quickly accessible."—*The Boston Herald,* [illegible]h, 1892.

Public Library F

The Hygiene of the Nursery.

By Louis Starr, M.D., Clinical Professor of Diseases of Children in the Hospital of the University of Pennsylvania; Physician to the Children's Hospital, Phila. Third edition, enlarged and improved, with 25 illustrations. 12mo. 293 pages. Cloth, $1.00.

Including the General Regimen and Feeding of Infants and Children and the Domestic Management of the Ordinary Emergencies of Early Life, Massage, etc.

These books may be ordered through any bookseller or news agent, or upon receipt of price we will send, postpaid, to any address. Remit by postal note or postage stamps. Catalogues of Books on Medicine, Hygiene, Nursing, Chemistry, etc., free.

PUBLISHERS OF

General Literature

Make a specialty of supplying Public, Private, School, Club, and Society Libraries. A topically arranged General Library List of the Standard Books of all Publishers mailed upon application. Estimates upon submitted lists.

Magazine of American History, vols. 1-22 (1877-1889); 5 vols. in half brown morocco, gilt tops, uncut, 1 vol. in cloth, balance unbound, all sound and clean. $85.00.

War of the Rebellion, 1861-'65; compilation of official reports, Union and Confederate; complete set to date, 80 vols., 8vo, cloth, and 8 atlases, unbound. $50.00.

Littell's Living Age; complete set from vol. 1 to 191 (1844-1891), newly and uniformly bound in half American Russia. $265.00.

W. H. Lowdermilk & Co.,

Dealers in Standard, Choice, and Rare Books, 1424-6 F Street, Washington, D. C.
Books Bought.

Charles Scribner's Sons' New Books.

Tropical America.

By ISAAC N. FORD, foreign editor of the New York *Tribune.* With 16 full-page Illustrations. Crown 8vo, $2 00.

Mr. Ford's book, the fruit of a nine months' sojourn in South and Central America, Mexico, Cuba, etc., presents, besides graphic pictures of travel, an extended study, rich in facts and entertaining in style, of the social, political, and commercial conditions of the people and of their relations with the United States.

Art for Art's Sake.

Seven University Lectures on the Technical Beauties of Painting. By JOHN C. VAN DYKE, L.H.D., Professor of the History of Art in Rutgers College. With 24 reproductions of Representative Paintings. 12mo, $1.50.

Mr. Van Dyke discusses in an interesting and instructive manner the qualities and merits of the technical side of painting. The author is a very successful writer and lecturer on art topics, and his book, which is addressed to the unprofessional reader, will fill a place hitherto vacant.

The Germ Plasm:

A Theory of Heredity. From the German of Dr. AUGUST WEISMANN. Contemporary Science Series. Double Volumes, copyrighted. Illustrated. 12mo, $2 50.

Prof. Weismann, the highest authority on this important subject, deals in a complete and comprehensive way, in this volume, with the fundamental problems of heredity in plants, animals, and man.

The French War and the Revolution.

By Prof. W. M. SLOANE. American History Series. With maps. 12mo, $1.25.

Prof. Sloane's book is a compact, popular narrative of the events of the period which succeeded that described in Prof. Fisher's "Colonial Era," the first volume in the American History Series. It is a thoroughly philosophical account of political causes and effects and a graphic picture of the times as well.

The Duchess of Berry

AND THE REVOLUTION OF 1830. From the French of I. de Saint Amand. With portrait. 12mo, $1.25.

The dramatic revolution which brought about the July monarchy of Louis Philippe has never been more vividly and intelligently described than in this the last of three volumes devoted to the Duchess of Berry, in the Famous Women of the French Court.

New Edgewood Edition.

Reveries of a Bachelor, and Dream Life. By DONALD G. MITHELL. Each 16mo, 75 cents.

This edition, printed from new plates and tastefully bound, of these two American classics will extend their popularity to fresh fields where the charm of the author's genial and sympathetic philosophy will make thousands of new friends for him.

Manual of Natural Theology.

By Prof. G. P. FISHER, D.D. 12mo, 75 cents.

Prof. Fisher's new book, dealing with the doctrines and proofs of religion which rest on reason rather than on special revelation, is compact, scholarly, and abreast of the latest thought.

Rise of the British Dominion in India.

By Sir ALFRED LYALL. With colored maps. 12mo, $1.50, net.

Sir Alfred Lyall's book not only gives a concise account of the adventurous rise of British dominion in India, but explains also the causes and convergent influences that brought about this result.

The Campaign of Waterloo.

A Military History. By JOHN C. ROPES. 8vo, $2 50, net.

"He describes the campaign in all its details, taking up all the disputed points and examining them in the light of newer documentary and historical evidence. It is difficult to see what more could be added, or what could be omitted to make it a more authoritative work."—*Boston Transcript.*

Atlas of the Campaign of Waterloo. 14 Maps. 16x22 inches 4to, $5.00, net.

Adzuma; or, The Japanese Wife.

A Play in Four Acts. By Sir EDWIN ARNOLD. 12mo, $1.50.

"This is a fine poem and a powerful drama. Its tragic motive is well conceived and displayed, and the theme itself belongs not to Japan merely, but to human nature."—*London Times.*

The Story of the Atlantic Telegraph.

By HENRY M. FIELD, D.D. With portrait. 12mo, $1.50.

"That it has the fascination of romance when the highest strain is on, explains but a part of the secret of its spell. The story of the Cable is one of grand endeavor and heroic constancy never surpassed."—*Independent.*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, N. Y.

The Nation

VOL. LVI—NO. 1445. THURSDAY, MARCH 9, 1893. PRICE 10 CENTS.

TWO NEW BOOKS.

THE NEWLY RECOVERED GOSPEL OF ST. PETER, with a full account of the same. By J. RENDEL HARRIS, Fellow of Clay College, Cambridge. Paper. 68 pages. Price, 50 cents. *Just Published.*

Five years ago were found among the Christian tombs at Akhmim, in Upper Egypt, searched by direction of the French Archæological Mission at Cairo, a number of Greek documents. Among them was a vellum MS. book of thirty-three leaves, which contains portions of three lost early Christian works—viz., the Book of Enoch, the Gospel of Peter, and the Apocalypse of Peter. The treasure-trove has just been published at Paris, and Professor Rendel Harris of Cambridge has lost no time in presenting to English readers a translation of the very interesting fragment of the Gospel, with valuable prolegomena and appendices. The Book of Enoch was previously known in an Ethiopic translation.

THE GENESIS OF THE AMERICAN PRAYER BOOK. A Survey of the Origin and Development of the Liturgy of the Church in the United States of America. Cloth, 12mo, $1.00.

CONTENTS: Primitive Liturgies. By the Rt. Rev. A. CLEVELAND COXE, D.D., LL.D., Bishop of Western New York. The Reformation Prayer Books. By the Rt. Rev. GEORGE F. SEYMOUR, D.D., LL.D., Bishop of Springfield. Early American Prayer Books. By the Rt. Rev. WILLIAM STEVENS PERRY, D.D., LL.D., D.C.L., Bishop of Iowa, and Historiographer of the Church. The Prayer Book Enriched. By the Rt. Rev. WILLIAM CROSWELL DOANE, D.D., LL.D., Bishop of Albany, and Chairman of the Joint Committee of the General Convention on Liturgical Revision. Changes Incorporated into the Standard Prayer Book of 1892. By the Rev. SAMUEL HART, DD., Professor in Trinity College, Hartford, Custodian of the Standard Prayer Book, Secretary of the House of Bishops, Secretary of the Joint Committee of the General Convention on Liturgical Revision, etc. As an appendix. Edited by the Rev. C. ELLIS STEVENS, LL.D. D.C.L., Rector of Christ Church, Philadelphia.

JAMES POTT & CO., Publishers,

114 Fifth Avenue, New York.

BOOKS BY

Joseph Henry Crooker.

SECOND EDITIONS.

Jesus Brought Back:

"The whole book is wonderfully stimulating and wholesome."—*The American, Philadelphia.*

GEORGE H. ELLIS, Publisher, Boston.

1607 THE LIBRARY OF AMERICAN LITERATURE, 1893

COMPILED AND EDITED BY

EDMUND CLARENCE STEDMAN and ELLEN MACKAY HUTCHINSON,

Alone contains more carefully chosen, ably edited, and artistically arranged

ADVENTURES, ANECDOTES, BALLADS, BIOGRAPHIES, CHARACTER SKETCHES, CORRESPONDENCE, CRITICISM, DRAMAS, ESSAYS, FICTIONS, HISTORIES, HUMOROUS ARTICLES, NARRATIVES, NOTED SAYINGS, ORATIONS, POEMS, POLITICS, THEOLOGY, TRAVELS, WARS, WITCHCRAFTS, AND WONDERS,

than were ever before gathered within the same space or offered in one collection.

The Stedman-Hutchinson Library of American Literature is indispensable to busy persons whose time is limited; to children whose tastes are to be formed; to those who use books for entertainment and instruction, and to all who wish to know anything about books or authors, or who wish to improve their own conversation and writings. Sold only by subscription through the Publishers' authorized solicitors. Not for sale by the Publishers at their place of business, nor by any bookstore anywhere at any time. For description and solicitor's address, write at once to

CHARLES L. WEBSTER & CO., 67 Fifth Ave., New York.

NEW YORK **D. D. MERRILL CO., Publishers,** ST. PAUL

'Our Children of the Slums.'

By ANNIE BRONSON KING. Cloth, illustrated, 50 cents. Touching stories of child-life in the slums of St. Louis.

In the stream of little foreigners that flows unceasingly through the darkest of our city streets, here and there, as in this little book, a child face is silhouetted for a moment against the black ere it falls back into the current with all its pitiful burden of baby woes.

'At His Feet.'

By WAYLAND HOYT, D.D., author of 'Hints and Helps for the Christian Life,' 'Present Lessons from Distant Days,' 'Along the Pilgrimage,' 'The Brook in the Way,' 'Saturday Afternoon,' 'Light on Life's Highway,' 'Walks and Talks with Mr. Spurgeon,' etc. 18mo, cloth, extra white and gold, $1.00.

'At His Feet' is a book for the half-hour, for the stirring and culture of the Christian life, for the looking at some of life's practical questions from the point of view of the Lord Jesus.

'The Golden Bottle.'

By Hon. IGNATIUS DONNELLY, author of 'Cæsar's Column,' 'Dr. Huguet,' 'Atlantis,' etc.

Paper, 50 cents; cloth, gilt top, $1.25.

A wonderfully interesting story, based on an original conception, and putting forth very singular and remarkable ideas.

A POLITICAL ROMANCE illustrating the great questions of the day—the land loan, the demonetization of silver, and Government ownership of railroads.

"It is a fantasy and a sermon. We have outlined a phantasm here, wild it certainly is, but it is also beautiful. Logic it may have none; but it has heart. In the age of the individual this book is the gospel of universal brotherhood."—*New York Journal.*

'The Railway Problem.'

By President A. B. STICKNEY, with illustrative diagrams, some printed in colors. 12mo, 250 pages, cloth, $2.00; half leather, gilt top, $2.50; paper edition without diagrams, 50 cents.

An earnest advocacy, by a practical railroad man, of the governmental control (not ownership) of railroads.

"Whatever view may be held, the book is well worth reading."—*Engineering News, N. Y.*

"The most thorough discussion of its subject that has yet been published."—*San Francisco Evening Post.*

"It is the most valuable popular treatise on the railroad question that is known to have been presented to the public."—*Denver Daily News.*

"A work that ought to be extensively read."
—*Cincinnati Inquirer.*

'Little Comrade Mine.'

By MARTHA BURR BANKS, author of 'Princess Dandelion's Secret,' 'Children's Summer,' 'Richard and Robin,' etc. 12mo, cloth, illuminated cover, $1.00.

"Ostensibly a story for children, it involves lessons which the most mature may well profit by. The author writes very much in the style of Miss Alcott."
—*Baltimore Methodist.*

RUSKIN.

We have on the presses a new *Edition de Luxe* of Ruskin's best works which will be the finest set of standard books ever made in this country.

The set comprises: Modern Painters, in six volumes (including both the original and the revised volume two), Stones of Venice, in three volumes, and Seven Lamps of Architecture, in one volume; in all about 3,250 printed pages, with one hundred and fifty-six full-page inset plates and several hundred engravings.

Twenty-one of the plates are lithographed by Bien; these include all the beautiful color plates, some of them in eleven colors. One hundred and one are artotypes, the most delicate and effective of all methods of illustration, and peculiarly adapted to these particular volumes of Ruskin. The others are line engravings or relief plates.

The books will be large octavos of uniform thickness, printed on English-finish tinted paper the best that money could buy.

The edition is limited to one thousand copies. Each volume, appropriately bound, will be enclosed in a separate box.

The set will be sold by subscription only, the ten volumes for fifty dollars. It is in every respect equal to the English *Édition de Luxe*, which sells for $200.00.

Prospectus, showing paper, type, and specimen illustrations, sent free on application.

ALSO A NEW EDITION OF

The Works of John Ruskin.

In 46 volumes, on paper made especially for it, and containing all the engravings and full-page plates, both plain and colored. The ONLY complete uniform edition published.

The Volumes will be sold separately

And will be bound up in one style and color only, making this edition especially desirable for libraries and private buyers, intending to own his complete works, but preferring to buy but a few volumes at a time. Price, complete set, $46.00.

The Nation.

NEW YORK, THURSDAY, MARCH 9, 1893.

The Week.

PRESIDENT CLEVELAND'S inaugural address was brief and directly to the point on all the subjects to which he addressed himself. These are subjects which immediately concern the well-being and progress of the nation. Mr. Cleveland affirms his purpose, so far as it rests with him, to carry out the will of the people as expressed in the election, not in any rash or destructive way, but firmly and consistently. The tariff is to be reformed in the interest of the masses of the people, and the Trusts and combines are to be curbed in so far as the Federal power can reach them. Of more immediate interest are Mr. Cleveland's remarks on the currency question. He says that all his efforts will be directed to the prevention of any debasement or depreciation of the standard of value, and that he will use, without hesitation, all the powers confided to him by law to that end. While seeking remedial measures, however, he will not approach them in any spirit of intolerance. On the subject of the civil service his declarations are in harmony with those which he made before the election. The tone of the address throughout was strikingly serious and elevated, and nothing like it has been heard from the lips of any President since Lincoln's second inaugural address.

Not the least suggestive greeting which comes to Mr. Cleveland on his return to the Presidency is from Chili. The President of that republic sent a personal cablegram to him, of which the following is the opening sentence:

> "The Government of Chili and the Chilian people, recognizing your political attitude in the past, consider that your reëlection as Chief Magistrate of the United States is a pledge that your Government will preserve the tranquillity and well-being of all nations upon the American Continent."

Republicans may see in this a covert allusion to the brutal treatment of Chili by Mr. Harrison, only a little over a year ago; but if they do, it will, of course, be a great source of pride and comfort to them. They are happiest when hated. In their eyes the country never appears so glorious as when dreaded and distrusted by weak foreign nations, and so they will be quick to interpret it as a sure sign of national humiliation that the Chilians now expect a policy of justice and forbearance in foreign affairs to be inaugurated at Washington.

The last monthly Treasury statement to which a Republican Secretary signs his name shows that the Treasury gold has reached the lowest point since the resumption of specie payments. Above the $100,000,000 reserve required by law, Mr. Foster can show but $3,284,218, and that sum would be wiped out twice over if he were called upon to repay to the banks the gold they kindly loaned him. Thus the surplus and the gold balance disappear with the Republican Administration. Mr. Harrison is reported to be considerably set up over his escape from the dire necessity of an issue of bonds. Whether his Administration will be more glorious in history for not having issued bonds than it would be if it had manfully faced the situation and issued them, when the best financial opinion of the country was demanding such a step, we very much doubt. It is probable that the historian, unless he is stupid beyond the average, will be able to see as clearly as everybody does now that Mr. Harrison was grasping at the shadow when the substance was gone. The fact that everybody knows this, that there has been no secrecy about the embarrassments of the Treasury, and that bankers and financiers of the highest repute have openly acknowledged the critical situation of affairs, makes Mr. Harrison's affectation of ignorance of any trouble little short of ludicrous. He appears to think it possible to make the country believe that, in the interval between his locking of the Treasury and Mr. Cleveland's unlocking it, vast changes in the Government's balance-sheet have taken place.

The clause of the Sundry Civil Bill known as the Sherman Bond Amendment was dropped in order to save the bill itself from defeat, as it became evident that the silverites in the House would adopt filibustering tactics against the bill if the conferees should report in favor of this section. The subject is therefore left where it was in the beginning, except that we have the opinion of a decided majority of the Senate that the power to issue bonds for the purpose of maintaining the $100,000,000 gold reserve exists, but that the bonds ought to bear a lower rate of interest than was fixed in the Specie Resumption Act of 1875. The fact was brought out in the Senate debate last week that both Secretary Foster and his successor, Mr. Carlisle, were consulted in the framing of the Sherman amendment, and that both of them approved of it, but merely on the ground that the rate of interest fixed in the law of 1875 was too high. There is a precedent for lowering the rate of interest on bonds of the United States without any law of Congress, this act having been performed by Secretary Windom at the beginning of the Garfield Administration. Mr. Wayne MacVeagh, the Attorney-General, gave an opinion that the outstanding 5 per cent. bonds, which had matured, might be extended, at the option of the United States (there being no money in the Treasury to pay them off), at any rate of interest less than 5 per cent. The whole outstanding issue was accordingly extended at 3½ and 3 per cent., and nobody ever questioned either the legality or the expediency of the step. These were bonds actually outstanding; but if the power to issue bonds under the Act of 1875 is a continuing power, then the power to issue them at a lower rate of interest and for a shorter time than the rates and times fixed in the act exists also under the Windom-MacVeagh precedent. We have no doubt that the courts would sustain the power in both particulars if the case were ever brought before them. If the Secretary of the Treasury should decide that there was an emergency calling for the issue of such bonds, it is certain that no court would ever enjoin him. Nor would any court ever enjoin the payment of bonds so issued, either principal or interest.

It is gratifying to record that the Anti-Option Bill has met its death in the present Congress, and that means that there will be no resurrection for it in any coming Congress. Like the free-silver craze, it seemed to carry everything before it for a time, but it lost strength with every day's debate, so that on March 2, instead of being able to muster twenty-five votes more than a two-thirds majority, as it did when it originally passed the House, it had twenty-five less than two-thirds. This loss of fifty votes shows that the gas is escaping from the balloon, and that its total collapse is imminent. It is not necessary to go over the reasons we have so often brought forward in opposition to this bill. The relief which its defeat at once brought to the produce exchanges, where higher prices were immediately recorded, shows how exact was the description of the bill by one of its opponents, who called it a "Bill to Compel Farmers to take Lower Prices." The failure of the measure leaves Senator Sherman once more on exhibition as the statesman whose convictions are most conspicuously at the disposal of any body of men who can manage to put "pressure" on him. He voted for the Anti-Option Bill doubting its constitutionality, and protesting that he believed it incapable of doing what it proposed to do, but alleging that he could not afford to disoblige certain political farmers of his acquaintance. In refreshing contrast to his ingrained disposition to grovel before ignorance, provided it has a vote, is the outspoken attitude of the new Secretary of Agriculture, who said, while the bill was still pending with a good chance of passing: "The Anti-Option Bill of Senator Washburn, instead of doing the

farmer any good, would result in his injury." Mr. Sterling Morton was far from admitting that the farmer is necessarily a miracle of wisdom. On the contrary, he maintained that many of the farmer's "peculiar ideas" "need changing," and that "he needs saving from economic fallacies."

The good news comes from Washington that the bill which enables the Secretary of the Treasury to throw open to the architects of the country the designing of public buildings has become a law. This measure was drawn up by the American Institute of Architects, and was passed by the House at the first session of the last Congress. It was laid over in the Senate till shortly before final adjournment, but was then taken up and passed, and was approved by President Harrison. What its enactment means to the architecture of the country is that henceforth all the architectural talent of the nation will be at the disposal of the Secretary of the Treasury in the designing of public buildings. Under the old system all plans for such buildings were nominally designed by the Supervising Architect of the Treasury, but as the number of such buildings in process of construction at one time was frequently as large as 300, it was a physical impossibility for him to do more than a fraction of the work. The consequence has been that his clerks have been pressed into service to design buildings which ought to have commanded the best expert architectural talent. Under the new law the Secretary of the Treasury is given the discretionary power to obtain plans and specifications and local supervision for public buildings by the system of competition among private architects. While not mandatory, the law authorizes him to employ the architects whose plans are approved to superintend the construction of buildings. The duties and responsibilities of the Supervising Architect remain the same as formerly, except that he is relieved of the work of preparing drawings and specifications and superintending the immediate construction of public buildings. He is to have charge, as before, of the receipt of proposals, the award of contracts, and the disbursement of moneys. This means that our public buildings will henceforth be as great a credit and ornament to the country as those of the Chicago Fair, provided the Secretary of the Treasury uses his power wisely.

The report of the Congressional Committee appointed to investigate the American end of the Panama scandal is a distinct refusal to follow the trail just when it was getting fresh. It runs off for the most part on the blind scent of the squabbles between the Pacific Mail Steamship Company and the Panama Railroad. Very few people care anything about that particular bit of wrangling, but almost everybody would like to know what became of the $4,000,000 spent in this country by the Canal Company. On this point the Committee lamely says:

> "The Committee has been unable thus far to trace directly or indirectly the expenditure of any money whatever in a corrupt way to influence the legislative or executive action of the United States Government. It may be that no investigation, however prolonged, after this lapse of time, could be efficient in making such discovery, even if such corrupt use of money was made, but on this subject the Committee does not desire authoritatively to express the opinion that further investigation would be entirely fruitless."

This is cool enough in face of the fact that Mr. Seligman testified in this city that his books would show to whom the Panama money had been paid. No sooner had the Committee heard this than, though professing a great desire to see those books, they were recalled to Washington by urgent business, and have not since found time to come back again. For less lukewarmness than this in exposing fraud a French Government was overthrown. Are we never to know how much it cost to draw the fangs of the Monroe Doctrine during those critical years, or who were the men superintending the operation? Such dentistry not only comes high, but also requires great skill, and the public is entitled to know who the expert operators were. We hope that Col. Fellows's eagerness to expose corruption will not expire with this Congress, but that he will take up the chase again in the next Congress, and not get frightened on coming too close to the bear.

One of the Hawaiian Commissioners has a long article in the *North American Review* in favor of American annexation, but a busy man can save a great deal of time by reading only one page, as that contains the gist of the whole. Mr. Thurston shows that McKinley was the author of all Hawaii's woes, as, by the free admission of sugar, his tariff bill "cut off all protection at one stroke" "from the $25,000,000 of American capital invested" in the Islands. He goes on:

> "The price of sugar belonging to Americans in Hawaii was reduced in round numbers from $90 to $50 a ton. The same amount of sugar produced in Hawaii that sold for $12,159,048 in 1890, will sell for only $6,963,504 in 1892, a reduction of $5,195,544, or 42 2-3 per cent., and the effect has been to reduce the selling price to, or less than, the cost of production, on all but a few of the most favorably located plantations. With rare exceptions, plantation stock is unsalable. It is inevitable that, if present conditions continue, an immense amount of capital invested, not only in sugar, but in industries subordinate to and dependent thereon, will be lost, and that all values at the Islands will suffer seriously."

The noble stand for free institutions made by the Americans in Hawaii, and their heroic determination to have nothing more to do with a "heathen and sorcerous reaction," are made clearer in the above, by at least 42 2-3 per cent., than in anything else the Hawaiian Commissioners have said or done.

The regulations which Surgeon-General Wyman, acting under the new Quarantine Law, has drawn up for enforcement at foreign ports of departure for this country, are well calculated to stop the advance of cholera or other epidemic disease at such ports. They require, among other things, that cabin passengers and steerage passengers shall be subjected to different treatment, as is only proper and just, since all authorities agree in the opinion that it is almost solely by means of the latter that infectious diseases are brought into the country. Each cabin passenger must produce satisfactory evidence as to his place of abode for four days previous to embarkation, and, if he has been exposed to contagion, will be detained for a term to be fixed by the inspector, and his baggage disinfected. Steerage passengers shipping from an infected port are to be detained five days under medical observation in specially provided quarters; they are to be bathed at the beginning of the five days' term and provided with disinfected clothing. If cholera should break out among them while under observation, none of them will be allowed to embark for the United States until at least seven days have elapsed since the conclusion of the last case. There were journalistic commentators last summer who held that there must be no discrimination made between cabin and steerage passengers; that all must be treated as equally dangerous to the public health, and, if necessary, must be left together indefinitely, or till all had caught the cholera and had died. This barbaric view is not embodied in Surgeon-General Wyman's regulations. Neither is the other view of last summer about the duration of quarantine for cholera-infected ships, for the regulations declare that a "vessel arriving at any United States port with cases of contagion aboard shall be detained for a period ranging from five days to twenty days, the latter only where typhus fever prevails."

The adjournment of the Montana Legislature without the choice of a United States Senator deprives the Democrats, for the next two years at least, of a seat which they ought to have gained; as the Legislature of the State meets biennially. The Governor is a Republican, and has appointed a Republican to fill the place until the next Legislature meets, while the Democratic Governor of Wyoming has appointed a Democrat to represent that State until another Legislature is convened. In Washington the squabbling over the seat among the Republican factions promises to continue until the Legislature adjourns, when a Republican will be appointed by the Governor. Questions will be raised as to the legality of all such appointments by a Governor after the Legislature which ought to elect has failed to do so, and there are precedents on both sides; but it seems probable that the appointees will be admitted. The credentials of John Mar-

tin as the new Senator from Kansas were presented on Saturday, and as they were in due form, he was admitted to be entitled, *prima facie*, to a seat, Mr. Hoar remarking that, if there were any question as to his title upon the merits, the Senate could deal with it afterwards. As nobody else so far presents any claim to the seat, and as the idea of electing any one else seems to have been given up, it appears probable that Mr. Martin will retain the seat.

If the Democratic Senator from Kansas remains, and the three other vacancies are filled by Republicans from Montana and Washington, and one Democrat from Wyoming, the body will contain, during the first half of Mr. Cleveland's Administration, forty-five Democrats, thirty-nine Republicans, and four Populists, counting as the latter Peffer of Kansas, Allen of Nebraska, Stewart of Nevada, and Kyle of South Dakota. This will give the Democrats a clear majority of the eighty-eight members with all the Populists voting against them, so that the Vice-President will not be called upon for his casting vote. On the tariff issue, however, the Populists will vote with the Democrats, and very likely also Pettigrew, the South Dakota Republican who stood out against the McKinley Bill in 1890. In any event the Democrats are sure to control the upper as well as the lower branch of Congress, which was in every way to be desired.

Mr. Gladstone's fine statesmanship was again vindicated in the House of Commons last week when Mr. Meysey-Thompson, a member of the English bimetallic group, moved that the Government should do something to bring about a reassembling of the Brussels Monetary Conference. Mr. Gladstone was quite right in replying that, since the Conference had been called at the instance of the United States, it would be an unprecedented proceeding for England now to take the initiative away from the country that rightfully held it. These words, in the mouth of Lord Salisbury or the late Lord Beaconsfield, might be taken for sarcasm—very much like saying that America is holding a hot poker, and that it would show great want of politeness for any other country to take it out of her hands. Mr. Gladstone, however, is not wont to indulge in sarcasm touching foreign countries, and least of all our country. So we are not at liberty to suppose that he intended anything more than he said. The United States really did take the initiative in this Conference, and is bound by all rules to hold it to the end. It happens that there is absolutely no competition for the honor of first place at the Conference. Our own delegates realize this fact more painfully than any others. All the rest can say, as Mr. Gladstone does, "We have followed the discussions of the Brussels Conference with more or less sympathy, and should like to know what step the United States proposes to take next." What those steps are the United States does not know, and for that reason, probably, will not put England or any other country to the trouble of coming to Brussels again.

Exclusive of Mr. Farmer-Atkinson's burlesque contest at Derby against Sir William Vernon Harcourt's return after the latter's acceptance of the Chancellorship of the Exchequer, fifteen British seats have been contested since Parliament met last August. Of these, seven showed Gladstonian and eight Unionist gains. Looked at in another way, however, the outcome of these struggles has given considerable encouragement to the supporters of the present Ministry. The aggregate poll in these fifteen places gave the Unionists but 3,500 more votes than they received in July, while the Gladstonians added no less than 5,500 to their midsummer strength, and that, too, in spite of the fact that a labor candidate at Halifax drew off 3,000 votes. The extent and the variety of the work outlined in the Queen's speech, and the comparative meagreness of the Government's majority in the Commons, make the net Liberal gain of two seats, counting four on a division, a most desirable addition to the Ministerial strength. In July the fifteen constituencies since contested returned nine Gladstonians and six Unionists. They are now represented by eleven of the former and by only four of the latter. The Opposition captured Huddersfield, where the Government candidate, a local employer of labor, was not popular among the more radical element of the workingmen. On the other hand, at Walsall and in the Hexham Division of Northumberland, for each of which constituencies the anti-home-rule candidate returned in July was unseated by the judges upon petition, because of the illegal practices of which his agent had been guilty, and at Pontefract, vacated by the accession of its Conservative member to a peerage, the Gladstonians carried the day. Moreover, all but one of the places contested were in England, in which the Unionist sentiment is stronger than in either Wales or Scotland.

But little if at all less important than the Ministerial gains in Great Britain is the failure of the Parnellites to capture the seats for either of the divisions of the County Meath vacated upon petition, filed at their instance, because of the spiritual intimidation practised by the Roman Catholic Bishop of the diocese and his priests in connection with the July election. In South Meath, at the general election, the anti-Parnellite candidate was returned by only 83 majority; and while in North Meath the majority was greater, a part of it was probably due to the exceptional popularity of the Nationalist candidate, Michael Davitt, who, under the law, having been unseated, was ineligible to stand for the same constituency again. A Parnellite success in either of these divisions would have put new life and spirit into that faction, and might have tempted its leaders to play tricks with the Home-Rule Bill, which they are now, perhaps, not likely to essay. As we go to press, the gain of a seat by the Liberal-Unionists at Grimsby, in Lincolnshire, England, is announced.

Whatever may be said of the attempts of the English parties to outbid each other for the labor vote, it cannot be denied that the new Department of Labor, organized by Mr. Mundella, the President of the Board of Trade, promises to yield valuable results to the student and the statistician, whether it pleases the workingmen or not. Mr. Giffen, an ideal appointment, is to be the Director-General of the Department, which is to have three divisions, relating to trade, labor, and statistics respectively. The labor division is to be under the charge of Mr. Llewellyn Smith, well known for his work among the poor in London in connection with the University Settlements. Several elaborate investigations are already planned, among them being inquiries respecting the causes of irregular and half-time employment, the economic effects of immigration and the different methods of paying wages, the labor of women and children, etc. Annual reports are to be published, and cannot fail, under such competent direction, to make a distinct addition to our knowledge of the facts.

France has just completed a year's experience of her new high-protection régime, and the results are far from satisfactory to her McKinleys. Even counting in the enormous imports of January a year ago, made in anticipation of the new tariff, the record for the year 1892 shows a falling off of over 7 per cent. in importations. Exports have fallen away but a little, although in manufactured articles there was a loss of $5,000,000. But the greatest evils have been felt in the disarrangement of business and in the disturbances wrought in the public revenue. For some time the Government held out the hope of doing something to relieve the business embarrassments caused by the new tariff, in the way of commercial treaties, but these have come to little, and the distress in some parts of the country has been severe. Marseilles, for example, lost 20 per cent. of its maritime commerce in 1892. The revenue has been millions of francs away from the estimates, and, altogether, the Méline tariff has proved itself about as ingenious an instrument for business upheaval and financial derangement as its fellow, the McKinley Bill. The worst of it is that, with the former as with the latter, its evil effects grow worse with time.

THE CLOSE OF AN EPOCH.

WITH the outgoing of the Harrison Administration closes an epoch in our history which has covered the lifetime of a generation. On the 4th of March, 1861, the Republican party came into full control of both the executive and legislative departments of the Government. From that time until the 4th of March, 1893, there has not been a day on which the Republican party has failed to hold either the Presidency or one or other branch of Congress. The Democrats had majorities in both the Senate and the House from 1879 to 1881, but a Republican was President. A Democrat was President from 1885 to 1889, but the Senate was Republican through his entire term. The election of Cleveland in 1884 was the defeat by Republicans of an unfit Republican candidate for the Presidency, and did not signify the nation's endorsement of the Democratic party. For a third of a century the Republican party has held control of the Government to such an extent that no law could be passed without its favor or repealed without its consent.

On the 4th of March, 1893, the Democratic party came into full control of the Government. Not only has it elected its President by a majority of the electoral votes for which there are scarcely any precedents in our history, but it will control both the House of Representatives and the Senate—although the latter was supposed to be "packed" against it for many years by the admission of new States. Any line of policy upon which the party is united can therefore be carried out; any act of Republican parentage which it wishes to repeal can be wiped out. For the first time since Buchanan's day there is no check to the rule of Democracy.

The extraordinary epoch under review has witnessed the rise, the gradual demoralization, and the fall of a most powerful political organization. The Republican party called itself, with reason, "the party of great moral ideas." It was built up by the moral forces of the nation, and during its early years there was a strong infusion of religious fervor in its support. There was, as Seward pointed out in 1858, "an irrepressible conflict between opposing and enduring forces," and it seemed to many people as clearly a conflict between moral right and wrong as that between Christianity and paganism. There was a spirit of unselfish devotion in the rank and file while the slavery issue was dominant such as has seldom been equalled in party divisions. The cause developed great leaders—men whose services have come to be regarded with respect and admiration by their old opponents; one who has already taken rank beside Washington for his patriotism and statesmanship. Well might Republicans afterwards "point with pride" to the fact that their party had been the party of Abraham Lincoln.

The success of the Republican party sowed the seeds of its overthrow. It at once attracted to itself the ambitious self-seekers, the men who wanted offices rather than the triumph of great principles, those who were "on the make" in politics, and who saw nothing to hope for from the discomfited Democracy. An era of corruption set in which was pictured in vivid terms by George F. Hoar of Massachusetts in his speech on the impeachment of Gen. Belknap, Secretary of War under Grant, May 6, 1876, when he said, among other things:

> "My own public life has been a very brief and insignificant one, extending little beyond the duration of a single term of Senatorial office. But in that brief period I have seen five judges of a high court of the United States driven from office by threats of impeachment for corruption or maladministration. I have seen the Chairman of the Committee on Military Affairs in the House rise in his place and demand the expulsion of four of his associates for making sale of their official privilege of selecting the youths to be educated at our great military school. When the greatest railroad of the world, binding together the continent and uniting the two great seas which wash our shores, was finished, I have seen our national triumph and exultation turned to bitterness and shame by the unanimous reports of three committees of Congress—two of the House and one here—that every step of that mighty enterprise had been taken in fraud. I have heard in highest places the shameless doctrine avowed, by men grown old in public office, that the true way by which power should be gained in the Republic is to bribe the people with the offices created for their service, and the true end for which it should be used when gained is the promotion of selfish ambition and the gratification of personal revenge. I have heard that suspicion haunts the footsteps of the trusted companions of the President."

The seating of Hayes in 1877 gave Republicanism a new lease of the power which it had really forfeited, and the incompetency of Democracy in 1880 enabled it to continue in control. But the moral forces were steadily ebbing, and the material elements as steadily gathering strength, until they compelled the nomination of Blaine in 1884 and lost the party the Presidency. The distrust of the party which had sustained slavery was still so strong, however, that even in 1888 the country was not quite prepared to reëlect Cleveland as a Democratic President. Republicanism was given, "by hook or by crook," another chance for life. The Harrison Administration showed that the party no longer deserved to live. It sought to revive the dying sectional issue by pushing a most ob noxious Force Bill, and it introduced as a new party dogma the doctrine that the Government should be carried on for the benefit of protected interests in the North, as formerly for the benefit of slaveholders at the South. Between them Harrison, McKinley, and Lodge showed the country that the Republican party only cumbered the ground. As soon as the people got a chance, they made short work of it.

When the Senate refused to pass the Force Bill, Senator Hoar remarked, "That means the death of the Republican party." He was right, in the sense that the Republican party as an organization founded on the slavery issue no longer had any excuse for existence. Even Harrison, narrow-minded partisan that he usually is, showed at last a comprehension of the fact when he gave a vacant seat on the Supreme bench to a Southern Democrat who once defended slavery and supported the Confederacy, but who now rejoices that the nation is reunited in freedom. It was an ideal close of a memorable epoch, and a fitting recognition of a new "era of good feeling," out of which are to come new parties—whether or not the old names survive.

PRESIDENT CLEVELAND'S FIRST WORK.

NOTHING can be more important at this juncture than the order in which the new President will take up his various duties. It would seem at first blush, in view of the discussions of the past four years, and especially of the last two years, as if there was nothing about which there could be less doubt than this order. If there be room for any doubt at all, it would seem to be doubt simply about the time at which he would call on Congress to begin the revision of the tariff. That his first concern should be the national credit and currency all admit; but there is some difference of opinion among his supporters on the point whether he should ask Congress to go to work on the tariff now or next autumn. Probably nine-tenths of those who voted for him in preference to any other possible Democratic candidate would, if now consulted, say that these two topics—the rehabilitation of the Treasury and the reform of the tariff—should engage the main part of his attention from March 4 until the wrongs which were condemned by the elections of 1890 and 1892 are as nearly righted as circumstances will allow.

There are many signs, however, already, that the other tenth is by no means of this way of thinking, and there is much reason to fear that during the next three months nearly all the advice the new President will have to listen to will come from this tenth, and from this tenth alone. The probabilities are, judging from the experience of previous Presidents, including Mr. Cleveland himself, that the nine-tenths, as soon as they see him safely installed in the White House, will turn to their ordinary avocations, discharge their minds of politics to a considerable extent, and leave him to wrestle with the other tenth as best he can. This tenth, too, will *not* turn to its ordinary avocations even if it have any. It will stay in and about Washington from March 4 on. Far from ceasing to talk politics, it will talk more politics than ever. Far from leaving the President to his own devices, it will submit for his selection a large assortment of devices of its own. It will throw aside the fear inspired by his warning last fall that he would put a black mark against the name of any one who approached him for office-seeking purposes, for it will say that he was then a private citizen, and had a right to defend himself against such importunity, but that he is now what Burke called

"a public creature" and lawful game. It will say to him that his first business is neither to reform the currency, nor to confirm the public credit, nor to take up the threads of foreign policy, nor to weed the public service of the incompetent and dishonest, but to clear out the Republicans from the non-classified service and put Democrats in their places.

The signs of this are already numerous. A letter from Boston was printed the other day showing that the Democratic "workers" of that State were already preparing a fortnight ago for an anticipated sack of the public offices for their own benefit, and were revealing with a certain cheerfulness the fact that, although they took during the canvass a considerable interest in tariff and other reform, nevertheless, in their opinion, what won the day for Mr. Cleveland was the general expectation that there would be no failure to treat the non-classified service as spoils of victory. We ourselves printed last week a letter from Louisville showing the same attitude on the part of the Democratic politicians of Kentucky. News reaches us, too, from various cities and towns, of the preparation of petitions and "pressure" in favor of a change in the post-offices for the benefit of some local worthies who have never in their life had any connection with any post-office. The following, for instance, comes to us from Chicago:

To the Editor of The Nation:

Sir: A local paper states that a monster petition, with 50,000 signatures, will be forwarded to President-elect Cleveland to have him appoint Frank Lawler Postmaster of Chicago. Among the signers are 5,000 business men, and among these may be found the names of thirty bank presidents, all the packers, seventy-four insurance companies, etc. Mr. Lawler is an ex-saloon-keeper, an ex-Alderman, and (to his credit be it said) an ex-Congressman. Presumably he bases his claims on his active participation in politics. What his particular qualifications for the office he aspires to are I have not been able to find out. In fact, nobody hereabouts seems, on inquiry, to have discovered any. Nor has any one vouchsafed any kind of information as to his business training, which ought to be considered when an office demanding high executive ability is to be bestowed. Would any of the thirty bank presidents who petition for Lawler give him a position of responsibility or trust in his bank? Or do these representative men imagine dabbling in politics renders unnecessary the ordinary preparations for the successful management of business affairs?

If any of the 5,000 business men can convince me that I have taken a hypercritical view of the situation, or misjudged the applicant, let him come forward. In that case I shall at once offer a devout peccavi. F.

The design of all such movements is plain enough: it is to cause President Cleveland and his new Cabinet to occupy themselves, as in 1885, and as President Harrison occupied himself and his Cabinet in 1889, for three months in a general substitution of employees of one party for employees of another party in the public service, not with reference to fitness or unfitness, but with reference to electioneering claims. This spectacle has, we might almost say unluckily, been witnessed only twice since 1860, owing to the steady hold on power given to the Republicans by the war. Had there been a change of parties at every Presidential election since then, a repetition of the practice would before now have been made impossible by an outburst of popular indignation and ridicule. No great people could allow their government to be seven times in thirty years put through the process to which Clarkson subjected this Government, in the eyes of the world, in 1889, with such idiotic gibberings of pride and delight. Had people witnessed it in 1869, 1873, and 1877, it would not have been repeated later.

It cannot be repeated now, for a variety of reasons. The first and foremost is that Mr. Cleveland is pledged to treat public offices, as far as human diligence will permit, as public trusts, and therefore not rightfully awardable to any but the reasonably fit. In fact, the restoration of fitness to its old place in the American civil service, as a principle of selection, is part, and a large part, of Mr. Cleveland's mission. This applies to the non-classified as well as the classified civil service. The law of the land does not lay on the appointing officer the same compulsion with regard to the former as with regard to the latter, but the moral law does. It is a wrong to give any man an office for anybody's good but for the good of the community, although the statute may not have forbidden it. Even Dr. Funk would probably admit this. To restore the public service to the people is, in fact, a part, and a large part, of the mission of the new Democratic party to-day. Another and hardly less powerful reason is that the order of importance of public business is settled, and well settled, in Mr. Cleveland's mind. The distribution of post-offices does not stand first, second, or third on the list. To give up the first months of his Administration to it, or allow his Cabinet to do so, would be very like the course of a newly elected bank president who should insist on taking the first quarter of his term to close out a small thread-and-needle business before entering on his real duties. Finally, Mr. Cleveland has, of course, taken note of the fact that, almost without exception, those who will urge him to occupy himself in making "sweeps" are the very men who thought his nomination unwise and his election impossible, and looked on the master-strokes of his career as the acts of a lunatic. All their advice and all their demands, therefore, touching his exercise of the appointing power he may well receive with distrust or alarm. The more they insist on a thing as a bit of political shrewdness, the better reason will he have for putting it far from him.

NAVAL POLITICS.

Capt. Mahan is one of the most distinguished officers of the United States Navy, and perhaps the most distinguished writer on naval warfare in existence. His competence and authority are, in truth, as fully acknowledged in Europe as here. What he says in his recent article in the *Forum*, therefore, on any matter within his special field, deserves the highest respect. When he points out the value which Hawaii would have to us as a coaling-station, in case we were a great naval Power at war with another great naval Power in the Pacific Ocean, and the annoyance which our possession of it would be, under such circumstances, to our rival or enemy, he speaks as a master. But his whole argument or dictum is based on the assumption that we are on the way to have a navy as large and powerful as the navies of France and England put together. He does not say this in express terms, but he *must* mean it. It is on this theory that England to-day establishes coaling-stations all over the world and guards the Suez Canal. The rule which regulates the size of the British Navy is that it must be as large as the combined navies of any other two naval Powers. It may not always attain this standard, but this is what the British Admiralty aims at, and it is on this assumption that the House of Commons votes the naval estimates. This makes the establishment of coaling-stations at remote points for military purposes perfectly reasonable. Naval coaling-stations are not places which are respected by an enemy as private property. They would, at once, on the outbreak of war, form the chief objects of attack. The more valuable they are to the owners, the more important it is to the enemy to destroy them or cut off communication with them. Nor is it sufficient that they should be so fortified as to resist a siege either by sea or land. To be of any use a coaling-station must be as accessible in war as in peace—that is, be so situated that it can put coal on board a cruiser without danger or difficulty. It is not an ornament, or a luxury, or a sign of national greatness. It is simply a place from which fuel for boiler fires can be safely and expeditiously obtained during the progress of hostilities. Therefore, it is plain to be seen that it is of no use for military purposes to any Power which does not command the surrounding seas, and cannot get coal from it easily, by driving and keeping away any enemy's vessels which seek to interfere with the operation. Coaling-stations are valuable to Great Britain because she maintains a navy on such a scale as to enable her not only to draw coal from them when she wants it, but to chase away any hostile vessels which should either try to coal there themselves or interfere with her coaling.

Interoceanic canals running through foreign territory come under the same rule. They can be of no use in time of war to any Power which cannot hold the seas at each end of them. Great Britain would attach no importance to the control of the Suez Canal in time of peace if she did not feel assured that she could in time of war keep the Mediterranean and Red Sea ends of it clear of all enemies who

might impede approach to it. So will it be with any canal which may eventually be made across the Isthmus of Panama, and with the canal now nearly completed across the Isthmus of Corinth. Any Power that wishes to enjoy the benefits of any one of them as a short cut in time of war, must have a fleet big enough to keep its enemies away from the entrance and exit. We are not now talking strategy or any abstruse science, but simply common sense. One has only to know what a coaling-station is, and what an inter-oceanic canal is, to see that for the full enjoyment of either of them a navy of the first rank is absolutely necessary. In other words, to make Hawaii of use to us as a coaling-station in a war with Great Britain, for instance—she being the Power which our naval men almost always have in mind when they are making their calculations—we must have a navy large enough not only to protect our coasting trade and our cities on the Atlantic and Pacific from the assaults of British cruisers, but to make British cruisers afraid to go near the Sandwich Islands. It will not do simply to fight them stoutly when they appear there, because coaling is an operation which cannot be carried on under fire. It needs peace and quiet and security; and enemies who are desirous of interfering with it have to be kept out of cannon shot by the simple unadulterated fear of being sunk or captured if they come too close. The more valuable Honolulu will be to us, the more desirous the British will be to deprive us of the advantages of it, and the larger the force they will detach for that purpose; and as it is 2,000 miles distant, and as cable communication with it would be promptly cut when war broke out, we should, if it be as precious as Capt. Mahan says it is, have to keep on the spot a fleet which we could not spare unless we had a navy at least as large as that of Great Britain.

We should, therefore, in reading Capt. Mahan's account of the importance of Hawaii from a military point of view, feel assured that he meant us to have a very large navy, even if he did not also advocate a close imitation of England's general foreign policy during the past hundred and fifty years. He asks us, in terms, to follow England's example by such annexations of foreign territory and foreign populations as seem likely to promote certain undefined things which he calls national "influence" and national greatness, by securing naval predominance on the Pacific, or "the control of the Pacific," as he calls it. He declines to say that such a policy as he advocates of "securing outlying dependencies" would "need a navy equal to the largest now existing." But the only reason which he gives for refusing this conclusion is, that "a nation as far removed as our own from the bases of foreign naval strength may reasonably reckon upon the qualification that distance — not to speak of complex European interests close at hand—impresses upon the exertion of naval strength." That is, reduced to simple English, we need not have so large a navy as England, in order to secure the control of the Pacific, because the Pacific is so far away from England. But this is a very curious observation for a naval writer to make. A naval war is never confined to one ocean or sea. When carried on between two first-class Powers, it vexes all the salt waters of the world. England would defend the Pacific on our Atlantic coast. She would menace Honolulu through Boston, New York, Philadelphia, Baltimore, and, in fact, along our whole line of coast from Maine to Texas. The war would rage wherever our flag waved or our "influence" extended. Our navy, in order to give our coast and our commerce reasonable security and save our dignity, would have to be at least as big as hers. A contest for maritime supremacy, such as some of our naval officers wish us to prepare for, would be necessarily a war of giants, a fight *à outrance*. It could not be a local war, a war with limited liability. Therefore we are warranted in concluding that, in spite of his reluctance to confess it, Capt. Mahan and a great many of his comrades do desire, and mean to get if they can, the largest and most powerful navy ever seen, and they want it not for reviews or parades, but to fight somebody. What effect this policy of general annexation, and general readiness to subjugate and dominate or control outside this continent would have on our domestic institutions, Captain Mahan does not consider at all; and yet this is to every American the one important point in his scheme. We propose hereafter to call his attention to it.

THE READING RECEIVERSHIP.

LATER information about the Reading receivership represents the causes as more involved than they were at first supposed to be. The old idea of a receivership still lingers in the public mind—that an action for that end should be begun before a court only in case of a total failure to meet obligations, and then only as a means of liquidating the affairs of a corporation. Hence, it used to be thought that a receivership was to be entered upon only as a last resort and as the beginning of liquidation or complete reorganization.

Within the last decade or so we have passed beyond this original theory. It was the late Mr. Jay Gould, we believe, who first developed the idea of a railway receivership until it became merely one of a series of strategic moves for the control of a great corporation or for some special financial result. In 1884 the Wabash Company was thrown into the hands of a receiver on its own motion. A few years afterwards, in a subsequent suit, Judge Treat, who granted the original petition, stated that he had had doubts about the legality of the first proceeding, but that he was afterwards convinced of the correctness of the principle. The Judge also stated that the Supreme Court of the United States had affirmed the same doctrine of the right of a corporation to ask for a receivership, or to confess judgment in order that a receiver might be appointed on the application of other parties, if such appointment was shown to be for the interest of the company. Since that date there have been several instances of such strategic receiverships, and, as might have been expected, these have been successively appointed on contentions which have appeared of less and less real moment. Last July a receiver was asked for the East Tennessee Railway on the ground that it owed one of its chief stockholders a small sum of money, and that, though it had suffered no present harm, yet, if the company was not thus protected, nobody knew what might happen to it because of other Richmond Terminal complications. The company consented to the receivership as a commercial advantage to itself and to the party then in power. We need not censure the judge in this case, because, under the various precedents, he had not much room for hesitancy.

Now comes the Reading affair as a climax to the movement which is making of receiverships only a move in a game for important stakes. A number of Philadelphia men, for ambitious or speculative purposes, form a combination of certain coal-carrying roads. These gentlemen think they see their opportunity for a very big scheme. Favored by an exceptional winter and a large demand for coal at prices one dollar or more higher than former quotations, they decline to spend their large earnings for needed cars and engines and for property improvements which would enable the road to carry this traffic cheaply and easily, but instead use the revenues and credit of the company in pursuit of a New England will-of-the-wisp, and in purchase of terminals and property whose usefulness is at least in the future, but whose capital requirements are great. They officially declare all the contingent interest earned and proceed to borrow that money. Under this spreading out, and because of slipshod management in the financial and operating departments, it comes about that the Reading is straitened for ready cash. The Philadelphia set find themselves in difficulties. Foreseeing the result, they precipitate matters by themselves hastening the inevitable. A friend, whose third-preference interest in a few bonds has not been paid, petitions for a receiver. The smallness of his claim would have caused his statement to be unnoticed were it not for the fact that the Reading Company by its officers consents to the petition. Thus both parties before the court agree in their views and in their choice of receivers, whereupon the Judge appoints the individuals designated, the Presidents of the Reading and the Lehigh Valley,

with a Pennsylvania judge to sweeten the dose.

This brief sketch of Reading's recent history shows that the financial losses incurred through the downfall have not really caused a change of control. By the modern theory of receiverships, the old rulers are retained to carry on their plans. Thus the fiasco does not involve any of the questions which some of the newspapers have been discussing, such as the hostility of the general public toward a combination which has raised the price of coal; for the price of anthracite is not likely to be lower because of it. It is the stock and bondholders who are injured on account of the unsound management and speculative purposes of Mr. McLeod and his friends. The precedent, first set in the Wabash cases, of a company's managers planning a receivership to perpetuate their own control, is one fraught with power for good or ill to our corporations. We may assume that in certain cases the effects are good, but it requires no prophet to foresee that we are putting a dangerous weapon against investors and stockholders in the hands of an unscrupulous railway officer. A trumped-up or insignificant debt and a consenting president or vice-president (*vide* the Richmond and Danville case) may throw any corporation into a receiver's hands. In such a game, played for high stakes, the stock and bondholders must usually stand by and see their investments dissipated during the struggle. Fortunately the great majority of our railways are in no danger, but the speculative manager has a new power and the holder of his securities must face a new peril. It would help the matter if we had a statute delaying the appointment of a particular person as receiver for thirty days, meanwhile keeping the *status quo*.

THE ITALIAN BANK SCANDAL.

ITALY, February 18, 1893.

AFTER the arrest of Cuciniello, the Roman director of the branch Bank of Naples; of Tanlongo, the director, and of Cesare Lazzaroni, the cashier of the Roman Bank; then of Michele Lazzaroni, councillor of the same, nephew of Cesare, the judicial authorities possessed themselves of all the public and private papers belonging to the accused, and on the perusal of these it became evident that the frauds were not confined to mere bank officials, and that the receivers were worse than the thieves. The permanent chief of the Department of Agriculture and Commerce, Commendatore Monzilli, was arrested on the charge "of violating three articles of the Penal Code for having between February, 1888, and March, 1891, abetted the crimes of peculation and corruption committed by Tanlongo and Lazzaroni." Several letters of his to Tanlongo were found. In one of them he warns him of an approaching inspection of the banks—he himself being responsible for these inspections in ordinary times—and offers to feign illness if the director should wish the inspection delayed. Another employee of the department is also arrested, and the office, with all the papers, closed and sealed. But the worst feature of the case is the alleged reception by Deputy De Zerbi of sums of money amounting to nearly half a million of lire in order to secure the passage of the bill for altering the law on the *riscontrato*, so especially desired by the director of the Roman Bank. On two occasions De Zerbi was Secretary of the Commission charged with the study of new regulations of the banks of issue.

As in Italy Senators and Deputies cannot be arrested without the consent of the respective Chambers, the Minister of Justice and Pardon made the formal demand, not for arrest, but for power to proceed against Rocco De Zerbi for crimes detailed in the Penal Code. The demand was discussed in the House soberly and sadly, and the permission granted; but De Zerbi, on account of illness, remains in his own house. As the papers justifying the demand were sent in, the Deputies got a sight of them, and, of course, the details were given to the press. From the letters found it is feared that De Zerbi not only received sums for himself, but distributed a portion of them to other members of the Commission. The law passed was precisely what the guilty bankers desired: it allowed the Government to "mitigate" the severity of the *riscontrato*, and later the Ministers Rudini and Luzzatti abolished it altogether.

Senator Boccardo, in an exhaustive article in the *Economist*, shows the extreme gravity of this abolition. When there exist in a country various banks of issue, each is, of course, obliged to receive the notes of the others; but this implies the necessity of a periodical and frequent settlement. There is no regular clearing-house in Italy. By the law of 1874 it was ordained that each bank should take back all the notes which another bank held, and restore those belonging to each, and pay the difference in case of excess. Say that the Roman bank held 10,000 notes of the National and the National held 11,000 of the Roman, the latter would have to refund the odd thousand in gold. Great opposition to this clearance had been manifested by several of the minor banks, but never had they succeeded in getting the regulation abolished. But the decree of August, 1891, did away with this safeguard, substituting the rule that, after the exchange of notes by the respective banks was effected, the bank holding a surplus of the notes of another bank might spend them in its own operations. This rule, writes Senator Boccardo, who is a recognized authority on such questions, "has wrought such serious modifications and has perturbed so profoundly the Italian banking system as to prepare the way for the disorders and scandals which now occupy the tribunals and the Parliament."

It is only fair to add that the partisans of Rudini and Luzzatti affirm that *all* the directors of the banks were summoned, and that all agreed in the desire to have the enforced settlement in cash abolished, and add that Boccardo is prejudiced by his mania for a single bank. Be that as it may, neither Luzzatti nor Rudini, in sending their bill to the Commission, ever for a moment dreamed that one or more of the Commissioners was in the pay of the Roman Bank. Should it be proved that only Rocco De Zerbi is guilty, the country will breathe more freely, since, while his versatile talent has secured him a tolerable fame in the newspaper world, he has never been esteemed by any party.

Coming to the rumors founded on what is said to be Tanlongo's defence, it is affirmed that he has deposed to having given money to successive Presidents of the Cabinet for the elections; and a letter went the round of the papers, purporting to be written by Depretis, asking, on his own responsibility, for 500,000 lire, "to be spent for political purposes," and promising to repay it within a given period. That "fatal man," as Bertani dubbed him, was personally the pink of honesty, but probably no Minister ever spent more money in order to secure the election of members after his own heart than Agostino Depretis, the father of "Transformation." Tanlongo's assertion, however, deeply offended Rudini, who publicly demanded a Parliamentary inquiry. Crispi, who was confined to his bed at the time, curtly denied by letter the accusation as far as he was concerned.

The other rumors attribute to an august personage the repayment of sums to the Bank to save the credit of certain other personages; and, now that the inspection of all the banks is to be completed by the end of the month, patriots and lovers of Italy can only pray with bated breath that the truth, the whole truth, and nothing but the truth shall be told to the nation. But before the legal trial ends, many things may happen to cast the banking scandals into oblivion. The Ministry, though supported by a large majority, is losing ground daily. Crispi, who, whether Deputy or Minister, has devoted his life to political questions in the main and to social questions in second line, is overwhelmed with grief and horror at these revelations. He admits frankly that, during his administration, he was aware of disorder in the Roman Bank—namely, that its paper circulation exceeded the legal limit in relation to its metallic reserve; that between the optimism of the Minister of Agriculture (pure, patriotic, but easily deceived Miceli, who trusted entirely to the ability of the chief of the department, Monzilli, now in prison), and the pessimism of Giolitti, Minister of the Treasury, he believed that they could restore order to the Roman Bank without disturbing public credit while he was preparing his bill for the "single bank of Italy," which was to purify and consolidate the whole banking system of the country; but the overthrow of his Government in the following January put an end to his hopes and plans. The question of the banks has now been raised in the Senate. Signor Giolitti pledges the Government to publish the report of the Commission on *all* the banks as soon as the inspection is terminated.

Meanwhile, the increase of crime is apparent in all directions. Popular banks find their cash-boxes emptied; the treasury of the provincial council of Caltanissetta has been despoiled of 375,000 lire. The bitter winter, increasing permanent misery, has aroused the long-suffering peasants. The old question of the lands assigned to the communes when the feudal system was abolished, and which ought to have been divided among the peasants in compensation of their old right to feed their herds and cut wood, has never been settled; hence the peasants, seeing that the administrators of the commune and private individuals were annexing these lands, have in several places tried to seize on them by force. At Caltavuturo, in the province of Palermo, they were shot down by the military—eight killed and ten wounded. At Caltagirone a similar catastrophe was averted by the humanity of the captain in command. Duels are of every-day occurrence, and only yesterday, at Catania and at Palermo, two cases of fratricide are recorded. The last day of carnival brought its usual number of murders and woundings in Sardinia and Ferrara, and as yet the murderers of Comm. Notarbartolo are undiscovered.

Notarbartolo was one of those splendid Sicilian characters whose numbers give hope for the future of the nation. He was Mayor of Palermo in 1873, a rigid administrator of public moneys, though he committed one thoroughly Italian error, *i. e.*, he sanctioned the erection of the gigantic Teatro Massimo, which has cost five, and will cost another five millions before it can be completed, while Palermo was (and still is) unsupplied with pure water. In 1875, when the Sicilian Bank was found, on inspection, to be in disorder through loans to a navigation society and a gigantic speculator who failed, Notarbartolo was nominated director, and his direction lasted till 1889, when he resigned, owing to some question with the Department of Agriculture. Rigid, inflexible, bent only on the interests of the Bank and the public, he condoned no dereliction from duty, respected no names, expelled, suspended, fined the least offences against the rules laid down, and was in consequence respected and admired by the honest citizens who form the majority, feared and hated by the Camorra; he was also the administrator of his own extensive estates and of those of the Prince of St. Elia. In 1882, he was sequestrated by a band of brigands; his family paid 51,000 lire ransom, but he, on being set at liberty, would not rest till he had brought his captors to justice, and he succeeded. The trial, which took place three years later, lasted for weeks. One brigand, Matteo Barone, was condemned to the galleys for life; others to three, six, eight years of hard labor. All save Barone have since been "restored to society." Towards the end of January the Commendatore went to visit his estates, and was to have returned home on the 1st of February, and did indeed take train at Termini, entering a first-class carriage, while his servant and a cooper who accompanied him travelled in a third-class at the other end of the train. In that train were forty carbineers escorting delinquents to the assizes now sitting at Palermo. On arriving at Palermo, where the wife and son were awaiting him, the servant was surprised not to find the "master" in the carriage. Later, the body was found with eleven knife wounds flung out of the train near Atta Villa. Such are the hideous facts. The suspicion of a vendetta connected with the Bank of Sicily is excluded. That bank is "in order" as far as the metallic reserve and notes issued are concerned, though there seem to be some technical faults.

Taken altogether, I look upon this as the gloomiest period of Italian history since the "Borgian times" of the tobacco scandals in 1868–9. J. W. M.

PINGAUD'S D'ANTRAIGUES.

PARIS, February 16, 1893.

SECRET agents are the natural weeds of the political soil during revolutionary periods. They generally disappear, as they have lived, in obscurity, but it is hardly to them that you would apply the famous verse:

"Full many a flower is born to blush unseen."

Who remembers, even after so short a time, the secret agent Régnier, who entered into communication with Bazaine during the siege of Metz, and who worked so powerfully on his mind? We hear every day just now the names of men who *perhaps* were secret agents of foreign Powers; but these names will be soon forgotten, and deservedly forgotten, though they may have been the instruments, conscious or unconscious, of very important designs. Who knows, at the present hour, the names of the men who were the secret agents of Fouché, of Talleyrand, of Napoleon? M. Léonce Pingaud has tried to draw from total oblivion the name of one of these secret agents of the revolutionary period, the Comte d'Antraigues, and his book has something of the interest of a novel. In his introduction he tells us that on the eve of the convocation of the States-General there appeared a pamphlet which made almost as much noise as the pamphlet of Sieyès on the Tiers-État; it was signed D. A. N. T. R. A. I. G. U. E. S. When the Directory wished to justify the *coup d'état* of the 18th Fructidor, it published, as a proof of a royalist conspiracy, a 'Pièce trouvée à Venise dans le Portefeuille de D'Antraigues.' In 1803 the same name was used when France and Russia became hostile to each other.

Who was this important personage? He was born of a good family in the province of Vivarais on the 25th of December, 1753. He served, as all gentlemen did, in the army, but only for a short time; he was not admitted, as his parchments were found insufficient, into the "Carrosses du Roi" at Versailles, and made himself a member of the already all-powerful republic of letters. During the reign of Louis XVI., we find him spending his life in journeys, visiting Voltaire at Ferney, acquainted with Rousseau, adopting the politics of the "Contrat Social," satisfied with the religion of the Savoyard Vicar and the morals of the "Nouvelle Héloïse." He visits, in 1778, Constantinople, Egypt, Syria, the Principalities, Poland, in company with a Princess Alexandrine Ghika, who left him abruptly in Poland. On his return to France, we see him living a life of pleasure, mixing in the society of the philosophers, and having an open liaison with Saint-Huberty, the first singer of the Opéra. Born in Strasbourg, the daughter of strolling musicians, Marie-Antoinette Clavet married an adventurer called Saint-Huberty. She had become a singer, and sang in all the operas of Gluck. (Her Life has been written by the Goncourts.) Her relations with D'Antraigues began in 1733; she had a son by him, who died. She seems to have always been much attached to him, though she did not exact from him a conjugal fidelity; he left her an equal liberty. When he stayed at his château in Vivarais, he had a rustic Saint-Huberty as a companion, a peasant girl, whom he had had half educated and who remained by him as a housekeeper.

Before the Revolution, D'Antraigues wrote an apologia of Necker, a memoir on the States-General, and a memoir on the States of Languedoc. When the three orders of Vivarais were assembled, he wrote the *cahier* of the nobility. He was elected a Deputy to the States-General; he had obtained a sort of popularity by his liberal views, but, in the Constituent Assembly, we find him among the defenders of the old order of things.

In a 'Gallery of the States-General' which gave portraits of all the members, he is described under the name of Antenor. "Antenor was born a courtier, and believes himself a republican. He is not yet very sure himself of what he thinks." D'Antraigues stood firmly for the royal right of veto. He entered into clandestine communications with the court, and he left after a while for Lausanne, where he remained, apparently for his health, till the end of 1790. He had left France with a few hundred louis; he received no more money from his tenants in Vivarais. Saint-Huberty joined him in Lausanne. At the end of 1790 they went together to Mendrisio, and were married on the 29th of December in the church of the village of Castello San Pietro. This union was kept secret, as D'Antraigues wished to spare the feelings of his mother, who was still alive.

D'Antraigues became one of the pamphleteers who wrote against the French Revolution, and one of the numerous agents of the Princes in their negotiations with foreign Powers. His pamphlets are now forgotten: who cares to read 'Point d'accommodement' or the 'Adresse à la noblesse de France'? D'Antraigues spent his talent in anonymous publications, in articles without echo, in memoirs which were hardly read by those to whom they were addressed. He travelled between Piedmont, Milan, and Switzerland. His services were received at first with some diffidence at Coblentz. He understood well the *émigrés*. "They intrigue at Coblentz as they intrigued at Versailles; they want, if they do anything, to seem to do more than they have done. If they do nothing, they agitate so as to seem to be acting. They give themselves importance, they have secrets, they imagine secrets, they confide them. The most mediocre are the most diligent. . . . In short, they are a true pest to the party, these agitators who swim in a vacuum." D'Antraigues had already become the model of those whom he so well described.

In 1793, D'Antraigues contrived to enter officially the ranks of the Spanish Legation in Venice; he received letters of Spanish naturalization; he became the representative of Charles IV. near Monsieur; he gave himself out in Venice as representing "the King of France." He concentrated the correspondence of the royalist agents in Piedmont, in Tuscany, in the two Sicilies; he became the recipient of the correspondence of the Court of Madrid and the Spanish agents in Paris, when war had hermetically shut the Pyrenees. He entered into relations with the representatives of Russia in Genoa and in Naples.

Venice had become a second Coblentz: eight hundred Frenchmen lived in it and filled every day the Piazza of Saint Mark. D'Antraigues had brought his wife with him; his mother was in Rome under the protection of the Spanish Embassy; they were in constant correspondence, she being much attached to him. "God only knows all you have done against me since you attained the age of reason, all I have done and suffered for you since your birth; but I forgive you with all my heart." D'Antraigues quarrelled with his subordinates and with his masters; he was vain, jealous, indiscreet, paradoxical; he declared that the greatest crime of the Revolution had not been committed on the 21st of January in the Place Louis XV., where Louis XVI. was beheaded, but in Versailles on the 23d of June, 1789, at the Jeu de Paume. He did not inspire the Royalists with much confidence, especially the moderate Royalists like Mallet-Dupan, Montlosier, Malouet, Lally-Tollendal.

When the French entered Venice, D'Antraigues left with the Russian Minister, but he was detained at Trieste by Bernardotte, and sent to Venice as a prisoner and confined. His papers had been seized, and among them was found an account, written by himself, of conversations which he had had with a certain Montgaillard, a royalist agent, who was at the same time a spy of the French Republic. Bonaparte was much interested in this account, and would see D'Antraigues in person at his headquarters at Montebello. The interview lasted several hours. Mme. de Saint-Huberty paid visits to Mme. Bonaparte at Milan, and, thanks, probably, to her intervention, Bonaparte, having no more need of D'Antraigues, allowed him to

leave his prison and to remain at Milan as prisoner on parole. D'Antraigues left Milan disguised as a priest. He heard after his escape the news of the *coup d'état* of the 18th Fructidor, made against the royalists; the documents found in his portfolio had been published in the *Moniteur*, and given as a proof of a great royalist plot and as a justification of the *coup d'état*. We cannot much wonder that D'Antraigues was not well received by Louis XVIII. and his entourage. He fell into a half-disgrace, remained some time in Vienna, in Gratz: all the *émigrés* looked upon him as a traitor.

He became a sort of international agent; we see him in relation with Thugut, with Razumovski; at Dresden with Czartoryski and Cobenzl. We find in M. Pingaud's book a curious conversation which he had in 1802 with Champagny, who represented the Cabinet of the Tuileries after the peace of Lunéville. On account of their respective situations they met each other at the house of a friend, an old French priest. Champagny prophesied to D'Antraigues that Bonaparte would soon found a monarchy—for himself, not for his family—and that his monarchy would be absolute. "He has a decided character and he dares—great qualities for old Europe and its poor kings. Bonaparte has rendered great services. He will tame this nation, which is mad and always ready to become atrocious, by making war outside with his armies, inside with his judges and his prisons. Otherwise, all is lost." In this conversation D'Antraigues spoke very strongly against Louis XVIII., saying that if Louis XVIII. were to become king, he would never serve him nor reënter his country. He resented deeply the treatment he had received after his captivity in Italy. Champagny reassured him; he told him that those who thought of a Bourbon were balancing between only two persons, the Duc d'Enghien and the Duc d'Orléans.

D'Antraigues remained a long time at Dresden, and became there a literary as much as a political correspondent. He wrote memoirs on public education, he took part in the movement in Prussia which followed the defeat at Jena. The peace of Tilsit was the ruin of all his hopes; he had lost successively all the pensions which he received, and resolved to go to England and make an appeal to the French princes. He had hardly arrived when he saw the Comte d'Artois and the Duc d'Orléans. He became a correspondent of Canning's on French affairs, and entered into relations with Dumouriez and Puisaye, who both lived in London. He was at drawn daggers with D'Avaray, the favorite of Louis XVIII., and with the little court at Hartwell, and lived in great isolation. His mother was dead; his wife could not resign herself to live in obscurity in a small house in Barnes. He had no resources but the pension which the English Government allowed him. His eyes were never taken off the various parts of the great chess-board of Europe; he foresaw early the rupture between Russia and France. One day, he was on the point of leaving for London when an Italian servant, Lorenzo, whom he had dismissed, entered his house, fired at him with a pistol, and threw himself with a poniard on Mme. d'Antraigues and killed her. D'Antraigues himself died a few moments afterwards. What was the cause of this double crime? Was it purely domestic, or was Lorenzo the instrument of a political vengeance? The assassin committed suicide, and the secret of his motives has never been unravelled. D'Antraigues was regretted by nobody; with fine and versatile intelligence, he had terrible defects. The best that can be said of him is that he was the victim of the disorder which revolutions create in the moral world; he led the life of an adventurer, of a political *condottiere*. He was a living proof of the danger of emigration: out of his own country, among the enemies of his country, he lost the true measure of political right and wrong, and he was despised even by those for whom he had sacrificed his life.

Correspondence.

LEGISLATIVE ANARCHY.

To the Editor of The Nation:

Sir: The close of the session of Congress, with the Silver Bill still unrepealed, teaches at least one lesson, that this is a government not by and for the people, but by and for the lobby. Whether a Democratic Congress will reinforce that lesson remains to be seen, but the risk is sufficient to make an extra session of doubtful promise. But while waiting seems to be the only attitude towards national affairs, there is a plenty of work to be done on State lines. The condition of the New Jersey Legislature, which, after passing laws condemned as an outrage upon public morality, adjourns to escape the wrath of an indignant mass-meeting, may seem to be an extreme case, but it is only in degree worse than those of the other States. The Legislature of Massachusetts is probably as good as any, but a very slight study of its proceedings reveals things which only the most determined optimist as to popular government can contemplate without grave misgivings.

One thing seems to be proved—that it is perfectly useless to urge the people to elect good men, or to scold them for not doing it. Every year shows more and more that they do not and will not do it. But that which, though equally true, is not so obvious, is that they *cannot* do it. The present system of State government drives away good men and attracts bad men as effectually as the modern centrifugal process expels cream from milk. Mr. Hewitt is reported as telling an audience at the City Club that they were a disorganized mob, contending with an organized, drilled and disciplined faction (meaning Tammany); and that single sentence is worth all the essays upon politics which have been written in the last twenty-five years. But how can a whole people arrive at organization? The first thing necessary is a leader—not, be it observed, leaders, because the multiplication destroys that personality which is the only effectual instrument for moving masses of men and giving life in their eyes to a measure or a principle. Witness how completely the Irish Home-Rule Bill, though others have had a hand in its preparation, is identified with Mr. Gladstone and depends upon himself or his successor for its passage. Now there can be but one possible leader for the people of a State, and that is the Governor, elected by the whole State, and towards whom all eyes are, or are ready to be, turned. The first step is to convert the purely nominal and illusory power of the Governor as it is now into one that is positive and practical. That is the meaning of the conflict so nobly begun in Massachusetts by Gov. Russell, and which, unless it is allowed to drop out of sight, will place the reputation of the State on a higher plane than it has ever yet occupied throughout the Union. It is true that Gov. Russell has thus far confined himself to messages and recommendations to the Legislature, which is very much like pleading with your adversary in a cause to give a decision in your favor. But it is to be hoped that he will have the insight and the courage to carry his case to the people, and, placing the facts before them, ask them to decide between him and the Legislature.

It may be asked, How will the increase of the Governor's power achieve the organization of the people? By bringing order, publicity, and responsibility into the conduct of public business. Now, the Legislature is a mob of equal units, in which what business is taken up and how it is treated is about equally a matter of chance and intrigue. Party combinations are the only way of getting anything done, and these combinations extend to the elections, involving methods which decent men will not submit to, so that the people are offered in the candidates only a choice between two evils, of which it is hard to tell which is the least. If there were an executive guide and leader for the conduct of legislation, subject to the public criticism of both sides and of independent members, the people would soon begin to recognize individuals, and to band together for the election of the good and the rejection of the bad.

The arguments are precisely the same as for the admission of the Cabinet officers to Congress, with as much more of force as State affairs are more important than the Federal. They may be summed up in the language of the Englishman, Walter Bagehot—deprecating only the limitation of place—that "if the New England States as a separate nation had cabinet government, they would be as renowned in the world for political sagacity as they now are for diffused happiness." G. B.

Boston, March 4, 1893.

MR. WATERS'S NEW CLUES.

To the Editor of The Nation:

Sir: Mr. Henry F. Waters writes that he has recently made two very interesting genealogical discoveries in Northampton, England. The first is the indenture, 12th Elizabeth, of Chadde Browne, the son of Arthur Browne of Melchbourne, County Bedford, yeoman, to Leonard Omston of Northampton, currier. This year is A. D. 1570, and the apprentice was doubtless fourteen years old. It is well known that a Chad Browne came to Providence in 1638, in the ship *Martin*, when his oldest son, John, was eight years old; that he, his son, and grandson were successively elders in the Baptist Church, and that the liberality of his descendants is commemorated in Brown University. It is hardly probable that the apprentice, Chad, was the emigrant, as he would have been over seventy when his son was born. Coincidence of names makes it highly probable that the apprentice was father of the emigrant.

As the general work of Mr. Waters for the *Register* does not allow of special searches, will not some of the graduates of Brown contribute the necessary funds to investigate this clue, so that Mr. Waters may do for their founder a like work to what he has done for Harvard?

The second discovery was the admission to freedom in Northampton, in 1618 or 1619, of Giles Corey, maltster. Here we seem to be on the track of the father of that stout-hearted victim of the Salem witchcraft, Giles, who was born about 1616.—Yours truly,

W. H. W.

THE CLASSICS AS AIDS TO GOOD ENGLISH.

To the Editor of The Nation:

Sir: A good deal of discussion has been carried on in the public prints of late over preparation in English. Attention has also been called to the specially bad English of translations from the classics in entrance examinations. In making out an examination paper a few days ago I was surprised to find the following sentences in the 'Primer of Roman Antiquities,' compiled by so capable a scholar as Mr. Wilkins: "But the most essential part of the character, the very backbone of the whole, was their [*sic*] steadfast and sober trustworthiness" (p. 12). "It was only when they had made a treaty of peace with a neighbouring nation that they felt to have [*sic*] any duty towards them" (p. 13). It were perhaps hypercritical to object to "them." "There is also another point on which the Romans differed widely from the Greeks; that is, in their [*sic*] love for discussions" (p. 14).

Perhaps written translations from the classics and modern languages should be required of college students, and it might be better for the correction to proceed from the teachers of English and be directed to accuracy in the use of the mother tongue, rather than to accuracy of translation. Such an exereise would be more difficult than original composition in English, and so more improving. Under present conditions the utility of the classics for cultivating the power of expression in English seems to me questionable. Perhaps it is only with us in the South that boys show a wilful inclination to employ the English infinitive to represent the Latin in indirect discourse.

Respectfully, Edwin W. Fay.

Austin, Texas, February 24, 1893.

BOOKS ON SHELVES.

To the Editor of The Nation:

Sir: The custom of shelving books with their backs to the wall must have been within men's memories at the beginning of the seventeenth century. At any rate, this is a natural inference from the engraved title-page of 'The Workes of Seneca Newly Inlarged and Corrected, by Thomas Lodge,' folio, London, 1620. The artist, in his attempt to illustrate the life of the philosopher, represents him in one scene as reclining on a pallet of straw with a shelf behind him containing six or eight bulky quartos with their edges towards the beholder, one of them firmly held together by clasps, and another with two pairs of thongs hanging loose from the front edges of the cover. J. E. G.

Burlington, Vt., March 2, 1893.

TINTORETTO'S ST. MARK, FINALLY.

To the Editor of The Nation:

Sir: I recognize the wisdom of cutting short a controversy which must be carried on at a distance of 4,500 miles from the printer, and for the evoking of which the *Nation* had no responsibility. But does not justice demand that the cutting should have been still shorter, and that the man attacked should have the last word?

I hope, therefore, you will allow me to say that Mr. Berenson's letter is a mass of gratuitous assumptions of error and ignorance on my part, of which I will only note in detail that he assumes that I admit not having seen the Tintoretto at the Brera, because I said that I did not recall it! With this sort of logical acumen one does not care to debate, and his entire letter is equally inexact. But the subject was not worth discussing, and I am content to drop it with so much disclaimer.

Yours truly, W. J. Stillman.

Rome, February 23, 1893.

Notes.

Benjamin R. Tucker, Boston, will publish directly 'Instead of a Book: By a Man Too Busy to Write One,' being a classified collection of his own writings for his weekly paper *Liberty*, and "intended to serve as a text-book of Philosophical Anarchism."

James Clegg, Rochdale, England, has in preparation the fourth edition of his 'International Directory of Second-Hand Booksellers, and Bibliophile's Manual,' the second half of the title covering lists of public libraries (British and foreign), publishers, learned and scientific societies, etc., etc. The same publisher announces a centenary edition of the works of 'Tim Bobbin (John Collier),' edited by Lieut.-Col. Fishwick, F.S.A., with the original and other illustrations.

Horace Cox, London, will shortly have ready 'Modern (Sporting) Dogs of Great Britain and Ireland,' by Rawdon B. Lee, editor of the *Field*. It will be profusely illustrated by collotype prints from drawings by Arthur Wardle.

A dainty volume with pictures of violets from water-colors, and selected verses about them on every page—'Stray Violets,' by Mary E. Hart (New York: George M. Allen Co.)—is among the earliest harbingers of spring, and will please those who are not too critical. But a true lover of wild things will quarrel with the monotony of form and color where nature shows such rich variety. The double violets of commerce have crowded out the yellow violet, the native white violet, the "worried violet" of which an observant poet writes, besides a host of others with real, if inconspicuous, distinctions.

Two books which come to us from Japan form a striking object-lesson in the resources of the typographic art as now employed in that country. One is an album of sights and scenes on the Tokaido, by K. Ogawa, photographer, Tokyo. The twenty plates are bound in the usual Japanese style, with silken back and cords, and heavy paper covers ornamented with the conventional wave-pattern (which is the Japanese equivalent of the Greek poet's "Oh the multitudinous laughings of the ocean billows"), shot through, here and there, with a mist of wisteria blossoms. Mr. James Murdoch, M.A., furnishes the descriptive text, which is printed in bold type. The pictures are in collotype and well executed. The opening scene, on the Nippon Bashi, shows the marvellous change from the turtle-backed wooden structure so familiar in old books. Now there is a massive flat-topped viaduct, over which the double steel tracks and tram-cars run. The perspective of Ginza Street shows line upon line of telegraph poles and a network of wires, though the costumes of the burden-bearers and most of the passers-by are those of Old Japan. There are scores of jin-riki-shas in sight, besides horse-carriages, and it is evident that a "block" of horse-cars is not uncommon even in Tokyo. The various pictures represent the scenes connected with old-time military manœuvres, marriage, the hara-kiri, domestic and interior scenes, the making of the toilet, and various industries, trades, and avocations. The larger pictures of the resting-place of "The Forty-seven Ronins," of the old and now disused execution ground near the Wind Bell Grove, the Rokugo River, and other scenes made familiar in the long line of foreign travellers' books on Japan, from Kaempfer to Murdoch, are clear and suggestive. Very successful is the instantaneous picture of a great procession of priests and religious over a bridge at a great temple celebration, the study of faces thus furnished being of more value than the usual conventional photographer's picture taken at a sitting. The other pictures of priest and temple life are excellent, and, of course, the volume is not complete without a representation of the fairest flowers of Japan, the *géisha*, or singing girls.

The other book is bound in the same manner, except that the silk-tied and highly ornamented covers are polychromatic, and are of pasteboard. Although the number of printed pages is 310, the descriptive matter is scarcely worth mentioning as literature. Despite the intent and purpose of a romance, the book is evidently got up to carry the scores of half-tone photo-mechanical reproductions which are printed with the letterpress. The author of the photo-mechanical process is K. Ogawa, a Japanese; and his success is striking, even in comparison with the best Western products. The book is entitled 'Ayamé San,' Ayamé being one of those standard characters in Japanese life in whom filial piety overcomes all other considerations. The beautiful and lovely daughter is willing to sell herself to shame in order to help her father, who has got into pecuniary difficulties, but is saved from it by a foreign lover. The subordinate character is an Irish Japanese (what a combination!) who is the son of a British soldier by a Japanese woman, born in Yokohama, and educated in that part of Great Britain where modern Irish is spoken with all its peculiarities. Many of the descriptions of persons and scenery are interesting. The whole air and atmosphere and *chiaroscuro* of Anglo-Japanese life are produced with remarkable fidelity. A gem of illustrative, though not of literary art, this pretty souvenir of foreign life in Japan will be greatly valued by those returned Americans who wish to revive their memories of the beautiful islands in the Eastern Sea. The book is printed by the Yokohama Printing and Publishing Company, and is published by Kelly & Walsh, Yokohama.

We are indebted to the Appalachian Mountain Club of Boston for a copy of Frederick H. Chapin's 'Land of the Cliff-Dwellers,' an unpretending little volume in which there is a good account of the ruined habitations in the Mancos Cañon and its tributaries. The field of observation—twenty miles by thirty—to which our author limited himself, is no doubt somewhat restricted, but on the other hand it is typical, for within these narrow bounds a network of cañons gives an exposure of some hundreds of miles of cliff-frontage, thus affording ample room for the numerous cave-like openings in which are situated the ruined buildings that dot the face of the cliffs. Many of these our author visited; the grandest and most picturesque he also figures, for, wisely enough, he trusts the camera quite as much as the pen to give an adequate idea of these wonderful scenes. Besides the abandoned dwellings, he shows us specimens of the arts and industries of the people who lived in them, and he prefaces the whole with an account of this region from the date of the Spanish conquest down to the present time. In this portion of the work he generally follows Bande-

lier, and the résumé he gives of that writer's investigations is as trustworthy as it is interesting. From a comparison of the architecture and mode of life of these people with that of the Pueblo Indians of Santa Fé and Arizona, our author concludes (pp. 16, 63, etc.) that some of these tribes, as, for example, the Moquis, are the descendants of the cliff-dwellers. This is also (p. 117) the voice of tradition, and it is generally accepted as a fact. Of the causes that led to the abandonment of this region nothing definite is known. It may have been brought about by the fear of hostile inroads, as the condition of the human remains found in one of the houses (p. 161) would seem to indicate, or it may have resulted from any one of the many other causes which influenced our Indians in the choice or abandonment of a village site.

Mr. I. N. Ford's 'Tropical America' (Scribners) consists of selections from the letters written by him, as staff correspondent, to the New York *Tribune* in 1890 and 1891. They are here more or less recast and, statistically, brought down to date, but their hurried quality is distinctly heightened by the lapse of time and their challenge of criticism no longer as journalism, but as a book of travels. It is a matter of boasting with the author that he knew nothing of the literature of his subject before setting out on his journey, and it only needs to be said that he gives no proof of being the rare genius who alone could, under such circumstances, make an addition to it which anybody else need read.

The popular reissue of the Edgewood edition of Donald G. Mitchell's 'Reveries of a Bachelor' and 'Dream Life' (Scribners) makes a pretty pair of volumes scarcely affected by a lowering of the quality in the paper. The eye and the hand are as well served as before, and at a lessened cost.

Col. Winthrop, Deputy Judge-Advocate-General of the Army, has published an abridgment of his work on 'Military Law' (John Wiley & Sons). He has thus brought into the compass of a single handy volume, 12mo, of about 450 pages, the whole substance of the larger treatise and the earlier editions. By the omission of the notes and the extended discussion of some disputable questions, he has been able to give a very convenient and trustworthy hand-book for use in the practical work of courts-martial and for the general instruction of young officers in the principles of military law.

'Criminology,' by Arthur MacDonald (Funk & Wagnalls Company), is intended as a study of crime upon the lines followed by the Italian specialist Lombroso, who furnishes an introduction to this volume. Most of it is made up of a summary of the labors of Lombroso and others, but the author reports some of his own investigations. A bibliography of works upon crime and criminals is appended. Such a work as this is not fit for general circulation, nor has it much value for specialists.

The Scribners publish 'The Ethic of Usury and Interest,' by W. Blissard, an English vicar, which is one of those compounds of socialistic theory and pseudo-religious sentiment now so much in vogue in England. The plunder of property-owners through the devices of "land nationalization," graduated income taxes, and collectivism in general, is now preached by many clergymen as of the essence of Christianity, and this author is moved by their spirit. His contention is that interest is defensible, but that when labor is underpaid, interest becomes usury, which is wrong. How to correct this evil, Mr. Blissard cheerfully explains; but the obstacles are formidable.

'A History of Socialism,' by Thomas Kirkup (London: Adam & Charles Black; New York: Macmillan) is partly historical, but mainly propagandist. Both as history and as criticism, Mr. John Rae's 'Contemporary Socialism' is much superior to the present work; but those who look to socialism for our salvation may derive edification from Mr. Kirkup's preachment.

What laws might govern in a community where laborers subsisted not upon food already in existence, but upon that which was to be produced in the future, seems to us an unprofitable inquiry; but those who think otherwise may be interested in 'The Theory of Wages and Its Application to the Eight Hours Question and Other Labor Problems,' by Herbert M. Thompson (Macmillan). The author maintains, in opposition to Mill, that a demand for commodities is a demand for labor, and insists that rent does enter into the cost of production. He concludes that the true theory of wages is that they are "a varying proportion of a varying product of industry"—a proposition scarcely of a nature to admit of categorical denial.

The May *Harper's* will contain an article on the life and work of the late Phillips Brooks, by his brother, the Rev. Arthur Brooks.

An Exhibition number of *Scribner's* will be published simultaneously with the opening of the World's Fair at Chicago, but it will be in the nature of an exhibit of an American magazine, rather than illustrative of the Fair itself.

The London *Art Journal*, on the other hand, will shortly commence publishing illustrated articles on the Chicago exhibits, from an artistic point of view.

Old heads upon young shoulders must be predicated of the chosen audience of *American Young People*, a quarto illustrated journal just launched in Chicago. "Patriotism," "Citizenship," "The Republics of Switzerland and the United States—A Contrast," "The Patriotic League," are certainly unchildlike topics, especially when occurring side by side with a paper on "Practical Toys."

The range of the Boston *Journal of American Folk-Lore* is illustrated by "Notes on the Chinese in Boston," by Mary Chapman, in the October-December number—these interesting memoranda being purely sociological. Mr. Alfred M. Williams exemplifies the rather sorry "Folk-Songs of the Civil War," on both sides of the contest. Interesting is the account of the Rabbit in Siouan mythology, to which any one should turn who is curious, for instance, to know why, when you seize a grasshopper, "he spits tobacco juice at you."

The February number of *Cassier's Magazine* (New York) contains the fourth paper by A. and W. K. L. Dickson on "The Life and Adventures of Edison," profusely illustrated with portraits, views, and diagrams. These chapters contain much that is fresh as well as interesting, the authors being colleagues of Mr. Edison in his laboratory researches and having enjoyed his intimacy.

The deserts of Atacama and Tarapaca, in the northern part of Chili, are described by Mrs. Lilly Grove in the *Scottish Geographical Magazine* for February. She dwells principally upon the natural resources of the country, and concludes with the statement that of the total area of Chili more than one-third is occupied by mines. Prof. J. J. Stevenson gives some account of southeastern Alaska and its people, accompanied by an excellent map. He prophesies the extinction of the fur-seal before many years, and says that after its disappearance there is little prospect that Alaska will be anything more to the United States than it was to Russia, except as a source of fish supply.

The *Geographical Journal* for February opens with an account of Mr. Joseph Thomson's exploration, in 1890, of the region to the north of the Zambesi River, now known as British Central Africa. He reports three-fourths of the country traversed during a journey of 1,200 miles to be capital agricultural and pastoral land, with a climate exceptionally good for Africa, the general elevation being nearly 4,000 feet. The natives have abandoned the village where Livingstone died, but the tree under which his heart was buried, and on which his faithful attendants cut an inscription, is still standing unharmed. Extensive regions were passed through which had recently been harried by the half-caste Portuguese slave-hunters, and great difficulty was experienced in convincing the excited natives of the peaceful character of the expedition. Only once, however, was a man wounded—"the first blood shed, by the way," remarks Mr. Thomson, "on any of my six African expeditions," in the course of which he has walked over 18,000 miles. The most interesting part of Capt. Gallwey's paper on West Africa is the description of his visit to the once famous city of Benin. Though very much smaller than it was two or three centuries ago, it is still an important place, and is the "seat of a very powerful theocracy of fetish priests." "Human sacrifices are of frequent occurrence," crucifixion being the usual form. "We saw several crucified victims during our stay, on the plain outside the King's residence." A treaty was signed by which the country was put under British protection, and it is hoped that in time these cruel practices will be stopped. Mr. Conway contributes a striking account of the crossing a Himalayan pass by a glacier eighty miles long.

The first fruits of the excavations of the American School of Athens at the Heraion of Argos in 1892 have been given to the world by Dr. Waldstein, the Director of the School, in a small folio (Boston: Ginn & Co.). Dr. Waldstein is convinced of the immediate importance of his finds to students of archæology and art, and a list of selected objects sent to the Museum at Athens attests the correctness of his judgment: metal rings in profusion, animal figures, tools, utensils, seals, toilet articles, beads, coins, terracotta plaques and idols, "1 porcelain monkey, 1 porcelain cat, 1 Egyptian image," and much else. The latest date to which he would ascribe these objects would be prior to the beginning of the fifth century B. C., "while many point to the remotest antiquity." Seven collotype plates accompany the letterpress, showing the site of the temple before and after excavation, and the more important fragments of statuary—a fine head of Hera, a torso from the metope of the second temple, and some very interesting terracotta figurines found below that temple's foundations.

Four more instalments of Prof. Payne's 'Famous Composers and their Works' (Boston: J. B. Millet Co.) have appeared, and maintain the agreeable variety of biographical narrative, critical appreciation, and exemplification which characterize this work. Portraits, views of birthplaces, graves and monuments, facsimiles of handwriting, and specimen music abound. Mozart is finished, and Beethoven, Schubert, Spohr, Weber, and Marschner are despatched. There are also sporadic portraits

of Rubinstein, Grieg, Spontini, and Mendelssohn.

No. 48 in the seventh series of the *Anales* of the University of Ecuador (Quito, July, 1892) contains a valuable Ecuadorian bibliography, by Dr. F. G. Suárez, supplementary to Anrique's 'Noticia' of certain Ecuadorian publications prior to 1792. Dr. Suárez's "essay" goes back to 1750, but describes nothing that he has not seen and examined. It is an anticipation of the fourth chapter of his General History of the republic. The introduction of the printing-press into Ecuador and its use by the Jesuits are assigned to the period 1750-52. It was, of course, for the use of the order, not for public enlightenment. The first title-page copied by Dr. Suárez is a 'Piissima erga Dei Genitricem Devotio,' printed at Ambato in 1755, a small 18mo. Twenty-four works in all are recorded in this manner.

A woman physician, Dr. Frances C. Van Gasken, has been appointed Assistant Medical Inspector to the Bureau of Health, Philadelphia. Before appointment, Dr. Van Gasken passed the requisite civil-service examinations "with distinction"; she has also served with credit a term as Resident at the Philadelphia Hospital, admission to which is through the open door of competitive examinations. The duties of House Inspector for Boards of Health might be admitted to fall within woman's sphere, even by the most conservative; and where women physicians possess the required "fitness," duly tested, their appointment to similar posts of public service should conduce to the improvement of civic sanitary conditions.

The vigorous recognition of equality between men and women which has found a place in the scheme for a Welsh university (with affiliated university colleges at Aberystwyth, Bangor, and Cardiff), should encourage those among us who demand the selection of "fit" women as members of college faculties and boards of control. The second clause of the draft-charter provides that "women as well as men shall be eligible for degrees in the university herein constituted, and for every office, and for membership of every body or authority herein constituted; and wherever throughout this act (or charter) the masculine pronoun is used of a student, graduate, or officer of said university, or of a member of any body or authority in it, it is to be construed as including the feminine also."

—Von Holst's Convocation Oration, delivered at Chicago in January and recently printed in the *Educational Review*, is a strong plea on the broadest grounds for the development of university education in the United States. A quarter of a century devoted to the study of our social and political development has convinced the historian that the greatest perils of our national life are yet to be met and overcome. He does not foresee further political crises like those which attended the birth of our nation in the last century and its reconstitution in civil war; the difficulties in sight are administrative and social. The rapid growth of our population, especially of our municipal population, and the increasing size and deteriorating quality of our immigration, are creating governmental problems, and the increase and centralization of wealth are forcing to the front social questions which are incomparably more difficult, because they are far more complex, than the constitutional questions with which our fathers and forefathers had to deal. Von Holst, like Bryce, has great faith in "the reserve of force and patriotism" which the American people have so often displayed; but energy and devotion will be insufficient to surmount the coming difficulties. We need also trained and progressive intelligence. The hope of democracy lies in wise leadership, and the leaders must be furnished by the universities. The universities will not discharge this duty either by sending out well-equipped professional men or by producing a small proportion of trained scholars: they must also rear an increasing "remnant" who love truth and seek it for its own sake. That is, they must, above all things, produce investigators. For this purpose Von Holst finds the existing American universities inadequate, both in structure and in spirit. A fully developed university, in the Continental European sense, does not yet exist in this country. Structurally our best universities are "either compounds of college and university, . . . or hybrids of college and university, or finally a torso of a university." More discouraging than this incompleteness, which may be regarded as a phase of development, is the predominance of the professional spirit. There is no doubt that the American idea of the university—even among the few people who have grasped the distinction between college and university—is simply a collection of technical and professional schools. Put schools of law, medicine, and theology under the same board of trustees and the same president, add a school of engineering and a school for training teachers, and, according to this view, you have a university. But there is still something lacking to the university as Von Holst conceives it, and that something is the most important thing of all—the encouragement of research.

—The emphasis laid upon technical training results, as he points out, in the establishment of fixed courses, devised simply to produce good lawyers, doctors, engineers, etc.—courses which occupy the student's entire time and leave him no opportunity to broaden and liberalize his studies; courses which exclude new combinations and discourage the development of individual genius. Von Holst indicates that the remedy is to be found in lessening the required work of the professional school and increasing the range of election. Under such a system the pure professional can devote himself as closely as he desires to purely professional studies, but the student who seeks a broader training will be able to secure it.

"Grant that by allowing a large measure of liberty, . . . part of the students will lay in a smaller stock of facts, rules, and technical training. . . . That is more than compensated by the advantages which only the freedom of true university education can secure. Only this can fan the burning coals of that enthusiasm which is absolutely untainted by any sordid motives into the intensest glow; only this can fully develop the inborn forces, for it alone allows full play in the use of them; . . . only this incites to the development of distinctive intellectual individualities, . . . only this systematically fosters the intellectual and moral courage required for striking out into new paths; . . . and last, but not least, this only can produce an adequate number of the kind of missionaries the country stands in need of."

The "remnant" from which Von Holst expects our national salvation is not, of course, to

> "lie reclined
> On the hills like gods together, careless of mankind";

it must keep in touch with the whole body of the nation. "If a chasm opens up between the 'remnant' and the 'unsound majority' and is allowed to widen, nothing can save this country." The need of universities is felt to-day in France as well in the United States, and there is in France to-day an energetic movement towards the development of true university work. Its leaders plead for it as the most necessary element of "national regeneration." It is a very significant fact that they, like Von Holst, find the greatest obstacle in their way to be that utilitarian spirit which insists on "practical" education, and the resulting predominance of technical and professional training.

—In a recent letter to the *Academy*, Prof. E. G. Bourne of Adelbert College, Cleveland, points out a common error in the interpretation of a passage in Seneca, made by writers on the discovery of America and early voyages hither. The passage is in the preface to the 'Naturales Quæstiones,' where Seneca is contrasting the petty dimensions of the earth, the scene of human life, with the wide ranges of the universe, the realm of thought. Once admitted to these, he says, the mind "contemnit domicilii prioris angustias. Quantum enim est quod *ab ultimis litoribus Hispaniæ usque ad Indos iacet?* Paucissimorum dierum spatium, si navem suus ferat ventus, inplebit. At illa regio cœlestis per triginta annos velocissimo sideri viam præstat," etc. To the classical scholar's mind it will seem almost incredible, yet it is true, that modern writers, from Roger Bacon down, have understood the italicized words to refer to the distance from Spain to India *by the way of the Atlantic*; see, for instance, Humboldt, Payne, Gaffarel, Fiske, Winsor (the last not cited by Prof. Bourne). Some have even argued from the passage that Atlantic voyages were not uncommon in Seneca's time; hardly less amusing is such a comment as the following: "It is certainly evident that Seneca underestimated the distance to India. Had the length of the voyage been known, he would not have used the illustration." On the contrary, the longer the voyage, the better the figure, the stronger the contrast; and the very word *paucissimorum*, taken literally as the critic takes it, is a conclusive proof that he does not understand the passage: any terrestrial voyage, no matter how long, is short compared to that celestial journey of thirty years.

—The truth is, that Seneca was using here a well-recognized phrase signifying *the known world*. Now, to the Roman of his day, Spain was the "jumping-off place," and from it the world lay not to the West but to the East; so Juvenal—

> "Omnibus in terris quæ sunt a Gadibus usque
> Auroram et Gangen."

There is no more sense in reading the Atlantic Ocean into these passages than there would be in supposing that in Dr. Johnson's

> "Let observation, with extensive view,
> Survey mankind, from China to Peru,"

the sage meant to confine his vision to the Pacific. As Prof. Bourne well remarks, "From a rhetorical point of view, the distance from Spain westward to India, as an absolutely unknown quantity, would be out of place in the comparison. Seneca would naturally use a great but known distance." The traditional modern interpretation comes from reading a single sentence in Seneca apart from its context and in the light of modern geographical knowledge. In fact, it wholly lacks the Roman point of view. That Seneca himself is professing no advanced geographical knowledge here is clear from words which he uses a few lines above—words with which Prof. Bourne might well have strengthened the case

against our modern writers: "Punctum est, illud in quo navigatis, in quo bellatis, in quo regna disponitis, minima etiam, cum illis utrimque *oceanus* occurrit" (cf. 3, 9, 27, "hic qui terras cingit *oceanus*"). Homer himself knew as much as this!

—The Parisian public is about to be invited to view two simultaneous collections of the works of the artist Meissonier. One exhibition, in the galleries of M. Georges Petit, is to be opened in the early part of this month, but a few weeks later than the second anniversary of Meissonier's death; the other, to which the Académie des Beaux-Arts will lend its walls, is receiving the vigorous support of his widow. The former alone is expected to be a still more magnificent testimony to the great artist's genius than the similar exhibition held in 1884, also in the well-known Rue de Sèze. It will be especially rich in drawings and studies of all sorts, some for pictures that have not yet been exhibited. The extraordinary capacity of Meissonier for elaborate and painstaking preparation for pictures, carried even to the manufacture of a button not otherwise forthcoming, was no small part of his genius, and will pass into the proverbial history of art. The size of his paintings, measured by rule-of-thumb, is another of the characteristics which early marked him out from a generation of ample stroke and lavish employment of pigment. Perhaps never before will there have been an opportunity to pass in review such large and varied portraiture of men on such a small extent of canvas. That greatness is not bigness was long ago proved to the critics who carped at their smallness by the vigor and individuality of Meissonier's minutely painted "Smokers," "Troopers," or "Card-Players." It is much to be wished that his Life, the materials for which are said to be in the hands of his brother-in-law, M. Steinheil, might appear contemporaneously with this double exhibition of his work. It was he who was the leading spirit in the revolt from the Salon that resulted in the founding of the Société Nationale des Beaux-Arts, with its rival Salon in the Champ de Mars. The prediction that the loss of its foremost artist would be the death-blow of this exhibition has not yet been realized, inasmuch as its opening this year has been announced for May 10.

—M. Adolphe Lods has undertaken a preliminary critical examination of the Greek texts discovered by M. Bouriant in Upper Egypt six years ago and published last November in the Memoirs of the French Archæological Mission of Cairo. In 'Le Livre d' Hénoch' (Paris: Leroux) he gives the Greek fragments of the book, with the variants of the Ethiopic text, translation, exegetical notes, and critical introduction. His conclusion is that the new Greek text is of the same family with that from which the Ethiopic version was made, and is in general superior to it in accuracy; he of course does not try to construct a final text. His exegetical-critical treatment is brief, clear, and judicious, and his book is useful and readable. Of the *Gospel according to Peter* and the *Apocalypse of Peter* he gives the Greek texts with Latin versions and critical dissertations. The author of the *Gospel*, he thinks, wrote in Syria, not in Judea, not long before 150 A. D., was acquainted with the first and second canonical Gospels, and possibly with the third, but probably not with the fourth. The *Apocalypse*, he concludes, was highly esteemed in the latter part of the second century; whether Dante used its pictures of torment he does not decide. Two bright, popular papers on the *Gospel* and the *Apocalypse* by M. Salomon Reinach, which appeared in January in the *République Française*, have been reprinted in pamphlet form (Paris: Alcan-Lévy). He holds that the author of the *Gospel* was not acquainted with either of our canonical gospels, and that the *Apocalypse* got its material from Greek sources, especially from the Orphic literature.

THAYER'S DAWN OF ITALIAN INDEPENDENCE.

The Dawn of Italian Independence. By William Roscoe Thayer. Boston: Houghton, Mifflin & Co. 2 vols., pp. 453, 446.

Mr. Thayer strictly limits his field to a period closing with the fall of Venice in 1849. When he has once found the clue of the tangled skein of events, he follows it with an exemplary singleness of aim, gathering, as he goes, only such threads as are really essential to the narrative, undiverted by the great mass of episodic fragments which, however tempting, have but slight connection with the final result. The work is very conveniently divided into five books (thirty-five chapters), and is well indexed. In the first book there is little that could not be spared. It was not necessary to go quite back to the twin-egg of Leda. To say nothing of the Western Empire, Charlemagne, and the dawn of the Papacy, it is doubtful if even the Middle Ages could have been so treated in a mere introduction as to give the reader any notions more helpful for the right understanding of the Italian movement than the generalities already so familiar to the reading public. From an artistic point of view, the French Revolution and its propaganda under the First Napoleon are the true starting-point for a history of Italian regeneration. Nevertheless, apart from the propriety of going into mediæval history at all, we cannot complain of Mr. Thayer's conception of it. He gives just values to feudalism, paganism, and Christianity as factors in the evolution of the Middle Ages. His summary of Christianity and of its successive compromises with the ancient world is well done and very much his own, even though he is merely expressing more tersely and forcibly ideas which for some decades have been vaguely blown about in the atmosphere of modern thought.

Every reader will soon feel that the author is a thinker; and nothing more clearly shows it than the readiness with which he seizes the one idea which is at once the keynote of mediæval history and the mainspring of Italian regeneracy. This conception, which, to distinguish it from Romanism, has been called Romanity, was first consciously entertained by the thinkers of the Augustan age, especially by Virgil. Mr. Thayer gives it the more poetic name of "the spell of Rome"; and a spell it truly was, a name to conjure by, which, after vitalizing the Holy Roman Empire and galvanizing the very carcass of it, profoundly influenced the French Revolution, made the First Empire, and even raised a faint echo in the Second, while all this time it was what it now is, the true "rock of Peter," on which the Church of Rome has stood these eighteen centuries gone. One may differ from the author on points of detail. We think that he misses the answer as to why, after the fall of the Western Empire, Italy did not rise as a nation. The true answer is, that Italy had never been a nation. Rome was only Rome, and as truly Rome in Bætica or in Africa as in Campania or in Latium, whereas France, for example, or rather the Franks in France, were and had never ceased to be a nation. Admirable, on the other hand, is the author's estimate of Dante, who, by giving a patent of nobility to the Italian language in his immortal poem, furnished that link without which, as all history shows, it is impossible to bind a people into a truly national union. Equally just is Mr. Thayer's judgment on the brilliant period of the Medici, which, as he tells us, did not create, but only brought to light, qualities engendered in the purer atmosphere of freedom; but let us own that we miss some appreciation of the abortive attempt of Cola di Rienzi, an event not justly measured by its unsuccess. Nothing in the mediæval history of Italy did more to keep alive the idea that Rome might some day rise again from her priest-ridden torpor. And the same criticism might be made as to the scientific activity of the Italians, especially in the seventeenth century, and the world-renown of the great artists; for it is not easy to overrate the nationalizing force of glory which an entire people regards as a common inheritance. Again, great as was the influence of Metternich in the opposite direction, one regrets to see eighteen pages (vol. i., pp. 120–138) devoted to anecdotes of so despicable a personage. For this the author himself (p. 136) feels obliged to make some apology.

The interval between 1814 and 1846 was a formative period, marked by the local revolutions of 1820, 1821, and 1830. These and the intervening years are treated in a lucid and graphic style which leaves little to be desired. The independent attitude of Piedmont towards Austria under Victor Emanuel I.; Carbonarism, of which Mr. Thayer gives an excellent account; the first appearance of Charles Albert, whose complex character is judiciously analyzed (ii., 258–262); the savage treatment of the patriots in Naples, Modena, and Lombardy; and the early career of Mazzini—these are the principal topics. Here, as in all the remainder of the book, Mr. Thayer has been a careful student of the best Italian authorities. He refers to a very large number of works not easily accessible to the American reader, and makes discriminating use of materials confusing by their abundance. There are some remarkably good passages, of which the description of the "dangerous classes" (ii., 228–230) and the spirited account of the arrest and adventures of Confalonieri may serve as examples. In ii., 319–324 the author compares Manzoni and Leopardi, justly attributing the latter's inferior influence to his pessimism, as has been more fully shown by Terenzio Mamiani in the *Nuova Antologia* (August, 1873). In describing the disturbances of 1830, the writer, wisely cautious, refuses to decide for or against the good faith of Francis of Modena in his first curious dealings with Ciro Menotti. This point cannot be certainly determined; yet it seems likely enough that the man who earned the title of "il Boja" (the hangman) would not shrink from the arts of a "sbirro." The author's tribute to the virtues of Mazzini is well deserved.

Mr. Thayer's book supplies, throughout, a deficiency, so far as our reading public is concerned; but with regard to the period we have just noticed, it stands almost alone. The whole of the second volume is taken up with the events of the four years, 1846–1849. The movement in 1846 was caused by the election of a Pope supposed to be a Liberal. Mr. Thayer answers negatively the question whether he ever was one, while admitting that he would have rejoiced in Italian Independence, on condition that it should not involve constitutional forms of government and especially

the secularization of his own. We are then shown how the enthusiasm produced by the prevailing assumptions as to his views carried Pius IX., at a pace which he had never dreamed of, to the verge of a precipice whence his priestly instincts recoiled with horror. We are led to see how the new attitude of the Papacy made it impossible for the Italian princes to resist the clamor for reform, and how, from one concession to another, they were all driven to grant constitutions. We next see the infection of Liberalism sweeping over Lombardy and Venetia, and even crossing the Alps to beard the old lion Metternich in his den and ignominiously drive him forth. It needed no more than this to start the revolution in Milan, a centre of culture, where the situation had been extremely strained for several months. We have in pp. 109–124 an animated and really very fine description of the famous "five days" of Milan (March 18–22, 1848) when a carefully disarmed population expelled from the city and its citadel 16,000 of Austria's best troops commanded by the veteral Fieldmarshal Radetzky. From this moment we see the war of Independence already unavoidable, and are shown how all the Italian princes were forced to embark in it. We cannot here follow the author through the interesting details of the campaign, from Goito to the Italian victory at Pastrengo, April 30, 1848. The war, thus far, had shown the Italian princes and the Pope that success might mean advantage to the House of Savoy, but certainly meant ruin to them; and, one by one, they dropped their masks, and recalled or withheld their troops. The fifth book shows us Charles Albert paralyzed by their defection and by the premature discussions as to how the hare should be served which, alas! was still running. Mr. Thayer has done the unhappy king full justice. He shows how, before Custozza, it was in his power to elect either to redeem his pledges to the Italian people, or to abandon Venice to her fate and add all Lombardy to his dominions; and how nobly he preferred the path of honor. We see him staking and losing all at Custozza, and then scoffed at and cursed by those very Lombards whose foolish bickerings had contributed to his defeat.

When the exasperation of disappointed hope had led to the establishment of democratic governments in Rome and Tuscany, with the Pope and Leopold at Gaeta under the friendly wing of "Bomba," the prominent figure of the period is Gioberti. How he vainly labored to unite the princes in an Italian League and to induce the republicans to forego their momentary triumph; how, when every other means had failed, he conceived the bold scheme of forestalling an Austrian by a Piedmontese intervention—all this the author explains clearly. His statement, on p. 297, that "Leopold's apostasy would not have deterred Gioberti" from intervention, "but opposition in Turin suddenly dashed that plan," is somewhat misleading. It seems to imply that, when Leopold withdrew his consent, Gioberti was still Prime Minister. We have Gioberti's own statement ('Risposta a Urbano Rattazzi,' p. 46) that he had resigned on the 19th of February, while Leopold's revocation of his assent reached Charles Albert only on February 21 (*ib.*, p. 59, where Gioberti says distinctly that he was no longer Minister). We next follow the fortunes of Italy through another campaign, ending with the disaster of Novara and the pathetic scene of the old King's abdication. This is practically the end; but the author has yet to describe the Austrian intervention in Tuscany and the restoration of Pius to his throne. The last chapter gives a full and remarkably exact account of the siege of Venice and its surrender, on August 22, 1849, with which the book ends. We must not omit to mention two very convenient maps which accompany the work.

Mr. Thayer is an easy and fluent—perhaps too fluent—writer, and his diction is noticeably tropical. He has not altogether escaped the influence of Carlyle. We think he makes an excessive use of the apostrophe, as, to the agricultural laborer (i., 6), the ancient Romans (i., 22), the Spielberg (i., 306), the Emperor Francis (i., 307), etc. Those who prize individuality of style less than we do would also find Mr. Thayer's vocabulary and phraseology occasionally too unconventional. But such faults occur in the midst of admirable writing and among abundant proofs of a scholarly and cultivated mind. The personality of the historian, as it shines in his judgments and his aspirations, is decidedly attractive, at least to liberal minds. Future works, which we may confidently expect from his pen, are assured of a friendly and eager reception from readers of the present.

COPLESTON'S BUDDHISM.

Buddhism, Primitive and Present, in Magadha and in Ceylon. By Reginald Stephen Copleston, D.D., Bishop of Colombo, President of the Ceylon Branch of the Royal Asiatic Society. Longmans, Green & Co. 1892. 8vo, pp. xv., 501.

NOTWITHSTANDING the numerous works on Buddhism recently issued, there was room for a book which, neglecting the side-growths, should undertake to give a continuous history of the primitive faith of Gotama. This task Bishop Copleston has performed with excellent judgment and skill. By way of preparation he has read, he says, a large part of the original sacred books of which he treats, including a good deal of unpublished matter, has consulted competent Sinhalese authorities, and has studied the leading European works bearing on his subject. He writes with the fervor and freshness of an independent investigator, and shows such genuine desire to be impartial that the reader cannot but follow him with pleasure. His conclusions agree in the main, but not without differences of detail, with those of Rhys Davids and Oldenberg. His critical position is moderate: he allows great weight to the Ceylonese tradition, but subjects the Buddhist books to a sharp analysis. Granting that Buddhism arose in the sixth century B. C., he doubts, and with good reason, whether its sacred books can be held to give an accurate picture of Indian life at that time. If these books were compiled two or three centuries later, and in the atmosphere of the new faith, they could hardly fail to be colored by the new conditions. Unfortunately there is no contemporary literature to appeal to, for the Jainist books also are of the later date. Modern authorities are agreed that a Buddhist canon was probably completed at the Council of Patna, under Asoka, about 250 B. C., but opinions differ as to the historical reality and significance of the alleged earlier Councils of Rajagaha and Vesali. Here Dr. Copleston appears as a sceptic: he regards the former of the two as entirely fictitious, and the second as not really a council, resting his opinion on the contradictions and legendary features of the authorities. It must be admitted that his scepticism is not without foundation.

On the other hand, the name of Asoka kindles his enthusiasm:

"He was not merely the Constantine of Buddhism; he was an Alexander with Buddhism for his Hellas; an unselfish Napoleon, with 'mettam' [love] in place of 'gloire.' The world was his that he might protect all lives in it; might teach loving-kindness throughout it; might establish in every part of it the Community of the disciples of the Buddha. Compared with the solid reality of Asoka, the records which are preserved of the Buddha himself are but a shadowy tradition. And as the great King's history becomes better known, men will be tempted to speculate whether Buddhism owes more to Gotama than to Moggali [the leader of the Community in Asoka's time]; to ask how far what is definite in the history of Bimbisára's [the royal disciple of Gotama] days is a reflection thrown back on the mist of the past from the greater epoch of Asoka" (p. 281).

Whether this is an exaggeration further research must show, but it is in any case a generous tribute from a Christian bishop to a noble exponent of a non-Christian religion.

Dr. Copleston is no doubt right in assigning Asoka a very important place as an organizer of the young Buddhism, and his view is to a certain extent supported by his valuable examination of the canonical literature (chap. xxi.). The critical analysis of the Buddhist books has only just begun; as it advances it must yield weighty results for the history of Buddhism. Bishop Copleston's special contribution in this direction is his attempt to show that the Maha Parinibbana Sutta belongs to the reign of Asoka. His arguments, for example, that Asoka is the first who answers to the description of a Cakkavatti king, or universal monarch, and that he began the erection of dagabas, or relic-shrines, are hardly convincing; the facts he adduces make against a very early date for the Sutta, but do not seem necessarily to bring it down to Asoka's time. Nevertheless, his method is good, and needs only to be pursued carefully to yield good fruit.

His account of Ceylonese Buddhism embraces the whole period from its introduction into the island down to the present time. With Rhys Davids, and against Oldenberg, he maintains the truth of the tradition which attributes the conversion of Ceylon to Asoka's missionary, Mahinda. Oldenberg thinks that the new religion, advancing gradually southward, passed into the island from the south of India. Dr. Copleston gives good reasons for regarding the Pali chronicles as trustworthy on this point. For the decision of the question we must wait for further light on the history; à-priori considerations are here of no value, and the evidence is not of a sort to be convincing. But, as regards the literature, we may hold with our author that the substance of the three Pitakas was brought to Ceylon in the memories of the missionaries, and gradually committed to writing as the demands of the Community required. The subsequent history of Buddhism in the island is given by Dr. Copleston at some length. The chief interest of the record lies in the picture of the origin and character of Buddhist sects, and of the intermixture of Buddhism and Hinduism. The author's residence in Ceylon has enabled him to give also valuable information concerning the present character and habits of the monks, and the relation of religion to the life of the people. English rule has brought European books and a veneering of European civilization, the result of which cannot be doubtful: the old will yield to the new, and Sinhalese culture will be civilized out of existence.

Just here Dr. Copleston's work is unsatisfactory. His main purpose, it is true, is to give a narrative of events, not an analysis of social phenomena. But it lay in his way to trace the elements of the popular life to their sources, to

tell us how much of it is heathen Ceylonese, how much Hindu, how much genuine or corrupted Buddhism. But of this he says substantially nothing, and thus fails to use the opportunity, which his exceptional position gave him, of contributing an interesting chapter to the history of general religious development. His failure to look into this question makes his conception of the popular morals hazy and wrong. He speaks almost as if he expected to see the moral life of a slovenly crew of monks and an uneducated peasantry transformed by the substitution of one religious creed for another. With all his real liberality and kindliness, he seems not to understand the ethical history of Buddhism or the present moral problem of Ceylon.

We can give only a word to his long discussion of the Buddhist system of ethics. His estimate of Gotama's theory of life is discriminating and fair; in common with most modern writers, he praises it on some sides and condemns it on others. When he speaks of its actual working in society, he is not free from confusion of ideas. He does not see that a moral code is rather an abstract of the opinions of a man or a circle than an effective power, and depends almost wholly, for its influence, on the general training of the community in which it is found. We can no more speak of Buddhist than of Christian morals; these expressions may mean a hundred different things, according to the time and place with which they are connected. Pascal and Louis the Fourteenth were both Christians, but their lives had little in common on the ethical side. With the excellent dissertations that we have on the Buddhist moral ideal, it would be well if some one would give us an account, like Lecky's history of Christian morals, of the real moral life of various Buddhist communities under different social conditions. Dr. Copleston's comparisons between Christianity and Buddhism are generally fair. Of the two monastic systems he says that the distance between their ideals is infinite, one being the absolute negative, the other the infinite positive; but, on the moral side, are not the two equally positive and equally negative?

The Campaign of Waterloo: A Military History. By John Codman Ropes. Charles Scribner's Sons. 8vo, pp. xlii, 401, with maps. Atlas to accompany the above, folio, published separately.

A NEW book on an old theme will always be welcome when it adds to our knowledge or helps us correct our errors. For both reasons Mr. Ropes's volume on Waterloo is entitled to a place among the standard histories of a great epoch. European writers on the Waterloo campaign have been numerous and able; but they are almost necessarily biassed by national or personal predilections. Englishmen find it hard to do full justice to Blücher and the Prussians. Frenchmen are either idolaters of Napoleon or hate him with Bourbon persistency. Germans are prone to depreciate Wellington and to magnify the part played by Blücher's troops.

It was well, therefore, to have an American student of the campaign give an impartial and judicial analysis of the great conflict of authors as well as of generals, and to offer a connected narrative which should harmonize most of the testimony and eliminate many of the contradictions. No reader of Mr. Ropes's book will doubt that he has laboriously examined all the witnesses and tested all the theories. He has studied the topography on the ground, and sought to find in it the clue to the solution of some doubts. He has given due weight to probable faults of memory, and shown a praiseworthy disposition to avoid imputations of dishonesty. In this way he has reached conclusions which may be fairly accepted as reasonable, and has given us a narrative which is probably more free from question than any one which has heretofore been published.

In this story none of the three great commanders appears as infallible. Napoleon is found to be clear in purpose and wise in plan; but he lacks the tireless energy which he had displayed in some of his earlier campaigns, and loses precious time after the battle of Ligny. Blücher's impetuous spirit and weaker intelligence lead him into trouble by accepting battle before arrangements for coöperation with the English had been completed. Wellington had to admit that the Emperor had stolen a march upon him, and had to make up by his splendid battle tactics and indomitable fighting for the faults of his first strategic combinations. The deficiencies of subordinates like Ney and Grouchy are reduced as nearly as may be to exact definition, so that their influence on the campaign may be given its just value.

In all these respects the author has done excellent critical work, and, without saying that his conclusions will stand as the final word in all respects, we may feel assured that the points are few in regard to which much room for difference will remain. He has taken infinite pains to marshal all the evidence and weigh all the argument, and the judicial calmness of his tone and the clearness of his statement carry the reader along with him.

The only direction in which further thought and investigation would seem to be profitable, is to be found in the effect of the political situation upon the conduct of Napoleon and upon the *morale* of his officers and men. To this we must attribute the absence of Davoust from the army and his assignment to the Ministry of War at Paris. Napoleon's reasons might well be such as he could not even discuss, for he would not choose to speak of the hollow support given him by French public opinion, and the need of a ruthless hand like that of the Marshal who had crushed Hanover, to hold Paris in check. To this also we must look for the causes of Ney's tardy appearance in the field, his excessive irritability, his readiness to quarrel with Napoleon, his half-insubordination, and his dissatisfaction even with himself. He was conscious of being in a false position, and this diminished his value as a soldier. For the same reason Napoleon could not treat either Grouchy or Ney as he would have done in one of his earlier campaigns. He had to respect their whims, to avoid division of their commands, to trust more to their judgment. The Empire must be re-established by victory before the Emperor could resume his old omnipotence over the wills of men who were necessary to him. He had to assign Soult to duty as chief of staff, because Berthier had not joined him, and Berthier was the only man who could translate Napoleon's larger orders into the detailed order of the day without omissions or mistakes.

Marshal Macdonald's memoirs give us glimpses into the contrast between the army craze and the civil apathy which marked the Hundred Days; and every glimpse suggests much more than is told of the reaction of public opinion upon the Emperor and his army. A purely military history of that time is a false history, because the army was every moment under the influence of great moral causes which are thus ignored. This is the extra chapter which we should be glad to have added to the strong and clear story of the strictly military events which our author has given us.

The Nationalisation of Health. By Havelock Ellis. London: T. Fisher Unwin; New York: Putnams.

THE legislation of all civilized countries recognizes that, in some degree, the State is responsible for the health of its citizens. The qualifications of physicians, the isolation of contagious disease, the oversight of tenements, of passenger ships and of food supplies, and the public relief of the sick poor are examples of this function whose propriety and whose exercise no one presumes to question. But the practice of domestic hygiene and the application of clinical medicine are with most people voluntary measures. Nevertheless, as the doctrine that public health is public wealth spreads, social economists are paying increased attention to problems that formerly devolved upon the individual, or that were disregarded as either unimportant or insoluble. Within the professional life of some practising physicians, typhoid fever was differentiated from typhus in France and in the United States, and about twenty years later the distinction was recognized in England. But how succeeding cases followed the first was not understood. Now most intelligent people know that a polluted water supply is the commonest agency in the multiplication of typhus as well as of cholera, and when matters become too bad, executive authority is invoked for relief. But as in spiritual, so in this form of physical, knowledge, there is often intellectual belief without personal conviction, and many a risk is run in dealing with unseen dangers because they are unseen. Did polluted water run red, contaminated air show green, and from a disease-bearing person or thing a luminous haze ema nate, we should be a wiser if not a happier race. Sight and touch are not likely to lend their aid, and it is so much the more necessary to invoke the power of the law to crush dangers that science detects. Where that has already been done, the demonstrable saving of life warrants almost every conceivable interference with the liberty of the subject. The maternity mortality of 60 per 1,000 has been reduced to 2 in New York, and that of 55.5 to nothing in Boston, in hospital practice. Is it too much to compel those treating such cases in private life to make use of the precautions whose voluntary adoption in public institutions has led to such gratifying results?

The author of the plain-speaking but agreeable book that is the occasion of these reflections is, as perhaps he might best be, a layman representing the modern school of social economists to whom every facet in the jewel we style public welfare is worth polishing. *Ne sutor ultra crepidam* hardly applies to the intelligent man of to-day. He hammers at his proper last within reasonable hours, and then takes up other work as an avocation in distinction from his vocation. The conditions of modern life so increase and intensify the community of interests and multiply the points of contact that great themes are profitably discussed from points of view which, a few years ago, had only theoretical existence. The angle of perception from some of these new stations reveals distinctly new relations, and the more completely we "bound" the territory of disease, the more likely are we to bring into subjection the *terra incognita* dreaded because unknown. Intelligent discussion, even if not al-

ways on purely technical lines, adds to the sum of knowledge and is welcome.

Speaking primarily for England, Mr. Ellis discusses unwholesome trades and dangerous industries, the place of the dentist (which is not doubtful to those who have observed the teeth of the lower-class English), some special physical ills, but particularly the relation of the hospital to the community. The constantly increasing application of the medical art through hospitals is lifting these institutions into a very different sphere from that of the old lazar-house or the last resort of the indigent, where not so very long ago (as history is made) two and three patients would lie in one bed, and shelter, not air-space or cleanliness, was the desideratum. It is no wonder that a traditional dread of going to the hospital belongs to the heritage of poverty. The hospital of to-day is a palace of health, if not a paradise; and as the crowding of population swells their constituencies, the superb facilities of these establishments attract from a wider field than ever. No hospital properly so called can be self-supporting and fulfil its mission. Some specialists conduct a high grade of private hospital for the convenience of treating distant or difficult cases, where the fees create a revenue; but these are beside the question. The general hospital of to-day rests upon an endowment, either fixed by the income of the pious gifts of a past generation, or variable as it depends upon current aid from the public in its collective or its individual capacity—an appropriation by law or personal charity more or less spontaneous. Now these funds are so large and the interests involved are so great that Mr. Ellis, formulating what others have doubtless thought, suggests that it is proper that they should be taken under legislative control in a more direct sense than the ordinary guardianship of life and property implies. What he looks forward to is: "In the end every medical man in the country would be attached to a hospital, and every person should be living within the district of a great institution of health." The view is that of an advanced socialism in such matters, although not so denominated. Mr. Ellis is speaking primarily of England, where dispensaries, infirmaries, and hospitals, especially the two former, do not correspond to their synonyms with us, and where the conditions of life differ from ours.

A recent Parliamentary Committee proposes a central hospitals board to inspect all medical charities, to oversee their statistics, financial and vital, and to report on proposals for new hospitals in London. Apparently the author would attach such a board to the central authority, the County Council, so as to give it executive force; and he would place all hospitals on the same plane as those admirable ones for infectious diseases under the Metropolitan Asylums Board, which are one of the very best features of London administration. These hospitals, by removing the sick, assist in sterilizing the centres of infection; they take most excellent care of their patients, and, above all, they are gradually educating people into the feeling that treatment in hospital is not in itself a badge of dependent poverty, and that it may be a public duty to accept as well as to give public aid. We are not required to pursue British methods, but the general principle that the health of the nation is the nation's concern we ought constantly to keep before us. Just now the exclusion of imported epidemics is our own special charge. Mr. Ellis does not touch the matter of English quarantine jurisdiction, which is so much simpler than ours—quarantine, by the exigencies of commerce, having been reduced to terms so very simple as to suggest danger. It is just on that ground, however, that our national Government has the opportunity to display its authority.

Mr. Ellis's pleasant volume may have been inspired by the great International Congress of Hygiene and Demography held in London twenty months ago, which excited the liveliest interest there, but whose echoes barely reached our people.

British New Guinea. By J. P. Thomson. With map, numerous illustrations, and appendix. London: George Philip & Son. 1892. 8vo, pp. xviii., 336.

THE southeastern part of New Guinea was annexed by Great Britain to prevent it from falling into the hands of Holland or Germany, and in the sole interest of Australia, which naturally desired to hold the exclusive possession of the Torres Straits dividing the two countries. During the last four years Sir William MacGregor has been the administrator of the territory, and this book is mainly the result of his explorations as contained in his official reports. It does not appear that the author, Mr. J. P. Thomson, has visited any part of the island himself, and consequently his descriptions, though doubtless scientifically accurate, lack the vivacity and distinctness of the account of an eye-witness.

By implication rather than by any direct statement we gather that, as a Crown possession, New Guinea is still of little value. Traces of gold are numerous, but it has been found in paying quantities only in one outlying island. The principal part of the arable land contiguous to the sea-coast or on navigable streams is now under cultivation by the natives. In the interior are forests with valuable timber, but there are no means of bringing it to the coast. New Guinea lacks "indigenous and cultivated fruit," with the important exception, however, of bananas, thirty-six distinct varieties being cultivated on the island of Kiwai alone. Here, also, are twenty kinds of yams and ten of sweet potatoes. There are few animals—pigs, dogs, and kangaroos being the largest; and of these the pigs are the most valuable to the natives. "They are fondled and petted like lambs, the young being suckled at the breasts of women," while their market value "is occasionally equal to that of a human being." Many of the tribes are still head-hunters and cannibals, and live in continual warfare with their neighbors. Others, especially on the south coast, are gradually becoming in some degree civilized, and are developing propensities for trade. For the European, however, the climate "will always be a great hindrance to settlement and a constant menace to life."

There is very little that is new in Mr. Thomson's representations concerning the natives and their modes of life. Previous writers have made us familiar with the villages built on piles, the fighting platforms in the tree-tops, and the huge houses, often exceeding 500 feet in length, in which a whole tribe can be lodged. The same is true of Sir William MacGregor's successful ascent of Mount Victoria, the culminating peak of the Owen Stanley Range, to which he devotes a long chapter. Much valuable information, however, is contained in the appendix, in which there are scientific descriptions by different writers of the geology, the flora, fauna, and languages of this part of New Guinea. Of these the most important are the catalogue of insects, and the vocabularies from the various dialects, which show that while some of the tribes can count but to five, others by constructive methods count to a thousand. The number of dialects is also remarkable, in some regions every village apparently having a distinct dialect of its own. There is, rather strangely, no account of the birds, though Mr. Thomson makes several references to their number and variety, especially of the birds of paradise.

The mechanical appearance of the volume is very attractive, its illustrations being numerous and excellent. There is, besides, a good index and a very clear map.

Clarke Aspinall: A Biography. By Walter Lewin. London: Edward W. Allen. 1893.

MR. LEWIN tells us in his preface that the permission to make this biography was granted, at his request, by the widow of Mr. Aspinall. But for this statement we should have imagined it inspired by conjugal or filial piety, with little hope of doing more than to furnish a narrow circle with the memoir of a genial friend. It is difficult to discover why a writer of Mr. Lewin's skill should have been drawn to Mr. Aspinall as a biographical subject. He was something of a local celebrity. Mr. Lewin thinks a quarter of a million people knew him by sight. His highest dignities were those of a coroner and a local magistrate and member of the Liverpool Town Council. His local magistracy was his most serious function, and in this his leaning was not to the side of mercy. Mr. Lewin has much to say about his wit and humor. They were not of a peculiar brilliancy or fineness. He was more jocose than either witty or humorous. Mr. Lewin, who as a biographer is nothing if not honest, does not disguise the fact that his hero's joking was in season and out of season, and that there were those who thought it oftener the latter than the former. One of his more favorable critics characterized his jokes as stale and rancid, and the samples given do not make us wish for more. If the best were such as these, the poorest must have been a weariness to those subjected to their constant puerility. The best of them is not so good as that told here of the reprobate of ninety-two summers who pleaded his being an orphan as a mitigating circumstance of his drunkenness.

Mr. Aspinall was one of a family that had other names in the history of Liverpool more celebrated than his own. His father was a clergyman, and he himself inclined at one time to this profession, but finally chose the law, and made an indifferent solicitor, spoiling a good barrister. His home was in the Liverpool suburb of Bebington, which is charmingly described in a quotation from Hawthorne's English note-book. The conscientiousness with which his various social functions are set down, from the Cathedral Restoration Fund to the mothers' tea-meeting, is funnier than any of his jokes. As if conscious of the meagreness of his material, Mr. Lewin has an introductory essay on the function of the biographer, which constitutes a somewhat too imposing entrance to the building into which it leads. After this essay there is a chapter on the history of Liverpool, which is far the most interesting in the book, especially as it deals largely with the slave trade, and shows how the material prosperity of Liverpool has twice seemed to depend on slavery. The modernness of Liverpool will be a surprise to many readers.

Mr. Lewin's book will certainly commend itself to Mr. Aspinall's immediate friends, though one here and there may object to its perfect candor. The best impression that it gives is

that there are thousands of men just as able and useful and kindly as Mr. Clarke Aspinall, if somewhat less jocose, whose biographies are never written.

Studies by a Recluse in Cloister, Town, and Country. By Augustus Jessopp, D.D. G. P. Putnam's Sons. 1893.

HISTORY infuses life and purpose into archæology, and archæology gives color and exactness to history. The combination of the two produces a most attractive result when the stores of research are poured forth with vividness and without pedantry, and scenes from the life of by-gone ages are set before us, in which the larger outlines are broadly sketched by the historian and the details are filled in by the antiquary. It is this which constitutes at once the value and the charm of the somewhat miscellaneous collection of essays which the Rev. Dr. Jessopp has here gathered together. Full of kindly sympathy with the past, yet not losing touch with the present, informed with a never-failing sense of humor that no burrowing among musty records can quench, and couched in a lively and vigorous if somewhat discursive style, they present in a most attractive form the ripe results of research and scholarship. A few of the shorter ones, it is true, are scarcely more than occasional articles or addresses, but the more elaborate, such as "St. Albans and Her Historian," "The Origin and Growth of English Towns," and "The Land and Its Owners in Past Times," are valuable contributions to our knowledge of the past, and will bring a wholesome desire of learning more to many who would shrink from Dryasdust dissertations or learned diatribes on the origin and functions of the Gild Merchant. Some of the author's views may not meet with full acquiescence from students who have framed different theories about obscure and debatable points, but it has not come within his scope to indulge in controversy; he simply states his own opinions, which are evidently the outcome of abundant familiarity with facts and ability to use them. The little volume is popular in the best sense of the word, and no one with a taste for history will take it up without finding in it some hours of delightful reading and material for further reflection.

The danger of gathering together articles written at different times and from different standpoints is illustrated by the somewhat discordant descriptions of Pliny the Younger as a country gentleman (p. 198) and Pliny the Younger as a prig (p. 228), though both sketches are so clever that one would not willingly part with either.

History of the English Parliament; together with an account of the Parliaments of Scotland and Ireland. By G. Barnett Smith. Ward, Lock, Bowden & Co. 1892.

IT is hard to say what class of readers is to be served by this book. We do not understand that the author offers it as the result of any original research, or as containing any new contribution to our knowledge. On the other hand, two ponderous volumes of 500 or 600 pages each, written in a colorless style, and made up of selections and adaptations from the pages of many learned and judicious but somewhat painful scholars, do not correspond with the idea ordinarily entertained of a "popular" work. Nevertheless, if there are those who desire a history of Parliament apart from other institutions, they will find it here, and upon the whole very well presented. If Mr. Smith is little more than a compiler, he at all events has the good sense to select the standard authorities for compilation; and as he claims no originality, he can hardly be blamed for using the language of others when it serves his purpose. Such a book is, of course, not to be measured by literary canons, and is perhaps better the more it contains that is not the author's own. As a narrative we should decidedly give the preference to Mr. Skottowe's 'Short History of Parliament,' reviewed in these columns some five or six years ago; but as a compendium of facts the present work is obviously far more complete.

As Mr. Smith has chosen the best authorities for the source of his materials, so he has followed them with good judgment and with accuracy. It would be possible to point out instances where he has gone astray through taking his learning at second-hand, but such instances, so far as our examination has extended, are surprisingly few. Some space is wasted in chronicling events in general history that have no proper connection with Parliamentary development, and in view of the bulk of the work this is a rather serious fault. But the temptation to wander from a dry subject to matters of human interest is so great that pardon must not be denied to those who yield to it occasionally. Upon the whole, Mr. Smith's arrangement is good, but his results are more satisfactory in the earlier period, where he is following a safe guide like Bishop Stubbs, than later, where the wisdom of a multitude of counsellors becomes perplexing. The account of the legislation of Parliament during Queen Victoria's reign is scarcely germane, and might well have been dispensed with. There are several interesting facsimiles of early writs, etc., in the book; and in the appendix are printed a translation of Magna Charta, the Petition of Right, the Habeas Corpus Act, the Bill of Rights, lists of the Chancellors and Speakers, and other like matter. A tolerably full index makes the work available for reference, and it is for this purpose that it will be chiefly valuable.

Das Kreditwesen der Staaten und Städte der Nordamerikanischen Union in seiner historischen Entwickelung. Von Dr. Carl Copping Plehn. Jena: G. Fischer. 8vo, pp. 93.

A PRONOUNCED feature of our recent law-making is the increasing tendency to introduce into State constitutions either direct legislation, or provision for a popular "referendum." It is easy to see why the distrust of chosen representatives which such constitutional provisions imply found early expression in connection with the management of State credit. Nothing is easier for the average politician temporarily in office than to contract public debts; his successors may explain as they can. But the majority of our States and cities have learned by experience that credit wears out rapidly when over-used. Their experience is the topic of Dr. Plehn's study. He attempts to describe, both as to their origin and as to their results, those limitations of the debt-making power which we have been forced, for the rescue of public credit, to impose upon our elected representatives in State and city.

When Jackson's veto of the Maysville Road Bill threw upon the States the task of providing internal improvements, no States save New York and Pennsylvania had large debts, and State credit was uniformly good. When the surplus revenue was distributed, debts to the amount of 175 millions, contracted in the North chiefly for canals and railways, in the South chiefly for banks, already rested on the States, and by 1842 the sum of their indebtedness had risen above 200 millions. State credit was nearly destroyed. The first limitation on the debt-making power of a State dates from the year 1842. It is the provision for a "referendum" in the Constitution of Rhode Island, art. iv, sec. 13. Mr. Oberholtzer is, therefore, in error in saying ('Law-making by Popular Vote,' Annals of the Amer. Academy of Political Science, vol. ii., p. 47), "another kind of Referendum was invented by Iowa . . . 1846," etc. The correction is worth making because it furnishes another illustration of the almost universal rule that important legislative tendencies originate in Eastern States and make their way West, not vice versa. Other States have followed Rhode Island's example, until in 1891 Dr. Plehn could count no less than 229 credit-limiting provisions in forty-four State constitutions. Only Vermont, Massachusetts, and Delaware leave both State and local governments free to contract such debts as they choose. The effect of these frequently drastic provisions upon State credit has been salutary. Since 1870 the sum of State indebtedness has steadily decreased, and, save where repudiation has taken place, the credit of the States is now good.

Precisely as Jackson's veto shifted the burden of internal improvements from the Union to the States, so the people's veto on the States shifted the burden to the towns and cities in the North and to the counties in the South. Local indebtedness began to grow soon after the war: in 1870 its sum was 515 millions, in 1880 it had risen to 822 millions. In the meantime the people were putting a stop to further local borrowing in the same way in which they had stopped State borrowing before. Our author, not having access to a collection of American city charters, was obliged to neglect the legal limitations on municipal debt-making contained in them, and to confine his attention to the constitutional limitations. His treatment of this phase of his subject is to that extent incomplete. In the constitutional limitations, however, he finds an adequate reason for the improvement in local credit which has taken place, and, while not denying that corruption and extravagance are responsible for a large share of existing city indebtedness, he is inclined to take, as the circumstances on the whole seem now to warrant, a more hopeful view than was prevalent ten years ago. He has studied the subject with evident diligence and from what we believe to be a new standpoint. On their administrative side the constitutional provisions in question have been discussed again and again, and the corruption thought to be their sole cause has been painted in colors of adequate strength; but their financial side has been neglected. That the average citizen who voted for them realized that they were necessary if credit was to be preserved, we do not understand the writer to say. But that they actually were a financial necessity, he distinctly shows.

BOOKS OF THE WEEK.

Pancoast's Representative English Literature.

Selections with Historical Connections. By HENRY S. PANCOAST, Instructor in the DeLancey School, Philadelphia. 12mo, 514 pp. To teachers, $1.60; by mail, $1.75.

Recognizing the good in both the old and the new way of teaching literature, this book puts the student into immediate contact with masterpieces, representative of great literary epochs, and, at the same time, supplies an illuminating account of the men and the time which produced them. It further impresses the truth that every epoch is but an episode in a continuous and intelligible story of literary development.

McLaughlin's Literary Criticisms for Students.

Edited by Prof. E. T. MCLAUGHLIN of Yale. Selections from the masters of English criticism, chosen for their general suggestiveness in matters of literary taste, from Sir Philip Sidney, Ben Jonson, Dryden, Addison, Swift, Dr. Johnson, Wordsworth, Coleridge, Lamb, DeQuincy, Carlyle, Matthew Arnold, Lowell, Ruskin, R. H. Hutton, and Pater. 12mo. 256 pp. To teachers, $1; by mail, $1.10.

Some British contradictions of opinion concerning CALMIRE.

"A dreary drivel of atheistical trash."—*London World.*

"A small commonplace book might be filled with the many terse and apt sayings with which his pages abound."—*London Literary World.*

"Nothing good can be said of the miserable Muriel Calmire, that imposture of a man."—*Academy.*

"Muriel is a tremendously lifelike person. Everybody must recognize in him some very young modern man whom they particularly like, and very possibly particularly dread."—*Guardian.*

"It would be curious to ascertain by what circle of the reading public a book such as this runs a chance of being appreciated."—*London Morning Post.*

"Sure to make its mark in England, and it would hardly be surprising if it became a sort of rage."—*Manchester Examiner.*

Apparently Calmire is already "a sort of a rage" in America. It is anonymous; it appeared at the opening of the dull season, and it does not profess to be a novel; yet it is already nearing the end of its third thousand in America, and an edition has been sold to England. It is equally evident, however, that there is a class of minds in which the book awakens a "rage" of an opposite character—a form, more or less "suppressed," of "odium theologicum" (though at least one of the religious papers has been free from it), and that such minds can find in the book no good whatever. In short:

"If people's tastes lie in other directions, they would do well to leave it alone."—*Saturday Review.*

A STITCH IN TIME SAVES NINE.

The Hygiene of the Sick Room.

By Wm. B. Canfield, M.D., Lecturer in the University of Maryland, Baltimore. A book for all those engaged in caring for the sick. 12mo. Handsome cloth, $1.50.

Being a plain, practical exposition of infection and disinfection, bacteriology, ventilation, heating, diet, the care of patients with fever, diphtheria, cholera, small-pox, consumption, measles, malaria, pneumonia, etc.

"It emphasizes as nothing can, except contagion, the importance of cleanliness of all things that may come in contact with the sick. This is insisted upon, not only to bring about a more rapid recovery, but to prevent the spread of those diseases which are infectious."—*Public Opinion.*

Accidents and Emergencies.

By Charles W. Dulles, M.D., Physician to the Rush Hospital, Philadelphia, late Asst. Surgeon N. G. P. Fourth Edition Just Ready. Cloth, $1.00.

"This is the fourth edition, thoroughly revised and enlarged, of a manual on the treatment of surgical and medical emergencies in the absence of a physician. It is full of valuable matter that every one ought to know and an index renders the information quickly accessible."—*The Boston Herald, December 8th,* 1892.

The Hygiene of the Nursery.

By Louis Starr, M.D., Clinical Professor of Diseases of Children in the Hospital of the University of Pennsylvania; Physician to the Children's Hospital, Phila. Third edition, enlarged and improved, with 25 illustrations. 12mo. 293 pages. Cloth, $1.00.

Including the General Regimen and Feeding of Infants and Children and the Domestic Management of the Ordinary Emergencies of Early Life, Massage, etc.

These books may be ordered through any bookseller or news agent, or upon receipt of price we will send, postpaid, to any address. Remit by postal note or postage stamps. Catalogues of Books on Medicine, Hygiene, Nursing, Chemistry, etc., free.

"THE BEST LITERARY JOURNAL IN AMERICA."

THE DIAL

A Semi-Monthly Journal of Literary Criticism, Discussion, and Information.

"THE DIAL *is, in my opinion, the soundest, most dignified, and creditable literary journal in America.*"—EDMUND CLARENCE STEDMAN.

"*I do indeed value* THE DIAL *very highly; it is, in my opinion, the best critical journal in this country.*"—H. H. BOYESEN.

THE DIAL has been established twelve years (since May, 1880), as a monthly journal devoted to Literary Criticism only; but lately (Sept. 1, 1892), by its change to semi-monthly publication, and by enlargement of its scope so as to include the broader interests of Literature, of Education, and of Higher Culture generally, it has entered upon a new career of influence and prosperity. It is published on the 1st and 16th of each month. Terms (including postage), $2.00 a year, in advance. Single copy, 10 cents. Address

THE DIAL, 24 ADAMS ST., CHICAGO.

A Very Special Offer.

The Publishers of THE DIAL will send their journal for two months (four numbers) to any responsible person (not already a subscriber) who will signify a desire for it and will enclose six 2-cent stamps for postage. It is desired that applications should, when agreeable, mention the profession or occupation of the sender; but this is not obligatory, nor is there any obligation whatever beyond a genuine intention to give the journal a fair examination.

"*In criticism, the event of the year* 1892 *has been the enlargement of* THE DIAL, *and its transformation from a monthly to a semi-monthly magazine.*"—Chicago Tribune.

RECENT POETRY.

Valeria

And Other Poems (including the Commemoration Ode of the World's Columbian Exposition). By HARRIET MONROE. 12mo, gilt top, $1.50.

"It is vigorous in conception and is wrought out with no little strength and beauty. Some passages are actually brilliant, and many lines, or even single clauses, delight one by their felicity of form and sense."—*Congregationalist, Boston.*

Some Rhymes of Ironquill

Of Kansas. 16mo, $1.00.

"He writes with shrewdness, brevity, humor, and point, yet in an off-hand, homely style that will please critical readers and attract the many others who can't be persuaded to read verse at all unless there is something odd about it."—*Godey's Magazine.*

Songs and Sonnets

And Other Poems. By MAURICE FRANCIS EGAN, LL.D. 16mo, $1.00.

"He is one of the poets whose songs gush from the heart, and when, as in Dr. Egan's case, the heart is a fervid Catholic one, there is left nothing more to be desired."—*The "Ave Maria."*

Poetry of the Gathered Years.

Compiled by M. H. 16mo, $1.00.

"This little book, so daintily bound and printed, contains some of the most exquisite of life's twilight songs ever written, and is charmingly unique in its arrangements."—*Transcript, Boston.*

Eleusis

And Lesser Poems. By WILLIAM RUFUS PERKINS. 16mo, $1.00.

"We have read it with unusual fascination. . . . The volume is opened with the idea of tasting, and before it is closed we find that we have devoured. . . . Mr. Perkins is a poet and a charming one."—*Interior, Chicago.*

Paradise Lost.

By JOHN MILTON. *Laurel-Crowned Verse.* 16mo, gilt top, $1.00.

The Iliad of Homer.

Pope's Translation. *Laurel-Crowned Verse.* 2 vols. 16mo, gilt top, $1.00 a vol.

"This series of classics is one of the most attractive published. The volumes are of just the right size to hold conveniently in the hand, the covers have an excellent feeling to the finger tips, and the sensitive, cultivated reader will find nothing to condemn in these well-published but inexpensive volumes."—*Advertiser, Boston.*

RECENT ROMANCE.

Other Things Being Equal.

By EMMA WOLF. 16mo, $1.00.

"A novel quite up to date in depicting the social life of the American Jew. . . . The struggle between orthodoxy and its views of marriage within the racial lines and the charming love story which is so complicated is as powerful an incident as anything in modern novel-writing."—*Public Ledger, Phila.*

Christmas Stories from French and Spanish Writers.

By ANTOINETTE OGDEN. 16mo, gilt top, in a box, $1.00.

"They are short, simple, charming in substance, gracefully written, and evidently well translated."—*Congregationalist, Boston.*

"Its contents are of permanent interest."—*Times-Democrat, New Orleans.*

Columbus and Beatriz.

By CONSTANCE GODDARD DUBOIS, author of "Martha Corey: A Tale of the Salem Witchcraft." 12mo, $1.00.

"The story, from the opening pages, is exceedingly interesting, possessing the fascination always present in a well-written historical novel. . . . The character of Beatriz as drawn by the author is noble and womanly."—*The Arena.*

For sale by booksellers generally, or sent, postpaid, on receipt of price by the publishers.

A. C. McCLURG & CO.,

CHICAGO.

Cassell Publishing Co.

HAVE JUST ISSUED:

BY FRANK FRANKFORT MOORE.

"I FORBID THE BANNS."

The story of a comedy which was played seriously. By FRANK FRANKFORT MOORE. 1 vol., 12mo, cloth, $1.00.

This is a story that is bound to attract more than passing notice. Opinions of the book may be as wide apart as the poles, except as to its interest. On this point the verdict will be unanimous in its favor.

BY W. CLARK RUSSELL.

LIST, YE LANDSMEN!

A Romance of Incident. By W. CLARK RUSSELL, author of "The Wreck of the Grosvenor," etc., etc. 1 vol., 12mo, cloth, nautical cover design, $1.00.

W. Clark Russell's sea stories need no "*bush*"—the present one least of all; for here we certainly have him at his very best.

BY WM. C. HUDSON.

THE DUGDALE MILLIONS.

A Novel. By WM. C. HUDSON ("Barclay North"), author of "The Diamond Button," "Jack Gordon, Knight Errant, Gotham, 1883," "On the Rack," etc., etc. 1 vol., 12mo, cloth, 75 cents; paper, 50 cents. *Cassell's Sunshine Library.*

As with Mr. Hudson's other stories, the scene of this one is laid in and around New York. That it is fresh, breezy, and fascinating his host of appreciative readers will correctly surmise.

MARK RUTHERFORD.

THE AUTOBIOGRAPHY OF MARK RUTHERFORD.

Edited by his friend, REUBEN SHAPCOTT. New edition, corrected and with additions. 1 vol., 12mo cloth. $1,00.

Mark Rutherford is a Dissenting Minister who bursts the fetters laid upou him by a creed which he can neither understand completely, nor yet endorse in parts. "It is a tragical story," says the London *Echo*, "powerfully, because so simply, told." This is the first authorized edition printed in America.

BY A. T. QUILLER-COUCH.

THE BLUE PAVILIONS.

A. Novel. By "Q" (A. T. Quiller-Couch), author of "Dead Man's Rock," etc., etc. *Cassell's Sunshine Series.* Paper, 50 cents; small 8vo edition, cloth, $1.25.

"Chief of the recent novels is assuredly Arthur T. Quiller-Couch's 'Blue Pavillions.'"—*Quarterly Register of Current History.*

BY P. L. McDERMOTT.

THE LAST KING OF YEWLE.

A Novelette in Nine Chapters. By P. L. McDERMOTT. 1 vol., 16mo, unique cloth binding, 50 cents. *The "Unknown" Library.*

REAL COOKERY.

By "GRID." 1 volume, 16mo, cloth, 50 cents.

A practical handbook that every housewife will appreciate. The author wastes no words in descriptions or "talk," but comes right down to "hard facts." The book is one that will make friends for itself as soon as it is seen.

READY ON MONDAY.

THE

Popular Science Monthly

FOR APRIL.

Science and the Colleges. By DAVID STARR JORDAN. Points out the absurd weakness of many starveling sectarian colleges, and shows what progress science teaching has made in higher education.

The Inadequacy of "Natural Selection." By HERBERT SPENCER. Shows how naturalists have been misled by a phrase.

Prof. G. F. Wright and His Critics. By Prof. E. W. CLAYPOLE. A defense of a recently attacked writer on the antiquity of man.

The Festal Development of Art. By President DAVID J. HILL. Maintains that the fine arts are simply modes of expressing religious and other strong feelings.

Other Articles on

THE CORRELATION OF STRUCTURE, ACTION, AND THOUGHT; THE MAORIS OF NEW ZEALAND; EDUCATION OF OUR COLORED CITIZENS; FREE PLAY IN PHYSICAL EDUCATION; CONSERVATION OF THE MACKEREL SUPPLY; TRACES OF A VANISHED INDUSTRY; ERNEST RENAN: Sketch of his Life and Work, with Portrait.

50 cents a number; $5.00 a year.

D. APPLETON & CO.,

NEW YORK.

D. APPLETON & CO.'S NEW BOOKS.

Idle Days in Patagonia.

By W. H. HUDSON, C.M.Z.S., author of 'The Naturalist in La Plata,' etc. With 27 illustrations. 8vo. Cloth, $4.00.

"Of all modern books of travel it is certainly one of the most original, and many, we are sure, will also find it one of the most interesting and suggestive."—*N. Y. Tribune.*

"Mr. Hudson's remarks on color and expression of eyes in man and animals are reserved for a second chapter, "Concerning Eyes." He is eloquent upon the pleasures afforded by "Bird Music in South America," and relates some romantic tales of white men in captivity to savages. But it makes very little difference what is the topic when Mr. Hudson writes. He calls up bright images of things unseen, and is a thoroughly agreeable companion."—*Philadelphia Ledger.*

General Jackson.

By JAMES PARTON. The third volume in the Great Commanders Series, edited by Gen. JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

The last literary work of James Parton, completed just before his death, was the preparation of this volume. It is a model miniature biography, possessing throughout all the interest of a romance.

An Atlas of Astronomy.

By Sir ROBERT S. BALL, F.R.S., Professor of Astronomy and Geometry at the University of Cambridge, author of 'Starland,' 'The Cause of an Ice Age,' etc. With 72 Plates, Explanatory Text, and Complete Index. Small 4to. Cloth, $4.00.

"The high reputation of Sir Robert Ball as a writer on astronomy at once popular and scientific, is in itself a more than sufficient recommendation of his newly published 'Atlas of Astronomy.' The plates are clear and well arranged, and those of them which represent the more striking aspects of the more important heavenly bodies are very beautifully executed. The introduction is written with Sir Robert Ball's well-known lucidity and simplicity of exposition, and altogether the Atlas is admirably adapted to meet the needs and smooth the difficulties of young and inexperienced students of astronomy, as well as materially to assist the researches of those that are more advanced."—*London Times.*

New Revised Edition of Lecky's England and Ireland.

A History of England in the Eighteenth Century.

By WILLIAM E. H. LECKY. Cabinet Edition, seven volumes, 12mo. Cloth, $7.00.

A History of Ireland in the Eighteenth Century.

By WILLIAM E. H. LECKY. Cabinet Edition, five volumes, 12mo. Cloth, $5.00.

The 'History of Ireland' was formerly included in the eight-volume edition of the 'History of England.' By a rearrangement of the contents the two Histories now appear separately as above, each complete in itself, but bound uniformly. Important revisions have been made, and the work is in some respects practically new.

The well-known high character of this standard history needs no fresh commendation.

The Political Value of History.

By WILLIAM E. H. LECKY, author of 'History of England in the Eighteenth Century,' etc. A Presidential Address delivered before the Birmingham and Midland Institute in October, 1892. Reprinted with Additions. 12mo. Cloth, 75 cents.

The Diary of an Idle Woman in Constantinople.

By FRANCES ELLIOT, author of 'The Diary of an Idle Woman in Sicily,' 'The Italians,' etc. With Plans and Illustrations. Crown 8vo. Cloth, $3.50.

"Those who love the romance of history better than its dry facts will probably find 'The Diary of an Idle Woman in Constantinople' a book to their taste. The author has rebuilt and repeopled the romantic scenes of this essentially Eastern city, gathering her information largely from Gibbon, Von Hammer, and similar writers, and remolding its shape according to her own ideas of what is most interesting. Thus details of dynasties and statistics are thrown aside and she dwells on the beauties, natural and human, of a long line of favorite Sultanas, and of Byzantium of old and the Golden Horn to-day. The author gives us material very much more difficult of access in the ordinary way."—*London Literary World.*

Dr. Paull's Theory.

By Mrs. A. M. DIEHL, author of 'The Garden of Eden,' etc. No. 112, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

'Dr. Paull's Theory' will be found to be a romance altogether out of the common. In this striking book the author has treated a novel theme in a manner which enchains the reader's interest.

A Little Minx.

By ADA CAMBRIDGE, author of 'The Three Miss Kings,' 'Not All in Vain,' etc. No. 114, Town and Country Library. 12mo. Paper, 50 cents; cloth, $1.00.

"The story of 'The Three Miss Kings' is told with great brilliancy, the character and society sketching is very charming, while delightful incidents and happy surprises abound. It is a triple love-story, pure in tone, and of very high literary merit."—*Chicago Herald.*

New Edition of Maartens's 'Joost Avelingh.'

Joost Avelingh.

By MAARTEN MAARTENS. New edition, uniform with 'God's Fool,' by the same author. 12mo. Cloth, $1.50.

The increasing demand for Maarten Maartens's two novels has led the publishers to prepare this edition of 'Joost Avelingh' for the convenience of those who prefer a uniform binding.

"A book by a man who, in addition to mere talent, has in him a vein of genuine genius."—*London Academy.*

"In scarcely any of the sensational novels of the day will the reader find more nature or more human nature."—*London Standard.*

YORK. By JAMES RAINE, M. A., D.C.L. With Maps and Plans. Crown 8vo, $1.25.

Recent Volumes in the Series.

NEW YORK. By THEODORE ROOSEVELT, With Maps and Plans, $1.25.

BOSTON. By H. CABOT LODGE With Maps and Plans, $1.25.

Buddhism, Primitive and Present, in Magadha and in Ceylon. By REGINALD STEPHEN COPLESTON, D.D., Bishop of Colombo, President of the Ceylon Branch of the Royal Asiatic Society. 8vo, pp. xv.-502, $5.00.

"With a style that is both beautiful and simple, the author traces the relation of Ceylonese Buddhism to the original stock, and then gives a general historical sketch which is of great interest. . . . We can heartily recommend this book as a candid and judicious appraisement of a most interesting subject."—*The Critic.*

Old and New Astronomy. By RICHARD A. PROCTOR and A. COWPER RANYARD. With 31 Plates and 472 Illustrations in the text. 4to, $12.00.

CONTENTS: Introduction—Ancient and Modern Methods of Observing the Heavenly Bodies—Ancient and Modern Studies of the Earth's Shape—Apparent Motions of the Sun, Moon, and Planets—The True Mechanism of the Solar System—Measuring and Weighing the Solar System—The Sun—The Sun's Surroundings—The Inferior Planets—The Planet Earth—The Moon as a Planet—The Planet Mars—The Zone of Asteroids—The Planet Jupiter—The Planet Saturn—The Planet Uranus—The Planet Neptune—The Stars—Table of Astronomical Constants—Index.

"Will be acceptable to all students of astronomy in its more popular aspects, alike for the lucidity of its style, the copiousness of its matter, and the attractiveness of its illustrations."—*Times.*

The Diseases of Children, Medical and Surgical. By HENRY ASHBY, M.D., Lond., and G. A. WRIGHT, B.A., Eng. *Second Edition.* Edited for American Students by WILLIAM PERRY NORTHRUP, A.M., M.D., Attending Physician to the Presbyterian Hospital, Pathologist to the N. Y. Foundling Hospital, etc. 8vo, 795 pages, with 183 Illustrations and full Index, $5.00.

"This book has many things to recommend it, both from a medical and surgical point of view. We do not know of a work in which a larger number of diseases are described than are found here, and the subjects which one finds discussed correspond more nearly to those presented by the reviewer in his teachings than is contained in any other book on diseases of children. Everything is brought up to date."—*Chicago Clinical Record.*

NEW EDITION OF QUAIN'S ANATOMY.

Quain's Elements of Anatomy. The Tenth Edition. Edited by EDWARD ALBERT, SCHÄFER, F.R.S., Professor of Physiology and Histology in University College, London, and GEORGE DANCER THANE, Professor of Anatomy in University College, London.

A NEW BOOK BY CANON BODY.

The Life of Love. A Course of Lent Lectures. By the Rev. GEORGE BODY, M.A., D.D., Canon Missioner of the Diocese of Durham. 12mo, $1.25.

NEW BOOK BY THE ABBE FOUARD.

St. Peter and the First Years of Christianity. By the ABBÉ CONSTANT FOUARD, Author of "The Christ, the Son of God." Translated by GEORGE F. X. GRIFFITH. In one vol., with 3 maps, small 8vo, cloth, gilt top, $2.00.

"Probably no more instructive and interesting chapter can be found in the volume than is the one of twenty-eight pages on 'The Jews of the Dispersion' and their influence upon the surrounding pagan world—sowing the Messianic seed which was soon to spring up into a great spiritual harvest under the Christian Apostles. Hardly less graphic and attractive are the chapters on the moral condition of the pagan world, on Antioch, on the Religion of Rome, on the Conduct of Life under Augustus, and on the Stoics of the Empire. . . . Vivacity, brilliancy at times, pervades the entire volume. There is no dullness to be found in the pages."—*American Catholic Quarterly Review.*

THE BAMPTON LECTURES, 1892.

Some Lights of Science on the Faith: Being the Bampton Lectures for 1892. By the Right Rev. ALFRED BARRY, D.D., Canon of Windsor, formerly Bishop of Sydney, Metropolitan of New South Wales, and Primate of Australia. 8vo. $3.00.

The Church in Relation to Sceptics: A Conversational Guide to Evidential Work. By the Rev. ALEXANDER J. HARRISON, B.D., Evidential Missioner of the Church Parochial Mission Society, Lecturer of the Christian Evidence Society, Boyle Lecturer 1892, Author of "Problems of Christianity and Scepticism." Crown 8vo, $2.00.

Pleas and Claims for Christ. By the Rev. HENRY SCOTT HOLLAND, M.A., Canon and Precentor of St. Paul's. Crown 8vo, $2.00.

LONGMANS, GREEN, & CO., Publishers, 15 East 16th Street, New York.

Maine Coast.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

RARE BOOKS

AUTOGRAPH LETTERS.
Catalogues issued continually.
Send 10 cts. postage for a package.
WILLIAM EVARTS BENJAMIN,
751 BROADWAY, NEW YORK.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

The cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by THE AMERICAN ANNEXE OF MR. HALFORD L. MILLS,
Cambridge Place, Paddington, London.

To Rent—For the Exposition Period,

Furnished flats of seven rooms and bath in **THE GROSVENOR, 6217 Sheridan Ave., Chicago,** Within eight minutes' walk of three entrances to the Fair. Cafe in basement. Rent, $3,500 for the six months.
Send for Prospectus to Room 537, 79 Dearborn St.

CAPE COD.

For rent, for the season of 1893, the place at Cotuit, Mass., known as the Uplands, consisting of 4 acres of ground, house, and boat and bath-house. House contains living-room and dining-room—each with large fireplace, library, store-room, servants' dining-room and kitchen, 4 bedrooms, and closets; 10-foot veranda at front and side. Fully furnished, with exception of linen and silver. Is situated on high ground, fronting Cotuit Bay, in Vineyard Sound, over which it has an uninterrupted view. Numerous trees and kitchen garden; 300 feet of sandy beach and ample boat-house; fine bathing and boating. Cotuit is seven miles from station, West Barnstable (Old Colony R.R.), with which there is stage connection three times daily. Terms, $400; one-half on execution of lease.
Address WM. H. CARPENTER.
Columbia College, New York.

TO RENT IN CHICAGO, DURING months of July, August, and September, a new flat, nine rooms, accommodating seven or eight persons. It is newly and completely furnished, two fireplaces, six minutes' walk from elevated road, and fifteen minutes' ride from World's Fair. Rooms all light, having east, south, and west exposure. Would like to leave servant in employ of family renting. Address K., No. 406, Rookery Building, Chicago.

FOR SALE.

A well-established Preparatory School in a Western city of 200,000. Principal desires to retire from school work. Address WESTERN, care of *Nation.*

The Nation.

NEW YORK, THURSDAY, MARCH 16, 1893.

The Week.

THE natural or business order on the occurrence of any serious crisis in public affairs is undoubtedly to call the national Legislature together to consider and meet the emergency. As we have frequently pointed out, were the machinery of government what it ought to be, the new Congress would meet as soon after the election as mechanical arrangements would permit, to execute the trust prescribed by its constituents. President Cleveland is, we have no doubt, as sensible of this as anybody, and yet he has decided not to convene Congress now, or before September, but to deal with the currency crisis with the powers the law has already placed in his hands, and to postpone Congressional action on the tariff till the autumn. Why is this? Simply, we believe—though we have no positive information on the subject—because he perceives, as do most other observers, that if Congress got together now, it would not devote itself at once to the consideration of the tariff, or any other public question, but to the work of helping him to fill the public offices. Were Congress in session to-day, the probabilities are that Washington would be crowded with office-seeking constituents, and the principal business of the members would be accompanying them to the White House and the departments for the presentation of "claims" and testimonials. Neither the President nor any member of the Cabinet would have a moment left from morning till night for the discharge of a single one of his imperative duties. The appointments which the President has to make he would not be allowed to make with deliberation, knowledge, or care. Removals and appointments which he need not make at all, or need not make now, would be pressed upon him vociferously, and the golden moments intended by the Constitution for the grave work of gathering up the reins of government would be spent in listening to harangues on the services of Jerry This and Jo That during the late memorable campaign. Moreover, the prospect of securing any legislation would be very small, so widespread would be the determination not to give votes to Administration measures except in return for consulships, and postoffices, and collectorships, and appraiserships.

These difficulties, it is true, are likely to appear in their gravest form only when the election has made a transfer of power to a new party. They would not occur, or would occur only in a much milder form, if, for instance, Gen. Harrison had been reëlected with a Congressional majority of his own party. But there is no juncture at which the country has more imperative need of the best services of a new Congress than that created by the expulsion of the old party from office, because this expulsion means a popular demand for a new policy. Could there be a better illustration of the evils of the spoils system—that is, of the treatment of the public offices as desirable booty—than the fact that it makes the Legislature at such a moment as this an embarrassment, and not a help, to the Executive?

In withdrawing the Hawaiian treaty from the Senate, President Cleveland has simply taken the straightforward way of undoing what never should have been done. Whatever steps he may contemplate in the future, this decided action of his can mean only that he has fundamental objections to the treaty, either on account of the manner of its negotiation or on account of its terms, or both. To suppose that he recalled it because of minor defects alone is absurd; these could easily have been remedied by amendments in the Senate. To imagine that he is jealous of the glory that would accrue to his predecessor by its ratification, and that he will soon send in another treaty to be identified with his own name, is worthy of the small minds which have adopted this fancy. With them it is simply a survival of the old ignoble contest between Blaine and Harrison as to which one should wear the laurels of reciprocity, and they have not yet got used to the change of atmosphere at Washington. The President gives the country to understand that there is going to be no offhand decision of the grave question, and that time will be taken and the proper means employed to find out the real sentiments of the Hawaiians themselves, and to probe the mercenary schemes that have been masquerading in the guise of patriotism. In all this he has faithfully reflected the views and wishes of the great majority of the people of this country.

Mr. Thurston of the Hawaiian Annexation Committee made an address before a Washington club last week, and was asked if it was true that the Sugar Trust would come in, under the contract with Hawaiian planters, for half of any bounty that might hereafter be paid them. His reply was a complete confirmation of our own report to that effect. He said:

"When Claus Spreckels and the Sugar Trust consolidated their interests, the representatives of the latter said to the sugar-planters of Hawaii: 'We are ready now to take your sugar for a term of five years, upon certain conditions.' One of these conditions was that if at any time the Hawaiian planters should receive the benefits of sugar bounty provided by the McKinley Law, the Trust was to have half of the amount paid on Hawaiian sugar. 'If you don't like these terms, eat your sugar,' the Trust said to the planters."

Mr. Thurston said that the planters protested, and went so far as to set up a refining plant of their own in San Francisco. But they found they could not sell a pound of sugar, so completely had the Trust got all the San Francisco grocers in its power. Then they gave it up and "the contract was signed last summer." Mr. Thurston said that he himself was one of the victims, and another Commissioner, who was present, Mr. Castle, said that he was also. This frank revelation comes in time to prevent the United States from becoming a third victim.

In some respects it is a good thing that we have no cable communication with Hawaii, as the belated news now coming in would all have been headed off if it had been known in the Islands, three weeks ago, as it was in this country, that the treaty of annexation would not be ratified. But as it was, everything was going swimmingly on the assurances of Commissioner Thurston that his mission would be a great success, and the performances now reported show to what a huge business scheme the United States were asked to lend themselves. The more excitable and less affluent part of the American element "blossomed out with handkerchiefs and head-coverings made of the stars and stripes," but the majority had a truer eye for the great political issues involved, and at once began "to cast about for bargains." Towns were promptly "plotted and laid out in the usual boom fashion," and there was a general opinion that the crown lands, if got hold of by hook or by crook, would make an ideal "ground plan of a colossal real - estate deal." Furthermore, the question was naturally "raised" whether the United States would not take Samoa too while about it. In fact, some thoughtful "native politicians" pointed out that there was already a treaty of "political confederacy" between Hawaii and Samoa, which the United States would annex along with the Islands, with all the "legal obligations" involved. We see no way of meeting this argument, and feel confident that Samoa could easily be shown to be the "key of the Pacific," which it would be simply humiliating not to have in our breeches-pocket.

Congressman Dingley is one of the greatest friends of American shipping, and yet he is in favor of allowing Claus Spreckels to fly the American flag over four foreign-built steamers. At least he says he is in favor of annexing Hawaii, and San Francisco despatches affirm Spreckels's intention to buy two steamers from the Cunard Company and two from the Peninsular and Oriental Company, get a Hawaiian register for them, and

then have them annexed. He now has American steamers on his Honolulu line, but these he is going to put into the coasting service, and get the foreign boats for an Australian and Hawaiian line. The heinousness of the transaction may be inferred from the statement made by an alarmed patriot, that he could buy these vessels for $1,500,000 each, while if compelled to build them in this country, as he ought to be, they would cost $2,000,000 each, and would clothe and feed a vast number of American workingmen. It is charitable to suppose that Mr. Dingley did not know of this scheme, and it is also safe to say that it will induce a strong opposition to annexation among all patriotic ship-builders. Annexation received a fearful wound in the house of its supposed friends when the Union League Club voted against it, and now if it is going to let in English-built ships without giving the Cramps an order for as many more, it is clear that the plan was by no means so "American" as it was cracked up to be.

It appears that the Solicitor-General at Washington wrote an opinion before the expiration of President Harrison's term of office to the effect that, while undoubtedly the law of 1875 authorized the Secretary of the Treasury to issue bonds for the purpose of replenishing the Treasury's supply of coin, either gold or silver, there was nothing on the statute-book authorizing the issue of bonds for gold alone. In other words, the bonds, if issued, are to be payable in coin, not merely in gold coin, and accordingly payment for them may be made by the purchasers in coin, either silver or gold. This opinion, if any such has been prepared, is sound, but can hardly be considered important, since nobody has proposed to issue bonds payable in gold alone. It is not likely that any subscriber for the bonds would take pains to collect silver dollars throughout the country to pay for them, since he would be obliged to pay 100 cents for each one, besides the cost of collecting them. Nor, for the same reason, would he collect silver certificates. Any purchaser would draw his check on his bank, and this check would pass through the Clearing house in the usual way, resulting in a balance in favor of the Government. As all funds, up to this time, are equivalent to gold, the result would be the same thing to the Government as a gold balance. The Solicitor General's law may be, and we think is, right, but it is accompanied by a wrong economical conception, if he is correctly reported as saying that the act of 1878 "restored silver to its old monetary place." It did nothing of the kind. Its old monetary place was free coinage; that is, a privilege extended to any holder of silver in any part of the world to bring it to the United States Mint to be converted into legal-tender money—in other words, the same privilege that exists as regards gold. Any holder of this metal, whether a citizen of the United States, or of India, or of Japan, can bring it to our mints and have it coined into eagles as a matter of right, and these coins will become legal tender throughout the United States. Now, nothing short of this can be called "restoring silver to its old monetary place." Solicitor-General Aldrich's legal distinction is, for the present at least, a distinction without a difference.

Of all the curious ideas that have been advanced about the Treasury gold reserve of $100,000,000, the *Tribune's* grave comparison of it to a banking reserve, which ought to be paid out without hesitation in times of financial panic, is about the most awry that we have seen. It cites what Bagehot says of the banking reserve held in the Bank of England, and says his opinions "describe accurately the proper function of the ultimate reserve in this country, which is held by the Treasury." But what possible analogy can there be between the banking department of the Bank of England and the Treasury, which does no banking at all, or between the variable reserve of the former, held for one purpose, and the fixed reserve of the latter, held for quite another purpose? Yet the *Tribune* urges this analogy as a part of that "common sense" of which "bank presidents stand greatly in need." We presume they will be content to leave to editors a monopoly of such uncommon nonsense.

The failure of the Senate Finance Committee to act on the House bill repealing the duty on pig-tin makes it quite probable that that metal will be taxed four cents per pound on and after the 1st of July next. It must not be supposed, however, that the Government will derive any considerable sum, in the way of revenue, from this tax. There is a strong pecuniary inducement to import tin before the 1st of July in order to save the four cents per pound. It is probable that a sufficient amount will be brought in before that date to supply the demand till the new Congress repeals the tax. This prospective demand has already had its effect on the London market, where the price of tin has advanced £1 per ton. It appears that London had the correct news from Washington as to the Tin Bill before New York had it. It is feared that the failure of the bill will have a discouraging effect on our tin-dipperies, whose infancy has been watched over with such solicitude by Special Treasury Agent Ayer.

The bill for regulating the printing and distribution of public documents was unfortunately lost in the hurly-burly of the last hours of Congress. It passed the Senate during the first session, and in the second session passed the House with some important amendments These were sent to conference, from which neither they nor the bill ever emerged. This is much to be regretted, as the bill would undoubtedly have been effective in bringing something like unity and business principles into a department notorious for its unsystematic and extravagant methods. The experienced Superintendent of Documents, Mr. J. G. Ames, made a report in advocacy of the proposed law, in which he convincingly showed its advantages, not the least of them being an annual saving of $300,000 or more in the public-documents account, without failing to meet a single legitimate demand. That such a law, acceptable in all its general provisions to a majority of both houses of Congress, and urgently needed for the good of the public service, should have been allowed to fail on account of minor differences, shows a surprising lack of intelligence or energy on the part of those responsible.

The decision of the Supreme Court in the letter-carriers' case is, that when the law makes eight hours a day's work, it means it, and that it cannot be got around in the way attempted by the Post-office Department. This will result either in a crippling of the service or in an increased appropriation, but it is best that the taxpayers should have the consequences of labor legislation put in a clear light. Then they can make up their minds whether they are willing to foot the bills for paying Government employees higher wages than are given in private businesses for equivalent work. It has been one great evil of the eight-hour movement, as applied to Government employees, that the plain intent of the law has been so often evaded by the heads of departments. The act of 1868, making eight hours a day's work "for all laborers, workmen, and mechanics" employed by the Government, was successfully evaded for a time by giving full wages only to those who would work for ten hours. This led to such an agitation as to call forth a proclamation from the President in 1869, and from that year up to 1877 full pay was given for eight hours' work in all the navy-yards and naval stations of the United States. In 1877, however, the Secretary of the Navy returned to the ten-hours system, compelling those who elected to work but eight hours to accept a proportionate reduction in wages. This plan was finally modified so as to make the ten-hours system apply only from March to September. But the men have claimed extra pay for those months, and the Committee on Labor reported in 1890 that the Government could not escape from the responsibility of payment. The whole history has been one of shifts and evasions, and it is high time that the laws were enforced to the letter. That would show their unfairness and lead to their repeal.

The action of the general managers of all the railways entering Chicago, in regard to strikes which are threatening either now or in the future, is a signifi-

cant departure. The managers came together to consider demands for higher wages which had been presented by the Switchmen's Mutual Aid Association. They voted unanimously to refuse the demands, declaring that the rates paid at present were uniform, were the highest ever paid in Chicago for similar service, and were higher than those paid in many other localities. This declaration was made unanimously, and was followed by an agreement, also unanimous, to discharge all union men on all the lines in case the roads should be crippled by a strike of switchmen. This would apply to engineers, conductors, firemen, and to all branches of organized railroad labor. The managers declared that they would not pay union men for doing nothing when their idleness was enforced by strikers to whom they were giving aid and encouragement. In case they are forced to discharge all their union men, they will fill the vacancies as rapidly as possible with non-union men, and distribute them according to the needs of the several roads.

It is interesting to observe how speedily the grievances of the switchmen melted away before this resolute and united action. All the machinery was ready for a strike of large dimensions, and the Grand Masters and Grievance Committees were beginning to emit the usual threats about boycotting and tying up right and left. But when they found the roads not only ready for them, but proposing to make the fight even sharper and more relentless than they had dared even to threaten to make it, they suddenly discovered that they had no injuries that could not wait indefinitely to be redressed. As long as they could not deny the main fact in the company's statement, namely, that their wages were as high as those paid anywhere in the country for similar work, they had no chance for securing public sympathy. The apparent stringency and unusual unanimity of the managers' action were undoubtedly prompted by the approach of the opening of the World's Fair, and the extensive preparation which labor agitators have been making for a long time to turn the heavy traffic of the summer to special account for themselves. Mr. Powderly "gave it away" in his letters to the organizer of the New York Central Railway strike in the spring of 1890, when he intimated broadly that the political influences of a Presidential contest would prevent resistance to strikes in 1892, and that the necessity of keeping the railways running to the Fair would act in the same way in 1893. The railway managers appear to have had warnings of what is coming and to have determined to "nip the thing in the bud." Their action is an absolute necessity if they are to keep their roads running during the Fair, for if labor agitators once got the upper hand of them, there would be no limit to the "demands" which would follow, one after another, until the management of the roads would be practically in Labor's hands.

The queer Kansas Legislature has passed a bill making all contracts payable in legal-tender money, and defining legal tender as gold coin, or silver coin, or United States notes, or Treasury notes issued under the act of July 14, 1890. The bill also forbids the making of contracts payable in gold alone. As the Constitution of the United States forbids any State to make anything but gold and silver coin a tender in payment of debts, the portion of the bill which declares a certain form of paper to be legal tender is simply nugatory. No State can make such paper more legal tender than it is now, nor continue its legal-tender character a moment if Congress should repeal the Legal-Tender Act. Therefore the first part of the bill merely declares gold and silver coin legal tender—a rather superfluous proceeding on the part of this Legislature. The second part is equivalent to declaring that men shall not make contracts payable in a particular way. The Supreme Court has said that contracts may be made payable in gold as well as in lumber or stone or in days' work. The question whether a State Legislature could prohibit contracts for days' work altogether, or make them payable in something quite different, is an interesting one, but not likely to be practical, since money-lenders will refuse to make new loans in a State where such dishonesty prevails. We say dishonesty, because the whole course of Populist reasoning and action in Kansas has betokened rascality rather than ignorance.

The form in which the Ballot-Law amendments have been passed by the New York Assembly is unquestionably a great improvement over that in which they were reported from committee. As they stand now, they provide for a single blanket-ballot, with the names of candidates arranged in columns by parties, each column to have a party name and emblem at the top, the voter to indicate his choice either by checking the name of each candidate for whom he wishes to vote, or by checking a full party ticket at once by means of a single mark at the top near the emblem. The addition of the emblem is an important step towards the abolition of the "paster." This fact was recognized by the Tammany and other Democratic opponents, for they declared that both emblem and "paster" were unnecessary, since a voter must be abnormally stupid as well as illiterate who cannot vote intelligently with an emblem-marked ballot. While the emblem is undoubtedly an aid to straight party voting of the most ignorant and slavish kind, it does not, as the "paster" does, afford opportunities for fraud. If we must have one or the other, the emblem is incomparably preferable. Once it is incorporated in the law, the difficulty of finding excuses for retaining the "paster" will be so great that its abolition cannot be prevented.

In the House of Commons, on the 28th of February, there was a general and highly interesting debate on the subject of the Brussels Monetary Conference and on bimetallism in general. The question came up on a motion by Mr. Meysey-Thompson that the Government should take steps to encourage the reassembling of the Conference and the continuance of the efforts to arrive at a solution of the silver question. This motion was supported by Mr. Goschen and Mr. Balfour, both of whom protested, however, that their support should not be construed as favoring a change of the monetary standard of England. The principal speech in opposition to the motion was made by Mr. Gladstone, and the portion relating to the position and needs of England as affected by the gold standard shows the grasp of a master as clearly as any speech on any financial subject in Mr. Gladstone's earlier days. The speech of Mr. Goschen was very lame in comparison, because he could not tell what he wanted. He thought that some good was likely to result from another "exchange of views," especially on the weighty subject of "introducing silver more largely into the *subsidiary* element of the currency of the world." Mr. Goschen disclaimed any intention to promote bimetallism in England, but nevertheless used the phrases commonly employed by bimetallists. He spoke, for instance, of the "work" done by gold, which was formerly done by gold and silver "in partnership." Loose jargon of this sort is not becoming in the mouth of a man of Mr. Goschen's reputation. What he really meant was, that gold and silver in partnership were able by their united strength to sustain prices, and that when silver withdrew or was expelled from the partnership, gold became tired and let prices down; but not a word of evidence was advanced to show that there had been any such effective partnership, or that prices had fallen in the way and for the cause described, or that the fall of prices was a bad thing for mankind, or, if it was, that an advance of prices now would be a good thing. Still less did he show any way to bring it about. The House was not impressed by Mr. Goschen's arguments, for it voted by 229 to 148 in favor of an amendment offered by Mr. Beckett, that, "seeing the deliberations of the International Monetary Conference mainly turned on the question of bimetallism; that after protracted sittings no agreement could be arrived at by the representatives of the assembled Powers; and that any interference with the single monetary standard now by law established in this country is open to the gravest objections, this House thinks it inexpedient that the Government should take any steps to procure the reassembly of that Conference."

HAWAII AGAIN.

QUITE the most striking topic in Mr. Cleveland's inaugural address was that of the Indians. This results from the fact that nobody would have remarked the absence of it. In the first place, the Indians are always with us; in the next place, everybody assumes that any President would look humanely and sympathetically upon these wards of the nation, however circumscribed his authority to enforce just treatment of them. It is true, however, that the Indian administration during Mr. Cleveland's first term of office left much to be desired, and of this he may have been or perhaps has been made conscious, and wished to give an unmistakable sign that he would pay particular attention to the rights and needs of that class of Americans called Indians.

Whatever his motive, his utterance was full of cheer for the philanthropists who have taken this class in charge, amid endless discouragement and opposition. It gives reason—as does Mr. Cleveland's personal action from the time he first became President—for believing that he is animated by none of the vulgar contempt for men not colored like himself, and that he means to treat all the races of our mixed population with the respect and justice due to their common manhood. Repulsive, we do not doubt, seems to him the obligation imposed upon him by his predecessor of executing the proscriptive Geary Act against the inoffensive Chinese inhabitants of this country, just as he must execute the McKinley Act till it is repealed. Had he felt free in his address to embrace this class also in his kindly profession of interest and good will, he would have merited a still deeper debt of gratitude from all self-respecting Americans. Without committing himself to the policy of admission, he might have expressed a natural abhorrence of our treatment of the Chinese now with us, and of the flagrant disregard of treaty rights attendant upon such treatment.

The Geary Act is, fortunately, involved in the question of Hawaiian annexation, as to which Mr. Cleveland has yet given no intimation of his attitude other than recalling the thoroughly disreputable treaty of the late Administration. He would stand upon irrefragable ground if he opposed annexation merely in accordance with our national anti-Chinese policy. He could point to our determined efforts to suppress immigration from China and to expel the present sojourners, as a sort of mandate not to acquire territory in which the Chinese form a very large percentage of the population. He might go further, and, as we pointed out the other day, object to taking over the Hawaiian Chinese on terms which (while our present legislation and hostile spirit remain unaltered) would reduce them lower in the scale of humanity than they now are, and put a stigma upon them which they do not now wear. It would not be making slaves of freemen, but it would be subjecting them to the fate of the conquered.

The truth is, that Hawaiian annexation in any other mode than upon a general and spontaneous offer from the *whole* population of the Islands, would be virtually an act of war. It was nothing else as arranged by President Harrison and Secretary Foster, for it was based upon the ex-parte statements of revolutionists who had really nothing to give except the ground covered by their guns. To grant a protectorate, even, to such a handful, would be a high-handed proceeding, and would make us "saviours of society" to a society which did not wish to be saved, or at all events had never been consulted on the subject. The Hawaiian native is, after all, a human being; he is in his own home; he has never injured us, though in times past we have wrought incalculable injury upon him, both by our vices and our virtues. On the theory on which our Government was founded he has a right to govern himself in his own way, and we are not called upon to take any part *pro* or *con* in the internal dissensions of his country. Nobody who has reflected on the condition of Hawaiian colonization has ever doubted that the time would come when the more civilized portion would be tempted, if not forced, to coerce the less civilized, and that we should witness in the Islands the state of things which brought about at the South the end of the carpet-bag régime. But in Hawaii this was the affair of the participants, and the fact of Americans having a hand in it did not impose on us the duty of annexing the Islands and crystallizing by force the rule of the minority. It was hard to see the suffrage of the freedmen made a nullity by intimidation and fraud, but the spectacle was endurable because it was certain that time would make the evils of intimidation and fraud palpable to the whites themselves, and that the ballot would gradually regain its full efficacy, while serving—even in its nominal estate—as a protection against bodily oppression. But it would have been monstrous for the Government to turn the bayonets which it withdrew from the artificial carpet-bag governments to the support of the white minority which had asserted its power to save itself from the grossest maladministration. Yet something analogous to this we must do if we accept annexation at the hands of the "Commissioners."

As a friend of the Indian, therefore, as one who does not contemn the Chinese and who does have an honest respect for solemn treaty obligations even with an "inferior" civilization, and who could not personally do a mean act to the humblest of the Hawaiian aborigines, we hope President Cleveland will study the proposal in the light of American republican principles and of the nature of peace and war. Is it consistent to incorporate another people without a plébiscite; or, having taken a plébiscite, straightway to disfranchise the majority of those who participated in it? Is it lawful to go to war for this purpose? On the general policy of extra-continental aggrandizement we should also hope that he would ponder well, and fix a salutary precedent.

ARMED EVANGELISTS.

WE pointed out last week how the naval view of the necessity of annexing the Sandwich Islands as a means of "controlling the Pacific," as set forth by Capt. Mahan, involves the creation of a navy of the largest size, fully as large, to say the least, as that of Great Britain. Moreover, as Capt. Mahan declares explicitly:

> "The annexation, even, of Hawaii would be no mere sporadic effort, irrational because disconnected from an adequate motive, but a first fruit and a token that the nation in its evolution has aroused itself to the necessity of carrying its life—that has been the happiness of those under its influence—beyond the borders that have heretofore sufficed for its activities. That the vaunted blessings of our economy are not to be forced upon the unwilling may be conceded; but the concession does not deny the right nor the wisdom of gathering in those who wish to come. Comparative religion teaches that creeds which reject missionary enterprise are foredoomed to decay. May it not be so with nations? Certainly the glorious record of England is consequent mainly upon the spirit and traceable to the time when she launched out into the deep—without formulated policy, it is true, or foreseeing the future to which her star was leading, but obeying the instinct which in the infancy of nations anticipates the more reasoned impulses of experience. Let us, too, learn from her experience."

Elsewhere he mentions the seizure of Gibraltar and the retention of Malta, Aden, Cyprus, Egypt, India as among the exploits of England which we not only should do well to imitate, but may be compelled to imitate by a certain "law" of expansion which, he intimates, governs the growth and even the existence of great nations.

That these ideas have taken possession of the naval imagination there is no doubt, and that they were carefully nurtured by the late Administration, and by the Republican party generally, after it became a tariff party pure and simple, is also certain. Hostility to foreigners, readiness for war with them, and eagerness to inflict some kind of loss and humiliation on them, as a necessary condition of our own glory, were as much a part of the Republican creed as the advantage of dearness to the poor man. But it was not until President Harrison came into power that the navy was called into the field to stimulate and encourage this policy and find occasions for its expression and practice. The extraordinary attitude which the Administration took from the very first towards the Republic of Chili when engaged in a desperate struggle with a Catilinian adventurer attempting to subvert her institutions, was bad enough, but the freedom with which our naval officers were allowed to express their dislike of the Chilians and eagerness to fight them, was worse. The participation of the fighting force in a heated diplomatic controversy was something unprecedented in the

military or naval annals of a modern civilized State. The Barrundia affair was another illustration of the same "new departure." That episode was apparently intended to impress on our naval officers the desirableness and even the duty of taking the law into their own hands on foreign stations, and of treating the peace-loving traditions of their own Government as so much lumber fit only for the garret. That the navy so understood the new policy of the State Department was made abundantly manifest in the speeches, letters, and interviews in which they expressed themselves about their new rôle. In a speech at a public dinner given to a young lieutenant in New Hampshire, he told the audience, amid wild applause, almost in set terms, that American naval officers on foreign stations were not going to be bound by the books any longer, but were going to do justice as they themselves understood it. Capt. Mahan is too experienced and cultivated a man to take any such ground as this, but his exposition and illustration of the rôle which the American Navy is to play in the future of the country is far more serviceable to the expansionists and annexationists than the vaporings which Secretary Tracy encouraged and put on record during the Chilian excitement.

It is difficult to argue with any one who thinks, because our population has reached in scanty numbers the shores of the Pacific, still leaving room on the continent for three or four hundred millions more, that we are bound, on any theory of national greatness, to seek further expansion by annexing the islands of the sea and the mongrel races of the tropics. One would have little patience with this sort of thing even if we had already carried out the programme of the Constitution among the present inhabitants of our soil by "establishing justice, insuring domestic tranquillity, providing for the common defence, promoting the general welfare, and securing the blessings of liberty for ourselves and our posterity." But everybody knows how much remains to be done before this great mission can be considered anywhere near fulfilled; how many social and political problems of the gravest order remain to be solved before we can consider ourselves at all fit for the rôle of armed evangelists. The man who thinks we should be justified now in treating ourselves to a Gibraltar, Malta, Egypt, Aden, or India, and a full line of proconsuls and vast hordes of colored subjects, must have wandered very far from American ideas of the ends of government and of the moral responsibilities attaching to the possession of great strength.

We should, too, be readier to sympathize with the desire for a huge navy to go round the world getting up quarrels for us if a single incident in our history, during the past thirty years, had brought home to us the need of having any navy at all. But the truth is, that from 1865 till now we have literally been without any navy whatever which a great naval Power need take into account, and during that period have had several differences with foreign Powers—one, at least, most formidable—and all have been settled to our satisfaction. At this moment we are, and at every moment since 1865 we have been, the Power of all Powers with which every nation on earth is most anxious *not* to quarrel. From no other will France, England, Germany, Italy, and Russia, to say nothing of Spain and Holland and the like, put up with so much, either of insolence or injury. The reason is very simple. We cannot be invaded, we have no foreign possessions to lose, and our resources in population and money are so enormous, and our capacity for doing damage when once roused so great, that any enemy, or any two enemies combined, would be sure to get the worst of it. Granted that it is well to have a respectable navy for the defence of our coasts, and the patrol of our seas, and the protection of our citizens in semi-civilized countries, it will not be well, and the American people will never submit with their eyes open, to have such a navy made the nucleus of an enormous sea force, to be "played for all it is worth" at every Presidential election as a means either of glorifying a bellicose Administration or turning popular attention away from odious party legislation. Of a huge standing army we are in no danger. But a navy, whose operations could be watched from a safe distance, and could be made to fire the patriotic heart without loss or inconvenience to the patriots, and which, under the Barrundia rulings, might keep us in perpetual hot water, would be a serious menace to our institutions, even if it had no foreign dependencies to watch over, or sugar, or coffee, or tobacco bosses to protect.

HOW OUR LAWS ARE MADE.

UNUSUAL attention was called to the confused scramble in which the business of the last Congress was conducted during its two or three closing days, though there was really nothing unusual about it. It has long been the fact that the last hours of Congress, and, indeed, of State Legislatures, resemble nothing in the world more nearly than a battlefield where the figures of the contestants are half-hidden, where everything is noise and shouting, and where no man can tell what the total upshot of the fierce struggling is until the smoke has cleared away and the killed and wounded and survivors are counted up. The reason that the spectacle was more in evidence this year than usual was that several important bills were pending up to the very end, and it was a long time before it was possible to find out whether they had come out of the scrimmage. For example, the bill repealing the stupid blunder of McKinley in putting a tax on pig-tin passed the House without opposition; the Republicans either kept a shamefaced silence or voted for it. It was brought up in the Senate, and was said, in some of the press reports, to have passed. Yet there was some doubt on the point, and it was really twenty-four hours or more after the adjournment of Congress before the truth could be positively ascertained. Then it was found that the bill had been lost in the hurly-burly.

No one knows who killed it or why it was killed. No reason is given why this rectification of a McKinley blunder was squelched while the other one, relating to the increased taxes on linen goods, was permitted to become a law. There was no open opposition to the bill. Very considerable business interests were involved in it, and were particularly dependent upon knowing whether it had passed. But they were left in entire uncertainty for several days, and exposed to no small pecuniary loss, simply because of the chaotic condition of the public business at the winding-up of Congress.

The surface cause of this state of things is, that the appropriation bills have the right of way, and are used as clubs to kill off all legislation which is, for any reason, obnoxious to any of the managers of Congressional business. This process was unusually conspicuous in the last Congress. It was admitted, even by the *Tribune's* Washington correspondent, that the public business was in a much more forward state three days before adjournment than it had been at a corresponding date in Speaker Reed's Congress. As far as the great appropriation bills were concerned, they could easily have been got out of the way long before the hour for adjournment arrived. But they were nursed along by unnecessary disagreements on conference reports and in other ways, and kept always in reserve to push any upstart measure off the track. The managers were visibly afraid to give Congress its head. Nothing but the tactical advantage of the delayed appropriation bills prevented a number of laws from securing enactment which could easily have mustered a majority vote.

Of course, bad bills were killed along with the good. It is only fair to reckon in the gains with the losses. If the Block-tin Bill was lost in the mêlée, and the important Public Documents Bill and the New Jersey Bridge Bill—for all of which a majority vote was ready to go on record—so, too, let us thankfully add, was the Anti-Option Bill, and we know not what other pestiferous measures. We ought to count up our mercies, and be thankful that it is as well with us as it is. Furthermore, taking the view that all laws are, in so far, a restraint on liberty, and that the vast majority of bills introduced in any Congress are either needless or positively mischievous, we may find some reason for being reconciled to a system of lawmaking which is ingeniously devised to reduce the laws made to the minimum.

Yet the fact remains that the system is a vicious one, and is tantamount to a confession that Congress cannot be trusted

to do what a majority of the members want to do. Congress itself has recognized this fact. An amendment was made to the House rules in the last Congress, which ordered all appropriation bills to be reported by committees having them in charge within eighty days after the beginning of the long session, and within forty in the short session. This was expressly intended to expedite the public business and to do away with the blind rush at the end. Yet, in practice, the leaders of the House, as we have seen, were afraid to let the rule work as it was intended to, and armed themselves, as before, with the appropriation bills, as with so many swords, to bar the way to all other legislation. The result is but to emphasize the fact that Congressional government is simply government by a half-dozen committees.

It is easy and plausible to say that this is the best we can do, given the increasing ignorance or worse of the majority of our representatives in Legislature or Congress. If they were not bound hand and foot by rules, and clubbed into submission or helplessness by party leaders, whose life or property would be safe? There is force in this question, we admit, yet we say again the system is a vicious one. It is clear, for one thing, that it partly exaggerates the very evils it is designed to suppress. What an encouragement to reckless demagogues it is, for example, to know that it is perfectly safe to introduce in Congress, and advocate with a great flourish, scandalous bills of all sorts, inasmuch as it is certain they can never run the gauntlet of the rules and become law. It is fair to presume that a good part of the fiery zeal of the supporters of the Anti-Option Bill, in behalf of the oppressed farmers, was due to the fact that they knew they could not pass it.

But the fundamental objection to the system is, that it serves to hide from the people the true state of the case. It encourages them to go on trusting to our proverbial luck to come out all right somehow. But what is needed is to have the badness of legislators put in a clear light, not masked under rules of business which tie their hands. It is not enough to put up with representatives who cannot do the harm they would, but to get those who would not pass bad laws if they could. We believe that all such exhibitions of legislative iniquity as have been seen at Albany and Trenton this winter will ultimately have a good effect in arousing the people to a choice of better representatives. And similarly we believe that the freer the rein given to bad lawmakers, the sooner the people will be convinced of the necessity of choosing men whom they can trust, with rules or without.

BALFOUR AND CHURCHILL.

THE recent split in the Conservative ranks in the British House of Commons had the very unfortunate result for the Opposition of giving the Ministry a very large majority on one of their own motions which Mr. Chamberlain had denounced as a "dirty trick." Even if the breach had been patched up by the conference at Lord Salisbury's—which it apparently was not—it was one of those incidents which never leave things precisely as they were, because no formal reconciliation can ever convince the public out of doors that it is all over. Trouble was expected when Lord Randolph Churchill came back, not only because he once led the party in the House before he went away, but because his favorite rôle is the making of trouble That his relations with the Salisbury family have long been much strained is well known, and when he makes himself unpleasant to them, it is difficult to make anybody believe he does not mean it.

He has made himself unpleasant on the present occasion by a rousing speech in opposition to the Government scheme for disestablishing the Welsh Church. The scheme does not propose actual present disestablishment. It simply provides that everybody who accepts a Welsh living hereafter shall take it with notice that he may lose it at any time by disestablishment, or, in other words, that no "vested interests" in the Welsh Church shall hereafter be created. No body had supposed that Lord Randolph took any particular interest in the Welsh or any other church. Everybody was, therefore, surprised when he rose at a late hour and delivered a slashing attack on the Ministry, apropos of the Welsh Church, and concerning nearly everything else. It was a speech which thoroughly roused the Tories by its vehemence, and directness, and rough-and-tumble eloquence. It reminded them of old times when they seemed to be routing the Radicals for good and all. It was most welcome, too, as a substitute for Mr. Balfour's very subtle and smart, but not particularly inspiring, dialectics, and must have set a good many Conservatives to asking themselves whether Churchill was not after all the coming man.

This speech, too, came at a time when the Tories were doubting more than ever whether home rule could be successfully resisted under Mr. Balfour's lead. For there is no denying that ever since Mr. Balfour's accession to the leadership, after Mr. Smith's death, they have been questioning themselves greatly whether they did not presume too much on his success in meeting the onslaughts of the Irish as Irish Secretary. These onslaughts had, by their extraordinary savagery and unscrupulousness, used up two of Balfour's predecessors, Sir George Trevelyan and Mr. Forster. When a man was found to meet them with smiles, and rather thrive under them than shrink from them, his party thrust an enormous amount of greatness on him. In fact, the rise of Mr. Balfour into eminence as not only a smart debater, but a great statesman, on the strength of his Irish administration, is one of the most curious episodes in English history. Its suddenness and rapidity was something unknown in English politics since the two Pitts, and showed in the most striking manner what a profound impression the Irish trouble had made on the English mind. In English politics men rise, as a rule, to the highest places very slowly, and through years of service in subordinate offices. Balfour rose from the position of a little-known idler, through two years of policing the Irish, to a place in the confidence of the party which no Tory Minister has held since the early days of Peel—for, though Disraeli was much admired, he was never wholly trusted. When it was found that Balfour was not by any means a skilful tactician, and that as a debater on general topics he was not even in the second rank, that he had none of Mr. Smith's skill in managing the discontented or mutinous, and that his dialectical skill was really available only for purposes of defence and recrimination, there was very great disappointment, and Churchill's appearance was very well timed.

To understand how serious this discontent is, it must be remembered that the main and loudly proclaimed reliance of the Conservatives has been on the fact that Gladstone's majority was so small, so heterogeneous, and so divided: it must, they thought, go to pieces either before the Home-Rule Bill was introduced or on its introduction. The plain duty of the Tory leader, therefore, was to seize every opportunity of breaking it up, and to withhold from it every occasion of showing strength or cohesion. This has not been done. On nearly every division, small and great, the Gladstonians have been allowed at least to hold their own. On most divisions, their vote has risen above their normal strength. The result has been the spread of despondency and lukewarmness among the Opposition rank and file, which the party organs have been trying to ascribe to their reserving their strength for the second reading of the bill. But this does not go down with the public, and the feeling that something is wrong with the leadership has been growing stronger for weeks, and has been increased by the debates, in which Balfour has distinctly played second fiddle to both Chamberlain and Goschen. There are signs, too, that Chamberlain has reached the stage, which he reached so soon in the Liberal ranks, of being tired of serving under anybody else. In other words, his stock of disinterested patriotism is plainly giving out. He has just made by far the best speech against the Home-Rule Bill on the Opposition side, and he is not the man to go on for ever rendering such services without recognition of some kind. That the late eruption has created much uneasiness in Conservative circles there can be little doubt, and Lord Salisbury is not the man to pour oil successfully on troubled waters.

TAINE AND THE SCIENCE OF CRITICISM.

In March, 1857, Sainte-Beuve devoted two of his *Causeries du Lundi* to the discussion of "Divers Écrits de M. H. Taine." He chose for special analysis Taine's 'Essai sur Tite-Live,' his Doctor's thesis on La Fontaine, which was later enlarged and republished, and his 'Philosophes Classiques du XIX^e^ Siècle.' Taine had taken his Doctor's degree only four years before, but he had marked each succeeding year with a work of first-rate importance; he had also published from time to time noteworthy essays on such widely different subjects as Xenophon, Saint-Simon, Guizot, and Mme. de la Fayette. In all these treatises and essays the comparatively unknown author had pleaded for and illustrated new methods and new aims in literary criticism. Yet, despite his youth and inexperience and venturesomeness, his work had shown none of the tentativeness or the weakness of first experiments. It became plainer with each new publication that the new critic was a man of genuine power and originality; and, accordingly, Sainte-Beuve, with characteristic grace and generosity, made haste to welcome him.

There is something almost dramatic in this first encounter between the two critics. Sainte-Beuve was the representative of the old tradition in criticism, while Taine was confessedly an innovator. The idealists and the romanticists who fared so ill at the hands of Taine, had many of them been personal friends of Sainte-Beuve. The idealistic tradition in literature with which Sainte-Beuve certainly sympathized, however completely he had rid himself of early romantic illusions, was the special object of Taine's contempt and ridicule. Again, Sainte-Beuve was the literary critic pure and simple; he had coquetted, it is true, with science, but he had never let his coquetries pass beyond the bounds of decorum or affect his professional work. Now, it was on science that Taine's whole method was founded; his terminology was drawn from science, and it was in the name of science that he came forward to reform literary criticism. Therefore, if Sainte-Beuve had in his favor the prestige of a great tradition, Taine on his side had the prestige of a popular catchword, for just at this time science was the cry of the hour, and realism was revenging itself for the romantic excesses of 1830.

Of the tact and skill with which, under these rather exacting conditions, Saint-Beuve acquits himself, there can be but one opinion: they are worthy of the great apostle of good taste. He recognizes at once Taine's scholarship, his curious maturity, his sureness of touch, his certainty of aim and of method. He speaks pleasantly of the duty that older men owe to such juniors as really "count"—that of scanning them well and coming to know them thoroughly. Moreover, to have to do with these newest arrivals tends to make you young again, even though the new-comers show their youth only by their vigor, and present themselves before you full-grown and full-armed. But it behooves you to be on your guard and to tighten your belt as you approach them.

This gracious and generous greeting, however, merely prepares the way for a very searching criticism of Taine's ideas and methods. Under guise of a tribute to Taine's thoroughness and scholarship, Sainte-Beuve at once suggests the points in which, he thinks, Taine most offends against the spirit and the ideals of good criticism. On the one hand, Taine is too desperately serious: he has the set look and the business-like bearing of a man in a laboratory, who handles hot crucibles and deals with dangerous compounds. On the other hand, Taine is too disputatious: he is always bent on proving a thesis; the air of the Sorbonne lecture-rooms clings about his volumes. These faults of bearing are for Sainte-Beuve significant of radical defects of temperament and of method. Taine does not put himself in touch with his author; he does not enter sympathetically into the spirit of the work he criticises; he uses his author for his own special purposes; he wrests his author's ideas into illustrations of his own pet theories; or, as Sainte-Beuve elsewhere puts it, the critic pulls the blankets all to his side of the bed.

These charges—though charges is too harsh and criminating a word for the suave insinuations of Sainte-Beuve—take up a large part of the first essay. But here and there in the first essay, and at still greater length in the second essay, Sainte-Beuve adopts a different point of view, and with admirable ingenuity turns Taine's own principles against him. The sum and substance of the earlier criticisms was that Taine was not an "appreciator," but a scientific student of literary forms and an historian of ideas; Sainte-Beuve's quarrel was with Taine's whole ideal. The later criticisms suggest that Taine is false to his own ideal; that while he is professing to reform literary criticism in the name of science and to put it on a scientific basis, he is constantly violating the laws of science and departing from the methods of scientific investigation. He is too much of a systematizer and too ambitious in his ideal constructions; he is impatient of doubt or uncertainty, and forges links out of nothing wherever there are breaks in the chain of his evidence. In attempting to sum up an individual under a formula he sins against science, by disregarding the infinite complexity of the problem and by using rough-and-ready methods for solving it. Before "talents" or characters can be classed or grouped under formulas, an almost endless series of observations must be made on all kinds of men and under a vast variety of conditions; to attempt to frame out of hand a few cheap formulas for typical characters is a radically unscientific mode of procedure.

By some of Sainte-Beuve's suggestions Taine undoubtedly profited; in his subsequent work he insists less dogmatically on the significance of "la faculté maîtresse" and on the possibility of finding a single phrase by which to sum up an individual in a formula. The parable of Adam naming the beasts of the field at the behest of the Lord had its effect. Taine's love of system, however, and his general methods of work remained unchanged. He was still invariably bent on proving a thesis, and he was as far as ever from being satisfied, after the manner of impressionistic critics, with merely dabbling in the standing pool of his feelings. Of the importance of method in the study of literature and of the value of his own method in its main features, Taine was as firmly convinced as ever; and his next great work, his 'Histoire de la littérature anglaise,' published in 1864, was constructed from first to last in illustration of his method and in obedience to his principles. In fact, the possibility of a scientific explanation of literature was the specific thesis which in this case Taine nailed up to be proved, and his 'History of English Literature' was merely the four-volume demonstration of a thirty-page theorem.

Certainly this work of Taine's must always stand as a superb *tour de force*. It is easy enough to carp at it; to disagree with this or that estimate; to blame the critic for overrating Byron and for doing scant justice to Shelley; to exclaim at the yeoman's service exacted from a few such terms as Berserker rage, Puritan cant, English stolidity, etc., etc.; to mock at French prejudice, and to accuse the critic of being mechanical and hard and unsympathetic, of turning everything into demonstration, and of being hypnotized by a theory. But, after the bitterest possible things have been said, it still remains true that the History is a magnificent achievement and a work of the greatest possible significance. Merely as a piece of literary engineering, it is a marvel of skill: its books, its chapters, and its sections are massed with a sure eye both for literary effect and for sequences of thought; and the table of contents alone is more stimulating reading than the texts of most histories of English literature. But, of course, what makes the book unique is its thorough-going attempt to explain a whole literature in terms of national character, inherited culture, and environment.

Not that the underlying principle on which Taine's method depends had not been enunciated long before. That principle is, of course, the historic continuity and the organic unity of national life; and for the earliest suggestion of that principle and the earliest development of a method somewhat in harmony with it, we should have to go back at least to Taine's great countryman, Montesquieu, whose 'De l'esprit des lois' was a more or less conscious attempt to find in all a nation's institutions and activities the expression of one moulding and guiding spirit. Later on, in the eighteenth century, the principle was grasped at least partially by Winckelmann, whose 'History of Ancient Art' recognized the relativity of the arts, and the essential and necessary connection between the life of a people and its art expression. It was Herder, however, who first realized all that the principle involved, and undertook to apply it systematically and in detail to the study of literature. Literary criticism, in passing into his hands from those of Lessing, was totally changed in scope, methods, and aims; it no longer sought to appraise the æsthetic value of pieces of literature according as they met or fell short of the abstract requirements of ideal standards; it studied literature historically, and regarded it as necessarily determined in form and in matter through its direct relation to the life of the people for whom and by whom it was produced. This conception of literature as an organic growth was one of the best gifts of Herder to Goethe, and from their day to our own it has been a commonplace of German literary criticism.

It is not, then, because of the originality of his fundamental principle that Taine's 'History of English Literature' is so important and significant a book. But nowhere else, unless in Scherer's 'Geschichte der deutschen Literatur,' has the principle in question been applied so brilliantly for the explanation of a whole national literature. The magnitude of the attempt, the importance of the subject, and the brilliancy of the execution, have insured the book a great vogue; and to-day, for most English readers, Taine stands as the one great representative of scientific method in the study of literature. Taine's work has done more to popularize the conception of literature as the direct and necessary expression of national life than all the numberless tomes of conscientious German philosophizing.

Then, again, with characteristic love of clearness, precision, and system, Taine tried to

find a few ultimate forces in terms of which to express all the infinitely various influences that shape and color national life and determine its form and content. The result of this effort was the well-known *race, moment,* and *milieu* theory—a theory which, from its union of apparent simplicity and comprehensiveness, is always at first sight enormously taking, and seems to offer a perfect organon for literary investigation. The thoroughness, too, and the skill with which the influence of these ultimate forces is traced out in all the minor groups of social facts, in religion, philosophy, art, and science, are bound to be captivating, particularly to young students who are hungry for generalizations and eager to impose themselves on the facts that they handle. Perhaps the value of Taine's theory then depends fully as much on its stimulating power as on any absolute certainty that can be claimed either for its subordinate principles or for the conclusions to which it leads.

Attacks on the theory have from the first been plentiful. Among comparatively recent criticisms that of M. Émile Hennequin in 'La Critique Scientifique' is most interesting and suggestive. M. Hennequin appeared as a champion of "the great man" in history and literature. Under Taine's treatment "the great man" seemed in danger of being ruthlessly and prematurely resolved into his elements; M. Hennequin was bent on rescuing him and reconstituting him at any cost. "The great man," he insists, is not the product of his age: he fashions his age in his own image. He creates out of nothing a beautiful ideal, either of action or of passion, and imposes it on his sympathetic, impressionable, but uncreative contemporaries. He cannot be the mere product of his age, for both he and his very opposite may exist under precisely the same social conditions. Goethe and Schiller belonged to one and the same nation in one and the same age; so also with Hobbes and Milton, with Byron and Crabbe, with Scott and Landor, and with a host of other ill-mated couples, whom M. Hennequin holds up to the reader's scorn. The great man, then, is not the product of his age, but is a mysterious, original force, out of all explicable relation to his time except as he brings his time under the spell of his genius.

It is, of course, not at all difficult to see how all this can be met from Taine's point of view; the criticism, though clever, is not damaging or convincing. But certain conclusions that M. Hennequin draws from this form of the great-man theory are very interesting to the literary critic because of their practical applications. Society, M. Hennequin insists, can properly be studied only through its typical great men, whose ideals dominate various social groups, and whose temperaments are their followers' temperaments intensified and magnified. Now, for the successful study of these typical temperaments we must have, M. Hennequin urges, a thorough and elaborate system of psychological analysis, with points of view, methods, and terms which shall be used in common by all critics. This plea for co-operation among all critics in the thorough and systematic study of temperaments seems wholly in Taine's spirit, and suggests certain lines along which Taine's method can profitably be supplemented.

M. Hennequin, with a courage that may very well have come from youth and inexperience, has tried to outline a scheme for the scientific study of the temperaments of authors. It is easy for the ill-disposed to scoff at his elaborately determined points of view, at his ingenious terminology, and at his formal schedules of facts and conclusions. But it is nevertheless perfectly plain that some such scheme must be devised and put into practice if criticism is ever to become a science, as Taine and his followers have always been bent upon making it. Moreover, Taine himself recognized this need with perfect distinctness. In the eighth section of the introduction to his 'History of English Literature' he writes: "There is a particular system of inner impressions and operations which makes an artist, a believer, a musician, a painter, a man in a nomadic or social state; and of each the birth and growth, the connection of ideas and emotions, are different; each has his moral history and his special structure, with some governing disposition and some dominant feature. To explain each, it would be necessary to write a chapter of psychological analysis, and barely yet has such a method been rudely sketched." This passage may well enough have given M. Hennequin the first hint for his scheme of psychological analysis.

Taine never for a moment claimed completeness or finality for his method. He knew far better than his assailants the difficulty of his problems, and the necessary imperfections of any method that can yet be devised for dealing with them. But "his faith was large in time" and in the ultimate outcome of the coöperation of many ardent students along the lines he had sketched. In 1866, in his preface to 'Essais de critique et d'histoire,' he writes of the science of history: "Tel est le champ qui lui est ouvert; il n'a pas de limites; dans un pareil domaine, tous les efforts d'un homme ne peuvent le porter en avant que d'un ou deux pas; il observe un petit coin, puis un autre; de temps en temps il s'arrête pour indiquer la voie qui lui semble la plus courte et la plus sûre. C'est tout ce que j'essaye de faire: le plus vif plaisir d'un esprit qui travaille consiste dans la pensée du travail que les autres feront plus tard." This passage contains the very quintessence of Taine's spirit—his generosity in appreciating the work of others, his faith in the future, his indomitable energy, and his enthusiastic devotion to the task in hand. In his article on that prince of amateurs, Prosper Mérimée, he says of the need of fixity of purpose and of concentration: "Un homme ne produit tout ce dont il est capable que lorsque, ayant conçu quelque forme d'art, quelque méthode de science, bref, quelque idée générale, il la trouve si belle qu'il la préfère à tout, notamment à lui-même, et l'adore comme une déesse qu'il est trop heureux de servir." This fine singleness of purpose and strenuousness of pursuit characterizes all Taine's work in literature. The great debt we owe to his scholarship and to his philosophic insight is too constantly in our minds to need to find its way often into speech; but perhaps we are not so apt to realize how much he has done to redeem literary criticism from being a paltry juggling with fine phrases and to give it seriousness of purpose, dignity, and a recognized standing. He was accused of being a materialist; but in an age of *décadence*, when the descendants of the romanticists and idealists are for the most part engaged in dilettante experiments on their senses and emotions, such materialism as Taine's is as healthy as sea-air. It is no wonder that when, a week ago, the death of M. Taine was announced, many students of literature felt as though they had lost a personal friend.

THE HOME RULE BILL'S PROSPECTS.

LONDON, March 4, 1893.

YOU are already fully informed regarding the text of the Home Rule Bill, and have grasped the main features and details of a measure evincing acquaintance with your own Constitution and that of the great British colonial dependencies. It is, therefore, unnecessary here to discuss particulars. There are two points likely to be disapproved on the Nationalist side. One of these is a sentence in the fourth clause, declaring that "The powers of the Irish Legislature shall not extend to the making of any law whereby private property may be taken without just compensation." A bill has just been brought in by the Government, to enable localities, after three years' notice, to close public houses. Ireland is being excluded from the operation of this bill on the ground that under the Home Rule Bill she can legislate for herself. It must be made clear that the above sentence would not interfere with her right to deal with the liquor traffic. The second and main difficulty likely to arise is regarding Ireland's contribution to imperial expenses. The question has of late received much attention from economists. A remarkable pamphlet on the subject* appeared last year from an occasional contributor to the *Nation*, a writer unconnected with political parties. It is satisfactory that between his estimate of a fair contribution at £2,000,000 and that of the present bill, there is a difference of only £400,000 per annum. Yet this is £200,000 in excess of the proposal of 1886, which sum might be of considerable importance to Ireland, in her very backward position. She must disburse largely in almost every department to bring her institutions up to present requirements. The proposals under the bill would show for Ireland a nominal surplus of £500,000 a year over existing relations. That sum, added to all possible savings on present establishments, would, without the immediate imposition of extra taxation, be a totally inadequate basis for necessary expenditure. So much for Nationalist criticism.

For opponents, as to details, the main point of attack is the retention of the Irish members. So long as the right of home rule is accorded, the Irish people have at present no very strong predilections. In 1886 they were willing to accept exclusion. They are now, after seven years' consideration, on the whole desirous of inclusion. Exclusion was the chief factor in wrecking the bill of 1886. On inclusion the Conservatives now place their main hope of defeating the present bill. In considering a measure so utterly distasteful to them, there is nothing necessarily irrational in objecting to it from every point of view. Their inconsistency lay in professing to agree to the principle of local government. Even this charge of inconsistency no longer holds against either Conservatives or Liberal-Unionists. Seven years ago the one party professed to admit the principle of Irish local government, the other that of home rule. Both have meanwhile levelled down to the maintenance of ascendancy pure and simple.

It is impossible to foresee how long the discussion may continue or what may be the fate of the present measure. Full discussion may dissipate objections and bring the Opposition to reason. It may, on the other hand, still further inflame passion. At present it avails little to argue whether the bill does or does not mean separation, repeal, or the relegation of the minority bound hand and foot to the majority. The Opposition has so far, especially in Ireland, claimed, or really wrought itself up to believe, that the measure means all three.

*'The Financial Relations of Great Britain and Ireland.' By An Irishman. Dublin. 1892.

It is amusing to note how wealthy men, declaring their lives and liberties are at stake, send a subscription of five dollars to avert the catastrophe, and how declarations that every interest in Ireland will be ruined are accompanied by the purchase of Irish "beared" stocks. We must doubt the sincerity of men who take the lead in maintaining that black disaster impends, and who have been latterly sinking more and more of their capital in bricks and mortar in Ireland. Nevertheless, a most bitter and formidable opposition is certainly brewing, such an opposition as, since the discussions regarding Catholic Emancipation and the Great Reform Bill, has not met any political change in the United Kingdom; more formidable in volume—in spirit in proportion to the increase of the effectiveness of political warfare within the past seventy years. Never did a statesman with the snows of eighty-three winters on his head face a storm such as that which Mr. Gladstone is about to encounter. Little wonder that when a deputation of supporters approached him the other day regarding the desirability of reform in another direction, he should have answered in effect, "My mental powers have their limits, which are already overstrained."

This opposition comes mainly from Ireland; its most serious effects are to be anticipated in its possible influence on the British electorate. That electorate was moved to the acceptance of home rule by various causes. Reason and conscience played their part. But beyond these, Parliamentary obstruction, a reign of despotism and heartless eviction, a series of imprisonments, embracing the incarceration as common criminals of town councillors, mayors, and members of Parliament, played no inconsiderable part. Obstruction, despotism, evictions, imprisonments have ceased. It remains now to be seen whether or not the British electorate will stand firm, and whether the frantic appeals and prognostications of Irish Protestants may not partly obliterate the lessons of the past. So far, it must be admitted, the expressions of Irish Protestant opinion in support of the 1886 bill are wanting in favor of the present measure. This is due, not, I believe, to any material change of feeling, but rather to the relentless social and business boycott established against those who have dared to show sympathy with the Nationalists. But to whatever cause attributable, the suppression of such feeling on the part of Irish Protestants must count against the measure. There are, it is true, a larger proportion than ever of Protestant Nationalist members of Parliament, but these members are steadily disowned as representing Protestant interests.

The very blindness of the Opposition may defeat itself. Parliament as at present constituted cannot continue to do its work. The United Kingdom excepted, all English-speaking communities are governed in their local affairs by parliaments, but one of which legislates for more than the population of Ireland, twenty-five of which legislate for smaller populations than that of Dublin. The British Parliament, which in 1801 had to rule 16,000,000, and followed the doctrine of *laissez faire* regarding social relations, has now to rule 38,000,000 on the principle of the interference of law in the minutest relations of life. This Parliament has besides taken upon itself, with a growing realization of the responsibility, the task of guiding the government of 300,000,000 in India. In so far as Parliament worked well in the past under its lighter burdens, it worked through a series of conventionalities as applied to procedure. Those conventionalities have perished in the storms of the last few years. It may be grand in theory that a member for Kerry or Orkney has as much right to interfere in the minutest affairs of the other 669 constituencies as in those of his own. But the theory is no longer practicable. Of the daily *agenda* nine-tenths are adjourned or scamped. Of the pile of documents daily delivered at the private residences of members, 99 per cent. are at once consigned to the waste-paper basket. The conception of a united Parliament to attend to everything, where one moment an empire is given away or assured, and another a discussion arises as to whether some poor woman in some Irish workhouse has received her proper allowance of rations, may be ideal, but it is not possible to carry out. The tactics of the Opposition in Parliament are in truth, day by day, emphasizing the necessity for change. Sooner or later will break down the impossible attempt to continue the transaction of committee business by what the *Chronicle* to-day styles "an unwieldy, turbulent, and ill-instructed assembly of 670 men." It is well for the Irish that it has suited them to cease obstruction, and that their opponents have had to assume the rôle, before obstruction meant the delay of domestic legislation keenly desired by the masses of the British democracy.

The Opposition in Ireland relies upon arguments which would tell equally against any form of local administration in that country. Under Mr. Gladstone's measure the minority would be assured better guarantees than under a system of local county government in which in twenty-seven out of thirty-two counties Protestants might be entirely unrepresented. Irish Protestantism has more to fear from intangible oppression in local assemblies than from the open application of illiberal feeling in a central legislature. It has most to fear from the establishment of a conviction in the minds of the Catholic masses that the Protestants alone stand in the way of the concession to Ireland of the management of her own affairs. No doubt the immediate disproportionate influence of the official classes in Ireland, who may be numbered at perhaps 25,000, and of the greater land-owners, perhaps 5,000, is more or less jeopardized by this bill. *Hinc illæ lachrymæ.* These classes, with their present social and political position, can influence many and effect much. It is not impossible that they may compass the defeat of the bill. If some such measure as the present is not accepted, the political condition of Ireland must year by year lag still further behind that of Great Britain; the conduct of the business of Parliament must become more and more difficult and involved; every question will be considered more and more, not in relation to its intrinsic merits, but in relation to the sustainment of one party and the injury of the other.

No one supposes that one-half of the 148 who against 229 voted the other day for bimetallism were really in favor of the nostrum. They voted in pursuance of a carefully devised trick to turn out the Government—a trick which might have succeeded but for the vigilance of the Liberal whips. By no process can Unionist doctrinaires eliminate the Irish vote from consideration. Even if the present number of Irish members were reduced, as it certainly would be if the Conservatives returned to power, a sufficient Nationalist representation would remain to complicate and obstruct business. The conflict is irrepressible. Sooner or later it must proceed to some issue. Were not the interests at stake so serious and pressing, and the demoralization under the present régime so widespread, many might feel tempted, from utter weariness of unnecessary striving, to stand aside, convinced that the present is only part of a movement that cannot ultimately be resisted, for the reconstruction of the British Constitution upon less cumbrous and more democratic lines—a movement that really depends more on the great current of progress than on Parliamentary majorities and frantic appeals to party and class rancor and religious bigotry. D. B.

TWO INTERPELLATIONS.

PARIS, February 23, 1893.

WITHIN the last fortnight we have had at the Chamber two interpellations which have made a good deal of stir. After the first, many people imagined we were going to witness a great political overthrow, and that all of a sudden the Panama affair was about to produce a direct and immediate change in the Government's line of policy. The second interpellation has shown these hopes or these fears to be vain. The events which have just occurred in the two Chambers nevertheless merit attention, as furnishing a study taken from the life of the opposing parties in Parliament.

In order the better to understand the meaning and the bearing of the various recent Parliamentary manœuvres, it is necessary not to lose sight of the party divisions at present existing in the Chamber of Deputies. The Right, it will be remembered, still comprises the Royalist and Conservative parties; for notwithstanding that a restoration of the monarchy becomes every day less and less probable, a certain number of Deputies continue to advocate it. The other members of the Right—those who, as I have had occasion to remark in a preceding letter, recognize the hopelessness of any attempt to restore the monarchy, and who therefore have declared their adhesion to the Republic—are denominated in current political language "Ralliés."

In contradistinction to the Right, and in constant opposition to it, is the Left, on which the Government depends for support, and which is itself also subdivided into a certain number of sections, shading off from the Left Centre, which does not greatly differ from the more moderate section of the Right, to the most extreme Socialist groups. No one of these sections is by itself sufficiently strong to constitute alone a stable Ministerial majority; and so the various Ministries that have followed each other in rapid succession for some years past have all been coalition Ministries, counting among them representatives of the different sections of the Republican majority. Hence it results that the Ministry is forced, on the occasion of every vote, to bargain for its majority, and consequently to deviate from its original line of policy; and experience has shown that in these compromises moderate ideas are always sacrificed to the profit of more advanced tendencies. Thus, for instance, since M. Ribot has been in power, he has been gradually drawn in his political policy nearer to the side of the Extreme Left; and a member of Parliament a day or two ago was able with justness to exclaim, "Where does M. Ribot come from?" "From the Left Centre." "Where is he going to?" "Towards Radicalism." But this evolution is evidently not calculated to please the moderate Republicans, who, with the advent of M. Ribot, thought to see one of their own party at the head of affairs. It is only natural, therefore, that they should try to make the Government turn back,

and should endeavor to obtain again the influence they thought they once possessed in its councils.

In effecting this they are able to count on the support of the "Ralliés," who, if they have accepted the republican form of government, nevertheless wish to have a moderate, almost a conservative, Republic. Moreover, in the case of their making any attack on the Government, the Right and Left Centres will always be sure of being supported by the Right, which, by a kind of absolute principle, always votes against the Ministry, however it be composed. A manœuvre of this kind, however, can succeed only under special conditions. Recent events seemed to supply these conditions; and hence the attack we have witnessed, for the making of which the Panama affair furnished the pretext. It is hardly necessary to allude to the various discoveries connected with this affair—the receiving of bribes by Deputies, the interference of foreign adventurers in our politics, and last, but not least, the fact that the Government had made use of some of the Panama money for a political purpose at a time when M. Floquet was President of the Council. In spite of the Committee of Inquiry and the trial for bribery and breach of contract, it could not be said that the matter was cleared up. The Chamber had refused to reëlect M. Floquet President; but the Ministry had not always maintained a consistent attitude, and there was no definite conviction that it was willing to go through with the affair to the end, and, by thoroughly settling it, to separate itself entirely from the individuals or groups compromised in this unhappy business. Such was the state of things when, on the 8th of this month, an obscure Deputy of the rank and file managed to initiate an interpellation on the Panama affair. The debate seemed likely to have no importance, when, without any warning, there mounted the tribune a personal friend and former political colleague of M. Ribot, no other than M. Godefroi Cavaignac, a former Minister of the Marine, who has great weight in the Chamber, and who is certainly the most prominent member of the moderate Left. His speech, very short and very simple, confined itself to an appeal to the Government to make a thorough examination, and at the same time to break once for all with the past ministerial practices condemned by the country at large. This speech, chaste in form and moderate in expression, but yet at bottom full of fire, as dealing with principles and nowise with the Chamber's confidence in the Government of the day, aroused a tremendous enthusiasm. The resolution proposed by M. Cavaignac was voted by a very large majority, and the posting up of the speech throughout the country was in addition ordered by the Chamber. This latter course is generally adopted when important declarations have been made by the Government, and consists in the official placarding throughout all the communes of France of the part of the Parliamentary report in question.

The intervention of M. Cavaignac had completely disconcerted the Ministry. It agreed to the resolution, but the vote was none the less a blow to it on account of the way in which the incident had occurred. This speech was directed against the Government, or at any rate against the majority it had hitherto depended on. Therein it saw the germ of a coalition of the Centres and of certain elements of the Right; in short, it felt that the Chamber was abandoning its allegiance. The various sections of the Republican majority drew on the morrow the same conclusions; the Deputies that had applauded M. Cavaignac with the most enthusiasm, themselves perceived, side by side with the question of political honesty and morality to which many were quite ready to agree, the existence of another question exclusively political. Unwilling to see the Centres gain the upper hand, they were therefore quite disposed to offer the Ministry an occasion of recovering its influence in the Chamber. The Government on its side was equally desirous of obtaining a formal vote of confidence. For this, an interpellation was necessary; and, having been carefully prepared, a week after the first this second interpellation took place.

Duly announced and anxiously anticipated, the Parliamentary sitting devoted to this debate disappointed every expectation. M. Ribot developed in wearisome iteration the theme of Republican concentration and, if necessary, union among the Republican party-sections—a doctrine which, it may be said, by the way, permits ministries to hang on, but corresponds in reality to nothing very definite; for the same Deputies who agree to vote in favor of the Government are often enough, politically speaking, in complete disagreement one with another.

M. Cavaignac came forward a second time to repeat what he said a week before, and certain other members delivered themselves of diatribes more or less violent and more or less ingenious against the policy of the Cabinet; but their success was of the most meagre kind. The President of the Council himself was far from being covered with applause; but in reality that did not much matter, as the majority had decided beforehand to back him up. And back him up it did, the vote of confidence that the Government accepted being passed by an imposing phalanx; and the Ribot Cabinet, which the week before had been tottering, was once more consolidated.

The word "consolidated" is not, perhaps, the most proper to be applied in this case, for, as a matter of fact, the Ministry's position remains the same to-day as it was a week or so ago, to wit, in a state of unstable equilibrium which may be maintained for some time, but which is quite as likely as not to be destroyed at any moment. Such are the fatal consequences of the absence of a homogeneous majority in the Chamber—the concentration that to-day sustains the Ministry may fall to pieces to-morrow, and in its place may possibly be formed another concentration, another fortuitous grouping of fragmentary parties in the Chamber. At the same time it would seem—and this is another conclusion to be drawn from these recent events—that if, as some people predict, the "Ralliés" and the Centres are to accede to power, and are to give us, instead of the growingly radical Republic which we have at present, a Conservative Republic of the kind M. Thiers extolled, it is not through the existing Chamber that such a result can be brought about, and that, for this *volte-face* to take place, the general elections next October should give returns different from the last—a contingency which for the moment is doubtful. But to know if this can happen, one needs to come back to the question of the influence the Panama affair is likely to have on political ideas, and on this ground I do not wish to venture. To be able to write sensibly and impartially on this subject, one needs to wait for the result of the legal preliminary examination, as also of the judgment of the Indictment Court and of the trial for bribery and corruption. Then, and then only, will it be possible to sum up the whole affair, and to elucidate all the various tendencies one sees looming through it, much more complex than one is at first tempted to believe. S.

THE KELMSCOTT PRESS.

LONDON, February 25, 1893.

IN many ways, the appearance of Mr. Morris as a "master-printer" is one of the most interesting events in the history of modern book-making. He is accepted as such an authority on all branches of decorative art, he has so often railed against the abomination of American printing in particular and the iniquity of nineteenth-century publishing in general, he has been so given to dogmatize on the nature of the perfect book, that, now he has himself taken to printing and publishing, one looks with much curiosity and some eagerness to the volumes from his own press, which must be supposed to represent the realization of his ideal. That he is free to realize this ideal, that he cannot make cheapness an excuse for shortcomings, is at once explained by the prices he asks. Mr. Morris's Socialism has always been as feeble in practice as it is violent in theory. All men may be equal in his eyes, the proletariat he may think shamefully neglected; but when it comes to the making of books, why, then it is only the capitalist he considers. The Kelmscott Press has the distinction of producing the most costly books of the day, and this though the expenses in connection with them are comparatively small. In reprinting old works, there are no royalties or half profits to be considered; in Mr. Morris's more modern ventures, only once or twice have the interests of any living author, except himself, been at stake.

The literary importance of his publications is a question apart, though the first new edition of Caxton's 'Golden Legend' issued in 350 years cannot be passed over entirely in silence. But still, as Mr. Morris explained to an interviewer only the other day, his object in starting the Kelmscott Press was to amuse himself and to print some nice books; he is not concerned with their direct influence on literature. It is enough, therefore, to say that his choice is delightfully characteristic. Of the thirteen volumes printed, or to be printed, several are his own poems and tales, the others, with one or two exceptions, the earliest English books. Mr. Morris, in his work, no matter of what kind, would rather be anything than modern.

If his literary prejudices are thus made manifest, his oft-proclaimed artistic dogmas are no less apparent in his type, his treatment of the page, his binding. It has always been a weakness with him to limit his artistic appreciation to certain periods and certain schools, and in these to see only good. In his devotion, even defects due to the immature development of an art or craft become qualities to be worshipped and, if possible, reproduced. In many respects, the first books published are the most beautiful ever produced, but they were not without drawbacks. Of the three fonts used at the Kelmscott Press, two are of the nature of Gothic, not absolute copies of the old German type, but adaptations, in which, however, much of the old obscurity is retained. It was very well for early printers to take as models the handwriting, not of the day, as Mr. Morris is always erroneously stating, but of the professional scribes, corresponding, as it were, to our conveyancers; it was inevitable that they should. But that is no reason why their designs should not now be improved upon. One of the

latest and most successful of Mr. Morris's books is his reprint, not by any means a facsimile, of Caxton's 'Recuyell of Troye.' To look at the page is a delight; it is fairly well printed; it is well spaced, its stern simplicity relieved only by the capitals at the beginning of the paragraphs, by the quiet design on the margin at their side, by the red ink in which the headings of the chapters are given. But if you come to read the page it is a task, requiring continual effort. There can be no genuine pleasure without ease in reading, and the presumption is that even Mr. Morris's books are intended to be read. The third font is Roman, the Venetian printers of the fifteenth century having been his guides, if not absolutely his masters in the designing of it. This is much better. To turn from the 'Troye' to the 'Golden Legend,' another of his last and most ambitious productions, in which Roman type has been used, is a vast relief, and the page loses nothing in effect. But beautiful type does not insure good printing; neither does the use of a hand-press, though Mr. Morris seems to believe that to say that a thing is done by hand is a guarantee of its excellence. There are pages in his books so slovenly and careless that the American printer he despises would rather have thrown them away than presented them as specimens, even of cheap printing, to the public.

Of actual book-illustration or decoration, there has as yet been little in the Kelmscott Press publications, though an edition of Chaucer, with numerous drawings by Mr. Burne-Jones, is promised. Hitherto Mr. Morris has concerned himself chiefly with beauty of type and harmony of proportions in the page. In the earlier productions, the 'Love Lyrics and Songs of Proteus' and Ruskin's 'Gothic Architecture,' for instance, a decorative border at the beginning of each book and initial letters are the only attempts at ornament; even the title-page carries austerity of design to such an extent as to suggest that more elaboration, if it meant a more effectively balanced design, would be an improvement. But it is in these very initials and borders that Mr. Morris at once invites criticism. It must be remembered that, for all his books, a price far above the average is asked. Economy in the making is, therefore, the last feature to be expected in them; and yet the evidence of thrift is aggressive. The same initials appear over and over again, not merely in the same volume (a repetition most irritating in the 'Proteus,' where, oftener than once, a letter faces its replica on the opposite page); but in both books the identical designs have been used for the initials and even for the borders.

In these first publications, however, Mr. Morris may be said to have been feeling his way. It is more just, perhaps, to consider instead the last two, the 'Golden Legend' and the 'Recuyell of Troye.' Here there is more variety in the initials, but the old ones are once more made to do service, while, much as the types differ—in one book Roman, in the other Gothic—occasionally the same capitals appear in both, and the marginal decoration that ought to give distinct character to the 'Troye' occurs here and there in the 'Golden Legend.' But the most glaring economical dodge (it does not deserve a more dignified name) is to be seen in the two title-pages. In each the title is in large, bold lettering on a background of arabesques surrounded by a border, the latter repeated on the opposite or opening page; in both, though the background is slightly varied, the same border is used. Mr. Morris has ever been among those who preach the necessity of appropriateness in book decoration; to quote a homely old saying, one should practise what one preaches. But whatever Mr. Morris expects of other book-makers, he seems to think that for himself appropriateness consists in turning his stock of designs to most account. What matter if type in one case be Roman, in the other Gothic? He must get his money's worth out of the borders and capitals on hand.

Otherwise the get-up of both these books is to be commended. The 'Recuyell of Troye' is in two not too heavy or unwieldy volumes; the paper, as in all Mr. Morris's other publications, is hand-made, of Kentish manufacture, but it might easily be better and heavier. The binding is in white vellum, which Mr. Morris prefers to the poor quality of leather to be had nowadays; or, is it that he has found leather to be too expensive and the leather-maker not a comrade? The 'Golden Legend,' in three large shapely volumes, in blue paper and gray-linen covers, "strong-backed and neat-bound," as Charles Lamb would have liked to see them, is further adorned by two wood-cuts after Burne-Jones, archaic and Burne-Jonesian to the last degree, and yet with a decorative grace, while their primitiveness is not out of keeping with type and text.

When it must be admitted that Mr. Morris has done much to restore the book to its original dignity, it may seem a waste of judgment to find fault rather than to praise. But it is simply because his work is good up to a certain point that it challenges severe criticism. His books, according to him, smack so little of commerce, though probably few publishers make such goodly profits, that his economies of time, money, and labor are the more irritating. Besides, he has been so boisterous and prejudiced in condemning all modern bookmaking that it is his own fault if one looks to him for perfection, and, not finding it, becomes but doubly conscious of his failure. And again, already the Kelmscott Press is influencing the trades—or arts, if you will—of printing and publishing. Distinct imitations of his books are beginning to appear. Even his scheme of page decoration is being quietly appropriated, while there is a youth in London, Mr. Aubrey Beardsley, of whom more will probably be heard later on, who has borrowed the lines and tricks of Burne-Jones, until the process blocks after his drawings for a new edition of Mallory's 'Morte D'Arthur,' now in the press, are scarce to be distinguished in quality and effect from the woodcuts in the 'Golden Legend.' As for the presswork, produced by a steam press, it is almost equal to Mr. Morris's, while in the degree of care and attention bestowed upon the decorations there is simply no comparison. Yet Dent's book will cost not many more shillings than Mr. Morris's does pounds.

As to the ultimate fate of the Kelmscott Press publications, one cannot but wonder. One of Mr. Morris's henchmen has informed an expectant world that in the end books, as well as land, will be nationalized. But as Mr. Morris issues the most limited editions, it follows that, even when the millennium has come, some few millions of people will have to do without his perfect volumes. On the other hand, he is rapidly lessening the chances of their becoming the special and treasured possession of the collector. Just at present, those that have been published are going up in price; but he is turning out so many books that, though the editions of each be limited, they cannot long retain the virtue of rarity, especially if he perseveres in the practice of repeating the same designs in all. Only books like the promised Chaucer with Burne-Jones's illustrations will prove of distinct value, and their value will not be due to Mr. Morris's share in their production.

Correspondence.

UNSECTARIAN THEOLOGY.

To the Editor of The Nation:

Sir: I am glad to see your comment (in your issue of March 2) upon the singular proposal in the Report of the Harvard Divinity School to have "different systems of Theology" taught in the School by professors of different denominations. To most of us it seems plain that if systematic theology, or any other province of theology, cannot be taught by university methods, with a view simply to historic truth, then the whole idea of unsectarian theology, for which the Harvard Divinity School has always stood, comes to naught. The essence of non-sectarianism in education is not the handling of religious problems by experts of various beliefs, from whose teachings the student is to take his choice, but the handling of them in the broader aspects under which the question of truth alone comes into account, and where all denominations are forgotten. If this is impossible in systematic theology, or in philosophy, as the Report intimates, then systematic theology and philosophy are not properly university studies, but esoteric sciences, to be imparted only by the initiated or by special advocates.

In this case they stand below such studies as political economy, which Harvard College, I believe, claims to teach not under the form of protection or free trade, but on its own merits, and as a branch of pure science. If non-sectarian theology or philosophy does not "draw," the remedy would seem to be to enlarge its scope and constantly improve its quality. It is hardly the function of a university to follow the methods of scholarship so long as they prove easy, and abandon them the moment they grow difficult or fail to meet the popular demand.

Cambridge, March 10, 1893.

THE JESUIT PASCAL.

To the Editor of The Nation:

Sir: I do not read the *North American Review*, but when the kindly gods cast before me such a thing of joy as this delicious passage from the number for March, I begin to wonder whether my life without it these many years has not been a ghastly waste of opportunities. It is from a "symposium" on the subject of "Insurance," p. 314:

"The problem was too difficult for him, and he sought the aid of the famous Abbe [*sic*] Blaise Pascal, *a Jesuit priest, author of 'Night Thoughts.'*"

But is not this carrying the "nullum discrimen" which is guaranteed upon the cover, to something like hyperbole?

T. B.

Rochester, March 16, 1893.

DE LESSEPS ANTICIPATED.

To the Editor of The Nation:

Sir: In his testimony before the Assize Court at Paris on the 8th inst., M. Charles de Lesseps is reported as having declared that "he took pride in saying that his father first conceived the idea of piercing the Isthmus of Panama."

An essay of Sir Thomas Browne's entitled "Of the River Nilus" ends with this paragraph:

"Nor will the ill success of some be made a sufficient determent unto others who know that many learned men affirm that islands were not from the beginning, that many have been made since by art, that some isthmuses have been eat through by the sea and others cut by the spade, and, if policy would permit, that of Panama in America were most worthy the attempt, it being but a few miles over, and would open a shorter cut into the East Indies and China."

I quote from Bohn's modernized edition of 'The Works of Sir Thomas Browne,' published in London in 1852. Attached to the essay is the following note in the original style:

"Betweene Panama and the Nombre de Dios, which lyes on bothe sides that strip of lande, the Spaniards accompte about 40 miles at most. . . . Butt itt withall supposes that to cut through the ridge of mountains which lies betweene those 2 havens is impossible and would prove more unfecible then that of Ægypt, which yf itt might be compassed would be of more advantage to these 3 parts of the world than that of Panama and nearer by 1000 leagues to us, the remotest Kingdome trading o the East Indyes."

Sir Thomas Browne was born in 1605 and died in 1682. The above essay was probably published after his 'Religio Medici,' and about 1650.—Yours respectfully,

J. Shipley Newlin.

Philadelphia, March 10, 1893.

A FORERUNNER OF LINCOLN.

To the Editor of The Nation:

Sir: It seems worthy of notice that more than half a century before Lincoln's famous speech on his nomination to the United States Senate the same warning note, in connection with the slavery question, was sounded by a Philadelphia Quaker. "A house divided against itself cannot stand," says John Parrish, in his 'Remarks on the Slavery of the Black People' (1806); and he adds, "neither can a government or constitution" (p. 9). Lincoln's use of the Scriptural figure is more effective than the earlier author's. He not only hits the nail on the head, but drives it home. Lincoln, moreover, is referring to a sectional division, with the anticipation, not that the house will fall, not that the Union will be dissolved, but that it will become either all slave or all free. Parrish is referring to a condition in which one half of the citizens trample on the rights of the other; and his idea of the issue is based on a religious conviction that the cry of the oppressed will be heard.

"There is a God that judgeth the earth," is the continual cry of this Jeremiah. We cannot hope for a long continuance of God's blessing upon a government which neglects or refuses its duty to these people (p. 24). Woe unto him that buildeth his house by unrighteousness (p. 29). The only sure foundation of government is the principle, "Do unto all men as ye would that they should do unto you" (p. 14). He declares that "all the combinations of human policy shall not be able to prevent the deliverance of this people from their wretched state of thraldom" (p. 7), and that, when they become free, "it is desirable it should be with the consent of those who have authority over them" (p. 41).

It is interesting to find, in this connection, one of the few existing protests against the first fugitive-slave law. Parrish attacks it partly on account of the injustice of its provisions (p. 12), and partly on the ground that it is based on a perversion of the Constitution. He argues that no service or labor can be due from a person deprived of his natural right, and that such an application of the constitutional clause would be manifestly inconsistent with the principles upon which this Government was founded (p. 32). The law of 1793, though less bitterly opposed than its successor, evidently contributed its mite towards nourishing anti-slavery sentiment.

Parrish's constitutional position is not altogether sound, but his insight into the slavery question is somewhat remarkable. He not only realizes the seriousness of the situation, but has a keen eye for specific abuses, and suggests definite remedies. The domestic as well as the foreign slave trade should be stopped; and he suggests that the State legislatures might prohibit transportation through their respective territories (p. 31). Not only must the importation of slaves be prohibited at the earliest possible moment, but something should be done to relieve those already under the lash, and that can be begun at once (p. 39). He suggests that a Congress which had power to make laws for the oppression of the slave, as in 1793, was surely competent also to do something to ameliorate his condition, and that the District of Columbia would be a suitable place to begin (p. 15). He argues in favor of emancipation (pp. 23 to 25 and *passim*), and advocates the scheme of colonization on Western territory, where he fondly imagines that "there are millions of acres likely to continue many ages unoccupied" (p. 43).

There was so much weak optimism among the anti-slavery writers of Parrish's day, such a disposition to defer all action until 1808, and such a comfortable expectation that after that time slavery would die a natural death, that it is cheering to find this vigorous plea for immediate action.—Yours very truly,

Mary Stoughton Locke.

Cambridge, Mass., March 4, 1893.

LECONTE DE LISLE IN THE ACADEMY.

To the Editor of The Nation:

Sir: May I venture to correct an error in your issue of February 9? In the communication on "Poetry in France" your Paris correspondent writes: "Whenever there was an Academical election, Victor Hugo . . . used invariably to write on his bulletin 'Leconte de Lisle,' till Leconte de Lisle was elected." The implication is that Hugo voted at the election in which Leconte de Lisle finally triumphed. As a matter of fact, however, Leconte de Lisle was elected to fill the Academy *fauteuil* left vacant by Victor Hugo's death.

M. Jules Lemaître, in the second series of his 'Impressions de Théâtre,' has given an amusing account of Leconte de Lisle's reception at the Academy, on which occasion Alexandre Dumas, *fils*, was spokesman of the august body. To quote M. Lemaître, who seizes the whole humor of the situation: "Il y avait en présence deux esprits n'aimant rien l'un à l'autre, ne comprenant absolument rien l'un à l'autre, obligés de se congratuler et d'exalter un troisième esprit qu'ils admirent, je crois, mais qu'ils n'aiment ni l'un ni l'autre." The whole account is delightful.

At the beginning of the communication from your correspondent there is another slight error, a manifest slip of the pen (or a misprint?), where Chénier, Dorat, etc., are spoken of as poets of the *seventeenth* century.

Very truly, R. E. N. D.

Paris, March 1, 1893.

MORALE.

To the Editor of The Nation:

Sir: I do not remember to have seen in any previous number of the *Nation* a mistake which occurs on page 113 of No. 1445. I read there: "upon the conduct of Napoleon and upon the *morale* of his men." The writer was certainly not concerning himself with the morals of the men, but with their spirit; and he should have written *moral*—unless he preferred an English word of precisely the same meaning, in which case he could have written *spirit*.

I should not trouble you with this letter if the error could be regarded as a mere slip of the pen. It is one that is so habitual with English and American writers that there is great danger it may get to be correct through universal use. The London *Spectator* is a constant offender. Col. Dodge uses the word throughout his Life of Cæsar. We should smile if a Frenchman said he admired the morals of our army at Gettysburg; and we make the same mistake every day ourselves.

May I add, without trespassing too much on your space, that nine people out of ten say *savoir faire* when they mean *savoir vivre*—praising another's skill when they mean to praise his tact? And, finally, let me note that there is not and never was such a thing as a *double entendre;* that is, if the words are meant for French. If they are English, I do not know how to pronounce them, and should like to be told. A. D.

["If the words are meant for French." Precisely. *Morale* is no more meant for French than *bouquet,* and its use as English is so convenient and so well established (see the 'Century Dictionary,' *s. v.*), that it ought no longer to be italicized, unless, perhaps, as an aid in pronunciation. *Nom de plume* is another naturalized adaptation from the French Hardly less unfamiliar to French eyes is *esprit d'escalier*—but who would hesitate to employ it though it be only the happy invention of a foreigner?—Ed. Nation]

Notes.

Charles Scribner's Sons have in press 'Wagner and his Works: The Story of his Life, with Critical Comments,' by Henry T. Finck; 'Recollections of Middle Life,' by Francisque Sarcey; 'Abelard, and the Origin and Early History of Universities,' by Jules Gabriel Compayré; 'Homes in City and Country,' reprinted from *Scribner's Magazine;* 'How to Know the Wild Flowers,' by Mrs. William Starr Dana and Marion Satterlee; Mrs. Burnett's 'The One I Knew the Best of All'; 'Island Nights' Entertainments,' by Robert Louis Stevenson, and 'A Second Book of Verse,' by Eugene Field.

In the early summer Harper & Brothers will bring out a new historical romance by Gen. Lew Wallace, 'The Prince of India; or, Why Constantinople Fell.' Meantime, they are about to issue 'Whittier: Notes of his Life and of his Friendships,' by Mrs. Annie Fields; Miss Wilkins's drama, 'Giles Corey, Yeoman'; Amélie Rives's tragedy, 'Athelwold'; 'The Japanese Bride,' by Naomi Tamura; 'Katharine North,' by Maria Louise Pool; 'White Birches,' by Annie Eliot, and 'Coffee and Repartee,' by John Kendrick Bangs.

Charles L. Webster & Co. have nearly ready

a new volume of short stories by Mark Twain.

'The Eloping Angels' is the title of a new poem by William Watson, which Macmillan & Co. will publish.

G. P. Putnam's Sons have in preparation new illustrated editions of 'Old Court Life in France,' by Frances Elliot, and 'Woman in France during the 18th Century,' by Julia Kavanagh.

Houghton, Mifflin & Co.'s announcements include 'Socialism and the American Spirit,' by the Rev. N. P. Gilman; 'Tools and the Man,' by the Rev. Washington Gladden; 'The Gospel of Paul,' by Prof. C. C. Everett of the Harvard Divinity School; 'The Story of Malta,' by M. M. Ballou; 'Horatian Echoes,' translations by the late John O. Sargent; an anthology of 'Greek Masterpieces,' by Prof. W. H. Appleton of Swarthmore College; and 'A Wayside Harp,' by Louise Imogen Guiney.

D. Lothrop Co. publish for Easter 'A Song of the Christ,' by Harriet Adams Sawyer; 'Whittier with the Children,' by Margaret Sidney; and 'The Tennyson Remembrance Book,' by Elbridge S. Brooks.

Ginn & Co. will issue 'A Practical Course in English Composition,' by Prof. Alphonso G. Newcomer of the Leland Stanford Junior University.

The Society for the Propagation of the Gospel is about to publish a digest of its proceedings, journals, MSS., letters, and reports, with a record of all the missionaries whom it has supported, from the date of its incorporation in 1701 to the present time. The first part will relate principally to the history of the Episcopal Church in this country, where, up to the Revolution, the Society spent nearly three-quarters of a million of dollars. Among the numerous portraits will be one of the first American Bishop, Seabury, and the first missionary, the learned Scotchman George Keith, who was sent over in 1702 to labor in Pennsylvania.

'Marriage,' in two volumes, by Miss Ferrier, comes to us from Roberts Bros., Boston, who aim, in their reprint of this and the two companion novels by the same author—her total production—to restore the text in its original fulness. Never, they say, has any but the first edition escaped curtailment. The series intentionally matches in appearance Miss Austen's as brought out by Roberts Bros. last year, and each volume has an etched frontispiece by Frank T. Merrill. Vol. i. opens with a biographical sketch of Miss Ferrier from *Temple Bar*, in which are marshalled the flattering opinions of contemporary critics from Sir Walter Scott down. And after this comes Miss Ferrier's account of her visits to Ashestiel and Abbotsford. To link her novels with Jane Austen's is natural and proper for the substance of them, though time has dealt very differently with the Scotch and the English woman in respect of fame and remembrance.

'The Black Dwarf' and 'A Legend of Montrose' compose the fifth volume of the Dryburgh Edition of the Waverley Novels (Macmillan), and each story has a separate artist assigned to it for the illustrations, which offer a considerable contrast in style. It is curious to remark that the juxtaposition of these tales brings together between two covers these parallel passages: "Grippie for grippie, friend," says Hobbie Elliot in the 'Black Dwarf' to Sir Frederick Langley, "I'll wad a wether he'll make the bluid spin frae under your nails." "As he [McAulay in the 'Legend'] spoke, he seized the Earl's hand and wrung it with such frantic earnestness that his grasp forced the blood to start under the nails."

Mr. Keltie's 'Statesman's Year-Book for 1893' (Macmillan) reaches its thirtieth issue, and calls for no description or eulogy. Its maps this year illustrate the frontier question of the Pamirs and the possible complications growing out of the dividing up of Africa by the European Powers. Some convenient tables have been placed in the front of the annual: the great cities of the world with 100,000 inhabitants and upwards; the world's wheat crops, production of gold and silver, merchant marine; the trade of Africa in 1891; the British Empire, 1891-92. There are other improvements in this very useful work, but they do not need to be pointed out.

Two of the Harper periodicals for 1892, bound volumes of which reach us from the publishers, bear testimony, silent and spoken, to the loss of Mr. Curtis—the break in the *Weekly* caused by his death being more immediate and marked than in the *Monthly*, where his last Easy Chair, written with the long anticipation of magazine copy, stands side by side with his obituary in the November number. The *Weekly* reveals other changes than the absence of his pen in the editorial columns—a new department, "Music and Drama," having been introduced towards the end of the year, and sharper prominence having been given to illustrations and letterpress of a sort new to the "old subscriber." For the rest, its pictorial chronicle of current events is as full and interesting as ever, adequately covering a year notable for memorable political and industrial struggles.

The *Monthly* has lost another frequent contributor of long standing through the dropping by the way of Theodore Child, several of whose articles on things and persons Parisian appear in these volumes. His successor, in point of voluminousness, appears to be Mr. Julian Ralph, whose pen has been let loose upon this hemisphere and had covered the region from Hudson's Bay to St. Louis by the end of Vol. 85. The year saw the close of the valuable series on the "Armies of To-day" and of Mr. Besant's papers on historic London. Lowell's lectures on the Old English Dramatists, with Bridge's reminiscences of Hawthorne and Mrs. Ritchie's of the Brownings, were the chief literary features.

The procession of the fashions in the *Bazar* gives the usual impression of mystery and fate combined. From clothes to faces a welcome transition is made in Mr. Child's "Mirror of Fair Women," with its profuse illustration. A series of slight sketches and gossip about art and travel and manners runs through the year under the title of "Mrs. Wouter Van Twiller's Saturdays," the more serious note being left to Col. Higginson in his "Women and Men" column. Mr. Besant furnishes the main serial story, and there is the usual miscellany about house and home and season and custom, with a long list of cookery recipes which are as condensed in form as Dr. Johnson could have desired, though whether as thoroughly "philosophical" as he would have made his cook-book we cannot say.

Whether the fifteen-year-old Eton boy for whom Mr. Reginald Baliol Brett wrote 'Footsteps of Statesmen during the Eighteenth Century in England' (Macmillan) was altogether to be congratulated, may well be doubted. Two-thirds of it must have been unintelligible to him, unless he was unhealthily precocious. Mr. Brett has, therefore, wisely placed the book before a more mature audience. It is an entertaining series of gossipy sketches, to be read in comfort over a pipe by men who know something of political affairs in England, and do not take too strenuous a view of things. They will find in them a mild Whig doctrine, an indefinable air of aristocratic superiority to the vulgar herd, and not a few shrewd touches. The hardly veiled allusions to modern politicians add to the gentle interest. Thus, Bolingbroke's "acceptance of office under Harley, his intrigues to overturn him, his momentarily obtained and forever-lost leadership, almost entitle him to rank as member for some great metropolitan constituency." We should like to know what Mr. Brett thinks of the member for Paddington's chances of the leadership now. In style the work is uneven; many of the sentences are awkward and involved, and grandiose phrases, such as the reference to the *Times* as "the diurnal literary miracle which emanates at an early hour from Printing-House Square," are not infrequent.

An account of 'Coal Pits and Pitmen' might easily be made interesting as well as instructive, but the book so entitled, by R. Nelson Boyd (Macmillan), is neither. It is concerned with coal-mining in Great Britain only. It gives little intelligible information concerning the methods pursued in the industry, and is principally occupied with the tedious details of the numerous Parliamentary measures regulating the working of collieries. Even this last subject might be handled so as to be not unprofitable to specialists, but Mr. Boyd has rendered his pages unreadable by attempting to mention all the amendments and proposed amendments to bills, the attitude towards these bills and amendments of various members of Parliament and other persons, and the language employed by many of them in explaining this attitude. It is conceivable that such a treatise may find readers in England, but they will be few in this country.

The two elaborate volumes of 'Electrical Papers' by Oliver Heaviside (Macmillan) are made up of a series of papers the first of which was published in 1872, the last in 1891. The treatment of the kindred subjects of electricity and magnetism is almost purely mathematical, and illustrates in a very striking manner the extent to which electricity has now become a branch of mathematical physics. Few persons will find the work easy reading, yet it is much less difficult than might at first appear, and well deserves attentive study. In the long preface the author takes the public into his confidence in a conversational sort of way, making excuses and assigning reasons for the collection of his very numerous papers. The work is frequently interrupted by remarks which put author and reader upon good terms with each other, and which sometimes excite a smile, as when, for instance, a formula resulting from a long train of mathematical reasoning is pronounced "ridiculously simple." The author's hearty interest in his work, his frank criticisms of the methods of others—his summary rejection of quaternions, for example—and his general independence and good-humored self-assertion, are very attractive. The book cannot fail to be useful, and to find a limited but appreciative circle of readers and students.

Prof. Andrew Gray's two new volumes, 'Absolute Measurements in Electricity and Magnetism' (Macmillan), form Parts i. and ii. of the second volume of his well-known work, probably the most complete which has been published upon the subjects treated. Part i. is devoted chiefly to the mathematical theories of electro-magnetism and magnetism as a groundwork for thorough treatment of instrumental methods; Part ii. mainly to these methods in

very full detail. In fact, we know of no work which so thoroughly covers the whole ground. Though not too difficult for a well-trained electrical engineer, it will require serious study, and will well repay the effort to master it.

In his last published report for the year ending December, 1891, the President of Yale University commends contributions to the Alumni University Fund. Started the year previous, this fund amounted to $15,738 (the contributions in 1891 being $6,500), and the way in which it was raised suggests to the alumni of all our institutions of higher education undeveloped possibilities of helpfulness. Men and women of modest means and limited incomes feel some hesitation in offering units, tens, and hundreds where thousands and tens of thousands are called for, and are tempted to forget that, in the educational as in the business world, "the multiplication of small gifts realizes large sums, and the annual repetition of such gifts according to the ability of the giver must bring great help both to the permanent funds and to the income" of universities. It appears from this report that Yale's available funds were increased one-half within the previous five years (independent of buildings and improvements), and the list of her benefactions for 1891 discloses the fact that, of the 172 donors during that year, 148 had given sums under $1,000, 115 of them being amounts of $100 or under; nor does this list include those contributions entered *en bloc* under the heading "$22,071 for the New Gymnasium," and of $6,499 to the credit of the Alumni University Fund first mentioned.

The Secretary of Harvard University has just published a pamphlet supplementary to Prof. Palmer's discussion of students' expenses at that institution in 1887. In the main it consists of letters from the students themselves, giving in detail the experience of each one; but Mr. Bolles prefixes some general remarks which show that while the attendance at Harvard has greatly increased since 1887, the modes of cheapening the cost of living have also multiplied, so that the annual minimum has been lowered from $450 to $350, or even, as the writer of the most notable letter affirms, $300, "honorably and happily." Twenty-five members of the class of 1891 spent less than $500 a year.

A correspondent writes:

"Those who like to find analogies for modern tendencies of thought and habit in the histories of great epochs of the past, will look in vain through the columns of your interesting review of Bishop Copleston's 'Buddhism' for any allusion to the prominence of a feminine element among the early followers of Gotama. In London, however, at the February meeting of the Royal Asiatic Society, of whose Ceylon branch the Bishop of Colombo is President, attention was called to this important feature of Buddhism by the paper of the day (by Mrs. Bode), 'On Some Women Leaders of the Buddhist Order.' These women belonged to the order of Bhikkhunis, or Sisters, founded by Gotama. They are mentioned among the contemporary disciples of the Buddha in a collection of his discourses called the 'Anguttara Nikāya,' and it is in a Pāli commentary (the 'Manoratha-Pūranī') on this ancient work that the stories of their lives are to be found. In these stories, which are said to have a distinct charm and human interest apart from their religious intention, the commentator Buddhagosha, who is of the fourth century A.D., points out that a few of the Bhikkhunis became renowned not only for their virtue, but for their intellectual gifts as well. They lived a life of entire freedom, though of great simplicity and poverty. That women should have held an important position as teachers of the Buddhist doctrines is a fact of great interest in the history of the philosophy that numbers about 450,000,000 adherents; and may be counted as a point with which controversialists should be called on to reckon when next the moot question of the contribution of women to the serious thought of the world is brought up for discussion."

"W. G. B." writes from Washington and Lee University:

"In confirmation of 'J. E. G.'s' inference with regard to shelving books with their backs to the wall as late as the beginning of the seventeenth century, may be mentioned a copy of Virgil in the library here, printed in Frankfort in 1596, and bound about the same time, which has 'Virgilius' in ink on the upper front edges. A copy of Basil of 1551, bound in leather-covered boards, has 'ΒΑΣΙΛ' in the same position."

—The question as to the choice of books and the selection of the best of them, which was begun by Sir John Lubbock some years ago in 'The Pleasures of Life,' and which has been pursued since by other writers, lively or severe, has just been taken up afresh by the *Revue Bleue*. It proposes a new inquiry into the selection of a library, and asks its readers to send in answers to the question: Which are the twenty-five best books? This is an appeal to a very intelligent jury, and one which, from its wide extent and the diversity of its pursuits and studies and habits of thought, is probably as well fitted to its work as any that could be had. Whatever its finding shall be upon the complex question which is submitted to it, its verdict will be sure to be not only most interesting, but also curious and instructive. At the outset one thing at least is certain: there are great difficulties in the way of coming to any satisfactory conclusion. For whom is the ideal library to be chosen? For the specialist? For the man of scholarly tastes? For the "general reader"? For the average man? But who is the average man, and where is he to be found, and who knows his tastes? Possibly an approximation towards him might be got at if everybody would set down with absolute honesty and frankness his own individual opinion, and then let a balance be struck. Yet, somehow or other, this has seemed a hard thing to do. It is difficult to go through any of the lists of the "best books" that have hitherto appeared without feeling that many of the titles are put there not so much from a sincere personal liking for the books as from what may be called a sense of duty. This sense of duty was obviously, one might even say oppressively, present in some of the English lists—we do not say in Sir John Lubbock's. They were so intensely British that one could almost swear that he had been present at the making of them. "The best book? The Bible, of course! Put down 'Number one: The Bible, King James's version.' Number two? Why, Shakspere, naturally—yes, of course, Shakspere!" And so on through the list, of which the chief wonder was that ox-tail soup did not hold the third place in it. Another difficulty will be to hold the scales even between quantity and quality in judging a man's work, if, as the *Revue Bleue* permits, an author's entire works (in case his work has been homogeneous, as, for example, Shakspere's) may be sent in. There are a few authors *unius libri*, like La Rochefoucauld, or La Bruyère, every word of whom is valuable; others, like Voltaire, voluminous writers of books of greater or less value, but always of some value and sometimes of the very greatest; others, again, like the Abbé Prévost, authors of one masterpiece, and of fifty other volumes of utterly insipid trash. It is easy to foresee, under such conditions, how many hard questions will arise. But, however difficult these may prove, the excellent jury of the *Revue Bleue* will enter on its work with everybody's good wishes, and may count beforehand upon a very wide interest in its result.

—The immediate cause of the *Revue Bleue's* investigation is to be found in an *enquête* of the same sort which has just been brought to an end in Italy. This was conducted by Messrs. A. Guicciardi and F. di Sarlo, and its results have appeared in a little volume recently published at Bologna under the title of 'Fra i Libri.' The Italian investigation sought for five books only, and not a hundred, as Sir John Lubbock, or twenty-five, as the *Revue Bleue*. These five were to be chosen as if by a man going into intellectual exile, who was laying in mental food for a life-time. Two hundred and fourteen answers were received. The first ten books chosen, and the vote for them, were as follows: Dante, 109; Bible, 57; Shakspere, 54; Herbert Spencer's 'First Principles,' 36; 'I Promessi Sposi,' 36; Darwin's 'Origin of Species,' 28; Goethe's 'Faust,' 22; H. Spencer's 'System,' 22; Homer, 20; Leopardi, 19. This is a somewhat astonishing list, and one which provokes comment, a part of which we have already made. The preponderance of foreign authors is very curious. They are in proportion to the Italian authors as six to four, taking in the whole list; as seven to three, taking the first ten names. When the list of the *Revue Bleue* shall appear, there will be material provided for international comparisons that will be at the very least entertaining. For, besides the lists we have been speaking of, there is a German one, 'Die besten Bücher aller Zeiten und Litteraturen,' which was compiled at Berlin a year or two ago.

—Dr. Vogel's map of the German Empire is not yet finished, yet a supplementary work is already launched by the same house (Gotha: G. Perthes; New York: Westermann). A 'Deutscher Kolonial-Atlas,' compiled by Paul Langhans, is the new undertaking, and its scope includes a view of the spread of German emigration the world over, as well as those settlements peopled chiefly by Germans and governed by the mother country. There will be thirty large maps in all, with an extraordinary number (several hundred) of side maps, conveying graphically an immense amount of statistical information. For instance, in Part i., the first plate represents on a liberal scale this world-wide emigration of which we were just speaking; while below are three smaller terrestrial maps showing (1) the German missions to the heathen, (2) the colonial States of the world, (3) the routes of German emigration. Another plate shows the archipelago of the New Guinea protectorate. The quality of these maps needs no praise beyond the name of Perthes. The enterprise is more ambitious than that of an atlas, bearing the same title, just published complete by Dietrich Reimer, Berlin. This consists of five strongly backed folded maps, of which the first shows in one view the German colonial possessions, consular and diplomatic establishments, and steamship mail routes; the second represents Equatorial West Africa; the third, German Southwestern Africa; the fourth, Equatorial East Africa; and the fifth, Germany's Pacific Ocean domain. By a very convenient arrangement, the text, by Dr. Joseph Partsch of Breslau, is bound to the left-hand cover in such a way as to be readily consulted while the maps attached to the opposite cover are unfolded. Partsch's general disquisition on the German protectorate is attended by Richard Kiepert's exposition and enumeration of the materials for the

construction of each map, with an index. The whole forms an admirably thorough and trustworthy work of reference, and differs from Langhans's atlas not only in its strict limitation as already pointed out, but also in being intended for official use, whereas the other has a more popular character, and maps the entire globe. Both atlases may be owned and prized by the same person. So far as Africa is concerned, they show that Germany has a footing on the chief of the great lakes—Tchad, Nyassa, Tanganyika, and Victoria Nyanza. Here, as well as in Togo and in Southwestern Africa, she comes in close contact with British "influence," with the probability of no little friction and collision in trade and in authority.

—At a meeting of the Hellenic Society on February 20, Mr. A. H. Smith of the British Museum spoke on "Recent Additions to the Sculptures of the Parthenon," and gave the interesting intelligence that an appreciable addition to the fragments belonging in the south or right-hand angle of the west pediment has just been made. In November last the upper half of a male torso, identified by Michaelis as a Lapith in Metope XIV., was pronounced by Herr Karl Schwärzek, a Viennese sculptor, to be of too soft and round a modelling to make it a possible Lapith. Furthermore, it was worked completely in the round, while the metopes for the most part contain figures more or less engaged upon a background. Michaelis's identification was based upon Carrey's drawing, since the metope in question has otherwise disappeared, and his view falls to the ground now that the torso in question has been fitted into its right place in the west pediment. Trial with a plaster squeeze having been made, there was an unmistakable fit over an area of about four square inches, although the first sharpness of the surfaces had been somewhat worn away. Unfortunately, this happy addition does not diminish the difficulties which still beset all attempts to name the figures grouped in this angle. After a word or two on an unpublished reconsideration of this subject by Furtwängler, Mr. Arthur Smith examined a hitherto unpublished terracotta lamp representing the competition between Athena and Poseidon, and bearing upon the central group of the west pediment. Carrey's drawing would have both divinities facing the spectator, but, in view of this terracotta and the statuette of Athena from Epidaurus, already cited by Miss Harrison, it seems more probable that both appeared in profile. Recent additions to the metopes and the frieze are: (1) the head of a Lapith, undoubtedly to be assigned somewhere on the south side of the Parthenon; (2) the well-known and wonderfully preserved head of Iris and other fragments of the frieze found in 1888–9. In discussing the bestowal of these scattered bits, the comparative accuracy of Carrey's drawings on the one hand, and of Stuart's engraver on the other, was discussed, and the many sins of the latter were forcibly enumerated. Nearly every original drawing by Stuart has disappeared, only enough remaining to show how grossly his engraver has misrepresented him.

—Mr. Cecil Smith, also of the British Museum, followed at the same meeting with a paper on "Harpies and Sirens in Greek Art," his first contention being that "the Siren has in Greek art the form of a bird with human head or human bust and arms; while the Harpy has invariably the winged figure of a woman, with no other distinguishing feature, unless it be that in one instance her hands are drawn in a method suggestive of claws." Harpies and Sirens in later literature and on late monuments have been confused, Harpies being assimilated to Sirens; but the so-called Harpy-tomb is too early for its name, and must be called the Siren-tomb. Here Sirens are gentle messengers, bearing off the dead, as Sleep or Death often does. The Harpy was a personification of the great speed and havoc of storm-winds. Homer connects them with an inglorious death, Aeschylus describes the Furies as wingless Harpies. They, as harmful wind powers, are often pitted against the beneficent Boreads. Various points in the early myth connecting Boreads and Harpies with the tree of the Hesperides seem to localize the Harpies at Cyrene, where the north wind brings help and the south wind harm. The myth travelled northward and was refashioned by Hesiod. The speaker then argued that the Würzburg Phineus cup came not from Asia Minor but from a Greek colony in Africa, and proceeded to point out a new interpretation for a Greco-Egyptian vase painting recently published, where he finds Boreas as a good-wind spirit opposed to the baneful Harpy. The myth in which this opposition chiefly shaped itself was of African growth, the Phineus myth being of a more northerly origin. Certain winged figures in early Greek art were very hard to name: particularly often in Cyrenaic works there was doubt whether a given figure should be called Nike, Iris, Harpy, or Boread. The speaker then endeavored to solve this difficulty in several cases, and closed with the communication of two interesting discoveries which he had recently made of (1) a vase referring to the foundation of a sanctuary of Heracles Kynosarges by the Attic demi-hero Diomos, (2) a vase bearing the name of Acamas, an Attic tribe-hero dear to the potters because they were of the tribe Acamantis. Hitherto this name had been conjecturally read as Aeetes because Medea stands near by.

Cosmopolis. By Paul Bourget. New York: Tait, Sons & Co.

WITH the arrest of the Star of Empire at the western ocean limit of the Continent and the establishment of settlements along its illuminated way, the story of pioneer vicissitude and perilous adventure becomes historical. The buffalo long since retired from prominence, and the Indian has followed him into obscurity. The "forty-niner," with his thousand vices, his single shining virtue, and his violent vocabulary, has departed, and, departing, left behind sons and daughters of questionable taste in opinions and dress, and very heavily gilded. Instead of human nature in the rough, settling little difficulties peremptorily with the bowie knife or revolver, we have human nature in the vulgar, prolonging squabbles by litigation, and resorting to endless underhand devices for getting ahead. The change in descriptive fiction is as inevitable as that in actual life, and so perhaps is the consequent dulness. We must regret both when invited by one who has conferred immortality, humanly speaking, on the rough-and-ready, short-shrift period, to consider characters representative of the advanced stage, and social questions arising out of that advancement. Bret Harte's story, 'Susy,' is of the kind that makes us mourn for the days that are gone. It is useless and unfair to find fault with Mr. Harte for falling short of his best work. The material out of which that was born is no longer at his command; and if, in that which now presents itself, there is opportunity for just as good work, it will be done by one who comes fresh to his labor, seeing the new order untrammelled by memories of the old and by the methods suited to depict it.

In comparing 'The Chosen Valley,' by Mrs. Foote, with her 'Led-Horse Claim,' it will be seen that she, too, suffers from a lack of adjustment to changing conditions. She is less assured and rather more prolix in her presentation of character, and the action of the drama is frequently impeded by insignificant discourse, which suggests a doubt about what was to be done next. Nevertheless, the contrast is well made between Norrison, the American engineer, who didn't care how the canal was built so long as he made it pay, and Dunsmuir, the Scotchman, whom "it hurt more to botch the job than to see the whole scheme fall through." If the description at moments lacks force, it is, on the whole, impressive, and a severe arraignment by illustration of that dishonesty in money-getting which is not confined to the West, nor yet exclusively American. Along with the great project for irrigating the Chosen Valley runs a natural and graceful romance, whereby conflicting interests are united and strife is silenced by love. The tragedy of Dunsmuir's death neither disappoints nor shocks; it is only the summary extinction of a man whose inability to yield to strength opposing itself to his convictions, or to compromise with coercion, made life itself a prolonged tragedy of one sort or another.

On Mr. Conan Doyle, as an historical novelist, there appears to have fallen at least a shred of Sir Walter's mantle, and a little incident in 'The Great Shadow' suggests that Mr. Doyle has a proper, reverential regard for the master in his chosen art. Jack Calder, the narrator, tells how one night, when the beacon-lights flashed out on the Scotch border, filling the countryside with terror lest the French had really crossed, there rode past his gate, among others, a heavy man on a roan horse. He stopped to "speer the way," and, taking off his hat, showed a great high brow running back into tufts of sandy hair. When he had spurred on, an Edinburgh student, staying at the West Inch farm, said: "That's a lawyer in Edinburgh and a braw hand at the stringin' of verses. Wattie Scott is his name." When the name of the Corsican who for a generation cast a shadow over Europe, was a myth in Scotland, and that of the Edinburgh lawyer common property, the Calder family plumed itself on that chance word with Wattie Scott. Jack Calder tells admirably the tale of his family's connection with the terrible "Bony," ending with the final dissipation of the Great Shadow at Waterloo, where Jack himself plays an humble part. His manner is at once direct and leisurely, keeping the main issue well in view, yet not hesitating to digress incidentally. It is safe to assume that no passages in a novel are more consistently skipped than the descriptions of a battle, or, if read, so little understood. Mr. Doyle has the power to make such descriptions clear and thrilling, and any one who may skip his battle scenes, on general principles, will make a great mistake.

The young person who embroils the lowly in the affairs of the great is a very clever example of the eternal feminine in an aspect neither high nor holy. For a country lass to play fast and loose with two honest compatriots of her own station, and cheat both by marrying a Colonel of the Emperor's Guard, is doing pretty well—far too well to appear true if her conduct were not plainly the expression of an instinct, independent of education and prior to experience. There is no doubt about Edie Calder. Whatever such a damsel may undertake in the way of fascinating men and disarming the suspicion of women, she is sure to accomplish. She is a rare person, and precious as a specimen of original sin justified by original charm.

'From Dusk to Dawn' is a triumphant example of the modern religious novel evolved from the primitive tract through the innocuous Sunday-school book. It is calculated to drive to despair those not deeply read in the subtleties of ancient superstition and mysticism, nor eager to engraft them on modern life and thought. Each person in the book represents a phase of so-called religious thought, and, through much struggle and anguish, most arrive at "vitalism," which appears to satisfy them and to establish itself as the future Rock of Ages. It is difficult for the unlearned to perceive why and how "vitalism" is an improvement on Christianity, and, unless it should secure more lucid exposition, we fear that the majority will ever remain ignorant.

The English reviewer of a French novel experiences at the outset one sensation of joy, derived from a perfect irresponsibility about the morality or the immorality of the book before him. He says to his public: "Now, this is the way they do in France. If you know the way and don't like it, or if you don't know the way and don't want to, shun the book." To read M. Paul Bourget's 'Cosmopolis' with any pleasure or profit, the situation must be accepted with a freedom from moral fastidiousness similar to that of the author and of the society which he is representing. This society is a little group comprising several nationalities, and abiding temporarily in Rome. It is the very best society, so far as birth and wealth and the cultivation of the world can make the best. The author's serious motive is to prove the permanence of race; his hypothesis being that, in moments of passion, when a man's nature is deeply touched, racial traits will show. This is an agreeable hypothesis for most of us, allowing such wide latitude for individual iniquity. It is a pity that the author has insisted on it so strongly, because we are constrained constantly to remember his theory and to observe how accurately he is developing it. But there are many moments when his great creative skill relegates theory to oblivion, and these are the moments when, having reflected, we find that the theory has been most cleverly elucidated. The Venetian Countess Steno, and the English wife of Boleslas Gorka, are drawn with extraordinary force and finish. Nothing is to be desired for naturalness and completeness; yet impute to the one the race of the other, and we should be confronted by a caricature and a monstrous impossibility. In the drawing of Countess Steno, one is most impressed by the author's power of observation, and in that of Mme. Gorka by his insight. George Eliot sounded the souls of many of her countrywomen in crises of poignant grief and bitter disillusion, but she never excelled Bourget's representation of Mme. Gorka brought face to face with the proofs of her husband's infidelity. Two such characters give any novel literary distinction; and a half a dozen more, done with almost equal understanding, truth, and particularity, confer fame.

In form the novel falls below the highest standard of French art. The action alternately flags and gallops, and there is a quantity of padding in the way of very dry unimaginative description of the Eternal City. There is room for discussion about whether such a book should ever be rendered into English. Sentiment and impression are much affected by language, and, by the change from French to English, there is no doubt that sentiment is coarsened and impression indescribably altered for the worse. There is here no plea for translation in order to diffuse useful knowledge or to exhibit a fine style. People unacquainted with French suffer no hardship by the deprivation of such knowledge, and are, as usual, compelled to do without the style. It would be libellous even to compare the style of the English 'Cosmopolis' with that of the French. Nothing more clumsy and inadequate can well be imagined. And, in all Scotland, one could hardly find such prodigal misuse of the words *shall* and *will*.

MR. MORSE STEPHENS'S ALBUQUERQUE.

Albuquerque. By H. Morse Stephens. [Rulers of India.] Oxford: Clarendon Press; New York: Macmillan. 1892. Pp. 222.

THIS is an interesting little volume on a subject which to many readers will be new. The British Empire in the East has so completely ousted its competitors and filled the scene as to make us forget that it once had rivals, Portuguese, French, and Dutch. Portugal was the first European Power, after Alexander, which founded an Eastern empire, and it was through Albuquerque that she founded it. Like Vasco da Gama, Albuquerque was a scion of a race of great navigators formed by Prince Henry of Portugal, himself named "the Navigator." A life more full of interest could hardly be conceived than that of Prince Henry in his castle on Cape Sines, instructing his mariners, sending them forth on his enterprises, and receiving their reports on their return. Nor can we ever cease to wonder at the miracles which the daring of these men and the other maritime adventurers of that age performed in their little barques and with their scanty appliances in the exploration of the unknown. Of the three ships with which Vasco da Gama made his eventful voyage round the Cape, not one, Mr. Morse Stephens tells us, was of more than a hundred and twenty tons burden, while the united crews numbered only a hundred and sixty men. The romance of that age can never return.

The primary object of the Portuguese in these enterprises was commercial. They sought to intercept for their own benefit the trade in the products of the East carried on through the hands of Mohammedans by Ormuz in the Persian Gulf or by the Red Sea. But, as in the case of the English East India Company, commerce in the East required the protection of fortified factories, and from this it was but a step to the acquisition of territory and foundation of an empire. Empire was the special policy and work of Albuquerque. The other commander, Almeda, opposed him in this, and advised the Portuguese Government to rest content with fortified factories. Sir Thomas Rowe, a leading statesman and diplomatist in his day, gave the same advice to the English. There are some who, not being fired with imperial ambition, and having misgivings as to the benefits of conquest either to the conqueror or to the conquered, are disposed to think, even at the present day, that Sir Thomas Rowe's advice may have deserved consideration. Albuquerque's designs were pretty far-reaching. Not only did he embrace in them Ormuz and Aden as well as Goa, but he hoped to make use of the Abyssinians for an attack on Egypt from the south, and for the overthrow of the Mohammedan dynasty reigning there. Failing this, he had a scheme for diverting the waters of the Nile and making them run through Abyssinia to the Red Sea, thus destroying the fertility of Egypt. He even requested his King to send him miners for the purpose. When so much that seemed like a dream had been actually achieved, ambitious fancy would naturally run riot.

Goa, of which Albuquerque possessed himself by extraordinary efforts of military skill and daring, was fixed on by him as the centre of his dominion. But he intended also to erect a fortress at Ormuz, the great emporium of Eastern trade, "the richest jewel in the world's ring." His feats of arms rivalled those of Cortez and Pizarro, or rather perhaps exceeded them, since the people against whom he fought were more civilized than the Mexicans and Peruvians and were provided with firearms and cannon. Unhappily, he also rivalled Cortez and Pizarro in cruelty. The Mohammedans against whom he had fought in Europe, who were the mortal enemies of Christendom, and whose trade it was his object to destroy, were the special victims of his ferocity. He butchered without mercy; he put to the sword the women and children as well as the men of a captured city; he perfidiously as well as savagely mutilated prisoners whose lives he had sworn to spare; he did not shrink even from assassination. This is the more shocking because he was not only not without culture, but a Latin scholar and distinguished for the elegance of his language. It is difficult to believe that any civilization which such a man could have imported would have been an improvement on that of the Mohammedan or the Hindu. On the other hand, the Oriental worships strength in a ruler, and is apt to identify it with justice and beneficence. We are told that the natives, after Albuquerque's death, when trampled on by other governors, used to go with offerings of flowers and oil for the lamp to his tomb, and invoke his protection. It was something, probably it was much, that, though unsparing of the blood of the natives, he did not despise them as an inferior race, but encouraged his followers to intermarry with them, hoping, apparently, to produce a mixed population, though it was not likely that his hope would be fulfilled.

It is easy to see why, among the four European empires in the East, that of England endured and that of Portugal did not. Portugal, as Mr. Morse Stephens says, was too small and weak to serve as a base; the drain upon her population and resources was too great. For a time she was annexed by Spain and her own enterprises were suspended. England, besides sailors innumerable, had a large landed gentry, the younger sons of which made excellent officers for her army, and a peasantry which made excellent soldiers. Moreover, the Portuguese, like the Spaniards, were religious persecutors, and they ultimately introduced at Goa the all-blighting Inquisition. The English were perfectly tolerant, and never meddled with the religion of the conquered. Such intolerance as they showed in their own country was, like

their State Church itself, more political than religious—the result, when displayed against Roman Catholics, of the mortal struggle with the Catholic Powers; when displayed against Nonconformists, of the rebellion of the time of Charles I. Transferred to India, they were perfect Gallios, and that character they have always maintained. For a long time they discouraged and even excluded the missionaries; nor do they even now regard them with unmixed favor. Practices which offended them as rulers, such as suttee, female infanticide, and thuggee, they have put down; and they are now cautiously proceeding to the abolition of child marriage. But they have scrupulously abstained from interference with the faith or worship of Hindu, Mohammedan, Buddhist, or Sikh. That they ever furnished a guard of honor to Juggernaut is a fable; their soldiers were sent only to keep order among the frenzied crowd. They are too prudent to give scandal on either side; but they have respected all the religions, and legally recognized them all, so far as property or secular rights were concerned. The panic rumor among the Sepoys that the Government intended to violate their caste by making them bite the greased cartridges, was totally baseless, though the terrible effect which it produced revealed the mine which a spark of imprudence might spring.

Holland, like Portugal, was too small to serve as the basis of an Eastern empire, and too exclusively commercial in her ends. Nor had either of them force to guard the communication between the imperial country and the distant dependency. In the case of France, despotic corruption and misgovernment were as fatal to empire in the East as they were to colonization on our continent. In the murder of Lally the whole tale was told.

The day of Albuquerque was not the day of voluminous and graphic biography. Great things were then done, but not so much was written. In Albuquerque's case there appears, indeed, to be more material for the biography than there is with regard to the lives of most of his contemporaries. But it is not of a kind to produce much fulness of picturesque detail or much richness of coloring. If the book before us is consequently a little dry, this is no fault of the writer, who is rather to be commended for not filling in the details or heightening the colors by the exercise of his own imagination. The names of "Ormuz" and "Ind" to some extent set the imagination of the reader at work to fill in the picture for himself.

The portrait of Albuquerque is apparently from the life. It is that of a strong and sanguine man. The map of India which suits the history of Ranjit Singh well enough—though not too well—does not suit that of Albuquerque, to illustrate whose field of enterprise we want a map taking in the Persian Gulf, the Red Sea, and his starting-point on the east coast of Africa—Zanzibar. Even a place so important to the story as Calicut is not laid down. It is fair to say that the map professes only to "exhibit the principal places"; but where is the use of a map in an historical work at all if it does not illustrate the history?

Formation of the Union. 1750-1829. By Albert Bushnell Hart, Ph.D., Assistant Professor of History in Harvard University, etc. With five maps. Longmans, Green & Co. 1892. [Epochs of American History.]

In this compact little volume we have an abstract and brief chronicle of American history from the middle of the eighteenth century to the close of the Administration of John Quincy Adams. The same method is here followed as that which determined the form and content of the earlier volume of the series on 'The Colonies.' The salient and essential facts in our annals are seized with rare perspicacity, and are presented with a brevity and a terseness which never degenerate into obscurity. The narrative is crowded with facts, condensed into the shortest possible form of statement, and yet it has a literary concinnity which makes it as readable for its internal harmony as it is varied and copious in the details which float on its surface. Most compends of this kind, even when they contain solid matter of history, are likely to be tedious in proportion to their comprehensiveness—much as condensed milk, though concocted from the purest products of the vaccine udder, is liable, even when pronounced most "nutritious," to be little appetizing to the fastidious palate. Literary pemmican, however deftly it may be sliced and dried, or however carefully it may be conserved, is apt to pall on the taste of the cursory reader, useful as it may be to the systematic and methodical explorer who wishes to take a sustained survey over a wide tract of time.

Prof. Hart escapes from his dilemma and relieves his readers from tedium by skilfully discerning the lines along which such a work as this should be projected. Such an epitome, he truly says, "must be a study of causes rather than of events." Events must be so selected and so collocated as to reveal the causal nexus without much formal disquisition. The causal nexus must indeed be implicit in the very form of the statement, without needing the relief of historical didactics, and without being left to inference after the allusive manner of Gibbon, who almost seems at times to presuppose a knowledge of his facts as the basis of his commentations. A terse and logical form of historical composition need never fail in point of literary interest. Cicero tells us in one of his letters that, for his part, he always found himself "more interested in the causes of events than in the events themselves." The statement surprises us at first, as coming from a master of forensic rhetoric, until, on examining the illustrations which he gives, we find it was rather a literary than a philosophical curiosity which gave its zest to such an inquiry as he contemplated.

It is not easy, says Macaulay, to make a simile go on all fours, while no human ingenuity, he thinks, "could produce such a centipede as a long allegory in which the correspondence between the outward sign and the thing signified should be exactly preserved." It would be too much to expect at all points a perfect "correspondence" between causes and events, between statements and facts, in a work so centipedal as that which, like Prof. Hart's, moves with flying feet over our *summa fastigia rerum* for more than three-quarters of a century. We believe it is hardly adequate to say, with the author, that the English common law, as accepted by the American colonies, "was modified everywhere by statutes according to the need of each colony." Dr. Wharton has shown, as illustrating the instinctive and organic way in which a community insensibly throws off laws which have ceased to be declaratory of existing conditions, that some of the most important changes in American common law, during the colonial period, were effected rather by tacit assumption than by statutory enactment. The English colonies in this country when they went into colonial seclusion, had on them, says Dr. Wharton, "the garb of feudalism and chivalry; when they emerged from this seclusion that gorgeous but superannuated attire was dropped, and they reappeared in the sober simplicity suited to a young civilization"—and all this as the result of evolutionary desuetude rather than of positive law.

It seems to us that Prof. Hart supports a good cause with a bad averment when, in arguing that the Constitution of the United States is not a mere "compact," he says that the framers of the instrument could not have considered it in that light, seeing that, on the 30th of May, 1787, they voted in the Federal Convention that "no treaty or treaties among the whole or part of the States, as individual sovereignties, would be sufficient." Such a resolution, we know, was reported on that day, but we cannot discover that it was either discussed or passed.

It is certainly correct to say that "no irregularity" was found in Alexander Hamilton's administration of the Treasury, as the result of the Congressional inquiry of 1793, but we presume that, according to the stricter methods of our modern accounting at the Treasury Department, it would now be held irregular to advance moneys on the President's salary beyond the amount due at a given date. From a statement made by Mr. Hamilton in 1795, after he had retired from the administration of the Treasury, we understand that he sometimes did this to accommodate the President. Such "advances" were held to be justified by the circumstances of the case, inasmuch as Washington had refused to accept any stated salary beyond the expenses of his household.

It is not correct to say that the "Resolutions of '98," as passed by the Legislature of Virginia, declared the Alien and Sedition Acts to be "unconstitutional, *void and no law*." The words "and not law, but utterly null, void and of no force or effect" were formally struck out by the friends of the resolutions before their passage, on a representation made by their Federalist opponents that, if adopted, they might encourage the people to disobey the obnoxious laws before they were repealed. Prof. Hart is entirely right when he holds that "the constitutional doctrine in these Resolutions was secondary" to their temporary political purpose in the eyes of the Republican leaders of 1798. The whole manifesto moved much more in the domain of party tactics than in the sphere of constitutional hermeneutics. It was only at a later day that it was transfigured into a fetish for men to conjure with, or erected into a rock of offence for men to stumble over.

The volume is remarkably free from misprints. "Loudon," on pages 38 and 39, should be Loudoun. Trescot's little book on 'American Diplomatic History' during the Administrations of Washington and John Adams is cited with a superfluous *t* at the end of the author's name. "Lee of Virginia" seems a rather cloudy compellation for the particular member of the Lee gens (Richard Bland) who figures on pages 147 and 149 as a member of the first House of Representatives assembled under the Constitution.

An Agnostic's Apology, and Other Essays. By Leslie Stephen. London: Smith & Elder; New York: Putnams.

Mr. Stephen collects in this volume articles which have before seen the light in various periodicals, though their recasting and expansion here have left on them few marks of the particular occasions which called them out; while affinity of theme and a certain order and

progress of thought make the whole go well within a single cover. No mind of his generation has penetrated more deeply than Mr. Stephen's into the questions relating to the limitations of knowledge, the nature of belief, the methods of science, the rationale of toleration and of the propagation of truth; and his discussion of them is an intellectual treat even to those who remain unconvinced by his reasoning. He is as far as possible from being one who "disbelieves heavily" (to adapt Renan's phrase), and many a deft touch—as, for example, where he speaks of allowing creeds "to expire by the method of explanation"—gives the added point of humor to his acuteness.

The long chapter on "Poisonous Opinions," which is really an essay on toleration, furnishes an excellent instance of his power to wind himself into a subject like a serpent, as Goldsmith said of Burke. Starting out with Mill's position in the essay on Liberty, he points out the need of correcting and expanding the doctrine of toleration therein laid down. He challenges Mill's concession that truth may be suppressed by persecution. First catch your truth. It is only a "happy thought" conception of scientific discovery which allows one to suppose that, if Newton, for example, could have been caught and "stamped out" when on the point of announcing his theory of gravitation, the truth would have died with its discoverer. Mill does not go far enough in claiming that truth has a "tendency" to triumph. It is bound to triumph unless the whole system of civilization of which it is an organic part is blotted out. Where can you draw the line? If gravitation is heretical, then you must not only condemn that doctrine, but all those studies in astronomy and navigation and physics which are so many finger-posts pointing to it. To stamp out a particular thought you must stamp out all thought. Mill's historical instance of the strangling of nascent Protestantism in Spain Mr. Stephen examines only to come to the conclusion that it was not Spanish persecution, but the entire constitution of the Spanish mind, which prevented the spread of Protestantism in the Peninsula. There is no good reason for supposing that the Protestant religion would have made any more headway in Spain in the sixteenth century, if not hindered by persecution, than it does in the nineteenth, when it is not hindered by persecution.

The entire chapter is marked by the highest qualities of thought and literary expression, and the volume as a whole is well worth the attention of those who would know what a singularly fair and frank and acute thinker has to say on the most important subjects of human thought.

BOOKS OF THE WEEK.

Alger, Horatio, jr. Facing the World; or, The Haps and Mishaps of Harry Vane. Philadelphia: Porter & Coates.
Ball, Sir R. S. An Atlas of Astronomy. Appletons.
Brack, F. de. Cavalry Outpost Duties. John Wiley & Sons. $2.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate,

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other Medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive Pamphlet free on application to

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

For sale by all druggists.

YALE MIXTURE

The choicest Smoking Tobacco experience can produce or that money can buy. MARBURG BROS.

SPECIAL BRAIN FOOD & NERVE TONIC.
CROSBY'S VITALIZED PHOSPHITES.

Composed of the Phosphoid Principle of the Ox Brain and Wheat Germ.

The very elements which produce vital force, increase brain power, sustain in vigor all the functions, prevent mental and nervous debility.

It is a *vital nutrient* phos*phite*, not a laboratory or acid phos*phate*. Formula on each label. Pamphlet with full information free on application to

56 West 25th Street, N. Y. *F. Crosby Co.*

For sale by leading druggists.

HOMŒOPATHY. If you know, or don't know, what you want, write to us—we can supply the goods or the information. Our DESCRIPTIVE BOOK CATALOGUE gives the fullest information of the books of Homœopathy; CONDENSED PRICE LIST gives prices of medicines, etc., and the HOMŒOPATHIC ENVOY (25 cents a year) gives reasons monthly why you should be a Homœopath.

BOERICKE & TAFEL,
Homœopathic Pharmacists and Publishers,
Established in 1835. 1011 Arch St., Philadelphia, Pa.

A STITCH IN TIME SAVES NINE.

The Hygiene of the Sick Room.

By Wm. B. Canfield, M.D., Lecturer in the University of Maryland, Baltimore. A book for all those engaged in caring for the sick. 12mo. Handsome cloth, $1.50.

Being a plain, practical exposition of infection and disinfection, bacteriology, ventilation, heating, diet, the care of patients with fever, diphtheria, cholera, small-pox, consumption, measles, malaria, pneumonia, etc.

"It emphasizes as nothing can, except contagion, the importance of cleanliness of all things that may come in contact with the sick. This is insisted upon, not only to bring about a more rapid recovery, but to prevent the spread of those diseases which are infectious."—*Public Opinion.*

Accidents and Emergencies.

By Charles W. Dulles, M.D., Physician to the Rush Hospital, Philadelphia, late Asst. Surgeon N. G. P. Fourth Edition Just Ready. Cloth, $1.00.

"This is the fourth edition, thoroughly revised and enlarged, of a manual on the treatment of surgical and medical emergencies in the absence of a physician. It is full of valuable matter that every one ought to know and an index renders the information quickly accessible."—*The Boston Herald, December 8th*, 1892.

The Hygiene of the Nursery.

By Louis Starr, M.D., Clinical Professor of Diseases of Children in the Hospital of the University of Pennsylvania; Physician to the Children's Hospital, Phila. Third edition, enlarged and improved, with 25 illustrations. 12mo. 293 pages. Cloth, $1.00.

Including the General Regimen and Feeding of Infants and Children and the Domestic Management of the Ordinary Emergencies of Early Life, Massage, etc.

These books may be ordered through any bookseller or news agent, or upon receipt of price we will send, postpaid, to any address. Remit by postal note or postage stamps. Catalogues of Books on Medicine, Hygiene, Nursing, Chemistry, etc., free.

P. BLAKISTON, SON & CO.,

1012 Walnut Street, Philadelphia, Pa.

Alexander Dumas' Romances.

NEW LIMITED EDITION OF 1,000 COPIES.

The most complete and only finely illustrated edition ever issued of the principal romances of this great French writer, newly translated by eminent scholars. This edition is embellished with over two hundred superb etchings and photogravures, mainly by French artists.

The manufacture of this edition is perfect.

All of the illustrations will be proof impressions on imperial Japanese paper.

This edition is complete in **40 octavo vols.**, *bound in English vellum cloth, paper titles, gilt tops, at* **$2.50 per vol.**

Prospectus and specimen pages, showing type, page, and paper, with sample illustration, sent on application.

ESTES & LAURIAT, Publishers, Boston

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. SEND FOR NEW EASTER CIRCULAR.

D. LOTHROP COMPANY,

Publishers, - - - BOSTON.

An Educational Directory.

I. THE NATION has a larger circulation than any literary-political journal published in this country. The 10,000 copies printed every week represent but a small part of the actual circulation, as THE NATION goes to all the principal libraries and reading-rooms, and into thousands of families. .

II. The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III. The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on eight insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

Charles Scribner's Sons'

NEW PUBLICATIONS.

Straight Sermons

To Young Men and Other Human Beings. By HENRY VAN DYKE, D.D. 12mo, $1.25.

The keynote of this new book is found in the title. It contains ten sermons of singular frankness and force, sweetness and light. They have been tested by practical success in Dr. Van Dyke's work among the colleges. They are addressed, not exclusively to young men, but to common humanity

A Second Book of Verse.

By EUGENE FIELD. 16mo, $1.25.

The characteristics which gave wide popularity to Mr. Field's "Little Book of Western Verse"—his individuality, his sentiment, his humor, his versatility, his melody—make this new volume equally delightful reading.

Abelard,

And the Origin and Early History of Universities. By GABRIEL COMPAYRE. Great Educators Series. $1.25 net.

This review of Abelard's character and work is from an entirely new point of view that is most instructive; and the beginnings and early history of the great European universities are graphically pictured.

Recollections of Middle Life.

By FRANCISQUE SARCEY. With Portrait. 12mo, $1.50.

A very lively personal and autobiographical interest attaches to these Recollections of the most eminent dramatic critic of his time. His description of his adventures and experiences as a lecturer on literary and dramatic topics is witty, vivacious, and entertaining, and his exposition of his principles of criticism is instructive.

The People's Money.

By W. L. TRENHOLM, ex-Comptroller of the Currency. 12mo, $1.50.

The aim of Mr. Trenholm's book is to enlighten those who, well informed otherwise, are more or less ignorant of financial matters; and, in view of the present discussion relating to gold and silver, it is of immediate interest and importance. Mr. Trenholm is a recognized authority on financial subjects.

The Earth's History.

An Introduction to Modern Geology. By R. D. ROBERTS, M.A. With Colored Maps and Illustrations. University Manuals. 12mo, $1.50 *net.*

This volume presents, in a popular form, a sketch of the methods and chief results down to the present time of geological inquiry, such as a reader interested in the subject for its own sake would desire to obtain.

Tropical America.

By ISAAC N. FORD, Foreign Editor of the New York *Tribune.* With 16 full page illustrations. Cr. 8vo, $2.00.

"It is a most vivid description of many of the countries to the south of us, and can but prove of great value in forming estimates of the political and, especially, the social relations which at present exist."—*Boston Traveller.*

Art for Art's Sake.

Seven University Lectures on the Technical Beauties of Painting. By JOHN C. VAN DYKE, L.H.D., Professor of the History of Art in Rutgers College. With 24 reproductions of Representative Paintings. 12mo, $1.50.

"Surely every one who desires to attain the qualification for studying pictures as they should be studied, and who has not had the benefit of actual artistic training, will profit greatly by a careful perusal of this admirable volume."—*Boston Beacon.*

*** *Sold by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

HOUGHTON, MIFFLIN & CO.'S

NEW BOOKS.

Socialism and the American Spirit.

By NICHOLAS PAINE GILMAN. A fresh and interesting discussion by the author of 'Profit-Sharing between Employer and Employee,' of phases of socialism not often treated; it may be called "The American Answer to Socialism." Crown 8vo, $1.50.

The Gospel of Paul.

A wholly new view of Paul's doctrine of the atonement, based upon a direct and literal interpretation of his writings; a work of profound scholarship, remarkable candor, and high literary charm, by CHARLES CARROLL EVERETT, Dean of the Harvard Divinity School, author of 'Poetry, Comedy, and Duty.' Crown 8vo, $1.50.

Tools and the Man.

A book of great importance and interest, discussing Property and Industry under the Christian law, including Labor, Competition, Coöperation and Socialism, by Rev. Dr. WASHINGTON GLADDEN, author of 'Applied Christianity,' 'The Lord's Prayer,' and 'Who Wrote the Bible?' $1.25.

The Story of Malta.

A graphic account of this famous island by MATURIN M. BALLOU, author of 'Equatorial America,' 'Due West,' etc., who made a long visit to the island, studied carefully on the spot the many interesting features of its history, and now tells the engaging story. Crown 8vo, $1.50.

A Satchel Guide

For the Vacation Tourist in Europe. Edition for 1893, revised. With Maps, Plans, Money Tables, etc. "Complete, concise, accurate." $1.50.

A Foregone Conclusion.

A Novel by W. D. HOWELLS. Riverside Paper Series. 50 cents. "The kind of power it displays is rare, not alone in American, but in any literature."—*Christian Union.*

Owns free and clear a tract of nearly 5,000 acres, on high ground, with numerous lakes, only 88 miles from New York, in the healthiest section of the Empire State, with fishing and hunting privileges. ONE HUNDRED DOLLARS will pay for an original, FULL-PAID, NON-ASSESSABLE MEMBERSHIP SHARE, with a Half-acre building site and an interest in the ENTIRE TRACT as well.

The Capital Stock is $100,000, consisting of 1,000 shares of $100 each, of which 500 shares have been issued in payment for the property free and clear from all encumbrances, and to cover all expenses of organization. The remaining 500 shares will remain in the treasury to be used for the development of the property.

It is proposed to erect two or more clubhouses, which will cost about $10,000 each, the first one to be in readiness by the middle of summer, and to be located on Masten Lake Hill, which has an elevation of about 1,750 feet, with a view of the entire surrounding country, including Liberty Mountain and the Walnut Hill House, the Mamakating Valley, and the Shawangunk Mountains. Masten Lake, a sheet of pure spring water about 4,000 feet in length, lies almost entirely within the tract owned by the Club.

Lots will be assigned in the order in which subscriptions are paid, but preference will be given to members *who will build immediately.*

The plan of the enterprise is similar to Twilight Park in the Catskills and other Cottage Communities, where meals and social entertainments are furnished in a central Inn or Clubhouse, conducted on the co-operative basis, at moderate rates of table board. One can thus enjoy all the freedom and privacy of family life without the cares of housekeeping, and yet secure the advantages of a community where roads, drainage, water-supply and other sanitary essentials are provided. Practical trial has shown this to be THE MOST RATIONAL, INEXPENSIVE, AND WHOLESOME WAY OF SUMMERING, especially for children.

Land at Twilight Park has risen from $10 to $2,000 an acre in five years, yet Sullivan County has even greater attractions.

One Hundred and Forty-three Shares have been taken in Nine weeks.

NO MORTGAGE. **NO MALARIA.** **NO PERSONAL LIABILITY.**

* * * * * * *

Send for Circular.

CHAS. F. WINGATE,
Consulting Sanitary Engineer,
119 Pearl St. (Hanover Square).

Sullivan County Club,

No. 203 Broadway,
New York City.

One Thousand Dollars or less will pay for a comfortable cottage, where you can "loaf and invite your soul." No dwelling of less value than $500 will be permitted. Stockholders may sell their shares with or without the land privileges, or can sell the land privileges separately. Shares are assignable. The Club will sell plots to persons other than shareholders, but such persons will not have any interest in the property as a whole. There will be rigid restrictions against nuisances of all kinds.

MACMILLAN & CO.'S NEW BOOKS.

Ready on Saturday, March 25, Vol. I. of the New Revised and Enlarged Edition of

THE AMERICAN COMMONWEALTH,

By the Right Hon. JAMES BRYCE, D.C.L., author of "The Holy Empire"; M.P. for Aberdeen.

In Two Volumes, Large 12mo. Third Edition, Revised Throughout, and for the greater part Rewritten.

Vol. I. Ready March 25. $1.75. Vol. II., In the Press.

"The book should be known by every American who wishes to understand his own country. . . . It is by far the most able, sincere, candid, and impartial study of the condition of the United States that has ever appeared since De Tocqueville's memorable work."—*Boston Beacon.*

"Written with full knowledge by a distinguished Englishman to dispel vulgar prejudices and to help kindred people to understand each other better, Prof. Bryce's work is in a sense an embassy of peace, a message of good will from one nation to another."—*The Times, London.*

"This work will be invaluable . . . to the American citizen who wishes something more than a superficial knowledge of the political system under which he lives and of the differences between it and those of other countries. . . . The fact is that no writer has ever attempted to present so comprehensive an account of our political system, founded upon such length of observation, enriched with so great a mass of detail, and so thoroughly practical in its character. . . . We have here a storehouse of political information regarding America such as no other writer, American or other, has ever provided in one work. . . . It will remain a standard even for the American reader."—*New York Tribune.*

Now Ready. A New Book by F. Marion Crawford.

The Novel. What It Is.

By F. MARION CRAWFORD, author of 'Children of the King,' 'Saracinesca,' etc., etc. Uniform with the pocket edition of William Winter's Works. With photogravure portrait. 18mo, cloth, 75 cents. *Next Week.*

National Life and Character. A Forecast.

By CHARLES H. PEARSON. 8vo, $4.00.

Contents: The Unchangeable Limits of the Higher Races—The Stationary Order in Society—Some Dangers of Political Development—Some Advantages of an Enhanced National Feeling—The Decline of the Family—The Decay of Character.

Russia Under Alexander III.,

And in the Preceding Period. Translated from the German of H. VON SAMSON HIMMELSTIERNA by J. MORRISON, M.A. Edited, with Explanatory Notes and an Introduction, by FELIX VOLKHOVSKY. With Portrait. 8vo, $3.00.

"There is a great mass of interesting information in this volume which cannot be found elsewhere. Indeed, we do not hesitate to say that a clearer and more intelligible idea of what is going on in Russia can be obtained from these pages than from many other books of larger scope and greater pretension."—*New York Tribune.*

"This is a most engrossing book."—*The National Observer.*

Now Ready. 30th Annual Publication. 12mo, $3.00.

The Statesman's Year Book, 1893.

Statistical and Historical Annual of the States of the Civilized World for the Year 1893. Edited by J. SCOTT KELTIE, Librarian to the Royal Geographical Society. Thirtieth Annual Publication. Revised after Official Returns. 12mo, cloth, $3.00.

"No well-regulated library, whether it be of the scholar, statesman, editor, or man of letters, can afford to be a day without 'The Statesman's Year Book.'"—*Mail and Express.*

Now Ready, Vol. I. 12mo, Cloth, $1.10.

English Prose.

Selected by various writers, with short Introductions. Edited with a general Introduction by HENRY CRAIK, C.B., LL.D. In 5 volumes. Volume 1, Student's Edition, $1.10. Library Edition, $1.50.

Just Ready. A New Poem entitled

The Eloping Angels.

By WILLIAM WATSON, author of "Lachrymæ Musarum," "Poems," etc. 16mo, cloth, 75 cents.

A NEW BOOK BY MR. WALTER PATER.

Plato and Platonism.

A Series of Lectures by WALTER PATER. Fellow of Brasenose College. Globe 8vo, cloth, $1.75.
Also a large-paper edition, on hand-made paper, limited to 100 copies, $3.00.

"To the student who is prepared to follow its pliant movement as it itself follows the evolution of the thoughts which it envelops patiently, closely, affectionately, this book, which is richer in scholarship than 'Marius' or the 'Studies in the Renaissance,' and as fascinating as either of them, will prove a delight and a generating power in the world of ideas."—*N. Y. Tribune.*

NEW NOVELS.

Now Ready. By Mr. Henry James.

The Real Thing, and Other Tales.

By HENRY JAMES. 12mo, cloth, $1.00.

By the Same Author. 12mo, cloth, $1.00 each.

The Lesson of the Master.
A London Life.
The Reverberator.
The Aspern Papers.

The Marplot.

By SIDNEY R. LYSAGHT. 12mo, cloth, $1.00.
Just Published.

The Story of John Trevennick.

By WALTER C. RHOADES. 12mo, cloth, $1.00.

"The charaters are varied and clearly drawn. The narrative is direct and free from trivialities, and the leading motive is worked out with genuine artistic skill."—*Boston Beacon.*

A Mere Cypher.

By MARY ANGELA DICKENS. 12mo, cloth, $1.00.

"The story is one of power."—*Philadelphia Bulletin.*

F. Marion Crawford's New Novel.

Children of the King.

A TALE OF SOUTHERN ITALY. Second Edition. 12mo, cloth, $1.00.

New and Cheaper Edition of the Eversley Edition of CHARLES KINGSLEY'S NOVELS.
To be published monthly.

Westward Ho!

2 vols. 16mo, cloth, gilt, $2.50. *Just Ready.*

The Dryburgh Edition of the

Waverley Novels.

To be completed in 25 volumes. Illustrated with 250 wood engravings, specially drawn by eminent artists.

Subscribers' names are now being received by all booksellers and by the publishers. Each volume will be promptly delivered monthly as published.

Just published. Vol. 6. $1.25.
OLD MORTALITY.

Ready.
WAVERLEY. GUY MANNERING.
THE ANTIQUARY. ROB ROY.
MONTROSE and THE BLACK DWARF.

*** Large-Paper Limited Edition, on Hand-Made Paper. For prices apply to the booksellers.

Macmillan & Co.'s List of Books by American authors will be sent free, by mail, on application.

MACMILLAN & CO., Publishers, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 23, 1893.

The Week.

THE more important of the nominations for office sent to the Senate by President Cleveland on Monday leave no doubt of his independence in making them. They came as a complete surprise to the politicians and omniscient newspaper correspondents. The choice of ex-Senator Eustis as Minister to France is particularly eloquent of the President's independence, as it is also of his magnanimity. The Louisianian had no political backing, and his outspoken attack on Mr. Cleveland eight years ago would have made him distinctly ineligible to any office in the gift of the President, if the ordinary rules of the game had been followed. Inasmuch as he was bitterly opposed to Mr. Cleveland on the ground of the latter's independence and efforts to introduce decency into politics, and inasmuch as he more than once in his public life arrayed himself with the lewd fellows of the baser sort in his party, we think Mr. Cleveland's magnanimity has taken a wrong direction in his case. We suppose there is no doubt of his personal qualifications for the French mission, but he has identified himself with a type of politics which his party cannot too soon get rid of instead of honoring. Ex-Chancellor Runyon of New Jersey is of a wholly different stamp, and his choice as Minister to Germany is the restoration to public life of a man whom the Machine politicians of his State long since ceased to have any use for. Mr. Risley of New York, named for the Danish mission, is certified to by Senator Murphy as a man of whom he had never heard. This is an excellent recommendation, as far as it goes, on the principle of the man in the pit who, when a sad actor uttered the words, "Alas, poor Yorick, I knew him!" promptly called out, "That speaks ill for Yorick's acquaintances."

The *Tribune*, which is always a pretty good civil-service-reform paper when the other fellows are in office, said on Thursday, in discussing our consular service:

> "What is needed in order to raise the standard of the American consular service is a system of promotions. If President Cleveland, instead of appointing Gen. Collins to the lucrative office of Consul-General at London, had transferred to that post a veteran who had served the Government faithfully and honorably abroad under successive administrations, he would have made a new departure of real significance."

The only weakness in the proposition which the *Tribune* offers, to fill our consular offices by promoting men who have done good service for long years under other administrations, is that we have almost no such men in the consular service. An examination of the list of United States consuls in office at the close of President Cleveland's Administration (taking the names in the 'Congressional Directory' for December, 1888), shows that of 263 consuls-general and consuls only 66 remained in office—including one consul-general—when the 'Congressional Directory' for February, 1893, at the close of President Harrison's Administration, was printed. On its face this statement would seem to indicate that civil-service-reform ideas did make some impression on the State Department under Harrison and Blaine. But a little further investigation discloses the fact that of the 66 consuls continued in office 43 were men whom the Cleveland Administration found in their places when it came into power. Practically, therefore, the whole consular service under the last Administration was given over to the spoils system. We do not mean to infer from this that President Cleveland and Secretary Gresham are not under any obligation to improve on the methods of their predecessors.

Although a stringency in the New York money market is a familiar enough incident of the month of March, it is very rarely that the stringency is so protracted as it has been in the present month. Ordinarily, the large amounts of currency sent about the 1st of March to the interior centres of trade are returned by the 10th of the month, when merchants have settled their bills. This year the money has not even yet flowed back, and the uncertainty of our banks regarding their resources has led not only to exorbitant prices for call loans in Wall Street, but to a sharp restriction in the accommodation usually offered to local merchants. The situation is thus in many respects peculiar, and its cause is equally singular. We have not yet done with the history of the great grain crop of 1891. Enormous as were the exports of that and the succeeding year to famine-stricken Europe, there was yet left unconsumed in the grain market an exceptionally large supply. The visible supply of the three chief cereals was reported on March 13 as 100,000,000 bushels. This was nearly double the stock of a year ago, and not quite four times as large as that of 1891. An immense amount of this grain is held for sale by the Chicago speculators, most of whom, quite contrary to the assumptions of the anti-optionists, are refusing to sell at ruling prices. To "carry" such stocks, money in enormous amounts is needed at the centre of speculation, and the Chicago banks, as might be expected, have not only withdrawn from New York institutions their whole deposit account, but have been borrowing New York money on the best collateral their security-boxes can supply.

The orders which Judges Taft and Ricks of the United States Circuit Court for the Northern District of Ohio have issued in regard to the right of a labor union to order strikes and boycotts, and the right of employees of railways to quit work without due notice to their employers, are of great interest and importance. They bring these very weighty questions before the highest court of the country for final decision. Judge Ricks's orders of Saturday, following on the lines of a previous order by Judge Taft, were issued in an injunction case which was brought by the Toledo, Ann Arbor and North Michigan Railway Company against Chief Arthur of the Brotherhood of Locomotive Engineers. The Railway Company asked for an injunction restraining Mr. Arthur from issuing an order to the members of his organization directing them to refuse to handle the cars of the company because of a difference of opinion about wages. In granting the injunction, Judge Ricks issued an order to Chief Arthur directing him to give notice in the usual way that the by-law or regulation of his Brotherhood which required members of the Brotherhood to refuse to handle the cars of the company in question was not in force or effect against said company. A similar order was issued against Joseph W. Watson, who is Chairman of the Grievance Committee of the Railway Employees. Orders were also issued to Arthur and Watson to file with the Court a copy of the by-law, rule, or regulation of the Brotherhood under which directions to refuse to handle cars were usually issued.

In explaining these orders to some engineers and firemen who had quit work in aid of the boycott on the railway company and had been arrested for so doing, Judge Ricks read a statement which the Labor leaders throughout the country have taken to mean, if sustained, that henceforth railway employees will be compelled to continue to work against their will—that the decisions involve the right of a man to quit work when he chooses. This is a perversion both of the Judge's words and of the facts in the case. All that the Judge says on this point has been said many times before, so far as the abstract merits of the case are concerned. That no body of employees who perform a service involving public comfort and convenience ought to be allowed to quit work in such a manner as to cause great public inconvenience is a point that has frequently been raised. Whether they can do it, and not violate existing common-law rights, is a question about which opinions differ, some authorities believing that they cannot, and others that additional legislation is necessary to restrain them from such action. As for their moral

right to do so, there is nothing in Judge Ricks's opinion which has not been stated in many quarters, and in none with more clearness than in the reports of the New York State Board of Mediation and Arbitration. Beginning with their report of 1887, this Board, which is composed of men who were appointed as friends of Labor, has repeatedly called attention to the need of legislation which should make it impossible for railway employees to quit work without giving notice according to contract. In its special report on the New York Central strike, the Board laid down some recommendations which are almost identical with the statement made by Judge Ricks as to the obligations which ought to be imposed upon railway employees. Judge Ricks holds that there exists legal authority to enforce such obligations, and his decisions will serve the useful purpose of having the question decided once for all. It is noticeable that Chief Arthur declares that he will comply at once with the Judge's orders, and will suspend the law of the Brotherhood under which boycotts are ordered.

One of the declarations which President Harrison made in his message transmitting the Hawaiian treaty, was that the possession of the Sandwich Islands by any other great Power "would not consist with our safety." This view of the importance of these islands to the safety of the United States as a nation is adopted in almost every argument made in favor of any form of annexation, and yet, in the light of facts, can anything be more ridiculous? These islands are distant from California about 2,000 miles. Compare their situation with that of the islands off the Atlantic Coast. New Providence, which may be called the centre of the Bahamas, situated only 160 miles from the Florida coast, is the possession of as great a Power as Great Britain. Bermuda, lying only 580 miles from Cape Hatteras, is a military station of the same great Power. Cuba, lying only 130 miles from Florida, is a possession of Spain; Martinique and Guadeloupe belong to France, and scores of other islands in the West Indies might be mentioned, lying only a few hundred miles from our coast, over which foreign Powers have exclusive control. If the government of an island lying between this country and Europe or Asia must be in the hands of the United States to secure our national "safety," certainly such control is more necessary over the neighboring islands in the Atlantic than it is over a far-distant island in the Pacific. We managed to maintain an efficient blockade of our Southern ports during the rebellion notwithstanding the nearness of sympathetic Englishmen at Bermuda and the Bahamas. We can imagine no conflict in which the United States might be engaged wherein the possession of the Sandwich Islands would add materially to our strength; nor can we conceive any condition of our navy which would render it easier for us to maintain our authority there against a foreign antagonist than it would be to seize the Islands from any foreign Power which might be in possession of them. Just at present no foreign Power wants them.

The latest budget of news from Hawaii contains some extraordinary utterances by the President of the Provisional Government. He was confident that annexation would be accomplished, as he thought the "United States cannot afford to let us go." But what sort of a people with what sort of capacity for self-government we cannot afford to let go, he naïvely revealed in saying what he thought would happen should the treaty be rejected:

"Of course, if the unexpected should happen, our only alternative would be a republic. We should find this form of government most difficult to carry on, owing to the mixture of races here and the preponderance of an uneducated vote. *It would necessarily be a government by force.* I have no doubt that resolute men could manage it, but we could hardly hope for public confidence and security under such conditions."

Yet President Dole thinks that Hawaii would make a beautiful American State, since, when asked what form of government he would advocate in case of annexation, he cheerfully replied, "Statehood, undoubtedly."

It was to have been expected that a more satisfactory solution of the Hawaiian troubles would be arrived at under a Democratic President than under a Republican Administration. Those troubles were the direct result of Republican legislation. The free-sugar clause of the McKinley Bill was what made the Americans in Hawaii discover that the monarchy was effete. There can be no doubt that it gave the planters just ground of complaint. Their reciprocity treaty was made on the tacit understanding that free entry of their sugar in this country would remain a special privilege granted to them—a privilege worth bargaining for and obtaining by the important concessions which they actually gave in exchange. All this was pointed out at the time the McKinley tariff was before Congress, and the Republicans were reminded by Mr. Carlisle and others that they were practically riding rough-shod over the treaty rights of the Hawaiians. But what difference did that make? As Commissioner Thurston remarks in his article in the *North American Review*:

"The fact that Hawaii admitted free entry of United States goods, in consideration of a protected market for her sugars, and that the opening of that market to the world practically cancelled the benefit of the treaty to Hawaii, cut no figure in the great game of politics. The fact that in the faith of the continuance of that protection upwards of $25,000,000 of American capital had been invested in the protected industry, and that the proposed law cut off all protection at one stroke, hindered the passage of the law no more than a fly on the rim of a wheel impedes the progress of the coach."

Now it is precisely the correcting of the evils wrought by the McKinley Bill in this way and others to which the Democratic party stands pledged, and for which it was put in power. It had no part in that "great game of politics" which played the mischief with the Hawaiians in the first place, and might naturally be looked to for the undoing of that mischief. McKinley was the chief oppressor of the islanders, and next to him is the Sugar Trust. We have before cited the evidence showing how it has taken them by the throat. But this enemy of theirs the Democratic party is also pledged to fight. Mr. Cleveland threw down the gage of battle to this and all other Trusts in his inaugural.

There is something connected with the Harris case more important than the fate of the prisoner, and that is the maintenance of popular respect for and appreciation of the orderly administration of justice. If this be true—and who will deny it?—the scenes enacted in court on Monday must have distressed if not alarmed everybody who believes the orderly administration of justice to be at the very foundation of civil society. Recorder Smyth, therefore, we are sure, will in his calmer moments regret the permission he gave Harris to deliver a speech an hour and a half long, abusing the witnesses and the public prosecutor, and analyzing the evidence against him. We are not too bold when we say that it was a scene without precedent in the history of criminal justice, if we except that great national scandal, the Guiteau trial. We speak as laymen, and under correction, when we ask the Recorder whether the question, "what he has to say why sentence of death should not be passed upon him," is meant, or has ever been meant, in law or propriety, to enable the prisoner to review the entire case and dispute argumentatively the verdict of the jury, the rulings of the court, and the conduct of counsel—or, in other words, to make allegations which could by no possibility operate in arrest of judgment? Is it not true that the question is meant, and has always been meant historically, to enable the prisoner to introduce *new* matter, if he has any, in bar of his sentence or in extenuation of his crime—that is, something which has not been judicially passed on, or which in the forum of morals may constitute a claim to pity? It is true that a prisoner answering this question is always, in common humanity, allowed a certain latitude; but latitude running into irrelevancy an hour and a half long is calculated to bring justice into contempt, and this, we say with great respect, was what happened on Monday, for it converted the court-room into a mass-meeting, of which the crowd outside, with its cheers for the prisoner and groans for the Recorder, was simply an "overflow."

The latest "un-American" practice to suffer exposure is the rule of the Bar As-

sociation that one adverse vote out of five shall be sufficient to exclude a candidate for membership. The patriotic denouncer of the rule is the man who has just fallen a victim to it, the Tammany Senator, Mr. Roesch. He hails his blackballing as really a great personal victory, inasmuch as his exclusion from the Association was "only possible because of an un-American by-law which makes one vote in every five sufficient to blackball a candidate." But the Senator ought to point out what would be the genuine American way of intimating to a Tammany gentleman that other gentlemen did not care to associate with him. Would a clubbing or a ducking be necessary to convince him that his company was not desired? Senator Roesch ought to reflect that if, as he thinks should be the case, the rule of the mere majority were applied to matters of personal intercourse, the usages and safeguards of society would be broken down even in our fair land. According to his doctrine, he would have the right, as a good American, to push his way into a parlor despite the objections of the lady of the house and her daughter, provided he had the consent of the majority vote of the butler, the cook, and the family ashman.

At about the same time that Mr. Gladstone was puncturing the bimetallist windbag in the English Parliament, the German Chancellor was performing the same kindly office in the Reichstag. In Germany, as in England, the bimetallist strength is largely found among the farmers, and it was Count Mirbach and the other leaders of the agrarian Conservatives who asked Caprivi what he was going to do for silver. They had no more definite ideas themselves of what should be done, or even of what they wanted done, than had Mr. Goschen. But they were sure that something ought to be done, and asserted that it was the Ministry's business to find out what. Pressed for a definite proposition as a basis for discussion, they at last agreed to this one: "If Germany were to lead the way towards bimetallism, the other nations would soon follow." "Then you mean," said the Government, "that we ought to go over to bimetallism without waiting to see what other countries will do?" "Not at all," replied the German silver-men; "that is not our policy at all; that, we admit, would be very foolish." The retort was obvious that if, by "leading the way," they meant "following others," what they needed first of all was a course in logic, and with that the debate closed.

The furious crowds who fill the court-room in Paris during the Panama Canal trial and rage against the judge are probably in the main the metropolitan "petites gens," who have to listen to the way in which their savings, which were to build the canal, were divided among the politicians. The small farmers and little people of the provincial towns have still to be heard from, and which way they will turn nobody pretends to know. When, in 1871, they were disgusted with the ravings and contortions of the Radicals under Gambetta, they put the Royalists in power by great majorities, but since then a new generation of voters has arisen which has seen the Orleanists in collusion with Boulanger. Still, this will hardly weigh against the fact that the Conservatives, or "Right," in the Chambers are the only politicians who have not been touched by the Panama exposures; and the importance of this is indicated by the fact that one of the charges levelled at the Minister of Justice is of an attempt to extort from the wife of one of the culprits testimony implicating some of the Monarchical wing in the Chambers. So that we may witness after the election a violent swing of the political pendulum in the direction, not of monarchy, but of a republic managed by men who would convert it into a monarchy if they dared. The French people are really less prepared to tolerate political corruption than any other in Europe—less, too, than we are here, for the simple reason that they are less familiar with speculation, and rapid accumulation, and the whole apparatus of commissions and "divvies" which speculation brings with it. Very few Frenchmen go into any kind of business with the expectation of making a rapid fortune. Large ventures play comparatively little part in French trade and industry. Most Frenchmen rely on small savings and extreme frugality for independence and comfort; so that the Panama affair is an amazing novelty to the bulk of the population. That so much money could be got out of a corporation by "striking" politicians astonishes the provinces at least. That the crisis is not more serious is doubtless somewhat due to the complicity in the corruption of the great bulk of the rascally newspapers which usually flame and rage in revolutionary times. Their lying puffs and "reading notices" have sealed their founts of indignation.

The death of Jules Ferry is a very serious loss to the French Republicans, as he was almost the only man of real vigor of the old opportunist set who remained unscathed by recent events. His recent election to the Senate, after six years of retirement and of unpopularity such as rarely overtakes a public man, shows to what straits the Republic has been reduced by the Panama scandal. He was hated by the Radicals because of his known readiness to meet disorder with grape and canister, and by the religious world for the truculence with which he pursued the Jesuits and other religious orders, and by the provinces for annexing Tonquin and sending the army to perish in distant rice swamps and jungles. The day he left office he was pursued by a mob to his home, and for a good while afterwards he hardly dared to show himself in the streets. There is no doubt that the annexation of Tonquin was a terrible mistake, but it was due to the necessity which nearly all Republicans felt, after the overthrow of the MacMahon régime, of doing something to connect the Republic with national glory and expansion, and especially with the glory and expansion of the old colonizing days of the monarchy. But he did not take into account the great change in the national manners which has occurred since the Revolution, and made Frenchmen the most stay-at-home and least enterprising of modern nations. When France sent out her swarms of adventurers to America and India, the population was wretchedly poor, and nearly as prolific as the Canadians. Since then it has become stationary or declining, has got possession of its own soil, and has contracted a passion for small savings and for small certainty rather than for large speculative profits, which has made competition with Germany, Great Britain, and even Italy in fields of foreign venture impossible. It was Jules Ferry's ill luck to be the first to find this out by actual experiment, and it is, perhaps, not too much to say that it killed him. The strain of the last ten years must have been frightful, and probably left either brain or heart unable to bear the excitement of his sudden restoration to power and fame by his election to the Presidency of the Senate. But it will be a good while before France produces his like, for his type of statesman was one in which modern democracies show no tendency to abound—the austere, independent, imperious type, which was represented in England in the last century by the Old Whigs, who were willing to do everything *for* the people, but not *by* or *through* the people.

The informal vote in the city of Brussels on the question of putting universal suffrage in the revised constitution—a vote which resulted in a large majority in favor of the project—did not seem to carry much weight with the Prime Minister. The very day after the vote was taken, he made a speech on revision before the Chamber, in which he said that universal suffrage was only "a dream," so far as Belgium was concerned, and that the vote of Brussels in favor of it, "however important it might appear, had not changed his settled convictions on that subject." He made a rather neat point against one of the apostles of the universal-suffrage gospel by citing a speech of the latter's, made no longer ago than 1884, in which it was maintained that, "to make head against the influence and pretensions of the Clerical party, there is but one force—democracy; but it must be an intelligent democracy. Before the suffrage, education is essential." The question is by no means settled, and Monday's despatches reported the intention of the Brussels workingmen to go on a general strike if universal suffrage is not granted.

"GOOD CHARACTER AND COMPETENCY."

SECRETARY CARLISLE'S announcement, in an answer to an office-seeker, that, in the light-house service, it is and has been the policy of his Department "to encourage and insure a high standard among the light-keepers by retaining them in the service during competency and good behavior, and by promoting and transferring them to better stations as a reward for good service," and that "no light-keeper will be disturbed by him in his official position merely because of his political opinions," is a very valuable and suggestive utterance. If the State Department could say the same thing with regard to the consular service, we venture to assert that it would be worth more to the safety, honor, and welfare of the United States than six ironclads of the latest pattern and containing all the modern improvements. In fact, we doubt if any number of ironclads would remove the discredit and distrust brought on the American name in foreign countries by the character of our present consular service. We say nothing about the damage done to our commercial relations by it, because, so long as we pass McKinley bills, and make hatred by foreigners a crown of glory to our statesmen, there is no use in blaming our consuls for not pushing our trade abroad. The reason Secretary Carlisle gives for permanence in the light-house service is applicable almost literally to the consular service. He says:

> "The great number of light-keepers employed, and their isolated situations, prevent anything like constant overseeing of their work; and a faithful performance of their responsible duties, involving the safety of a vast amount of property and the number of lives entrusted to their care, depends upon the good character and the competency of the keepers themselves."

It is true that no lives are lost by consular incompetency, and perhaps it might be said no property; but the good name and fame of the United States people and Government, political, commercial, and social, is largely dependent on the character and competency of the consuls, and, like the light-house-keepers, their work is done in isolated situations, remote from the observation of the American public. But in truth the reasons for keeping good light-keepers and good consuls in office are applicable to all branches of the public service. Business is business, whether it be public or private business. Any distinction between subordinate offices on the score of politics is as absurd in the public as it would be in private service. If a railroad corporation were to treat conductors' places as "spoils" and brakemen's as permanent, it would excite general merriment.

The notion, too, that there is something "practical" in using the offices to reward party service received a great shock in 1884 and in 1888, and ought to have received its deathblow last year. Politicians might in 1880 have wagged their wise heads over the folly of the "theorists" in supposing that party organization could be maintained without spoils, but since Mr. Cleveland won the Presidency in 1884 without having a single office-holder working for him, and Mr. Blaine lost it when every office-holder was working for him, and since a similar thing occurred in 1888 and in 1892, it is time that we heard no more of this folly. Office-holding competency, secured by the ordinary business methods, is the winning card for every party, as now plainly appears.

The importance attached to offices as a means of rewarding "workers" by politicians relates, in truth, rather to the nomination than the election, for it is the former rather than the latter which mainly occupies their minds. To "get the delegates," as Hill said, is the chief object of their ambition, and, in their estimation, the thing which best proves their power or talent. About winning the election they concern themselves only in a minor degree, as something which no one State can wholly control. It is in securing the delegates that office or the prospect of office is most useful. It is usually in order to get delegates that offices are promised, and as a reward for getting them that offices are generally bestowed, for the contributions of the office-seeking class to the victories at the polls are comparatively small. As Mr. Cleveland has won the election without "getting the delegates," having left that sweet triumph to glorious "Dave" Hill, he can now go on and break up nearly all the great traditions of the spoils system without fear of consequences. The announcement that tenure in any branch of the non-classified service will depend on "good character and competency," breaks up one of them, and the worst.

But there remains another which he can now attack, and, if the news from Washington be correct, is attacking—that, namely, which treats office-seeking as *public* business. This notion, which President Harrison encouraged by a sort of manifesto after his inauguration, has probably done more to produce the quadrennial rush at Washington than any other one thing. Every office-seeker goes to Washington now with the idea that he has a right to be heard about his application, or, in other words, that the President, under his oath of office, owes him, the office-seeker, a portion of his time and attention. This is a pure hallucination, and if Mr. Cleveland can dissipate it, he will not only clear the administrative machine of a great encumbrance, but save thousands of poor men from expense they cannot afford, as well as from torturing anxiety. An application for an office, and especially for an office which is not vacant, is not in any sense public business. It is the private business of the applicant, and he has no more right to claim the President's attention for it in a personal interview than for a patent potato-peeler or incubator.

Another hallucination, almost equally mischievous, is the notion that the body of office-seekers who go to Washington about this time are, or in any sense represent, the American people. They have been taught to think that each of them has the same claim to the Presidential ear as the 5,500,000 Democratic voters would have could they collect in the White House in reception hours; and that, if they are snubbed or denied a hearing, some sort of violence is done to the democratic principle. The truth is, that the whole of the President's time and ability is due to the millions who do not go to Washington, and that the thousand office-seekers who do go and take up the President's attention are committing a fraud on the rest of the community, at which he in listening to them in a certain sense connives. Their need of office and desire for it are no more a public concern than their need of or desire for a new suit of clothes. If these elementary distinctions could be put on paper by some competent officer and distributed among visitors to the White House, it would do the best work of political evangelization that this generation has seen.

STATE AND LOCAL TAXATION.

THE report of the Joint Committee of the New York Legislature on the subject of taxation is a very thoughtful and well-considered treatise. We have had Tax Commissions before now composed of experts, not members of the Legislature, who have made reports as intelligent as this, but we cannot recall any committee, resting under the responsibility of legislation as well as of investigation, which has done nearly so well. The Commissions always recommend an abandonment of the attempt to tax invisible and intangible things and personal property which has the power of flight and escape. Legislative committees have always heretofore recommended more drastic measures to find the invisible things, and severer penalties for the concealment of them. In other words, the economists have always advised against the general property tax, while the lawmakers have until now always insisted upon it in the strongest terms. It would seem that the long chase after a will-o'-the-wisp in the matter of taxation had been abandoned. To speak more properly, it would seem as though the Legislature was willing at last to make the laws conform to the facts of the case, for the general property tax, although theoretically in force in this State, is not so in practice, and has not been for many years. The Committee does not in terms recommend the exemption of personal property, but it proposes a new system which, if adopted, will almost certainly bring about that reform. The language of the report on this subject is as follows:

> "We confess a considerable change of heart from the opinions at first entertained by us when we say that the proposition to relieve personal property from taxation presents a

problem which we are well satisfied is worthy of careful study, but to which we do not feel fully warranted in giving our present assent further than in the direction recommended."

Such language would never have been employed by a legislative committee unless public opinion had undergone a radical change. Undoubtedly new conditions have helped to bring about this change. The payment of the State debt and the completion of most of the costly public edifices have brought us near to the possibility of carrying on the State Government without any levy on the counties. Prior to 1880 all the State revenue, except a small sum derived from invested funds, was obtained by assessment on the counties. The State passed a law prescribing how the valuations of property should be made for purposes of taxation. Then it fixed the percentage necessary to meet the State's expenses, and directed the county officers to pay the sums named to the State Treasurer. In 1880 the Legislature took a leaf out of the Pennsylvania system and gained a certain amount of revenue independently, by taxes upon the dividends of corporations, upon collateral inheritances and some other things, which could be easily collected without the intervention of county officers. The law of 1880 has been amended from time to time until now it produces about one-half of the sum required for State purposes. The aim of the Committee is to establish a system which shall yield the whole of the State revenue without any property tax. The Committee say that so large a gain is not to be expected in a single year. They propose certain changes looking to the ultimate realization of this project which they think will yield an additional $4,000,000 at once and eventually the whole amount required for State purposes.

Whenever the State revenue shall be derived entirely from sources other than the counties, the Board of Equalization will be abolished and there will be no obstacle to what is called "local option." It cannot make any difference to Erie County how Albany County raises money for local purposes. It cannot make any difference to the State at large how New York county raises money for her own use. Whatever she obtains she must get in pursuance of law, but she and all the other counties should be allowed a choice among certain prescribed methods, and will be if this system takes root. The Committee say that local option means the exemption of personal property, first by one county and then by another, each one striving to attract such property or to prevent others from drawing its own away. This is a fair supposition. Hence, if the Legislature adopts the Committee's recommendation, we shall know that it has given its sanction indirectly to the principle of the exemption of personal property.

Looking for new sources of State revenue, the Committee has suggested, among other things, a tax on mortgages, coupled with a proviso that such mortgages shall be exempted from local taxation. This plan seems to us unobjectionable. Theoretically, mortgages are taxable now for both State and local purposes. The maker of the mortgage (the one who owes the money) has the right to deduct the amount from his personal property liable to taxation; but this is a barren right in most cases because personal property is not listed for taxation. The change proposed by the Committee is rather as to the means of collecting the mortgage tax. It offers a commission of one per cent. to the local tax officers on all moneys so collected. This will stimulate them to search the records and see that no one who ought to pay the tax escapes from it. The tax proposed is very moderate, being only one-half of one per cent. In order to make this provision effective, the present exemption of mortgages held by savings-banks and life-insurance companies ought to be repealed. There is no good ground for this exemption. All these people (the depositors and the insured) are forehanded, and they ought to pay some part of the public expenses. Any class who can get rid of a tax by using a catch-word will do so, naturally, and it happens that an abundance of catch-words is handy for this purpose. What the savings-banks need is not exemption from the taxes which other people pay, but a relaxation of the stubborn rules enacted by the State which restrict their investments. The mortgage tax always brings up the question whether the burden of it falls on the borrower or on the lender. This point has never been satisfactorily determined by economists, although the weight of authority seems to favor the opinion that it falls on the borrower. If this is the correct opinion, there is no reason for exempting either savings-bank mortgages or life-insurance mortgages from a tax to which other mortgages are subject.

The Committee recommends also the taxing of the capital stock of foreign corporations doing business in this State on that portion of their capital employed here. This is entirely just. Corporations which pay taxes directly to the State ought, however, to be exempt from local taxation except on their real estate—this by way of simplification of the tax system. It is possible, of course, to make the State tax high enough to equalize the burden. The present double-barrelled system of taxing corporations ought to be swept from the statute book whatever else is done or not done. The recommendation that manufacturing corporations, which are now exempt from tax on their *capital stock*, shall be taxed in that way, is open to more serious question. The principle upon which this exemption was originally made was the same as that which applies to other personal property of a flighty character. If it can get away and establish itself in another State where it is exempt from taxation (Pennsylvania, for example), it is best not to offer it that inducement to move.

"A POINT IN JOURNALISM."

THE Boston *Herald* discusses at some length, under the above heading, in answer to a correspondent, the question whether a "great newspaper" ought to print accounts of prize-fights. The correspondent objects to such reports because their influence is "demoralizing," and "stimulates young men to cultivate the brutal instincts," because prize-fights are immoral and illegal, and, finally, because he dislikes to let his family see the reports of such contests. The *Herald* exposes itself to such criticisms more than most other newspapers in the country, mainly, paradoxical as it may seem, owing to the goodness of its editorial articles. That is to say, the observations of the editor on the questions of the day, moral, social, political, and religious, are for the most part so sensible, well informed, and so elevated in tone and temper, that people of taste and cultivation are seduced into subscribing for it as a good family paper, and are then disappointed and even shocked to find that its news columns are very much like those of the Boston *Globe* and New York *World*—that is, contain, for the most part, elaborate and embellished records of contemporaneous crime and folly. As a general rule, the newspapers which most carefully explore the sewers and garbage-boxes of society adapt their editorial homiletics to the "finds" served up by their reporters. The leading articles are addressed, frankly and without disguise, to readers to whom life is largely made up of rapes, suicides, murders, adulteries, fights, swindles, forgeries, elopements, parricides, and falls of pastors. The writers speak not in the character of moralists or philosophers or economists, but of jolly good fellows who are themselves out on a spree, and sympathize keenly with those whose opportunities of seeing the seamy side of human nature have been scantier than their own.

The defence of the *Herald* contains nothing new. It has been made before by the same paper, but it is a defence which can never become stale and will always repay examination. It says, in the first place, that although reports of prize-fights may be unfit reading for the "children of tender years," or for "ladies," or for the "refined classes generally," and although such fights have been made illegal because they are immoral and brutalizing, and are, in short, "evil and wrong," yet a "great newspaper"—meaning a newspaper with a large circulation—cannot avoid printing them. Why not? Because "life is made up of contests," "in politics, in the bar, and in the forum," and because contests are what most interests people of all classes, and because it is a matter of careful observation that when a paper con-

tains a report of a prize-fight, it is the first thing that passengers of all classes read as they come to town to their business in the morning—"the middle and the more wealthy and cultured classes" as well as the others. "The newspaper," says the editor, "in treating of this topic, starts with this as a fact. Why does it exist? It exists because of an element inherent in human nature."

The trouble with this argument is that it proves too much. If it has any force at all, it covers all obscene literature as well as reports of prize-fights. A report of an indecent divorce case would be read in the cars in the morning by probably twice the number of people who read the reports of a prize-fight, for the women would read it as well as men, and, if they did not read it on the train, would very likely carry it home with them for private perusal. "The element in human nature," too, which demands obscene literature, is about twice as strong as the interest in "contests" of all kinds, physical and mental. Why, then, do the law and public opinion condemn and prohibit the publication and sale of indecent literature? Simply because its influence on young and old is unhealthy, degrading, and brutalizing, "the element in human nature" notwithstanding. What the influence of reports of prize-fights is may be readily inferred from the character of prize-fighters and of the company which witnesses their contests. It consists almost always of the offscourings of human society—gamblers, thieves, drunkards, and bullies. The sprinkling of betting men who have lawful occupations which is sometimes found among them, does not change their complexion. The pugilists themselves, too, are generally persons whose manners and morals are a disgrace to our civilization; but as they retain the human form, seeing them pummel each other out of shape, amid the yells and oaths of a band of surrounding ruffians, must to any man, young or old, make human nature seem a cheaper, viler thing than he had previously considered it.

It is for these and half-a-dozen other similar reasons that the law of most civilized communities has prohibited prize-fights. But the law is everywhere imperfect in not also prohibiting newspaper reports of them, for it is these reports, more than anything else, which keep them going. It is the notoriety given by the newspapers to the pugilists and their doings which produces each successive crop of them, and keeps alive the depraved interest in their contests. The silence of the press about them would do more in one year to suppress these contests than the Sheriff and police can do in ten. It is the newspapers which make popular heroes of such brutes as Sullivan and Corbett and "Squire Abingdon," the poor creature who has just ended his career of vice and extravagance as a general "bottle-holder" of all the leading ruffians of the ring.

The plea set up by the Boston *Herald*, that there is some sort of obligation resting on "a great newspaper"—that is, a newspaper of large circulation—to publish pugilistic reports, which does not rest on newspapers of small or restricted circulation, is a *reductio ad absurdum* of the claim of complete freedom from moral responsibility to the community, which has long been the bane and disgrace of the press. If this responsibility exists at all, of course the larger the circulation the greater the responsibility is. If a publication have an evil influence, the wrong of it is in the direct ratio of the number of people it reaches. There is nothing in the modern world more curious than the attempt, and in some degree successful attempt, of newspaper proprietors to claim for their business an exemption from the moral jurisdiction under which every other business is carried on. A doctor who defended his practice of abortion by alleging the large demand for it; the lawyer who gloried in chicane and pettifogging by pointing to the large number of his clients; the bookseller who excused his obscene-literature department by proving that its sales brought in more money than all the others; the landlord who declined to eject his brothel-keepers, showing that they paid higher rents than any other class of tenants—would be greeted with mingled merriment and execration. But a newspaper proprietor, whose trade always includes the maintenance of a chair of moral and social philosophy, when charged with fostering a debased and debasing curiosity among all classes, with diffusing vile tastes among the young, and with discouraging good literature and intellectual interests, puts in the brothel-keeper's and faro-banker's defence—that he is meeting a widely felt want—and then rests his case.

THE PROBLEM OF SMALL LIBRARIES.

THE seal of the newly fledged city of Quincy, Mass., bears the motto "Manet," as if in pleasantry, for the charter was a distinct and even noteworthy innovation. Nor has the innovating spirit exhausted itself in the direction of municipal reform. Quincy has a public library, a memorial foundation, of which the twenty-second annual report is before us, with Mr. Charles Francis Adams's name at the head of the undersigned trustees. The building was calculated for the accommodation of 20,000 volumes, and last year it gave shelter to 19,000. The trustees dismissed the idea of an enlargement of the building, and resolved upon the only other possible solution of the problem, a diminution of the books. They considered the fact of Quincy being a suburb of Boston, some eight miles distant and easily accessible, and resolved that their Thomas Crane Public Library should not attempt to compete, for the sake of the scholarly few, with the great collections in the metropolitan centre. They would therefore discard such works as would not naturally be looked for in a suburban library; such as experience showed to be but seldom or never consulted; such as required too much space in proportion to the frequency of consultation — like public documents; and "all duplicates and books of ephemeral interest." They fixed the normal size of the library at 15,000 volumes, and contemplate a perpetual winnowing and renewal within this figure, constituting the collection of "all the standard works in the language, and a good assortment of practical treatises and of the best works of reference."

The choice of 15,000 as a maximum was determined by the belief of the trustees that this number is "within the limit of reasonable catalogue work"—in other words, as we infer, within the resources of the Crane Library. The necessity of frequent renewals of the printed catalogue in consequence of the disappearance of books in the reducing process is obvious; but this is not the only expense. The trustees aim to sell the catalogue, "irrespective of cost, at a price so low as to put it within the easy reach of any one wishing to use the library." Their idea appears to be that the library, being thus introduced into the family, will be more used than upon the ordinary condition of going to the library to consult the catalogue, and that "a people's working and educational institution" will result.

Whatever may be said in support of this policy, we do not expect it to find favor with librarians, and it seems to us not a solution but a postponement of the problem. In carrying it out, the trustees will have a greater responsibility and a greater care than they imagine. It is easy to put away, by a broad rule, duplicates and whole classes like public documents; but when it comes to passing upon works of ephemeral interest and works not often called for, one needs to be a very broad-minded and a very well-informed trustee, with plenty of leisure. There are degrees of value even in what is ephemeral, and minds capable of comparison and reflection will often gain as much by studying the taste and mode of thought of a previous generation as by familiarizing themselves with those of their own. Such a comparison ought not to be confined to "standard works." And again, the mass of readers and the thoughtful and studious few in any given community cannot fairly be offset in a numerical equation. Fifty-six per cent. of the books taken out of the Crane Library in 1892 were fiction, adult and juvenile. Who can doubt that the greatest service to the public was rendered by supplying the borrowers of the nineteen per cent. in the categories of history, general literature, arts and sciences, travels, biography, poetry, religion, and education? And who knows whether the well-thumbed or the dusty and uncut volume contributed more to the formation of individual character

or to the ultimate welfare of Quincy or of mankind?

We leave it to experts to pass upon the Quincy policy on the score of economy, and to contrast it with that governing the expansion of the branches of the Boston Public Library, among which the Crane Library may before many years be enrolled by annexation. We think it self-evident that to fix an arbitrary limit to the library and to make room for the new books by getting rid of the old is to put a damper on public spirit. People will not offer to give books which may be rejected at once or after a few years, and the motive for additional benefactions to the building or the sustentation-fund supplied by the sight of vigorous growth and cramped accommodations and insufficient service will be destroyed. This is the most serious objection to the policy initiated by the trustees. Furthermore, if the giving of books such as the library would not be justified in buying is discountenanced, there will be a general falling off in the quality of such gifts; and, finally, the library will be denied its share in the custody of the rarer works accumulated in the neighborhood of Boston. A catastrophe might any day overtake any one of the metropolitan libraries in which the trustees would concentrate these treasures. Such risks of total destruction should be distributed.

But there are practical difficulties in the way of the trustees. To prescribe the number of *volumes* is to entail a constantly diminishing number of works and authors Twenty-three per cent. of the volumes called for in 1892 were periodicals, and we presume the Library binds its current sets. The yearly addition from this source alone must be considerable, and will tend more and more to restrict the tract open to winnowing and renewal, unless the heroic remedy is applied of emptying the shelves of the early volumes of *Harper*, the *Atlantic*, the *Century*, *Littell*, the *Nation*, etc., etc. Moreover, the question arises, Are editions in one volume or in many to be preferred in the case of prolific writers or the larger books of reference? Clearly, by total limitation and by the removal of duplicates, a premium is put on multiplying the volumes in the interest of the greatest number of readers. In the case of fifty standard authors in fiction, poetry, history, science, politics, and economics, with a good proportion of American writers, we have easily reckoned up an average of fifteen volumes apiece. There is an edition of Browning, for example, in fifteen. Would the trustees reject the gift of it because they have the same matter in fewer volumes? Would they discard the latter in favor of the former, and in general would they take the ground that a variety of editions differing in completeness, in critical value and mechanical accuracy and attractiveness is not to be tolerated? Must one read of Lincoln in Herndon's two and not in Hay and Nicolay's ten volumes? May one not have the benefit of both? If they have not all of a set—of Dickens's 56 and G. P. R. James's 61, for instance—will they decline voluntary accessions to it; in other words, will they hold that the public need do no more than *sample* an author?

In their reference department, will they insist on Webster in one volume, or will they keep it together with the 'Century Dictionary' in six and the 'Encyclopædic Dictionary' in fourteen volumes? In the contest between this and the circulating department, which shall have the preference? Shall the fifty to sixty volumes of the 'Dictionary of National Biography' be gratefully accepted from Citizen X, or be declined with thanks because it would debar as many one-volume authors? So with the increasing "series"—of epochs, heroes, men of letters, rulers, reformers, and the like. So with the uncurrent volumes of the Quincy Directory, 'Whitaker's Almanac,' the 'Statesman's Year Book.' All these must crowd out a large number of works of the most diversified and many of a superior kind, and help along to a condition in which nothing more can be given away by the trustees and nothing more taken in, or else their magic 15,000 must perforce be exceeded. When that time comes, their duties will certainly not be onerous, and the cost of cataloguing will be reduced to a minimum, but meanwhile their labors are likely to be severe. The process will be hastened if books not in the English language are to be admitted; but, for aught we can discover to the contrary, the Quincy public is expected to go to Boston not less for its foreign literature than for its public documents.

We make these criticisms without denying that, as a library of 15,000 volumes may be founded at one stroke by a judicious selection that will practically exclude rubbish, so an old library may and ought to be protected against the intrusion of poor stuff not worth housing. But it is better, we believe, to overrate rather than underrate the intelligence of the local public, to consult its convenience upon the spot to the fullest possible extent, in purveying for it to err on the side of freedom and "natural selection," and to make the library a means not only for the diffusion of knowledge, but for the promotion of public spirit.

THE JUBILEE MASS AT ST. PETER'S.

ROME, February 20, 1893.

LONG before daylight yesterday the steady rumble of carriages going towards St. Peter's could be distinguished; and those who arrived at this early hour on the great Piazza, found it already invested by the municipal guard and the bersaglieri, who formed a cordon on the outer side of the obelisk, permitting only those to pass who were provided with tickets for the church ceremony. The presence of the King's troops to keep order at the very door of the Vatican is not the protest against Papal pretensions one might at first suppose it, for one of the first articles of the Statuto proclaims the Roman Catholic religion that of the State, and as such to be protected and assisted by King and Government.

The doors of St. Peter's remained closed till seven, so the earliest arrivals (at 4:30) remained on the steps of the church, pressing as near as possible to the doors, so as to have easy access to the tribunes of reserved seats, or (for those who had only tickets) for standing room near the altar. It was an unusually motley crowd for a religious function. One is usually notified to wear black, and the women are required to cover their heads with veils, according to St. Paul's injunction; but only those distinguished by admission to the reserved seats were kept to this rule; so one saw pilgrims in every variety of national costume, where such still existed, ladies from the hotels in travelling garb of different fashions and colors, ambassadors to the Holy See in full uniform with all their decorations, and country people from the Castelli Romani in Sunday finery of brightest hues. An immense number of tickets had been distributed, besides which four thousand have since been declared to have been forged. Between the opening of the doors at 7 A. M. and 8:30, the immense space in St. Peter's was filled to every corner; every point of vantage on the side of the Papal monuments and the corners of the bases of the columns had been occupied. The guards at the pilgrims' door, to which an immense green ticket directed them, seeing still a great concourse of pilgrims pressing towards them, and fearing the Pope's procession from the Vatican to St. Peter's might be impeded by this continuous flow of people, had the unfortunate idea of closing this door and posting a placard on it inviting pilgrims to enter at the one to the left destined for the public. This caused much confusion by the hurried rushing from left to right by the crowd on the steps, and many fell and were trampled on and hurt; besides which, the church being as full as safety permitted, this door was also soon closed, and it was then that among the pilgrims who had come from afar there was "weeping and gnashing of teeth." A master of the ceremonies came out and arranged that some might enter by a private door further on, but as many as 25,000 ticket-holders remained shut out, and may count themselves as those foolish virgins who slept late instead of trimming their lamps.

We congratulated ourselves on having been more provident. The sun was rising in all its glory in a luminous, cloudless sky as we left our dwelling at a little past seven, and hailed one of the string of returning cabs which, in two rows of going and coming, reached from the Piazza di Spagna to the Vatican. There was a hum of voices everywhere on our way. One could not fail to perceive that the day was full of significance—those who care for quiet ardently hoped that it might end peacefully. The civil authorities had evidently taken every precaution that there should be no cause of provocation on their side, and had rigorously suppressed all counter-demonstrations and processions with banners or inscriptions. It was feared that the pastoral letters of the new cardinals dwelling on the spoliations of the Holy See, which had been telegraphed in part to the Italian newspapers from England, might lead to provocation. It is certain that an immense circulation of pilgrims in Rome is always a source of danger to the peace; for as they are people who bring little into the revenues of the country, they are not favorably regarded either by the shopkeepers, who complain of having done little or no business this winter, or by the hotel-keepers, who, if they lodge them, have to do so on special terms. Moreover,

there is a class here only too glad of rows, hoping that some good may come of any change.

It was easy to pass through the ranks of bersaglieri and to mount the steps, but even to get into the peristyle of St. Peter's there was some difficulty and much pushing. An Italian crowd is always a good-humored one, and there is generally a great regard for good manners and very little rough hustling. Our tickets taken and the doors passed, the church seemed already very full—fuller than we deemed it possible it ever could be. A deep line of people crowded the central aisle through which the *guardia nobile* kept a passage clear for the procession and for people of distinction to get to their tribunes. We determined to see the ceremony of the mass itself, rather than the procession, and pressed forward beside the side chapels past the sacristy till we arrived at the wing to the left of Bernini's bronze canopy above the high altar; and here we decided to remain, if possible. Among the tribunes erected for reserved seats was one especially labelled for the Pecci family—the family of the Pope. The stalls for the ambassadors were behind the high altar; before them were stationed the principal pilgrimages, with their respective banners. The balcony opposite was occupied by the nuns, too high above the crowd to be separately distinguishable; even the narrow passage within round the dome was full of spectators, who must have seen as through the wrong end of a telescope. The choristers occupied another gallery. We let ourselves go with the current, and were soon carried as near as we were likely to get to the ceremony. We found ourselves among priests, nuns, divinity students, and Italians from the provinces, all very determined to see all they could and to make their best of this opportunity to receive a papal blessing. There was still an hour and a half to wait, and every one hoped by pressing forward to get as near as possible to the vacant space kept open for the procession.

At the sound of the first cannon at half-past eight, the multitude knew that the Holy Father was on his way, and every one tried to get his neighbor's place in front. Some of the English ladies came provided with little stools to stand on, much to the discomfiture of those behind them; but the general determination to see, and the utter indifference to the courtesy which is such a characteristic of the Italian nation, made it impossible for them to make use of this rather unfair advantage. Already the surging of the crowd filled many with alarm; the priests and nuns were evidently used to it on such occasions, and the divinity students were enjoying it, and were making jokes all the while, while their father directors were inciting them to fresh efforts to get in front, and gave them the example by a very adroit use of their elbows. The people from the provinces, however, were frightened, never having been in such a wedge; and one short, stout Venetian gentleman lost his temper and his courage, and, abusing all around in strong language, he advised his wife to go ahead by any means. His son, a square-built boy of fourteen, was fighting and butting with his head, which seemed as hard and round as a cannon-ball. One young peasant girl began weeping with terror at the roughness of her neighbors; we tried to protect her, but she soon went away altogether. I saw one energetic countrywoman fighting her way into our midst, talking and apologizing as she went. She got beside me at last, and gave me the benefit of her confidences. She had come on foot into Rome that morning, a walk of two hours, and had been on the steps of St. Peter's when the doors opened, so she had been lucky enough to get an excellent place quite in front beside an English lady, who, after a time, pulled out a little bottle of strong-smelling stuff—phenic acid, she supposed; the strong odor made her faint, and so she had to go out and relinquish her excellent place, but she was determined to see the Pope and receive his blessing. Pio Nono had blessed her, Leo XIII. should bless her, and then she should live and die content.

We envied the possessor of the smelling salts. The heat became excessive, the pushing almost unendurable, while people were getting angry and rude to each other, regardless of the place. At last a shout, which spread through the crowd and continued for some minutes, greeted the entrance of the Holy Father into St. Peter's. The enthusiasm was extreme: arms were raised, handkerchiefs, caps, and hats waved, and every one shouted; "Long live Leo XIII.! long live the Pope! long live Pope Pecci!" (the country people seem to call him by his family name). The procession took three-quarters of an hour to arrive at the high altar. Expectation had been strained to the utmost in our portion of the crowd before the *flabelli* appeared round the corner of the great pilasters supporting the dome. The acclamations sounded again, excitement was at its highest pitch as the pale, emaciated figure of Leo XIII. was borne along in the *sedia gestatoria*, blessing the multitude as he passed. He seemed even more transparent than usual in his shining white and gold robes, and his movements betrayed great weakness and fatigue. The acclamations continued until he had taken his place at the high altar and the silver trumpets from above had commanded attention to the mass. We could just see the Pope and his cardinals and the ceremony of putting on and taking off vestments and the change of the mitre, but we could hear nothing. The Pope's voice, which is unexpectedly sonorous considering his frail appearance, was entirely lost under Michael Angelo's great dome. We were told that the new cardinals had been permitted to wear their red robes for this special occasion; the others were in violet, as is usual in Lent. Cardinal Vaughan's erect figure and imposing presence was very observable.

After the first words of the mass my neighbors continued to talk quite loud again, and a priest behind me, putting his two hands on my shoulders and using me as a wedge, tried to get forward, calling to the students under his care to follow. I turned upon him in anger, with reproaches for his forgetting the holiness of the place and the solemnity of the occasion, not to speak of the example to his young men. He looked pained and embarrassed at being thus lectured in comprehensible Italian in the presence of his flock, and at once desisted from making free with my shoulders, after excusing himself by a "You will understand that we want to see, and you are taller." The students had not even brought their breviaries; they evidently regarded this mass as a sight to enjoy, and assumed that they would easily be absolved for any carelessness on such a day. The most solemnly impressive moment was the elevation of the Host. As the Holy Father knelt before the altar with raised hands, the sun was pouring down upon him in two columns of brilliant light from the windows in the apse, making the light beyond seem almost gloom. Bernini's bronze twisted columns framed in the picture of the brilliant altar, the white Pope, and the red and violet cardinals standing around him. He was evidently much moved and with difficulty rose from his knees. Then, after the usual change of mitre, the Te Deum began, being chanted by the choristers above, whose fresh young voices contrasted with the responses, in which, for the first time during the service, every one joined. The chanting throughout the service was really impressive, although they had not chosen any of their early church music, but had preferred later compositions. One could not but feel that the whole service was a splendid ceremonial, perfectly adapted to its surroundings, and that St. Peter's, notwithstanding all that has been written and said about the decadence of its sixteenth-century decorations and its utter want of religious mysticism, is, in its large lines and showy decorations, very well fitted for the great pomp of a function like the present one.

We left during the Te Deum, in order to be in time to see the crowd of pilgrims coming out at the doors. We made our way slowly and with difficulty through the crowd. It seems that some Benedictine monks had ambulances and were reviving fainting ladies during the service. The air felt delightfully fresh and bracing after the great heat inside the church. The tall Papal policemen were guarding the doors, and from the peristyle the Swiss guards, in their showy Michelangelo liveries, could be seen waiting for his Holiness's return to the Vatican. Soon we heard the sound of many voices again acclaiming the Pope and wishing him long life. The shouts continued during his passage to his palace through a doorway inside the church to the right-hand side, after which the sixty thousand people, pilgrims and spectators, came pouring through the doors, which had been thrown open after the Pope's passage, into the brilliant sunshine of the Piazza. It was a sight worth seeing. These people came together from every part of the world as a token that the Catholic faith is still very much alive, and that its votaries are ready to assemble to do honor to its supreme head; and the day was such a glorious one, so full of sunlight, with a feeling of coming spring in the air, that Rome must have seemed indeed a blessed place to those visitors. S. S.

A BOURGEOIS NAPOLEON.

PARIS, March 3, 1893.

'NAPOLÉON INTIME'; my eyes were attracted lately by this title, though I knew absolutely nothing of the author of the book, M. Arthur Lévy. On inquiry, I learned that M. Lévy had been long engaged in buying books about Napoleon. There is a vast Napoleon literature, and at the beginning of his huge volume M. Lévy gives the list of the works which he will have occasion to cite. This list fills nearly four pages. He belongs, as you see, to the historical school, which deals with what are called original documents. "You will find in this work," he says in his preface, "no opinion concerning Napoleon which is not founded on information procured from the most varied sources, or official texts of which the originals are easily accessible, either in our National Archives or in collections which I can fully indicate." With extreme scrupulousness, the author has been careful not to use the 'Mémorial de Saint-Hélène,' though it would often have confirmed his views. He has thought with some reason that you must not take the definition which a man gives of himself.

M. Lévy has certainly been very painstaking; he has read much, he has consulted many documents, but it is not necessary to read far

in his pages to see that he is wanting in the qualifications of an historian. His work might be adduced as the most characteristic proof that the modern documentary school, though it professes to have nothing in view but the truth, is often misled and errs for want of criticism. Take this example of Napoleon. Here are two men, Taine and Arthur Lévy: I don't compare them for talent, but both are systematic devotees of what we call the documentary school. Taine brings forward a thousand little facts in succession before drawing his final conclusion, and so does M. Lévy. Their notes, their citations are so numerous that they become fatiguing. How is it that, having used the same works, the same letters, the same collections, they come to totally different conclusions?

We have all read the portrait of Napoleon drawn by Taine. It is very severe, and you feel at once that the author always meant to be severe. He read his documents with the intention of finding out all he could against Napoleon, and made the most of it. He worked like the man who washes sand in the placer in order to pick up the little gold that can be found. Human nature is very complex: if you analyze a man and a life, you can present the result of the analysis in many ways. It is evident that Taine had unconsciously formed in his own mind a certain image of this great enigmatic figure of Napoleon, which will for all ages to come fill the beginning of the nineteenth century; and when afterwards he came to work out his chapter on Napoleon with the aid of documents, he took from those documents what best suited his preconceived idea. Napoleon was to him from the beginning an Italian tyrant of the Renaissance, a man of the Cæsar Borgia type, thrown by events on the great stage of France and of Europe; he was a mixture of Machiavelli's Prince and the Corsican brigand. There is an evident *parti-pris* in M. Taine's development of the character and work of Napoleon, but the impression he leaves on the mind is probably nearer the truth, at least on many points, than that left by the ponderous work of M. Lévy.

It was hardly necessary to accumulate a mountain of original documents to come to a conclusion like this: "The work of this man, born a bourgeois, is essentially a bourgeois work; thanks to him, the middle classes have gained a foothold in affairs of state." The Napoleon of M. Lévy is a Napoleon bourgeois, *bonhomme*, as we say. Would you have believed it?—he was weakness itself in his family, with his brothers and sisters; he forgave his enemies; he was hardworking, painstaking, generous to a fault, economical for himself; if he made war, war was always forced upon him; he was always betrayed, he betrayed nobody; he was conciliating, and not quarrelsome. "Napoleon," says M. Lévy, "in whom were personified the virtues of the middle classes, has shown what the sons of the emancipated nineteenth century ought to be—candidates by right to all employments. He has shown . . . how the generalissimo of innumerable armies can remain a soldier; how, at the top of the social hierarchy, it is possible to be, like a common auditor of accounts, active, strict, punctual, economical, and honest."

A bourgeois Napoleon—this is surely the most paradoxical view that could be taken of a man who remains in the popular imagination a demigod, made of some other stuff than the rest of mankind. A commonplace Napoleon is a sort of outrage against that truth, deeper than the common truth, which turns history into a legend. We cannot judge Napoleon as M. Lévy does, and put him, as he does, on the level of the merchant, the shopkeeper, "who devotes himself, body and soul, to the prosperity of his work, who lives for it alone." There is in Bonaparte a poetical element which we cannot and ought not to ignore: the man who moulded revolutionary France into its actual form, who organized its disorganized forces, who stirred Europe to its foundations and prepared the development of our modern nationalities, was not a mere bourgeois, a good man longing only for a quiet home and the pleasures of family life.

The details of M. Lévy's book are all interesting, the conclusions which he draws from them are all wrong. He makes an exact picture and covers it with a dull gray color. He is pursued with the idea of whitewashing Napoleon, of proving that he had no defects; but, as the French say, people have the defects of their qualities and the qualities of their defects. A perfect Napoleon would probably have lived and died in obscurity. There was in him a force which could not be arrested and was comparable to a natural force. The day after the 18th Brumaire, going back to Paris, he says: "Now we must reconstruct and reconstruct solidly." And he did go to work at once, with Roederer, Dumas, and others. His powers of organization were marvellous, and nothing is more true than what Taine says of the solidity of the mould in which he fixed administrative France.

The most interesting parts of 'Napoléon Intime' are the chapters on his early years, his life in Corsica, his family, his school-days, his difficult début in Paris, his life in the capital when he was young, unknown and poor, his first relations with Barras and the members of the Republican Government. You will find condensed in these chapters a number of details, taken from a quantity of books and pamphlets; there is sometimes a melancholy note in the letters written during that period by Napoleon which is surprising in so active a man. One day, for instance, he writes to his brother Joseph: "Life is a light dream which evaporates." He is often ill, he makes a hundred plans. In a moment he rises from obscurity when the Directory employs him in Paris, and when he puts down a Royalist insurrection. He writes to Joseph after this event, which is a turning-point in his destiny: "You will have heard by the papers all that concerns me. I have been appointed by decree Lieutenant-General of the Army of the Interior. Barras has been appointed Commander-in-Chief. We have conquered, and all is forgotten."

M. Lévy does not throw enough light on the first relations of Napoleon with Barras and with Josephine Beauharnais; but he gives *in extenso* the letters which Napoleon wrote to Josephine after she had become his wife. These letters are of the most ardent lover; there is no doubt that Napoleon was almost madly in love with the charming, thoughtless, childish Creole whom the French people still call *la bonne Joséphine*. If Napoleon loved Josephine, Josephine did not return his love. She wrote to one of her friends, a short time before her marriage: "You have seen at my house General Bonaparte. Well, he is to become the father of the orphans of Alexandre de Beauharnais, the husband of his wife. Do you love him? you will ask me. Well, . . . no. Do you feel any antipathy towards him? No; but I find myself in a tepid state which displeases me, and which, in religious matters, the devout find the worst state of all."

Mme. de Beauharnais was the friend of Mme. Tallien; the marriage had been arranged by the famous mistress of Barras. It was said at the time that Barras had enjoyed the favors of Josephine. Two days after the celebration of the marriage, Bonaparte left for Italy; he was Commander-in-Chief of the Italian Army, and during his first memorable campaign, which was a succession of victories, he found time to write to Josephine letters which were extraordinary effusions of the most violent love, and which made Josephine simply say, with a shrug of her shoulders: "Est-il drôle, ce Bonaparte!" Immediately after her marriage, during the Italian campaign, and afterwards, during the campaign of Egypt, Josephine led a life of gayety in Paris, incurred debts, allowed young officers to court her. Things became so bad during the Egyptian campaign that Napoleon returned to Paris with the firm intention of asking for a divorce; he was disarmed at the first meeting, and Josephine again took full possession of him.

When political considerations induced him afterwards to divorce her and to marry an Austrian archduchess, he provided for Josephine with the greatest generosity, and he always continued to see her from time to time. His passion for Josephine was probably a protection against the many women whom he knew afterwards, but whom he always treated with a mixture of contempt and almost of anger. We should have much to say on the chapter devoted by M. Lévy to Napoleon's relations with his sisters, especially with Pauline, whom he married first to Gen. Leclerc and afterwards to Prince Borghese. M. Lévy does not seem to us to have completely cleared Bonaparte or his sister of the imputations directed from many sides against them. The question of the murder of the Duc d'Enghien falls strangely enough in his book in a chapter which has for its heading "Sa générosité." M. Lévy speaks very lightly of this political crime. Here, and in everything, he is determined to minimize all the faults of Napoleon. In our time of severe criticism, his 'Napoléon Intime' will not be admitted as a lasting historical document.

Correspondence.

THE HARVARD DIVINITY SCHOOL.

To the Editor of The Nation:

Sir: In my report as Dean of the Harvard Divinity School for the last academic year I suggested that the experiment of an undenominational divinity school would not be fairly tried until there were one or two additional chairs of theology to be filled by representatives of different denominations. In his report President Eliot referred to this suggestion with approval. I have noticed in the *Nation* and in some other papers the assumption that this was a confession of the failure of the plan of an undenominational theological seminary—a cry of distress, as it were, and a reaching out after some means to repair the failing fortunes of the school. In regard to this assumption, will you allow me to say two things?

In the first place, speaking for myself alone, I will say that, from the beginning of what may be called the new movement, such a duplication or triplication of teachers of theology entered into my ideal of the school. In my report for the year 1883-'84, I urged it more strongly, and discussed it at greater length, than in my report for 1891-'92. I may add that, with some difference of detail, it was a favorite idea with James Freeman Clarke.

In the second place, the school was never so prosperous as now, and never in so little need of a change of policy. In the year 1880–'81 the number of students was 23, which was higher than the average. In the last three years the number has been 40 and 41. The number is small, but the proportional increase is considerable. The increase has been largely in the direction of the higher theological education. This year, for instance, the school contains 14 graduates of other theological schools, and one of our own.

If the plan under consideration were carried out, I believe that the school would be larger; but it would be so because, in my view at least, it would be better fulfilling the ideal of an undenominational school. I am well aware that to those theologians whose idea of a theological seminary is that it shall fit students for the service of one denomination, and that therefore they should be raised, so to speak, under glass, the plan will seem as ridiculous as that of an unpartisan civil service seems to an old-time politician. It will seem absurd, also, to those whose idea of an undenominational school is that it shall be conducted wholly by Unitarians. To those who believe that the office of a theological school is to help men to independent thought and to advance theological science, I think that the plan will commend itself as the one best suited to the circumstances of our time. C. C. EVERETT.

THE HARVARD DIVINITY SCHOOL, March 18, 1893.

A PEST OF THE HIGHER EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: Cannot something be done to suppress a nuisance like that of which I enclose herewith a circular? The fourth batch of these within the past year has just been received. Remembering the effective service the *Nation* did in suppressing the great Literary Bureau in Yellow Springs, O., in 1875, my thoughts naturally turn again to you.

Very truly yours, W.

WORCESTER, MASS., March 17, 1893.

[The circular in question is sent out from Tiffin, Ohio, by "Yours Confidentially, Colchester, Roberts & Co.," "being Alumni of first-class colleges ourselves," and recognizing "the fact that the student of the present day, as well as he of the past generation, has duties to perform and work to do for which time and fitness are wholly wanting," and that "there are those who are obliged by a tyrannical college faculty to waste both mortal time and parental money in gorging a brain with knowledge as useless to its owner as was Greek to the Montezumas." "Our prices are as follows: High School Orations and Essays, $3 to $8. . . . Special attention paid to Law, mathematical and medical theses. . . . No money required in advance."—ED. NATION.]

SIR THOMAS BROWNE ANTICIPATED.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of March 16, a letter by J. Shipley Newlin is headed "De Lesseps Anticipated," and a quotation is introduced from an essay of Sir Thomas Browne, to prove that he was before De Lesseps in the conception of piercing the Isthmus of Panama. Mr. Newlin informs us that Sir Thomas Browne was born in 1605, and probably published the aforesaid essay about 1650. The great explorer Samuel de Champlain was at the Isthmus of Panama in 1599, and in a work written by him that year he refers to a ship-canal in the following words:

"One might judge, if the territory four leagues in extent lying between Panama and the river [referring to the Rio Chagres] were cut through, he could pass from the South Sea to that on the other side, and thus shorten the route by more than fifteen hundred leagues. From Panama to the Straits of Magellan would constitute an island, and from Panama to New Foundland another, so that the whole of America would be in two islands."

(*Vide* 'Brief Discovrs des Choses plvs Remarqvables,' par Sammvel Champlain de Brovage, 1599, Quebec edition, vol. i., p. 41. See also 'Champlain's Voyages,' Prince Society's edition, vol. i., p. 25.)

EDMUND F. SLAFTER.

BOSTON, March 17, 1893.

TO THE EDITOR OF THE NATION:

SIR: The suggestion of a Panama canal was made very soon after the Spanish Government became convinced, about 1525, that there was no natural waterway between the Atlantic and the Pacific save at the extremities of the continent. It is difficult, perhaps impossible, to determine who first proposed such a canal. In 1527 the route of a carriage-road from the head of navigation on the Chagres River to the Pacific was explored. A further survey was ordered in 1532. On February 20, 1534, the Emperor Charles V. ordered a special survey of this region to find out the most convenient way to establish communication between the South Sea and the head of navigation of the Chagres, to set forth the difficulties of carrying out the project presented by the difference in the height of the tides and of the divergence in level of the shores, and to compute the probable cost in men and money as well as the time necessary to bring the enterprise to completion. In October of the same year Andagoya reported that such a project was entirely impracticable, that there was no prince in the world, however powerful, capable of uniting the two seas (Navarrete, 'Viajes y Descubrimientos,' vol. iv., pp. ix–xi). During the sixteenth century many surveys were made, and the question aroused much interest. Gomara, in chap. 104 of his 'History of the Indies,' published in 1551, strongly urged the construction of an interoceanic canal and suggested four routes. Three of them were the familiar ones to which modern attention has been varyingly attracted, viz.: the Chagres, the Nicaragua, and the Huasacualco, or Tehuantepec routes. Gomara realized the difficulties, but hopefully declared that where there is a will there is a way (Guillemard, 'Magellan,' 198; Bancroft, 'Central America,' iii., 738). Acosta, however, in his 'History of the Indies,' published in 1590, referred to this project, and pronounced it futile to attempt to divide the mighty barrier of mountains established by God to sustain the fury of the seas (Navarrete, *ibid.*, p. xii). Again, in December, 1616, the King of Spain requested the Governor of Castilla del Oro to investigate the feasibility of a canal (Bancroft, 'Central America,' ii., 471). Navarrete says that Bolivar had great hopes that the Panama Congress of 1825 would devote serious attention to the canal question. Navarrete adds that no doubt the future advance of the sciences and the arts will enable man to overcome obstacles then apparently insuperable.

Bancroft's 'Central America' contains various references to the proposed canal, while the appendix to the third volume gives a full account of the various projects of the present century. Bancroft is inclined to give the credit of the first proposal to Charles V.

EDWARD G. BOURNE.

ADELBERT COLLEGE, CLEVELAND, March 18, 1893.

TO THE EDITOR OF THE NATION:

SIR: The communication published in your issue of March 16, under the heading "De Lesseps Anticipated," suggests the following passage from Eckermann's 'Gespräche mit Goethe':

"WEDNESDAY, Feb'y 21, 1827.

"Dined with Goethe. He expressed much admiration for Alexander von Humboldt, whose work on Cuba and Colombia he had begun to read. The opinions expressed by Humboldt on the construction of a canal across the Isthmus of Panama seemed to have a special interest for him. 'Humboldt,' said Goethe, 'from his intimate acquaintance with the topography of that region, has been able to indicate other points along the coast where, by utilizing some of the streams which flow into the Gulf of Mexico, the same object might, perhaps, be more easily attained. All this, to be sure, has been reserved for the enterprising spirit of the future. It is certain, however, that if a canal should be constructed which would allow the largest vessels to pass from the Gulf of Mexico into the Pacific Ocean, the consequences to the whole world would be quite incalculable. I should be surprised if the United States allowed such a work to escape from their hands. It is to be foreseen that within the next twenty or thirty years this young and vigorous nation, with its pronounced tendency towards the west, will occupy the vast territory beyond the Rocky Mountains. It is further to be foreseen that along this whole coast of the Pacific Ocean, where nature has already formed the largest and safest harbors, there will spring up important commercial centres as the medium of an extensive trade between China, the East Indies, and the United States. In this event it would be not only desirable, but almost necessary, that there should be for merchant-vessels and ships-of-war some speedier means of communication between the eastern and western coasts of North America than has hitherto been possible by the tedious, unpleasant, and expensive voyage around Cape Horn. Therefore, I repeat, the United States will find it absolutely necessary to construct a passage from the Gulf of Mexico to the Pacific Ocean, and I am sure that this is an undertaking which they will one day accomplish.

"'I should like to live to see it, but I shall not. Secondly, I should like to see a canal connecting the Danube with the Rhine; but I fear this is a project too vast for the Germans to execute with the means at their command. Finally, I should like to see the English in possession of a canal across the Isthmus of Suez. These three great things I should like to see, and it would, perhaps, be worth the while to hold out some fifty years longer for that purpose.'"

Sixty-five years have passed since Goethe spoke these words, and we, at least, have lived "to see the English in possession of a canal across the Isthmus of Suez." As for the Panama Canal, if not a *fait accompli*, it is just now, as some one has said, "decidedly in the air," and that, too, in more senses than one.

M. D.

ROXBURY, March 18, 1893.

WIDOW BEWITCHED AND *GRASS-WIDOW.*

TO THE EDITOR OF THE NATION:

SIR: For the first of these expressions one will explore in vain the pages of Johnson, Richardson, Webster, and Worcester. Whether any of these lexicographers knew it, but thought it unworthy of record, may well be doubted. Yet it was by no means uncommon in the last century; and an exhaustive search

among my papers would, I dare say, enable me to produce twice as many quotations for it as those which follow:

"My condition was very odd; for . . . I was a *widow bewitched:* I had a husband and no husband; and I could not pretend to marry again, though I knew well enough my husband [who, a felon, had fled the country] would never see England any more, if he lived fifty years." De Foe, *Moll Flanders* (1721), p. 63 (ed. 1840).

"What can you be able to do, that would be more grateful to them, than if they should see you divorc'd from your Husband; a Widow, nay, to live (a *Widow bewitcht*) worse than a Widow; for Widows may marry again." Nathaniel Bailey, *All the Familiar Colloquies of Desiderius Erasmus* (1725), p. 171.

"As to the lady herself, she has e'en as good a Chance of being happy as the String of *Widows bewitched* who have lately taken the same Route before her." Mrs. Elizabeth Griffith, *A Series of Genuine Letters between Henry and Frances*, Vol. iv., p. 7 (1766).

"It would, perhaps, have been natural, if Sir Solomon, in his zeal to remove the licence of the old White Horse to his own premises, had offered to put the poor *bewitched widow* [a woman whose husband had disappeared mysteriously] into it." "Lord Lowder abroad, Lord Denningcourt in the country, and Sir Jacob so engaged between consoling the *bewitched widow* and betting, there could be no danger from him." Mrs. A. M. Bennett, *The Beggar Girl and her Benefactors* (1797). Vol. i., p. 249; Vol. iv., p. 149 (ed. 1813).

"In a letter from Major Wight to Dr. Bell, dated July 11, 1798, we find the following passage, which would seem to intimate that, at that time, some fair lady had attracted his notice: 'What shall you make of your *widow-bewitched?* My guess is, that she is not what she seems. You have not raised her in my estimation by mentioning that Dr. Darwin is her most intimate correspondent, and Lady Audley her acquaintance and friend. I don't like learned ladies. They are, most generally, deficient in that delicacy and correctness which render a woman most truly amiable.'" Southey's *Life of Dr. Andrew Bell* (1844), Vol. ii., p. 75, foot-note.

"I [Lady Randann, who had divorced her husband] became, in the eyes of your half-formed bucks, the most attractive of all objects, a *widow bewitched.*" *Morning Chronicle* (1798), in *Spirit of the Public Journals*, Vol. ii., p. 259 (1799).

"The other, a Mrs. Waldo, a *widow bewitched.*" "But his rakery had been considerably subdued by this country retreat, where his attentions were confined to one woman, a widow, or a *widow bewitched*, of a lieutenant in the navy." Jeremy Bentham (about 1827), in his *Works* (1838-1843), Vol. x., pp. 14, 24. So Sir John Bowring reports what was said to him by Bentham, who was born in 1748.

See also the quotation from Mrs. Gaskell's *Sylvia's Lovers*, given by the Rev. T. Lewis O. Davies, in his *Supplementary English Glossary* (1881).

A *widow bewitched* is, then, "a woman who is living in divorce, practical, if not actual."

The expression, as I am told by a gentleman and a lady who lived many years in Devonshire, is often used there, but, they think, in the sense of "a widow eager to remarry." It rarely occurs, nowadays, in books; and I suspect that it is found in very few of the English dialects.

For the following curious quotation, earlier than my earliest for *widow bewitched*, I have to thank Dr. Murray, of the *New English Dictionary:*

"If my marrying a fortune has made me a scoundrel, . . . it is but while I continue a *Widower bewitched.*" John Dunton, *Life and Errors*, etc. (1705), Vol. i., p. 405 (ed. 1818).

In Mr. Bartlett's *Dictionary of Americanisms* we read:

"*Grass Widow.* A wife who has been separated from her husband; called also a 'widow *bewitched.*' In England, the term *grass widow* signifies an unmarried woman who has had a child."

Dr. Worcester defines *grass widow*, as ordinarily current, "a wife whose husband is absent from her for a length of time," and despises the locution as "cant or vulgar," which it is not in England, but only humorous. Dr. Webster's Editors, apparently quoting a later edition of Bartlett than that of 1859, while giving much the same definition, add, "or who has been deserted by her husband," and characterize the phrase as a colloquialism peculiar to the United States. But is it employed there at all in its second alleged sense?

Goldsmith, whatever he intended, wrote, in 1760:

"I have made more matches in my time than a *grass-widow.*" *Miscellaneous Works* (ed. Prior, 1837), Vol. i, essay xxvi.

In Halliwell and Wright's edition of Nares's *Glossary* are these verses, from Taylor, the Water-poet, destined, perhaps, to afford an explanatory clue to the expression in a sense from which that now usually borne by it has been perverted:

"Licurgus did a law in Sparta make,
That all men might their barren wives forsake;
And by the same law it ordained was,
Wives might unable husbands *turne to grasse.*"

But these verses are, even now, suggestive. With allusion to a horse at grass, and therefore out of service, a wife living for a considerable period away from her husband might, by a bold metaphor, be spoken of as a *grass-wife.* A wife so circumstanced is, however, for the time being, virtually a widow. May she not thence have come by the designation of *grass-widow?* But I do not hug myself for this speculation.

Bartlett's second meaning of *grass-widow* is known, I believe, only hereabouts and for some way north from here. In the *Vocabulary of East Anglia* it is said to signify "a forsaken fair one, whose nuptials, not celebrated in a church, were consummated, in all pastoral simplicity, on the green turf." Pretty well, for one of your cloth, Rev. Robert Forby, defunct Rector of Fincham, Norfolk! But the Rev. W. T. Spurdens, dissatisfied with the elucidation of his brother-cleric, dogmatizes, touching *grass-widow*, in this wise: "This should be *grace-widow;* one who has the favour or *grace* shown her of being allowed to hide her shame under the pretence of widowhood. F[orby], [p.] 140, is merely fanciful." And what are you, sir? The question why an unmarried mother is called, by rustic euphemism, a *grass-widow* is still to be answered. Was the other import of the epithet originally misapprehended by the illiterate? F. H.

MARLESFORD, ENGLAND, February 8, 1893.

Notes.

T. Y. CROWELL & Co. have nearly ready the first volume in the "Library of Economics and Politics," edited by Prof. Richard T. Ely, viz., 'The Independent Treasury System of the United States,' by Prof. David Kinley of the University of Michigan; and 'Philanthropy and Social Progress,' seven essays delivered before the School of Applied Ethics at Plymouth, Mass.

Harper & Brothers will soon publish Mr. Howells's new novel, 'The World of Chance'; 'The Philosophy of Singing,' by Mrs. Clara K. Rogers; 'Primary Convictions,' by the Bishop of Derry and Raphoe; Horatio Bridge's 'Recollections of Nathaniel Hawthorne,' with portraits; and Justin McCarthy's new novel, 'The Dictator.' They will also add to their series of "The Queen's Prime Ministers" a biography of the Earl of Aberdeen by his son, Sir Arthur Gordon.

S. C. Griggs & Co., Chicago, announce for early publication 'Persian Literature, Ancient and Modern,' by Mrs. Elizabeth A. Reed. A facsimile of the illuminated title-page of a Persian manuscript will enrich the volume, together with a facsimile of a portion of one of the oldest known Zend manuscripts, now in possession of the University of Oxford.

A collection of papers on 'Methods of Teaching Modern Languages' is in the press of D. C. Heath & Co.

Von Sybel's 'Erhebung Europas gegen Napoleon I.,' edited as a text-book by A. B. Nichols, instructor in German at Harvard University, will be published by Ginn & Co.

'Through Colonial Doorways,' by Anne Hollingsworth Wharton, and 'Outlines of Forestry,' by Prof. Edwin J. Houston, are among the forthcoming publications of J. B. Lippincott Co.

Zola's latest story, 'Modern Marriages,' will be published directly by Benj. R. Tucker.

'Homer and the Epic' is the title of Mr. Andrew Lang's new book, in which he maintains the unity of the 'Iliad,' and discusses Wolf's attack by the light of the history of other epics, the 'Song of Roland,' for example, and the 'Kalevala.' It will be published at once by Longmans, Green & Co. The same house has in preparation a treatise on 'Telephone Lines and their Properties,' by Prof. W. J. Hopkins of the Drexel Institute.

The second series of Mr. C. R. B. Barrett's 'Essex: Highways, Byways, and Waterways' (London: Lawrence & Bullen) deals with villages and manor-houses. The author starts from the village of Newport, and, circling the county from west to east, finishes his wanderings at Harlow. The praise that we gave the first series, which treats of boroughs and small towns, may also be extended to the second. This volume is embellished with nine etchings and many other excellent illustrations; the accompanying text is pleasantly written, with no display of learning or research, and the general make-up of the work does credit to the publishers.

Prof. N. Perini of King's College, London, has edited Dante's 'Vita Nuova' (London: Hachette; Boston: Schoenhof) for the use of average students of Italian. His notes are not too numerous nor too recondite, and he gives further help by printing the modern form of archaic words in brackets beside the original in the text, thus, "etade (età)," "avvegnachè (quantunque)." The substance of the notes is eminently sensible, free alike from pedantic quibbles and from critical fads. The book is so well printed, and is in shape so convenient, that it ought to be popular even with readers who do not need its notes.

M. de Vogüé, the leading French popularizer of the Russian novelists, is also an industrious contributor to the periodical press, and most, if not all, of the books he has published are reprints of his magazine articles. Such a reprint is his 'Heures d'Histoire,' a duodecimo of 364 pages just published in Paris by Armand Colin & Co. The title of the collection is a misnomer, as the articles are nearly all book reviews, more or less worthy of reproduction. The concluding one, however, written last December, treats of the Panama scandal in a lachrymose sort of way, and especially deplores the corruption of the press revealed anew by the Panama investigation.

We have received from B. Westermann & Co. the first instalment of the fifth edition of

'Meyers Konversations-Lexikon,' after an interval which, as our readers are aware, has been filled by the issue of two annual supplements. Everything will now be freshly rewrought: the type is larger and clearer, particularly the black letter of the titles, and the longer articles are usefully divided by appropriate sub-headings; the paper is, as being free from wood, guaranteed against growing yellow. But the greatest difference will lie in the number of illustrations, of one kind and another, some ten thousand being promised. The part before us contains, besides cuts in the text, colored plates of European artillerymen, and of an aquarium; colored maps of equatorial Africa and of American history, and a colored plan of Amsterdam; and an architectural sheet in black and white, giving examples of Renaissance buildings of the sixteenth and seventeenth centuries. The barrenness of the contents of this tract of the alphabet forbids further comment, and the solid worth and accuracy of this self-renewing dictionary are too well known to be dwelt upon.

'The Published Writings of George N. Lawrence, 1844-1891,' by L. S. Foster, forms Bulletin No. 40 of the United States National Museum, and is No. iv. of the series of "Biographies of American Naturalists." Besides a striking portrait and a short sketch of the career of Mr. Lawrence, there are about 125 pages concerning his publications, especially interesting to ornithologists.

The great value of the collections made by expeditions sent out by the trustees of the American Museum of Natural History of New York city, in their efforts to secure representations from the various geological horizons, is becoming manifest through the published bulletins. Their importance is thus far most apparent in the light they throw on the forms, characters, and relationships of many species hitherto known only by fragments. One of the articles to which we refer is a sixty-six-page illustrated pamphlet, by Prof. Henry F. Osborn and Dr. J. L. Wortman, on the 'Fossil Mammals of the Wahsatch and Wind River Beds.' Another, by the same authors, relates to the 'Characters of Protoceras (Marsh), the New Artiodactyl from the Lower Miocene.' It is decided that this genus represents a distinct family which may not consistently be referred to either the Pecora or the Tragulina, as now characterized, and of which neither ancestors nor descendants have yet been recognized.

No. 3 of vol. ii. of the Bulletin from the Laboratories of Natural History of the State University of Iowa contains several entomological papers by H. F. Wickham, one of them on Alaskan forms, and a "Report on Zoölogical Explorations on the Lower Saskatchewan River" by C. C. Nutting. The last is rich in ornithological data, the list of birds being lengthy and accompanied by many field notes. Some of the names are introduced on slender evidence, as, description by natives. *Bonasa umbellus*, the ruffed grouse, is recorded from a headless body "with the characteristic reddish brown tail"; but Brewster, one of the best authorities, states that individuals of *B. togata*, the common form of the region, also have this mark. In respect to the white color on the under surfaces of so many sea birds, the author remarks that it may be directive, serving to flash a signal to others when the bird dives for prey. "Thus we can see a possible utility to the species in the possession of white under parts, this utility being at the same time no disadvantage to the individual who unconsciously gives the signal." The act of darting upon prey, whatever the color of the bird, is a signal not likely to escape notice or be misunderstood by any of the keen-eyed creatures in sight bent upon a similar mission. The whiteness of the lower parts accords with the theory advanced by Garman of a bleaching effect of the light reflected from broken surfaces, crystals of sand, ice, etc. The author's treatment of the matter suggests that, like so many others, he inclines to look upon present utility as sufficient proof of origin by natural selection.

In the form of pamphlet extras, Prof. E. D. Cope publishes a couple of papers of importance to herpetologists. The first and larger, on "The Osteology of the Lacertilia" (Proceedings Am. Philos. Society, 1892) treats of North American genera of lizards; and the second, "On Degenerate Types of Scapular and Pelvic Arches in the Lacertilia," from the *Journal of Morphology*, vol. vii., relates to genera of lizards from which the limbs have partially or entirely disappeared.

The latest issue in the Johns Hopkins University Studies in History and Political Science is a readable pamphlet of some fifty pages on 'The World's Representative Assemblies of To-day.' In the table at the end may be found a compact summary of the leading facts regarding not merely the well-known national assemblies, but even such bodies of minor importance as the Council of Andorra or the Parliament of Finland. The qualifications of members, their number, and the character of the electorate, are presented in a form convenient for reference or comparison. In the essay which precedes, the compiler, Mr. E. K. Alden, has combined a series of notes on the more important questions to which a comparative study of this sort gives rise. Of course, no attempt is made to treat any of them fully in such narrow limits; but many interesting points of view are suggested on such subjects as the size of the chambers, reëlection, committees, the referendum. One who plans to undertake a more extended consideration of the subject or any of its parts will find this careful outline an admirable guide. From the skill with which the facts are grouped and their tedium relieved by apt allusions, even non-professional readers will enjoy reading it.

We have already noticed Mrs. Zelia Nuttall's discovery of a Hispano-Mexican manuscript of the sixteenth century in the Biblioteca Nazionale of Florence, and called attention to its importance as a contribution to our knowledge of the civilization and especially of the religious conceptions of the ancient Aztecs. In making a critical study of this interesting document, Mrs. Nuttall came upon a passage which placed in her hands the key to the old Mexican system of dividing time into days, weeks, months, years, etc., and enabled her to reconstruct the calendar of the ancient Aztecs. She embodied the results of her researches in a series of tables, which she laid before the Congress of Americanists at Huelva on the 11th of last October, showing that the Mexican cycle consisted of 13,515 days, comprising fifty-two ritual years of 260 days each (less five days at the end of the cycle), or fifty-one lunar years of 265 days each (based on nine moons), or thirty-seven solar years of 365 days each. In order to equalize the lunar and solar years and to bring them into harmony with each other, ten days were intercalated at the end of the fifty-first lunar year, so that each new cycle began in the same lunar and solar positions as the first. Each period commenced with a day bearing one of the four names acatl, tecpatl, calli, tochtli. This calendar, which is by no means so complicated as it seems to be at first sight, was submitted to Prof. Norman Lockyer, who found it to be in perfect accordance with astronomical observations, and expressed the opinion that it must have been used by the aborigines of Mexico for nearly 4,000 years. At the request of the Queen Regent of Spain, Mrs. Nuttall was presented to her Majesty, who complimented her on her scholarly investigations and showed the liveliest interest in them.

In accordance with a ministerial resolution, a careful examination and description of rare MSS. lodged in the different libraries and archives of the Prussian provinces is now being made. One of the most interesting finds so far is a history of the Incas, written by Pedro Sarmiento de Gamboas in 1572. It is supposed that this is the original copy sent by the author to King Philip, of which all traces had been lost for many years. Before coming into the possession in 1785 of the Göttingen library, where it now is, it had belonged to Abraham Granov of Leyden.

The British Labor Commission has been at the pains to collate the reports of all the Bureaus of Labor in the United States—a vast labor, and extremely well performed. Whether it was worth doing at all is perhaps questionable, when it is recollected that a New York functionary named Peck, whose methods were exposed to the light of publicity during the last political campaign, was a typical Labor Commissioner. The contradictory character of the results furnished by these authorities almost passes belief. We should have been glad to have the British Commission compute the cost to this country of the maintenance of these bureaus; it is probable that the income of several thousand farmers would be required to meet the expense. The United States Commission cost $25,000 in 1885 and $175,000 in 1892. As to the practical results, they are indicated with scientific precision by the Commissioner, Mr. Carroll D. Wright, who states that "the statistical illustrations of the various features . . . are the results of original inquiry, and these statistical illustrations, taken in connection with others, which are all from most trustworthy sources and from highest authorities, constitute a grouping of facts relative to conditions claiming the fullest attention."

The March *Pedagogical Seminary* makes the interesting announcement of a purpose on the part of its conductors, provided the necessary funds can be obtained, to establish "an ideal school for young children." The intention is to embody in an actual object-lesson as many as possible of the results arrived at by the scientific study of pedagogy, beginning with grounds, building and school furniture, and ending with applied child-study in its higher forms. Such an experiment ought by all means to be tried.

There is nothing in the *New World* for March more noticeable than Mr. J. W. Chadwick's paper on "Whittier's Spiritual Career," which, after all that has been written about the poet, contains much both of criticism and insight that will repay perusal. He recurs to the late Samuel Longfellow's services to Whittier in making him a popular hymn-writer by dint of free handling, curtailing, and patching, for which the poet's gratitude may perhaps be inferred, and was probably deserved at least from the pecuniary point of view as extending Whittier's fame and increasing the demand for his works.

Petermann's Mitteilungen for 1893 opens with a paper on the ethnography of Guatemala by Dr. K. Sapper, which is accompanied by a map so colored as to show the distribution of

the nineteen different languages and dialects spoken in the republic. These are briefly described, and some information is given as to the distinguishing characteristics of the various native tribes. The author ascribes the meagreness of his knowledge to the extraordinary distrust of the Indian for the European, making it very difficult for the latter even to enter an Indian's hut. In some few districts inhabited by Indians of pure blood, there are still to be found the remnants of the old civilization, shown particularly in their methods of government and healing, and in their love for music and poetry. Improvisations, he adds, can sometimes be heard at their dances. Both music and poetry, however, are fast disappearing before the increasing influence of the Spanish, and the Indian is distinctly deteriorating. In a supplemental number Dr. S. Ruge treats of the development of the cartography of America up to 1570. After a general survey of the sources of information, he gives a descriptive list of ninety-one voyages, beginning with that of Columbus and ending with Pedro Marquez, who explored the southern coast of North America in 1573. This is followed by a similar list of about two hundred and fifty maps, charts, and globes, which were published or drawn between the years 1492 and 1570. The paper is illustrated by thirty-two of the most interesting maps.

Dr. Nansen and Lieut. Peary have found a rival in Mr. Fred. G. Jackson, F.R.G.S., who announces that he is about to make the attempt to reach the Pole from Franz Josef Land. His expedition, consisting of ten men, with sledges and dogs, will probably start this summer, and he hopes to go into his winter quarters some distance to the northward of Eira Harbor. On the supposition that land exists to within a comparatively short distance of the Pole, he proposes to spend the next summer in establishing a second and possibly a third depot of supplies still farther to the north. If he should succeed in getting within two hundred miles of the Pole, he will winter at that point, and devote the following summer to an attempt to reach his goal.

An official report states that the Pinsk marshes, represented on most maps as covering an enormous area on either bank of the Pripet River in West Russia, have been in great part reclaimed. Within the last fifteen years canals, aggregating 2,196 miles in length, have been dug, draining nearly one-half of the 16,000,000 acres of which they consist. Eight hundred thousand acres have been transformed into meadow land, immense tracts of forest have been dried and brought within reach of a market, and the river is lined with prosperous farms. Fevers have been reduced, and the terrible disease of the hair, the *plica polonica*, is said to have entirely disappeared. It is proposed to bring immigrants from Great Russia to occupy the new lands.

The late Bishop Brooks was unquestionably a bad subject for portraiture, difficult to be caught by camera or by the artist's hand. The extant likenesses of him vary not a little and are seldom satisfactory. Ticknor & Co., Boston, have just put out an etching, by Charles A. Walker, which we must take leave to think hard and unsympathetic, though the publishers vouch for its resemblance to the "Bishop," as if his appearance underwent some change on his promotion.

An erratum of more than ordinary consequence should be pointed out in our review of 'The Nationalisation of Health,' in No. 1445, in line 26 (p. 183), where "typhus" crept in for "typhoid," which is communicable through the water supply, whereas typhus is distinctly infectious, like smallpox.

—In the March *Atlantic* Sir Edward Strachey writes, in the pleasant, somewhat old-fashioned manner which we have before described, a paper on "Persian Poetry," graphic and touched with sentiment, and instinct with good taste. The subject is, at the same time, remote and much worn by the pens of critics, but he discloses such poetical charm in his brief review as to make the matter treasure-trove equally with his unusually refined literary treatment. Style is so much a lost art of the modern magazine as to make a single instance notable, though it comes in this particular case in a curiously antiquated form. The paper belongs to the period of Fitzgerald's Oxford conversations, and suggests a similarly refined culture in the taste of its author. Dr. Furness's reminiscences of Emerson, delightful in their colloquial and random character, also remind the reader of a time when writers had leisure to attend to their words and found their account in it. His anecdotes of the spirit of Harvard youths in his day, their enthusiasm for the well-turned phrase and the purely rhetorical in style, are significant of the sources of that literary success which makes the brightest spot in our book-history; and with them may be joined Dr. Hale's anecdotes of Harvard in his college days, illustrative of Edward Channing's teaching. In those times there were no Reports on the English Department of such an unenviable sort as the late half-humorous disclosures of the ability of the young students to express themselves; and possibly such records of the past may be as useful a commentary as any for the reading of those who have the training of the future Harvard authors in charge. Mr. Havelock Ellis gives some interesting statistics of the genealogy of a dozen contemporary English authors, with the view of showing that they are not of pure English blood, and makes the somewhat sweeping correlative assertion that "genius" does not exist except as a resultant of the fusion of the long-headed and the broad-headed primitive races of Europe.

—Returning for a moment to Dr. Furness's article, we remark that he says: "Our national motto, 'E pluribus unum,' does not mean, as I imagine it is generally understood, one made up of many, but one out of many." This is a very old criticism, but is as baseless as it is old, and was exploded years and years ago. But, as some young persons may be misled by Dr. Furness's doctrine, it may be as well to quote once more the familiar verses from the pseudo-Virgilian 'Moretum,' 104-6, which settles the matter so far as the Latinity is concerned:

> "*color est e pluribus unus,*
> nec totus viridis, quia lactea frusta repugnant,
> nec de lacte nitens, quia tot variatur ab herbis."

Southern scholars were rather fond of citing these verses in secession days, and no wonder. "Lactea frusta repugnant" represented their side of the irrepressible conflict, and it suited them to regard the Union as a salad and not as a growth. Those who are old enough to have read Cowper will recall his translation of the passage and the lines so distasteful to the States'-rights people:

> "He grinds, and by degrees his herbs below,
> *Lost in each other, their own powers forego.*"

—*Scribner's* brings forward a very full and detailed review of the French Symbolists, but the subject itself forbids a very clear presentation of their notion or methods. The names are given and some analysis of their mostly obscure works; the language, however, is too essential a part of the scheme of these reformers to permit the reader to feel their originality or eccentricity very accurately in the dress of a translation. Such attempts at a new mode of literature depend much on delicacies of phrase and cadence, and we should do wrong to judge of anything except their matter from this account. Their matter is at best a tale for a midsummer madness, so far as it appears here. The school has value as a sign and illustration of the *fin de siècle*, independently of its intrinsic worth. The autobiography of Audubon is a charming piece of self-revelation and of description of intimate home surroundings; it is a pity there is not more of such a simple and direct story of reality. The philanthropic papers of the magazine are continued in an account of the Andover House in Boston. The article is mainly confined to the description of the organization and its methods, and discloses almost nothing of the life of the poor in Boston. This renders it less effective in leavening public opinion, but it will be useful to the organizers of work among the poor in other cities.

—*Harper's*, besides the usual grist of travel, is distinguished by a careful summary account of the slave-trade and the man-hunt in Africa from the pen of Stanley. The cuts are very shocking, both in physiognomy and in incident, but they illustrate the text; and the measures suggested by the author, though they involve great expense and something of speculative motive, are made plausible. The element of duty in the problem is much emphasized, and the need of action in the interest of the material future of Africa as well as of humanity is set forth with the clear and precise eloquence of facts. The continuous attention which the subject has received is possibly the most promising sign that some line of action must finally be taken by civilized nations. The topic of official society in Washington is well developed by Mr. Henry Loomis Nelson, who shows how truly the social life of the nation in all its prosperous varieties is reflected in the daily round of the gatherings of people in Washington for acquaintance or private diversion. Several distinct types are cleverly drawn, and the conventional rule to which all who stay succumb is presented in all its barrenness, ennui, and routine. The more interesting part, by far, is that floating and shifting element which, though always there, does not suffer the social change, but remains in its untaught, ungoverned, and picturesque rudeness of natural good-will and lively curiosity. Mrs. Deland's tale of "The Face on the Wall" is also worthy of attention by students of morals in literature and the tendency of the popular story even in our best-reputed magazines.

—The *Century's pièce de résistance* is "Napoleon's Deportation to Elba," by Admiral Ussher, who was in charge. The account is practically unknown, and it is of great historical and personal interest in relation to Napoleon. Westminster Abbey is elaborately described and illustrated, and is the second main article of the number. The greater portion of the magazine is taken up with the lighter sort of painter-travel sketches, in which picturesqueness and distance are equal attractions to the reader. For the musical public there is a notice of Saint-Saëns; for the religious, a paper on the criticism of the Old Testament writings; and the usual serials, including the interesting correspondence of General and Senator Sherman, continue.

—On February 9 the lecture-room of the Indian Institute at Oxford was crowded by many of the Orientalists, some of them Orientals, in residence at Oxford, to hear the well-known American Zend scholar, Dr. L. H. Mills, on "Immortality in the Gâthas." The word immortality as it occurs in the Gâthas was one of those poetical personifications which in later use soon sank to the lower level of theological abstractions. Was there room for doubting its reference in the Gâthas to a spiritual and future state? As used in the Vedas, it commonly designated a supernatural eternity attached to the life of gods. Did the same word necessarily mean a life after death in the Old and New Avesta? Suppose it does not, then in several passages the Gâthic immortality, being described as this present life indefinitely prolonged, would suggest rather the "hundred autumns" of the sister book than the eternal life of Indra. It was at all events plain that the hope of immortality, as it presented itself in both books, grew out of the desire of a life prolonged on earth beyond ordinary limits. However, in the typical chapter of the Gâthas it is the soul of a *youthful* Gâthic saint which progresses towards heaven. This heaven was a life filled with holiness "in thought, word, and deed," but still it was life, and excluded death as of the evil spirit. Here we may detect the difference between the Vedic hundred years of life and Gâthic immortality, which was a banishment of death. If we were to stop at this, and insist upon excluding the notion of a future and spiritual immortality, what could we do with those Gâthic passages where this very state of "death banishment" in the present life is wrought out to a climax by appeals to an immortality vouchsafed by Mazda Ahura with the fulness of grace from himself as the head of Dominion? What of the graphic glimpses given of its inverted counterpart in store "for those believing ill, false men, evil minded"? "In falsehood's home," we read, "at last their forms abide." Moreover, there is the apostrophe to Mazda Ahura—"when, as rewarding deeds and words, thou shalt establish evil for the evil, and happy blessings for the good, by thy just discernment in the creation's final change." Gâthic immortality, though often conceived of as a deathlessness in the present life to be completed in a future state after the still sacred body should have paid the debt of nature, involved a future existence. This teaching made the Avesta the book of the other life to the pre-Christian world.

—In a college pamphlet recently printed in England for private circulation among Cambridge women students, past and present, there is given, by a leading member of the Women's University Settlement at Southwark, a statement of the aims and policy of the Settlement which invites comparison with the annual report (lately referred to in these columns) of the College Settlement Association nearer home. As an independent body, it is stated, the Southwark Settlement could not undertake a third of what it does; only by holding to the principle of coöperation with others, rather than of origination by themselves, are its members able to attempt the work they do. In accordance with this admirable principle, the Settlement provides a secretary, treasurer, and other members for the local committee of the Charity Organization Society; it also lends its helping hand to the Children's Country Holiday Fund, the Invalid Children's Aid Association, the Metropolitan Association for Befriending Young Servants, and the London Pupil Teachers' Association. The Women's Benefit Society for Southwark finds its headquarters at the Settlement, while the Nursing Association for the same area has lately come into close connection with it. District visiting, board school work, rent collecting, or "house-management," claim the energies of other workers. In addition to its federated interests, the Settlement has for its newest independent venture a Junior Club for Girls who have just left school and are under sixteen. This club, which is thus far very popular with the children, meets four nights a week and has classes in various subjects. Finally, the writer gives a highly suggestive paragraph to what she calls the "somewhat new aspect of the Settlement as a training ground for workers." Although in most fields of work, she goes on to say, the value of training is now clearly recognized, its value for the workers among the poor has not been sufficiently considered. At the Settlement, on the side of practice, the worker may acquire business-like habits and "that power of dealing readily with people of all kinds which comes from much personal contact"; while on the side of theory she may attend the lectures given from time to time, and the monthly instructions in the technical side of work, "though perhaps she will learn most from the informal talk that goes on constantly around her." Like the annual report already referred to, this informal paper has no statistics or tabulated records to offer, nor, it is stated, has the Settlement much to show in the way of buildings, or class-rooms, or apparatus of any kind. But in merely standing for the idea of the value and necessity of accurate and prolonged training for work hitherto too often recommended and taken up as an outlet for the otherwise unoccupied energies of women without the requisite qualifications, the Settlement is performing a needed service to society; while in its singleness of aim and its ideal of immediate practical helpfulness to the poor and unfortunate, it sets a standard that cannot be too closely followed by all later foundations of a similar character.

—The French journals now contain constant reports and descriptions of the "envois" to the French exposition at Chicago. The *Temps*, a fortnight ago, noticed at some length the works of art sent from the national establishments—the porcelain of Sèvres and the tapestries of Beauvais and the Gobelins. From Sèvres, besides important decorated pieces, vases, amphoræ, plates and dishes, cups, etc., painted by the best-known Sèvres artists, there are coming several busts and figures in biscuit of extreme delicacy and exquisite execution—among others, a reproduction of the (official) bust of the President of the Republic by Chapu (distinguished chiefly, perhaps, for his beautiful monumental tombs); a bust of the Republic herself, by Injalbert, whose works follow the best traditions of French sculpture; a reduced reproduction of the statue of François Boucher by Aubé—one of the most characteristic of his many portrait statues; by Suchetet, still a comparatively young man, a Leda; a Judith by Aizelin, whose female figures excel in fineness and elegance; and by Barrias, who fifteen years ago became famous through "Les Premières Funérailles," the figure of Mozart as a child. This work dates from ten years ago. The little virtuoso is represented as tuning his violin, which rests on his slightly raised knee, and his head is bent in attention; the mingling of childishness and genius in the expression is admirable. From Beauvais we are to see ten great pieces of tapestry, and six from the Gobelins, of which the most noteworthy is "La Filleule des Fées," designed by Mazerolle, the border by Galland. Other pieces of decorative art are also on their way—an Amphitrite by Mercié, a figure of ivory and gold on a pedestal of gold-work; a dish in faience decorated by Mme. Moreau-Nélaton, and cups in the marvellous gold-cloisonné translucent enamel of Thesmar. This list, which might be much lengthened, indicates that the visitors to the exhibition will have the opportunity of seeing not only beautiful reproductions, but also some specimens of the new forms of plastic art that have attracted attention in the recent Salons.

—The vigor with which study in the varied field of economics has been prosecuted in the last fifteen years is strikingly illustrated in the new edition of Cossa's well-known 'Guide to the Study of Political Economy.' The earlier work has, in fact, been entirely rewritten as well as greatly enlarged, and so appropriately bears a new name: 'Introduzione allo Studio dell' Economia Politica' (Milan: Hoepli). The extent of the general part, on methods, etc., is more than doubled, while in the historical part we have 430 pages instead of 150. The number of authors mentioned is increased from about 700 to over 2,000. Apart from this marked enrichment of material, there are noticeable improvements in classification. In the 'Guide' all the historical matter preceding the chapter on the Physiocrats was massed, with merely chronological subdivisions, in two chapters entitled Ancient Political Economy and Modern Political Economy. In the 'Introduzione,' in their place, are chapters on The Epoch of Fragmentary Work, Monographs, Empirical Systems, The Liberal Reaction and Eclecticism, The Precursors of the Science. In reading these chapters one is vividly impressed with the tentative, groping process which characterizes the progress of human thought. The survey of the modern development of economic science is very full and interesting. The chapter on the United States appeared last year in the *Giornale degl' Economisti*, and was noticed in these columns. The last chapter deals with contemporary Theoretic Socialism. We shall seem captious, but we should have been pleased to learn something of the condition of economic studies in Spanish and Portuguese America. A subject-index, in addition to the index of names, would render more accessible to the reader the wealth of special studies mentioned. Prof. Cossa has placed all students under the greatest obligation by this truly masterly work. The thoughtful reader cannot rise from a perusal of it without being profoundly impressed with the instructive past, the present vigor, and the splendid future of economic science.

MILNER'S ENGLAND IN EGYPT.

England in Egypt. By Alfred Milner, Late Under-Secretary for Finance in Egypt. London: Edward Arnold; New York: Macmillan.

THE time at which this work appears is curiously opportune, and the circumstances under which it has been given to the public are almost unique. Our readers have been kept informed of England's remarkable endeavors for the regeneration of Egypt since, in 1882, she decided, against her own inclination, to undertake single-handed the task of saving that country from the anarchy with which it was threatened. Mr. Milner's book has been

written to explain fully to all the world the extraordinary conditions under which that work has been done; the hindrances which have been met with and their origin; the degree of success attained; the national duty, as he conceives it, which devolves upon England to stick courageously to the thankless but necessary task to which she has put her hand; the duty of other nations to give her at least moral support and sympathy in her efforts to solve the Egyptian problem.

A distinctive character and special interest is given to the book by the author's official position. After serving a long apprenticeship in finance under Mr. Goschen, to whom he was private secretary, Mr. Milner was sent to Egypt to fill the important post which he has held for some years in the Department of Finance. Last year he returned to England to assume the duties of Chairman of the Board of Inland Revenue, one of the highest English departmental appointments. In his Egyptian post he must have had an opportunity to see from the inside the secret working of the whole machine of government; in his English post he must still write under a deep sense of official responsibility. Noting these facts, we observe, almost with surprise, the absolute frankness and fulness with which English methods of dealing with Egypt are discussed. It is quite impossible to conceive a man of Mr. Milner's standing writing this book without having the expressed or tacit consent of his colleagues and of the superiors who are responsible for the position of affairs in Egypt. It is not every day that the public are thus invited to look at and pass judgment upon the inner processes of diplomacy and statecraft in a sphere which is peculiarly a centre of international contention and intrigue. For this is the case in Egypt. Everybody has known in a vague way that for the last few years the political situation in that country has been one of the most anomalous in the world. Events have constantly suggested the probability that the Egyptian question might become the pivot of European politics at any moment. The irritability and sensitiveness of France touching all Egyptian matters has been exceeded only by her depth of feeling in respect of Alsace and Lorraine. For the moment of diplomatic advantage in the one case she watches as sedulously as for the moment of military advantage in the other. Turkey, too, with less power, has equal willingness to cause embarrassment, while almost every European nation has rights or interests in Egypt which tend to complicate the situation. England, meanwhile, has assumed the main responsibility for the good government of the country. It is through this political tangle that Mr. Milner undertakes to guide his readers.

Primarily his book commends itself by perfect simplicity, directness, and manifest sincerity of statement. The keynote of every effective book is in the present case unmistakable. In a recent address Lord Rosebery said that the British Empire was "the greatest secular agency for good now known to mankind. It would be nothing," he continued, "were it a symbol of violence and rapine, or even conquest; it is what it is. It represents everywhere peace and civilization and commerce, the negation of violence." This is a large claim and a large faith, but it is precisely that which, applied to the particular case of Egypt, Mr. Milner preaches in this book. He does not base his doctrine on mere assertion, but expounds and illustrates it with a fulness of knowledge and a variety of proof drawn from industrial and financial statistics, and no less from moral considerations, which must put the critics upon their mettle. As to his accuracy:

"I have spared no pains," he says, "to verify every statement, either by reference to published records or by careful consultation of men intimately acquainted with the work of the several departments of government. Mistakes there may be, but they are assuredly not due to a desire to twist or conceal facts in favor of any particular view, however strongly I may hold it. If the facts will not support it, perish the view."

This pledge of fair statement and reliance upon open argument is, we think, fulfilled throughout the book. Mr. Milner devotes his earlier chapters to a rapid review of the circumstances which forced England against her will into the occupation of Egypt, threatened, as it was, by

"a reign of blank barbarism. . . . European property was no longer safe; European blood, including that of a number of our own countrymen, had already been shed. There was every symptom of further violence, not only to all Europeans, but to all Christians. Face to face with this frightful emergency, the English Government looked to the European concert; it looked to Turkey; it looked in the last resort to combined action with France, to avert the otherwise inevitable duty of independent interference."

Forced to act alone, she threw herself resolutely into the breach. "Let it always be remembered that Great Britain did save Egypt from anarchy, and all European nations interested in Egypt from incalculable losses in blood and treasure, to say nothing of the deep dishonor which those losses, foreseen and yet unhindered, would have brought on civilized mankind." To obviate anarchy and put down a rebellion was the work of a few weeks; to establish "an order of things which should have the elements of stability and progress," was a far longer and more trying task. At the end of ten years England finds the work only fairly begun. The slowness of progress will cease to be a matter of wonder to any one who reads the chapters of this book, almost as interesting as the pages of a romance, which present a picture of the international fetters by which Egypt was bound, and the slough of native incapacity and official corruption from which she had to be drawn when English influence first began to make itself felt. Still less will the reader wonder when he traces, as he may do here, the hesitancy with which England took up any defined position or exercised any definite authority; the doubt which long existed whether her influence might not be at any moment withdrawn. What has been the net result of these ten years—for after all it is by results that the English occupation of Egypt must finally be judged? This truth Mr. Milner has fully grasped, since it is with results that he principally deals.

"If there is one thing absolutely certain, it is that the great majority of the Egyptian natives, and especially the peasantry, have benefited enormously by our presence in the country. For the few, the new system has meant loss as well as gain; for the many, it is all pure gain. At no previous period of his history has the fellah lived under a government so careful to promote his interests or to protect his rights."

This main proposition is proved by an array of facts and figures which, unless they can be controverted, leave no room for questioning. The extravagance of Ismail had left the country burdened with a debt which had risen from three millions in 1863 to eighty-nine millions in 1876. "There is nothing in the financial history of any country, from the remotest ages to the present time, to equal this carnival of extravagance and oppression." How Egypt has been saved from absolute bankruptcy, how her credit has been restored, how taxes have been reduced, how at the same time money has been found for necessary public improvements, Mr. Milner explains with the natural satisfaction of one who has taken a considerable share in the work. But in the valley of the Nile there can be no financial equilibrium without agricultural prosperity, and no agricultural prosperity without abundant irrigation plus conditions of government which leave the peasant free to employ his industry to the best advantage. The steps by which was made possible the abolition, at least in its worst aspects, of the corvée, or system of forced labor, are themselves of profound interest. For the mechanical problems of irrigation England had the advantage of being able to call in the aid of experts trained by long experience in India; for the more difficult problem of distributing the water impartially among the whole agricultural population she had to create what Egypt had apparently never before known, an honest administration. Mr. Milner's explanation of the vast improvement in the system of irrigation is crowned by a noble suggestion. An immense reservoir, costing possibly £5,000,000 sterling, is yet required to give the fullest development and the most complete security to Egyptian agriculture. Mr. Milner proposes that some portion of the enormous profit which in a year or two England will realize from the purchase of the Suez Canal shares (the original interest of £4,000,000 has increased in value to almost £20,000,000) should be applied to the construction of this reservoir. Most people will agree with him when he says: "I can think of no act which would commend itself more promptly to the equitable judgment of mankind, or which would do more to render Great Britain beloved in Egypt."

Limits of space forbid us to follow our author in his exposition of the change which has been effected in the administration of justice, perhaps the most useful of all, the reorganization of the army, or into those odds and ends of reform to which he devotes an interesting chapter. Not least frank and full is the dissection of the "policy of spite" pursued in Egyptian affairs by France. The recent crisis in Egypt gives a peculiar timeliness to the present volume, and furnishes a curious and unexpected proof of the author's accuracy and insight. Travel, study, or connection with missionary effort has given many Americans a permanent interest in Egypt. Others delight in the intricate problems connected with the application of Western civilization to Oriental conditions. To all such 'England in Egypt' may be recommended as a conscientious study of an extremely complicated question.

CARPENTER'S INDIA AND CEYLON.

From Adam's Peak to Elephanta: Sketches in Ceylon and India. By Edward Carpenter. London: Swan Sonnenschein & Co.; New York: Macmillan. 1892.

THIS book, of fewer pages than the days in the year, is more instructive and withal entertaining than many a more voluminous and pretentious work. Its author brought knowledge home because he carried knowledge out. His sketches, also, were largely pencillings by the way, such as only those travellers make who feel that half a word fixed on the spot is worth a cartload of recollections. Then, his physique was admirable. After shivering through a sleepless night on a mountain, he walked twenty miles the next day in equatorial heat.

He did not mind joltings in bullock-carts so long drawn out that they would have made most men stage-crazy. He had a quick eye to catch salient points in nature, art, and each change of many-colored life. More than all, he came into familiar and confidential intercourse with natives to a degree quite exceptional for an Englishman. Everywhere he secured friends among the native proletariat.

One of the earliest of this class was a rice-raising peasant near Candy in whose cabin he lodged, and who became his guide, philosopher, and friend up Adam's Peak, across the country from it to the River Kaluganga, and down stream in a native bark. In this tramp and others like it the Englishman was immersed in a flood of Orientalism, and took it in as by absorption at every pore. To every Socialist he became as a twin brother. He also made himself at home with schoolmasters, barbers, opium-sellers, railroad clerks, and even Brahmans, all of whom could speak broken English, and no one of whom could fail incidentally and unawares to teach him much he would not otherwise have learned. He thus had an inside view of coolie slavery. His estimation of the palm was heightened when, on his remarking that palms could not grow in England, a native cried out: "How can you live there?" He was admitted to esoteric midnight mysteries, seldom witnessed by strangers, and has filled a chapter with realistic details concerning a nocturnal procession and voyage of the gods, concerning Nautch girls, offerings, music, etc. On the last topic Mr. Carpenter, being himself a musician, expatiates for more than half-a-dozen pages, which, though Greek to outsiders, must be full of significance to the initiated. When he first came to Ceylon, he was criticised by his first Tamil friend about his way of calling him and the rest of the population, whether Tamil, or Mohammedan, or Cingalese, all indiscriminately *natives*, "as if we were so many *oysters*." The rebuke seemed so just that he henceforth, to the end of his book, gave the name "oysters" to all non-Europeans. Thus frequent contact with Hindu life at many points exercised his senses to discern lights and shades where otherwise all would have been of one color.

Mr. Carpenter went to the Orient in search for a religion. He encountered one sage of India who might have been a descendant from the Gymnosophist of whom Alexander inquired how a man might become a god. At all events, this Guru, or Illuminated Master, so impressed the traveller that he sat for weeks at his feet, though he had found nothing to reverence in Christendom. The seer was as affable as the archangel to Adam, "only requiring a question to launch off into a long discourse—fluent and even rapt for an hour or two." This was the more remarkable because his speech was an unknown tongue to his English disciple, who could not even count in Tamil. Thanks, however, to an interpreter, Mr. Carpenter gathered enough of the hidden manna to fill several chapters of his book. The aspiration of the Gnanis, or Theosophists, is to a new order of consciousness—cosmic-universal—passing into ecstasy. Among the methods of attaining to this exaltation of one *vere adeptus*, who "swims into identity with the universe," are self-torture, Pythagorean silence for years, repeating the same word for days together, fixing attention for as long a period on his own breathing, effacement of all thought and at last of every desire. These austerities gave the English inquirer no great shock. But hearing that the fault is in the stars and not in ourselves if we are underlings, that copper may be turned into gold, and that the earth is flat, the sun at night hiding behind Mount Meru, he could not repress some sceptical doubts. The only answer he got was, "These things are so, such has been the tradition from a time beyond all memory. They cannot be spoken against." Mr. Carpenter had a similar experience at the temple of Tanjore. When a priest told him that the temple never cast any shadow, he said: "Why, we are now walking in its shadow, and would be sunstruck if we did not." The answer in substance was, "We must never trust to our senses when they run counter to tradition. They may delude; it cannot." On the whole, the religious pilgrimage of Mr. Carpenter was less successful than that of the Magi. He was, indeed, deeply impressed by the sincerity, earnestness, and whole personality of his great master, the Guru Ramaswamy, yet was not ready to do him homage with gold, frankincense, and myrrh. The only missionaries he notices were the Salvationists, and these he admired greatly.

Regarding the permanence of English dominion over India Mr. Carpenter is quite in accord with the writer of the present notice, who travelled there at the same time. The fewness of the English—not one in a thousand—made a cumulative impression, growing with the growth of the journey. Their inability to live in the country without an annual flight to the mountains, their sending wives home for health and children for education, their pervading passion to leave India themselves—if not with a competence accumulated, then to return to England on a scanty pension—these things were ominous. Still darker was the prospect arising from the fact that there is a great gulf fixed between English officials and commercials, and one still greater between them both and missionaries as well as Eurasians, the children of native mothers and European fathers. But these sections of the ruling race are not severed from each other so sharply or so hopelessly as all of them are from those who figure in Mr. Carpenter's pages as "oysters." At only one place could he discover anything like a cordial feeling between the rulers and the ruled. He compares the aloofness of the English from natives to that of whites from blacks in our South. Yet English and Hindus are of the same Aryan stock. Sepoy gunners in 1857 were so superior to English that they have ever since been excluded from the artillery. In the Bombay court, English barristers showed up feebly against native pleaders, and Mr. Carpenter thinks the educated oysters, if anything, superior to the Englishman in matters of pure intellect. For some years a congress of delegates from all India at its annual sessions has demanded some share in the Government. Not a month before Mr. Carpenter landed in India, Mr. W. S. Caine, late a member of Parliament—an agitator strangely unmentioned by Mr. Carpenter—was holding mass-meetings in India and demanding a mild form of home rule. At more than one of them the present writer was at a loss whether to wonder more at the throng of natives or at the utter absence of English. Each fact was full of meaning. The first Ceylonese with whom Mr. Carpenter companied was always asking him about Europe. As it was in the beginning, so to the end he found men's ideals Western. They longed for Western culture, Western arts, and Western institutions. Dreams of these things seemed already leavening the whole lump. Such dreams he held to be a long step, and perhaps the most important one, towards their realization. Such dreams, disturbing the slumbers of three hundred millions, cannot leave long intact "the enormous faith of many made for one" which is the chief corner-stone of the English empire in India.

Mr. Carpenter's readers will enjoy many racy anecdotes of a piece with the following: An English maiden, in the afternoon of her best days, was pleading with a rajah against child-marriage. He admitted that it was bad, but thought it also an evil that there was no English association to provide husbands for ladies like her before their hair grew gray.

Le Rêve. Par Émile Zola. Illustrations de Carloz Schwabe et L. Métivet. Paris: Flammarion; New York: J. W. Bouton.

Among the few men who, last year, gave distinction to the Champ-de-Mars Salon, Carloz Schwabe was conspicuous. He had up to that time been known chiefly as one of Sar Péladan's flock, not the strongest recommendation. But if the drawings for the illustration of Zola's 'Rêve,' which he then exhibited, contained mysticism, or symbolism, enough to please ardent followers of the Rosy Cross, in them also were sounder qualities to attract the artist. These drawings, with the text, were afterwards (throughout the summer and early winter) published by Flammarion in separate numbers, which have now been gathered together and issued in one volume.

To those who saw the originals, the reproductions lose greatly by being printed in black and white; for nothing was lovelier in the drawings themselves than what might be called the color designing. With a few tints, Schwabe had produced a harmony to which tone and modelling were so well subordinated that his work charmed because of his supremacy, not as a mystic, not as a draughtsman, but as a designer in color. This was the capacity in which he excelled; and, therefore, it seems to us that even the many who do not know the originals must in the reproductions be conscious of a certain incompleteness, in some cases of a certain barrenness, which irritates and puzzles. Another drawback is the very indifferent printing. Illustration after illustration is marred by an effect of weakness for which the printer, and not the artist, is responsible. It is unfortunate, since first impressions are not easily set aside, that this feebleness is most apparent on the first page, where the border of passion flowers is forlornly faint, and what was meant to be the black mass of the cathedral, for the bringing out of the figure in stronger relief, is but a dirty gray smudge.

It is only fair to Schwabe to point out these defects at once; we are too apt to take the illustrator to task for the faults of the various craftsmen through whose hands his work must pass before it is presented to the public. And when it comes to Schwabe's actual designs, while they may prove a problem to the layman who seeks for meaning in a painting or a drawing, they are a delight to the artist who cares alone for treatment and method. The aim of the illustrator of novel or tale, as we understand it, is not to borrow and repeat at different angles a face, or type, that happens to please the author, not to suggest merely the main incidents of the plot, but to express in drawing the pervading feeling of the story he illustrates, or, in other words, to show himself in sympathy with it, and, at the same time, to make his subjects little more than an excuse for a beautiful arrangement of lines, or of figures, or of landscape, or of architecture that will fitly decorate the page. Judged by this standard, Schwabe must be counted a master of illustration. His tendency to that

mysticism which is the latest Parisian fad makes Zola's 'Rêve' a book especially adapted to his purpose. Angélique, living almost within the sanctuary of the old mediæval church, spending her days in embroidering mystic symbols and strange flowers on priestly garments, spending her nights in dreams of saints and angels—Angélique, whose love was born of her dreaming, and in its birth and growth had for background spring, full of sweet blossoms and sweeter perfumes—Angélique is the heroine to provide Schwabe in endless variety with the motives he loves best. From her broidery frame, the annunciation lilies and passion-flowers and roses stray into his drawings to surround one page with lovely arabesques; her visions fill another with heavenly figures which, like haloed saints and virgins of old, are a decoration in themselves; and Spring trails her blossoms in exquisite scrolls and diapering over his paper, as through the seclusion of Clos-Marie. Indeed, it is hardly too much to say that Schwabe's realization of Angélique's mystic reveries gives a clue to the 'Rêve' which many may not have found in the text; while his maddest flights of symbolism, instead of seeming foolish affectation, are, to the appropriate illustration of Zola's story, absolutely indispensable.

But it is when we consider the methods by which he has expressed this mysticism that his drawings are most interesting. We know the way in which this would be managed by the symbolist—the name answers for want of a better—of the English school: excess of symbolism and primitiveness of treatment would emphasize the soulfulness of the draughtsman and justify indifferent draughtsmanship; decorative effect would be sought, if sought at all, through archaic means. And if the artist endeavored to explain wherein the merit of the result lay, he would tell you it was entirely in the meaning, for too often, if shorn of meaning, the picture or drawing, on the face of it, would be worthless. But it is a very different matter with Schwabe. It is not because of his symbolism, but despite it, that his drawings achieve distinction. As illustrations to Zola's novel, their curious mysticism has its value. But if we saw them apart from the book, knowing nothing of it, we should never stop to ask their meaning, so great would still be our pleasure in their beauty and his accomplishment. Not by aggressiveness of symbol, but by simplicity and sobriety of line, does he command attention. Nor does he rely upon Greek drapery or Dürer-esque handling for success as book decorator. His people wear every-day dress, his men coats and trousers, his women commonplace skirts and blouses; his technique is that of the modern man who has been trained to work for process reproduction. But the dignity of his well-balanced compositions, the grace and almost solemnity of his well-drawn figures, produce a far more decorative result than the strained archaism of a Burne-Jones or the exaggerated morbidness of a Rossetti. It is easy to see that the subject has appealed to him only when it has afforded the chance to carry out his decorative fancies. If he has made the dream of Félicien as St. George, accompanied by troops of virgins, a motive, it is because he has realized beforehand the marvellous contrast to be had between the glory of the heavenly hosts and the starry skies and shadowy woodland of night; if, with Angélique, he has personified Spring and her attendants, it is because of his appreciation of the lines of figures to which, nude or draped, he can appropriately lend the slimness and yet voluptuousness that fascinate in Botticelli's Venus. If, in a word, the young girl's visions appeal to him above all else, it is because, like Blake, he feels keenly the beauty to be had in spirit forms sweeping through space, the majesty of winged Death, the force of impossible grotesques.

While there is so much that is fine in his drawings, we must also admit that, at times, his flowery borders strike a discordant note in the otherwise austere and stately composition. This is especially the case in the cover, where the row of passion-flowers at the base of the design seems to belong rather to South Kensington than to the art that produced the climbing houses, surmounted by the buttressed church, the dove, or Holy Ghost, as you will, encompassing the town with his feathered wings. The flowers, however, are always beautifully drawn, and we are less disposed to discover blemishes in Schwabe's drawings, when we turn from them to the illustrations of L. Métivet, who, for one reason or another, illustrates the concluding chapters. The latter has modelled his style on Schwabe's, but, with him, angels degenerate into the sugar ornaments of the wedding cake, Angélique is transformed into a second-rate model for a fashion-plate, decoration offends by its pretension and banality. It needed but these drawings to convince one more fully of the truth to be learnt from Schwabe: in the designer's work meaning counts for nothing; it fails or succeeds according to the measure of his artistic achievement.

The story itself is too well known to call now for further criticism. But its reappearance in Flammarion's edition is a noteworthy event, even in these days, when illustrated books are the rule and not the exception.

Faith-Healing, Christian Science, and Kindred Phenomena. By J. M. Buckley, LL.D. The Century Co. 1892.

Among the magazine papers of which this book has been composed, those on "kindred phenomena"—astrology, dreams, presentiments, witchcraft—have small claim to be reprinted. The others, too, seem to us to derive their chief value from the copious extracts made from the bedlamitish writings of expositors of faith-healing, Christian science, and mind cure. This jargon ought to warn off any sane and disciplined mind; and it probably would always do so if not preceded by reports of extraordinary cures. Within limits, Dr. Buckley concedes the reality of some of the alleged cures, but, like the medical faculty, he can come no nearer to an explanation of them and of well-known instances of the effect of imagination on bodily conditions than to say (p. 25): "In all the foregoing cases, the cure or relief was a natural result of mental or emotional states." In other words (p. 38), "the 'mind cure' . . . has a basis in the laws of nature." And again (p. 42): "A formula can be constructed out of the elements of the human mind which will give as high average results as their [the faith-healers'] prayers or anointings. That formula in its lowest form is '*concentrated attention*.' . . . Passes, magnets, anointings with oil are useful only as they produce concentration of attention, reverence, and confident expectancy."

If this "formula" were invariably or generally effective, there would appear to be a useful field for professors of it, and Dr. Buckley would have little ground of quarrel with the faith-healers, especially if they dispensed with prayer. His chief concern is to confute the notion that prayer has anything to do with the cures he finds it necessary to admit, and his chief argument is derived from the restricted field of operation—the nervous system. To cure deafness or lameness is one thing; to restore an amputated ear or limb is another. If Dr. Newton had performed a surgical or evolutionary miracle of this sort, his pretensions to have procured the intercession of God would stagger our author, for the Bible record of the marvellous works of Christ and his apostles would be paralleled. They (p. 41) "made no distinction in cases." Indeed, Dr. Buckley would be unable to credit the New Testament miracles of this sort if they were unsupported by doctrines which, "applied to men's own needs and lives, . . . prove their divine origin by the radical and permanent changes which they make in character." He is also comforted by the reflection (p. 42) that "no account of failure on the part of Christ, or of the apostles after his ascension, to cure *any* case can be found. Neither is there a syllable concerning any *relapse*, or the danger of such a thing, . . . in the New Testament." But, as he affirms (p. 61) that "the credibility of the record concerning Christ's works is a question which cannot be raised by Christians, whether they hold the superstitions of the faith-healers or not," it is useless to discuss with him the imperfections of that record.

It would be equally futile to dispute the incontestable proposition (p. 43) that "none can demonstrate that God cannot work through second causes, bringing about results which, when they come, appear to be entirely natural, but which could not have come except through special providence, or in answer to prayer." This is advanced in the interest of "the Christian doctrine of answer to prayer" for the sick, "one of the most consoling privileges." "It would be a strange omission," continues Dr. Buckley, "if we were not entitled to pray for comfort, for spiritual help, for such graces as will render continued chastening unnecessary, and for recovery, when that which is desired is in harmony with the will of God." And it appears to us strange ratiocination by which (p. 44) "the Christian, in his personal religious experience, may believe that his prayer was the element that induced God to interfere with the course of nature and prolong life," and the Christian faith-healer may do no such thing; by which belief in faith-healing has a tendency (p. 45) "to produce an effeminate type of character which shrinks from pain," and "sets up false grounds for determining whether a person is or is not in the favor of God," and "opens the door to every superstition," while belief in answer to prayer for the sick is attended by none of these evils.

Dr. Buckley can hardly expect that all his readers will overlook his "strange omission" to discuss the efficacy and moral tendency of prayers to avert or interrupt droughts, floods, tempests, earthquakes, pestilence, and shipwrecks; whether, for example, the evangelist Moody "may, in his personal religious experience, believe that his prayer was the element that induced God" to keep the *Spree* from sinking, and is justified in citing this instance of answer to prayer in his revival meetings (as we understand he does). To some not irreverent minds these practices and pretensions seem as superstitious as that which Dr. Buckley so brands, viz. (p. 45), "opening the Bible at random, expecting the Lord so to influence their thoughts and minds that they can gather His will from the first passage they see"; or as his own making sickness the result of God's "chastening," in order to find a reasonable ground for begging Him to be merciful to the invalid. Neither more nor less superstitious

was the Rev. Cotton Mather's "Burnings bewailed: in a sermon, occasioned by the lamentable fire which was in Boston, October 2, 1711. In which the sins which provoke the Lord to kindle fires, are inquired into"; or the Rev. Thomas Prince's thanksgiving sermon at the South Church in Boston, August 24, 1749, on "The natural and moral government and agency of God in causing droughts and rains"; or the Rev. James Allen's several sermons, in 1679, of "Serious advice to delivered ones from sickness or any other dangers threatning death, how they ought to carry it, that their mercyes may be continued, and after misery prevented." Indeed, we are very much of the opinion that Dr. Buckley's *argument* in this volume will do more to awaken scepticism among the orthodox than to rout the faith-healers. It would, we are sure, make very little impression on the Rev. A. S. Orne of Haverhill, Mass., formerly the city missionary, who heals by anointing with oil, laying on of hands, and prayer, and who, on the 17th of January last, lost an infant by pneumonia which did not prove amenable to this treatment. He obtained a diagnosis from a physician, but asked for no prescription, saying (as the Associated Press reported): "I am not of this world, and I try to follow the orders of the Scriptures; and as God did not heal my child, I believe He has another object in taking her away."

Russia under Alexander III., and in the Preceding Period. By H. von Samson-Himmelstierna. Translated by J. Morrison, M.A. Edited, with explanatory notes and introduction, by Felix Volkhovsky. Macmillan.

THE average reader is likely to derive more bewilderment than profit from the curiously mixed contents of this volume, whose peculiarities begin on the title-page, adorned with the name of the translator in large type, that of the editor and introducer in still larger type, and that of the author in letters which would justify the public in demanding that a pocket-microscope be thrown in with each copy. To begin with the introduction, out of respect to the prominence given to the name of the editor, we gather from it that Mr. Volkhovsky either wholly rejects, or three-quarters discredits, the greater part of the work he patronizes in such flaunting style. We notice two misstatements of fact, the first unimportant, the second calculated to mislead grossly as to the Russian Government's motives and methods. Ivanoff's great picture of "Christ Coming to be Baptized," which every visitor to Russia should make a point of seeing because of the innumerable references to it, must be looked for in the Rumyantzoff Museum at Moscow, not, as stated, in the Hermitage at St. Petersburg. The statement that "the Russian people are allowed to be informed now and then, *post factum*, . . . at what reviews the Tsar has made his appearance," is intended to strengthen the erroneous notion, which already prevails abroad, that the public does not know when and where to see the Emperor, that secrecy is preserved as to his movements, out of fear, and the like. As a matter of fact, not only is the Emperor's presence frequently announced in the newspapers beforehand, in cases where the occurrence is isolated, not of periodical recurrence, but public notice is given of the regular court festivities, in the form of orders as to uniforms, entrances to the Palace, and so forth, for the guidance of courtiers; and the annual repetition of the reviews mentioned is so thoroughly well understood as taking place on fixed days that no notice of any sort is needed to post the public as to particulars, since even the dress required is known.

The bulk of the introduction is too long and complicated, with its truths and half-truths produced by one-sided views, to permit of detailed examination here. Something of the same elements pervades the notes in the appendix furnished by the editor. For example, the note about the "May fires" of 1862 would seem to deny that there was arson, or that revolutionists had a hand in them. It should have been stated, in justice, that all the persons who lived at points visited by these fires believe in arson to this day, and that if, out of the two hypotheses upheld by different persons nearly concerned, that which attributes them to the action of Poles sent into residence in the distant Russian towns thus afflicted, be rejected, the other hypothesis, that Russians set the fires, must be accepted—which is equivalent to proving that revolutionists or abnormal citizens, however called, were the authors.

The chapters of the main work which purport to describe the characters of the Emperor, Empress, and other members of the Imperial family are interesting. In their general outlines there is much justice and truth, mingled with various misapprehensions and prejudices such as we might expect from a German like Von Samson-Himmelstierna, of the ultra-patriotic type. It is positively comical, however, to find him coupling Count L. N. Tolstoi with Pobyedonostseff and Countess Antoinette Bludoff in religion. The author should have notified us, by the way, that Countess A. Bludoff is dead, and he might have furnished some spicy details of her fanatical power had he been perfectly acquainted with his subject. His greatest departure from accepted standards is when he explains the position of the Grand Duke Vladimir's wife, Marie Pavlovna. Naturally, he takes up the cudgels for her, on account of her German birth and sympathies. But when he goes so far as to say that "she is persecuted and slandered because she is a Lutheran, and has remained so," and so on, he fires absurdly wide of the mark, not only as to the fiction of her persecution and slander, but also as to the reason for her unpopularity. His praise of another Grand Duchess of German birth is also somewhat amazing to the initiated.

All this part of the book is, nevertheless, very interesting, though hardly important. We may take exceptions to such statements as that Russia "is a country which has already become effete," and so forth (p. 85), in face of the undeveloped vigor of mind and morals of the masses; and it is hardly permissible to leave uncorrected the assertion, in support of Pobyedonostseff's intolerance, that "in the summer of 1888 he celebrated the twenty-fifth year of jubilee of the conversion of the Uniats (the Orthodox Christians who recognize the headship of the Pope), with all the pomp of Church and State." What was celebrated at the time mentioned was the conversion of the Russians to Christianity in the tenth century. These few instances will serve to show what measure of confidence we may place in the author's statements of fact, and his freedom from, or permeation with, national prejudice. The chapter on Finland is valuable only as a concise historical account. If it proves anything, it proves that Finland has no reason to yearn for a renewal of the old relations with Sweden. It affords no help in understanding the present situation or problems.

The remainder of the book is the most authoritative, interesting, and valuable portion, being derived from Russian sources, with but few interpolations in the translation by the German author. Nevertheless, it is likely to seem heavy, remote, incomprehensible to the general public, which will with difficulty follow the careers of the prominent Russians therein treated, unless considerable preliminary knowledge is taken for granted. For the special, careful, well-prepared reader, however, there is much to interest and instruct in the chapters on the Aksakoff family, Kosheleff, Krayeevsky, and Byelinsky, and they afford sufficient excuse for the publication of this rather unpleasantly fragmentary selection from Von Samson-Himmelstierna's work. It is a pity that, with such handsome paper, type, and binding, more pains had not been taken with the proof-reading, not only of the Russian and other foreign names, but with the English, which now annoys with such mistakes as "abrogated to himself the right," "alumini" (for *alumni*), and the like.

First Days amongst the Contrabands. By Elizabeth Hyde Botume. Boston: Lee & Shepard. 1893.

WE have here a very interesting book, and one almost unique in its intimate reproduction of one of the most significant and pathetic aspects of the civil war. Mr. Higginson's account of his experience with his black regiment is more akin to it than any other writing, but whereas that dealt principally with the men who had just escaped from slavery, this deals principally with the women and children, and with the first attempts to educate them. The book is very different, again, from Mr. Higginson's in its lack of literary form. But this defect has its excellence: without art or artifice we are brought as close as possible to the circumstances of the shifting time; the incoherency and scrappiness of the narrative give the impression that we are reading extracts from a contemporary journal, and not the uncertain recollections of another generation. That the arrangement of the matter is topical and not chronological has much to do with the incoherency and the frequent repetition. But it is the narrative of a lady who was one of the first teachers on the South Carolina coast, who has been for many years at her post, who is a keen observer and a good reporter, and who, best of all, brought to her task a quick and noble sympathy with the people she was trying to befriend. She had been in the South before the war, and had made herself acquainted with the true character of slavery. She does not believe that the slaves were so contented with their slavery as do some others who are not so well acquainted with the facts. She has several stories illustrating the intense interest of the slaves in the fortunes of the war—one of a waiting-maid whose master used to spell the war-news to his wife so that the girl might not understand; but she remembered the letters, and hastened to spell them to an uncle who could interpret them. Asked by Miss Botume if she could still do this, she said, "Try me, missis; try me an' see," and Miss Botume spelled a long sentence as rapidly as possible, and the girl repeated the letters without a mistake. In her first chapter our author speaks of receiving 'Uncle Tom's Cabin' in Central Georgia in 1850—the completed book. But it was not published till March 20, 1852.

Nothing could have been more grotesque than the appearance of the negro refugees as they came flocking into the Union lines. A huge negress was seen striding along with her homi-

ny-pot, in which was a live chicken, poised on her head; one child on her back, under each arm a smaller one, her apron tucked up and full of clothing, a little dog running by her side, and a pig trotting on before. But the humors of the contrabands' speech were those which had for Miss Botume the greatest fascination. The use of the nominative for the accusative, and the accusative for the nominative, was the most common trick: "Her b'longs to us now, and us b'longs to she," said one of the girls, describing her relation and that of her companions to the new teacher. "Him's feminine, Miss Ellen! Him's a gal!" said another, trying to parse *sister*. Then, too, there were the humors of ignorance and of the delight in knowledge. To the question, "Who wrote the Commandments?" one answer was, "Uncle Sam," another "Gen. Saxby" (*i. e.*, Saxton), and a third, "Columbus." The question, "Who is Jesus Christ?" brought similar replies: "Gen. Saxby, sar," and "Him's Massa Linkum." After Lincoln's death one of the leaders of the prayer-meeting, whose prayer in its perfect rhythmical flow was like a solemn chant, after calling the dead President by every tender and endearing name, ended with, "Massa Linkum! our 'dored Redeemer an' Saviour an' Frien'! Amen!"

There are more tears in these things than there is laughter, though there is much of that. There is much comfort in them for aged abolitionists, now getting few upon the earth. If they have ever doubted that the people for whom they fought the good fight were worthy of their labor and fidelity, they would here be reassured. The desire of the slaves to learn, their feeling that the alphabet was a talisman that would open for them every door, has often been reported, and it has various illustrations here. None were too old to try to learn, though some tried in vain. One charming instance is of a father and mother, "great, stalwart creatures, black as ink," in one class and their three children in the next higher, these scandalized by their parents' ignorance, and the parents delighted with their children's marvellous attainments. One little fellow had been with Jefferson Davis; Mrs. Davis had made much of him and he had been her children's playfellow. She herself gave him into Gen. Saxton's care when the bad cause was lost. He was always loyal to her and her husband. He apologized for his scanty outfit: "Her couldn't do any better"; and when the little contrabands were singing their resolve to "hang Jeff Davis to a sour-apple tree," he dashed in among them with the cry, "Three cheers for Jefferson Davis!" Miss Botume has several stories of the devotion of the women to their erring sisters, which are deeply affecting. She had refused to help one of these, and, insisting that she must keep her word, was met with, "That's so, ma'am. You knows best. You *mus'* be right, fur you'na kin read the Bible, and so you must know best. But I has now to go to the gal, poor creeter!" She went, but not without the necessaries for which she came. One picture will be apt to haunt the reader's memory—that of three women sitting side by side upon the floor making their laps a bed for a dying girl. The patience in sickness was so remarkable that it seemed like apathy.

The general impression of the colored people given by Miss Botume is most interesting and engaging. Those of the islands about Hilton Head were of the lowest grade in point of civilization; hence a more absolute simplicity, which the friction of the reconstruction period did much to wear away. But whatever has been lost, the gains have been incalculably great. The statistics of Miss Botume's last page are almost too good to believe. They are those of Dr. Beard, the Secretary of the American Missionary Association. Where, twenty-seven years ago, no colored child was legally permitted to read, now there are 25,530 schools in which 2,250,000 have learned to read and most of them to write; there are 238,000 pupils in the colored schools and 20,000 colored teachers. There are 150 schools for advanced education, and 7 colleges administered by colored presidents and faculties; and of the presidents 3 were formerly slaves. There are 154 colored editors, 250 lawyers, 740 physicians, and there are 247 colored students now educating themselves in European universities. Still more remarkable is the industrial development. Here are the elements which are very gradually, but surely, solving the race problem of the South. In the perspective of another century the wonder may possibly be that so much was accomplished in so short a time.

Carriage Driving in and near unto Western Massachusetts. By Clark W. Bryan. Springfield, Mass.: C. W. Bryan & Co.

THE cover of this little volume is too dainty for its proper use, which is to fit the pocket of the author's imitators. We do not mean that his chapters, originally letters to the Springfield *Republican*, cannot be read with pleasure in and for themselves; they can be, they have been by thousands, especially those in exile from the home of their childhood. Still, Mr. Bryan makes no pretension to literary art or gift of graphic description, and in his homely and racy way simply aims to report the drives which he and his wife have undertaken from Springfield as a centre, and in the space of four or five days. Brattleboro, Vt., on the north, and Hudson, N. Y., on the west, mark the longest radii of these excursions, while Worcester is all but reached on the east. From the "heart of the Commonwealth," then, to the New York border, there is very little of Massachusetts which Mr. Bryan has not driven over or seen from near or far: and while the Berkshire Hills and the valley of the Connecticut receive the most attention, a glimpse is afforded of the rare scenic beauty of Worcester County, which yet awaits its *sacer vates*. Bashpish Falls, in the extreme southwestern corner of the State, is almost the only significant natural feature of this tract which Mr. Bryan leaves unvisited and even unmentioned; but since he now and again crosses the border, we marvel that he has never essayed the incomparable drive from Williamstown to Bennington, Vt., especially in the height of the autumn coloring, with a return trip over Florida Mountain and down the Deerfield Valley. He has, indeed, driven up this valley, proceeding from Greenfield through the little wilderness of the divide to Shelburne Falls, and so on to North Adams, and has felt the charm of the route without being able to convey a vivid impression of it. He ought to fit himself, by taking it in reverse, to give an opinion as to which is the more delightful—the eastward or the westward journey. We remark that this kind of observation is conspicuously absent from his diaries, though he frequently retraces his course. So far as our own wanderings have coincided with his, we find him going into raptures at the proper places, as, for example, over the romantic drive along the Farmington River from Otis to New Boston.

It is pleasant to see the unconscious testimony of these pages to the native love of New England—not that New England (the Puritan nursling) which Increase Mather, Judge Sewall, and their colleagues in the overthrow of Andros so revered as time's noblest offspring among human governments; but first the face of the land, its mountains and its streams, and the very air which stimulates the mind to independence and invention, and then the people, kindly and helpful—the "folks." Mr. Bryan is such a lover, and it hurts him to view the deserted towns only too abundant along the road, victims of "the logic of events," he concludes, meaning for the most part the logic of the locomotive. "The railway up and down the Connecticut River valley," he says on p. 157, "has siphoned the life blood of the village over the hills and far away to the eastward"; and he quotes the rustic who thought it queer he could get only $150 for a hillside pasturage when "a picture painter down in Springfield got $275 for a picture of two or three old beech trees which have been there ever since Becket was first discovered." He devotes a whole chapter to Washington, the once prosperous birthplace of the late Governor Morgan of New York, who left in his will $5,000 for the care of a church already a prey to the elements, while no remnant of the congregation is to be found capable of undertaking the trust. The example shows that men should not leave such benefactions to their wills. The library and the academy are the stakes which well-to-do absentees, turning fondly homewards in thought or in person, can effectively drive to stay the land-slide of emigration, as Mr. Bryan shows at more than one point. Even without these, one town at least contrives to hold its own. "There would seem to be here [in Hawley]," says our tourist, "an honorable exception to the old rule of country life, when all the young people leave home to go out West and grow up with the country, or to seek New England city life, if the evidence to the contrary which the well-filled church on Sabbath morning presented, may be relied upon."

No thoughtful observer can doubt that New England's decays are in time destined to be repaired, if only by the summer resident, and Mr. Bryan's book is a practical guide to the seeker after "abandoned farms" and sites glorious in their prospect and enviable for their healthfulness. It is not necessary, in fact, to go so far as Vermont or New Hampshire. For this reason we regret that Mr. Bryan, over and above or in place of the capricious illustrations, did not furnish route-maps for each of his jaunts. But it is evident that he does not yet appreciate the maps of the new survey of Massachusetts, which, cut up in sections for folding in the pocket, show all the roads and relieve the traveller from the necessity of inquiring his way. He might, as he is his own publisher, offer three or four of these sheets thus prepared in connection with his little volume. In conclusion, it need hardly be said that he has written as much for the benefit of the pedestrian or the wheelman as of the carriage-driver.

Materials for the Study of Private Law in Old Japan. Part I., Introduction. Part II., Contract; Civil Customs. Part III., Contract; Legal Precedents; section i., Money Loans; Letting and Hiring. Part V., Property; Civil Customs. By John Henry Wigmore. Tokyo. 1892.

New Codes and Old Customs. By J. H. W. Reprinted from the *Japan Mail*.

THIS contribution by Prof. Wigmore to the study of Japanese institutions is highly inte-

resting and important. The value to comparative legal science of a careful investigation of the customary law of such a country as Japan, with its ancient and isolated civilization, is beyond question. And the volumes before us, the subject of which, hitherto almost wholly unexplored, is the private laws and customs of Old Japan, give ample evidence of the laborious and scholarly completeness with which the work has been done. These volumes, which include nearly a thousand pages of the Proceedings of the Asiatic Society of Japan, are to be supplemented by two others now in preparation by the same author, dealing with the law of contract (commercial customs), of persons (civil customs), and four additional volumes of legal precedents. The sources are original documents in the Japanese Department of Justice, discovered by Prof. Wigmore himself, almost by accident. Some of these are official records of actual decisions of the judges. Translations of many of these decisions, which in their cautious regard for precedent are worthy of an English court of common law, make up the volume of Precedents. The indifference of native scholars, in this era of imported codes and European ideas, to the study of their inherited institutions, made it doubly important that the work should be done before the materials became still more inaccessible. We are told that a well-known Japanese law lecturer is in the habit of dismissing the whole subject of the customary law as a "laughing-stock." And this in a country which, from the end of the sixteenth century, had a registry of land titles; where bills of exchange were known from the thirteenth century, and banks, with deposits, checks, and even a clearing-house, from the middle of the seventeenth; where regular bankruptcy proceedings have long been provided by law; and where a rice-exchange, with dealings in "futures" carried on in the face of an impotent "anti-option" law, has for two hundred years anticipated some of our modern methods of business, and legislation as well.

"New Codes and Old Customs" is an interesting paper aimed to disprove the supposed conflict between the new Japanese codes and the existing customs of the country.

HENRY HOLT & CO., N. Y.

FOX ISLANDS.

TO LET—for the summer—Two very charmingly situated cottages, directly upon the water; grounds occupying exclusively a peninsula of 50 acres on Fox Island Thoroughfare, Maine, in the large island township of Vinal Haven. Each house is fully furnished; has a boat harbor, barn, etc., and boat houses, half-a-mile from village and steamboat landing; houses contain 7 and 10 rooms; rents $175 and $225; exceptional chance for two families wishing to be near together; will be let together or separately.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ASHFIELD, MASS.

TO LET—Furnished, for the summer, a very attractive old-fashioned house in the beautiful hill township of Ashfield, Mass., near the summer home of the late George William Curtis. House contains 12 rooms; ample land, stable, etc.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

A GENTLEMAN'S SMOKE.

YALE MIXTURE.

Made by MARBURG BROS.

A Delightful Blend of

St. James Parish, Louisiana Perique, Genuine Imported Turkish, Extra Bright Plug Cut, Extra Bright Long Cut, and Marburg Bros.' Celebrated Brand, "Pickings."

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

NORTHAMPTON, MASS.

TO LET—Furnished, the new cottage of the late Mrs. Harrison O. Apthorp; contains nine rooms, is fully and tastefully furnished and beautifully situated on high land, with broad view of the Connecticut Valley and Mts. Tom and Holyoke; has all modern conveniences and is within a short distance of railroad station; rent low to a careful tenant for two or three years. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

BEVERLY SHORE, MASS.

FOR SALE OR TO LET—An estate of 20 acres of very high land, directly on the water. Large house, fully furnished, stable, gardener's cottage, gardens, and beautiful trees. Will be sold at a low price to settle an estate. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate,

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other Medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive Pamphlet free on application to

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

Cassell Publishing Co.

HAVE JUST ISSUED:

BY KATE MARSDEN.

ON SLEDGE AND HORSEBACK

To the Outcast Siberian Lepers. By KATE MARSDEN, Member (Special Badge) of the Royal British Nurses' Association, Fellow of the Royal Geographical Society, etc., etc. Illustrated from photographs and drawings. 1 vol., 12mo, cloth, $2.00.

Ever since Miss Marsden began her devoted work among the outcast lepers of Siberia the world has been eager to read her own story of her adventures and experiences. That story is given in the present volume and will be found as thrilling as the wildest romance. No one can read it without thoroughly appreciating the devotion and heroism of the author, who alone faced the rigors of two Siberian winters, in a work so completely and so nobly philanthropic.

BY FRANK BARRETT.

OUT OF THE JAWS OF DEATH.

By FRANK BARRETT, author of "The Admirable Lady Biddy Fane," etc. 12mo, extra cloth, $1.00; paper, *Cassell's Sunshine Series*, 50 cents.

"His masterpiece thus far."—*Boston Daily Traveller.*

"One of those novels which it is nowadays refreshing to lay one's hands on."—*Chicago Times.*

"Interesting to the last page."—*Washington Public Opinion.*

By GILBERT AUGUSTIN THIERRY.

THE PALIMPSEST.

By GILBERT AUGUSTIN THIERRY. 1 vol., 16mo, unique cloth binding, 50 cents. *The "Unknown" Library.*

BY FRANK FRANKFORT MOORE.

"I FORBID THE BANNS."

The story of a comedy which was played seriously. By FRANK FRANKFORT MOORE. 1 vol., 12mo, cloth, $1.00.

This is a story that is bound to attract more than passing notice. Opinions of the book may be as wide apart as the poles, except as to its interest. On this point the verdict will be unanimous in its favor.

BY W. CLARK RUSSELL.

LIST, YE LANDSMEN!

A Romance of Incident. By W. CLARK RUSSELL, author of "The Wreck of the Grosvenor," etc., etc. 1 vol., 12mo, cloth, nautical cover design, $1.00.

W. Clark Russell's sea stories need no "*bush*"—the present one least of all; for here we certainly have him at his very best.

CASSELL'S

COMPLETE POCKET GUIDE

TO EUROPE FOR 1893.

Planned and edited by EDMUND CLARENCE STEDMAN. Compiled by EDWARD KING. Full morocco, flexible, $1.50.

This highly popular work has been for more than ten years before the public and is thoroughly tested by increasing use among travellers. For the present season a special revision has been made, with much care and outlay, bringing the book up to the latest possible date.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

The cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by THE AMERICAN ANNEXE OF MR. HALFORD L. MILLS,
Cambridge Place, Paddington, London.

The Point of View. OUTRAGEOUS FORTUNE—A QUESTION OF DEFINITION—THE OLD AND THE YOUNG.

Price, 25 cents. $3.00 *a Year.*

Charles Scribner's Sons, New York.

School Trustees,

Principals,

Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especialy ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

G. P. Putnam's Sons

HAVE NOW READY:

VENICE: An Historical Sketch of THE REPUBLIC. By HORATIO F. BROWN, author of "The Venetian Printing-Press," "Life on the Lagoons," etc. With maps and plan. 8vo, $4.50.

HEROIC HAPPENINGS. Told in VERSE AND STORY. By E. S. BROOKS. (Being No. IV. in the series, "Tales of Heroism.") Large 8vo, fully illustrated, $2.00.

PRISONERS AND PAUPERS. A study of the Abnormal Increase of Criminals and the Public Burden of Pauperism in the United States; with a Consideration of the Causes and the Remedies. By HENRY M. BOIES, M.A. 8vo, illustrated, $1.50.

"The writer of this book has had much and long experience in the administration of penal laws—he has carefully studied the statistics of crime in the country at large, and none who read his book can doubt either his earnestness or the general fulness of his information."—*New York Tribune.*

THE GENESIS OF ART-FORM. An Essay in Comparative Æsthetics. Showing the Identity of the Sources, Methods, and Effects of Composition in Music, Poetry, Painting, Sculpture, and Architecture. By GEORGE L. RAYMOND, Professor of Oratory and Æsthetic Criticism, Princeton College. Fully illustrated. 12mo, $2.25.

"This book is the result of an endeavor to trace to their sources in mind or matter the methods employed in the composition of the art-forms."—*Extract from Preface.*

RUMINATIONS; The Ideal American Lady and Other Essays. By PAUL SIEGVOLK, author of "A Bundle of Papers," etc. 12mo, gilt tops, $1.50.

THE STORY OF THE TUSCAN REPUBLICS. By BELLA DUFFY. (No. XXXV. in the Story of the Nations Series) 12mo, illustrated, cloth, $1.50; half leather, gilt top, $1.75.

"The history herewith presented by Miss Duffy is exceedingly complex, and in many portions difficult. Miss Duffy knows Florence well, and has given thorough study to other parts of Italy. Her narrative is one that gives real pleasure to the reader and affords the requisite guidance through the mazes of mediæval Italian history. The volume is packed with information, and is thoroughly deserving of commendation."—*London Athenæum.*

BOOKS
Of Permanent Value

For the Library and Bookshelf.

In the "Cavendish Library," in 1 volume, crown 8vo, cloth, gilt top, $1.50.

William Hazlitt, Essayist and Critic.

Selections from his Writings. With a Memoir, Biographical and Critical, by ALEXANDER IRELAND, author of 'The Book-Lover's Enchiridion,' 'Memoir of Emerson,' etc. With steel portrait.

"To dip into him at intervals, as this volume enables us to do, is a great delight, and persuades us that Lamb, Jeffrey, DeQuincey, and the rest, were right in ranking him among the foremost and most original of critics."—*The Dial.*

Right Hon. W. E. Gladstone writes: "I consider this volume a legitimate and welcome addition to our literature."

Also, uniform with the above, price, $1.50.

Leigh Hunt as Poet and Essayist.

Being the choicest passages from his Works, selected and edited, with a Biographical Introduction, by Charles Kent. With a steel portrait.

"In the charming grace and learning of his essays, Leigh Hunt occupies a sunny spot midway between Addison and Lang. . . . No writer of his day was more steeped in modern and ancient lore. In all he finds sweetness, soundness, and sunniness."—*The Critic.*

Recently added to "THE CHANDOS CLASSICS."

In 12mo, blue linen, white title label, price 75 cents; or, Roxburgh style, cloth, gilt top. $1.00 per volume.

Horace: the Odes, Epodes, Satires, and Epistles.

Translated by the eminent English scholars and poets, including Ben Jonson, Milton, Dryden, Lytton, Conington, Sir Theodore Martin, and others.

Christian Lyrics:

Chiefly selected from modern authors. With upwards of two hundred Illustrations. Price 75 cents, or gilt top $1.00.

The Poems of Elizabeth Barrett Browning.

With memoir, etc., price 75 cts., or gilt top, $1.00.

How We Are Governed.

A Handbook of the Constitution, Government, Laws, and Power of the British Empire. By ALBANY DE FONBLANQUE. *The Sixteenth Edition*, revised and reedited by W. J. GORDON. In 12mo, cloth, limp, 75 cents.

"The information is just such as a foreigner needs and finds most difficult to obtain."—*Prof. Wheeler, Yale College.*

The Diary and Letters of Madame D'Arblay (FRANCES BURNEY).

With Notes by W. C. WARD, and prefaced by LORD MACAULAY'S Essay. With Portraits. In 3 vols., smooth dark blue linen boards, price, $2.25 per set; or, in "Roxburgh" style, cloth, gilt tops, price, $3.00 per set, boxed.

*** The Diary of the author of "Evelina" contains most sprightly and entertaining anecdotes of fashionable and Court Society of the Reign of George III., as well as the literary circles of the latter portion of the eighteenth century, Dr. Johnson, Mrs. Thrale, etc., etc.

Food and Feeding.

By Sir HENRY THOMPSON, F.R.C.S. Seventh Edition, revised and enlarged. 12mo, cloth, price $1.25.

"It is of prime import what we eat, how it is prepared, how and when eaten. . . . Both to housewife and to husband this work will be of interest and use."—*The Christian Union, N. Y.*

Of all booksellers, or mailed free, on receipt of price, by the publishers.

FREDERICK WARNE & CO.,

3 Cooper Union, 4th Avenue, New York.

Two Important Books

The Dawn of Italian Independence:

Italy from the Congress of Vienna, 1814, to the Fall of Venice, 1849. By WILLIAM R. THAYER. With maps. 2 vols., crown 8vo, $4.00.

"It is to be hoped that the author of these exceedingly interesting volumes intends to carry the story of Italian rejuvenescence somewhat further, and so to complete the impressive picture of which he has given so large a part. But in any case, he deserves great credit for the fulness and the picturesqueness of his descriptions, the nervous masculinity of his character studies, and the general large effect of his historic tableaux. . . . It is a history full of interest, well and faithfully told."—*New York Tribune.*

"It is the story of the gradual regeneration of a people, one of the most significant episodes of modern Europe. . . . Mr. Thayer's style is remarkably picturesque, and he succeeds in fixing and holding the attention of the reader by its fascination."—*Boston Daily Advertiser.*

"By the vigor of his style and his dramatic power he has made a romance of history, and has added another to the class of books to which belong the 'Rise of the Dutch Republic,' Prescott's 'Conquests,' and Carlyle's 'French Revolution.'"—*Worcester Spy.*

The Interpretation of Nature.

By N. S. SHALER, Professor of Geology in Harvard University, author of 'Illustrations of the Earth's Surface,' 'Kentucky' in the series of American Commonwealths. $1.25.

CONTENTS: The Interpretation of Nature—Critical Points in the Continuity of Natural Phenomena—The Place of Organic Life in Nature—The March of the Generations—The Bond of the Generations—The Natural History of Sympathy—The Immortality of the Soul from the Point of View of Natural Science.

"Professor Shaler is a clear thinker, and the fortunate possessor of a literary style that is not only as lucid as his thought but singularly attractive because of its richness and flexibility. So a book by him is of more than ordinary interest. His attempt to explain and reconcile what he himself calls the 'somewhat strained' relations between natural science and religion is solid yet entertaining reading."—*Portland Press.*

"If not an epoch-making book it at least marks, as no other book has done, a most interesting epoch in the history of religious thought. No such book could have been written had not the tide distinctly turned from agnosticism back to faith."—*The Occident, San Francisco.*

"This book is not an attempt to reconcile science and religion, according to the popular idea; it is rather an affirmation of the unity of the realm with which both science and religion are concerned, and the proper standpoint which thinking men of to-day should occupy with reference to the phenomena of nature."—*Northwestern Congregationalist.*

WILLIAM S. COOPER BRASS WORKS, PHILADELPHIA, PA.

MACMILLAN & CO.'S NEW BOOKS.

Now Ready. Vol. I. of the New Revised and Enlarged Edition of

The Right Hon. JAMES BRYCE'S Great Work,

THE AMERICAN COMMONWEALTH,

By the Right Hon. JAMES BRYCE, D.C.L.,

Author of 'The Holy Empire'; M.P. for Aberdeen.

In Two Volumes, Large 12mo. Third Edition, Revised Throughout, and for the greater part Rewritten.

Vol. I., $1.75, net. **Vol. II., In the Press.**

Opinions of the Press on Mr. Bryce's Great Work,
THE AMERICAN COMMONWEALTH.

"His work rises at once to an eminent place among studies of great nations and their institutions. It is, so far as America goes, a work unique in scope, spirit, and knowledge. There is nothing like it anywhere extant, nothing that approaches it. . . . Without exaggeration, it may be called the most considerable and gratifying tribute that has yet been bestowed upon us by an Englishman, and, perhaps, by even England herself. . . . One despairs in an attempt to give, in a single newspaper article, an adequate account of a work so infused with knowledge and sparkling with suggestion. . . . Every thoughtful American will read it, and will long hold in grateful remembrance its author's name."—*New York Times.*

"As we can hardly conceive of any influence more likely to help in forming a right judgment on these momentous subjects than that of so wise, so temperate, and so able a discussion of American institutions as Prof. Bryce has here given us, we repeat the wish that it may find its way to the library of every patriotic citizen, and be studied with earnest care."—*N. Y. Evening Post.* (Second Notice.)

"All too brief and inadequate as this review may be, it indicates the lofty tone and impartial spirit of a work that takes instant rank as the keenest critique and most trustworthy description of our social and political life. The only way to enjoy such a work is to read every line of it."—*Philadelphia Press.*

"We understate the facts when we say that De Tocqueville's survey of our political and social framework cannot be compared, in point of wide knowledge and wise comment, with 'The American Commonwealth,' by James Bryce."—*New York Sun.*

"This work will be invaluable . . . to the American citizen who wishes something more than a superficial knowledge of the political system under which he lives and of the differences between it and those of other countries. . . . The fact is that no writer has ever attempted to present so comprehensive an account of our political system, founded upon such length of observation, enriched with so great a mass of detail, and so thoroughly practical in its character. . . . We have here a storehouse of political information regarding America such as no other writer, American or other, has ever provided in one work. . . . It will remain a standard even for the American reader."—*New York Tribune.*

"On this side of the Atlantic it is recognized as the most remarkable among English books for the accuracy of its statements, its fairness of judgment, and its clearness of comprehension; while by the English press it is regarded as the most sagacious and important study of the subject since De Tocqueville's 'Democracy in America,' which appeared more than half a century ago."—*Public Opinion.*

"Written with full knowledge by a distinguished Englishman to dispel vulgar prejudices and to help kindred people to understand each other better, Prof. Bryce's work is in a sense an embassy of peace, a message of good will from one nation to another."—*London Times.*

"The event of the year in the literary world takes place to-day in the publication by Messrs. Macmillan of Mr. Bryce's monumental work on 'The American Commonwealth,' . . . a work remarkable alike for penetration of judgment, for felicity of style, and for solidity of research."—*Pall Mall Gazette.*

The Nation.

NEW YORK, THURSDAY, MARCH 30, 1893.

The Week.

THE trouble into which the President has got over the appointment of one of Senator Voorhees's followers as District Attorney for Indiana calls attention once more to the danger which lurks always in trusting the representations of spoilsmen in matters of this kind. The chances are a hundred to one that they will not tell the truth about their candidate's qualifications, and that behind his candidacy there are bargains and deals and shady political transactions which will be brought to light sooner or later, to the humiliation of everybody concerned in the selection. All the trouble of this kind that President Cleveland has ever had has come from his occasional yielding to the spoilsmen of his party. He has had no trouble from the appointees whom he has put into office either in opposition to the wishes of the spoilsmen or without their knowledge. These have invariably commanded general approval for him at the time of their selection, and have given him no reason to feel ashamed of them, or to make excuses for them, after they have entered upon their duties. The lesson of experience in this matter is so clear that argument upon it is a waste of time.

The *Civil Service Chronicle*, which, we are pleased to observe has been revived after a brief respite, and now has its eagle eye on the spoils politicians, and particularly the bad lot who have their nests in Indiana, considers District-Attorney Burke "one of the most vicious men who ever got into public place," applying this term to his political methods. Indiana has suffered perhaps more than any other State in the Union from the ravages of political vermin in her public benevolent institutions. A determined effort was made a few years ago to take these institutions out of politics, so that the helpless inmates should not be made the prey of the ignorant and ruffianly class who were habitually appointed to have charge of them as a reward for other bad conduct at the primaries. This reform was opposed by Burke, who was then a member of the State Senate, and was defeated by his efforts in part. He also opposed the Australian Ballot Bill, and was the only Democrat in the Legislature who voted against it. "Any measure that was for the general benefit," says the *Chronicle*, "could safely count on Burke's opposition." It cannot be supposed that the appointment of such persons helps the Democratic party in Indiana. On the contrary, it damages the party there and everywhere else. The *Chronicle* is very temperate in its comments on this case. It says that the reform element in the Democratic party in Indiana will fight on in spite of Voorhees and Burke.

The lofty tone of President Cleveland's inaugural address, and his unflinching courage in laying his finger upon national evils, especially upon the growth of paternalism and extravagance in government, did not fail to find recognition in Europe. Thoughtful and patriotic Europeans have been cheered by his words in the work of withstanding their own threatening dangers. Far more than his remarks upon the tariff or the entire absence of the Jingo note in his address, do they value his earnest words upon the very fundamentals of society and government. Thus, we read in the *Mémorial Diplomatique* of March 11: "Addressed only to the people of the United States, this discourse sounds across the ocean; Europe, bewildered, anxious, uncertain what principles and what route to adopt for the development of her civilization, can hear this voice which comes to her from the New World and draw inspiration from such an example." Similarly, the Berlin *Nation* of the same date says of the inaugural that, "with its sound political principles, it should receive especial attention in Germany." It especially rejoices at President Cleveland's "impetuous words" about "the unwholesome progeny of paternalism," which, it says, ought to have the careful study of all the German advocates of State Socialism.

As the day approaches when the great "round-up" and deportation of the Chinese in this country is to take place, provided they have not previously complied with the terms of the Geary Law, it is natural that they should be anxious to know what are the President's intentions. The Chinese Minister has telegraphed to San Francisco that Mr. Cleveland has assured him he will do "what is right" in the matter. But this may mean much or little. What is right for the President to do is to enforce the laws of the land. But the Constitution defines treaties with foreign Powers as the supreme law of the land, and if a law passed by Congress is in plain conflict with a treaty, as many good lawyers assert the Geary Law to be, it may be the President's duty to suspend it until the Supreme Court shall have passed upon the question. It is possible that such suspension may be brought about by the United States courts directly, as it is reported that a writ is to be asked for enjoining the enforcement of the law until its constitutionality has been passed upon. That some such course is contemplated, so that the country shall be saved from presenting to the world the extraordinary spectacle of rushing into barbarism in its treatment of inoffensive aliens, and then having its course pronounced illegal in its own courts, would seem to be the least that can be implied in Mr. Cleveland's assurances to the Chinese Minister.

Unfortunately, the record of our dealings with the Chinese for the past few years is not such as to make them credit our good intentions or even our good faith. In the diplomatic correspondence on the subject of the Geary Law, made public last week, there was a most heartless and domineering tone in the language held by our State Department, which reached the limits of insult when the Chinese were gravely assured that our courts were as open to the Chinese as to our own citizens. Nothing like this has been heard since the famous invective of Justice Maule against the inequality of the laws of England, delivered in the guise of a severe rebuke to a poverty-stricken bigamist for not having gone through a divorce suit to rid himself of a bad wife, which would have cost him more pounds than the man had pence, though this, said the ironical Justice, was no excuse, "since it is my duty, as one of her Majesty's Judges, to tell you that the law of England makes no discrimination between rich and poor." Then the Chinese have had strong evidence of our entire disregard of their rights, either as human beings or as subjects of a Power with which we are in treaty relations, in the proposed Hawaiian treaty. That humane instrument proposed to make by force several thousand Chinese residents of United States territory, and yet to deny them the right of migration, although that right is guaranteed to all Chinese subjects by our treaty with China. In the light of this fact, the simplicity of the *Japan Weekly Mail* is almost pathetic, supposing, as it did when it first heard of the annexation scheme, that "it is not at all probable that the American Government will insist upon extending to Hawaii a system of exclusion opposed alike to American traditions and to Hawaiian material interests."

The *Hawaiian Gazette* of March 7 contains the text of the treaty for annexing the Islands, and in its comments upon the sugar-bounty business shows slight respect for the opinion of some of our able publicists who held that the bounty would not have to be paid to the Hawaiians (with one-half to go to the Sugar Trust) unless Congress so ordered. Says the *Gazette:* "The treaty makes Hawaii American soil, and there is strong ground for holding that the Hawaiian growers of sugar will become entitled to any bounty paid to other American growers as soon as ratifications have been exchanged." So

we have always maintained. A full-fledged American not entitled to a bounty would be a rare bird. The Hawaiians had rather be dogs and bay the moon than such Americans.

There has been a pause of nearly three weeks in the outflow of our gold to Europe, broken only by the half-million shipment of Tuesday week, described as the fulfilment of an old contract. Preparations have been made, however, for a resumption of the exports, and at best the respite can be only temporary. The cessation of shipments this month was not, indeed, due in any sense to permanent and fundamental causes. A banker who is undertaking to ship gold must sell his bills of exchange, and the disordered money-market of a fortnight ago rendered the negotiation of such bills all but impossible. The supply of bank money in this city available for the purchase either of bankers' bills or of merchants' paper was so reduced by the heavy Western demand that the banks had their hands full caring for their regular depositors, whose claim was naturally first. That this situation is to be permanent nobody for a moment supposes, and the first sign of a returning money supply is greeted, as we have already said, by preparation for renewed gold exports. It has long been a matter of common knowledge that the Austrian Government, in its plans for gold accumulation, has been reckoning deliberately on our own supply of gold. Of the new 4 per cent. resumption loan (about $30,000,000 in amount), one-half has already been sold and the gold delivered. The remainder has within three weeks been subscribed for, and whether the immediate purchasers come from the east or from the west of Europe, the Austrian demand for gold will be equally felt in New York city. It is highly probable, therefore, with exchange on London and Paris already practically at the gold-shipping point, that new and extensive contracts for the export of American gold have already been placed. In one respect the recent check to the outward movement was an incident of no little significance. It shows that an undue restriction of the circulating medium, such as the silver fanatics profess to have discovered, would make itself known by signs that would need no Congressional investigation. The very fact of chronic specie exports is a proof that our money supply is ample for the needs of trade. The trouble is, that international confidence and international credit have, by our reckless silver experiments, been so far impaired that what we are losing to Europe is the very best of our coined money, and what we are getting in its place is the silver fiat-money bundled out of the Treasury printing-offices.

The vicious secrecy which has long marked the conduct of the pension business was again brought out on Saturday in the announcement of an important ruling made last September, but never before published. It was, in effect, a reversal of the practice of the Bureau in regard to paying out "accrued pensions" in certain cases, and providing for the expenses of the "last sickness and burial" of pensioners. Assistant Secretary Bussey made a careful examination of the statutes bearing upon these practices and found them to be without warrant of law. It is estimated that upwards of $2,000,000 had already been paid out in a way now pronounced illegal. This is but a sample of the loose management which secret methods invite. The important decision itself seems to have leaked out by accident. Of course it would never have done to let such a wet blanket drop upon the "soldier vote" during the Presidential campaign, but why it should have been kept back so long after the election is only to be explained by the general love of the Pension Bureau for darkness and mystery.

The failure of the latest attempt to weaken the Ballot Law of Massachusetts is both instructive and encouraging. Taken all in all, the Massachusetts statute is the most thorough-going application of the Australian system which is to be found among the thirty-six laws that have been enacted in as many States in this country. It has been tried now in four important elections, and after each trial there have been complaints that the alphabetical arrangement of its ballot worked injustice to all except the leading candidates. These complaints have invariably come from the machine elements of both parties, but there has never been much evidence that they had strong popular support. Just how much support they had has now been demonstrated by the defeat of the proposition which was made in this year's Legislature to change the form of the ballot from the alphabetical to the party-group arrangement. The action of the Legislature in refusing to make this change shows that there is really no popular dissatisfaction with the law as it stands—that, on the contrary, the people look with disfavor upon all efforts to modify or weaken its provisions.

A Cleveland letter to the *Evening Post* reports a successful experiment in municipal reform, which seems to be so much easier to accomplish everywhere else than in this city. The plan adopted there was not a very novel one. An old system with a very greatly divided responsibility was changed to a new one under which the city government has only six departments, the heads of each being nominated by the Mayor and confirmed by the Council. It will be seen that this change makes the government of the Ohio city similar to our own city government when the Board of Aldermen had the power to pass on the Mayor's nominations. But even this partial concentration of authority has in two years reduced the tax rate 13 per cent., brought down the city debt nearly $100,000, reduced the annual running expenses of the city $25,000, and at the same time given a better government in all the departments. The correspondent, explaining this good result, says:

> "The great gain from the centralizing of power has been due in large part to the popular realization that the election was of much more importance than of old, and that officials could be reached at the polls more easily, and a consequent increase in popular interest both in the caucuses and the election. At the Democratic caucuses held last Friday night, for example, 12,000 votes were cast—the greatest number by far in the history of the city."

It is easy to draw from this statement the oft-repeated lesson that a large part of the bad government of New York city is to be attributed to the indifference of its citizens about municipal affairs. There was never a harder fought campaign for local reform than the Mayoralty campaign of 1890, unconnected as it was with any great State or national election; but the mere fact that "only a Mayor" was at stake, caused the vote to fall off 55,000 as compared with the vote for President two years before, or 65,600 as compared with the election for President two years later. It seems to be a good deal easier to get a large class of our leading citizens to testify to the correctness of a Connolly's accounts, or to defend a Tammany Mayor from all public criticism, than it is to get citizens of the same representative type to vote (not to say work) where the Mayoralty alone is at stake.

It was plain from the start that the reporters would have to be called in to clear up the mystery attending Col. Shepard's death. Two physicians of the highest standing had told what they, on the spot, had made out to be the causes of death, but their official bulletin was miserably deficient in those details which the public is entitled to have in all such cases. It was only what we expected, therefore, when we found Sunday's papers, almost without exception, trying to gratify that "element in human nature," as the Boston *Herald* calls it, which insists on a daily mess of scandal and brutality. One paper, properly resenting Dr. McBurney's unwillingness to give it a spicy column, made up a "statement" of its own and put it into his mouth. Another charged him with "criminal negligence," on the strength of private information derived from a "friend of the family," and we understand that the said friend will soon be called upon to foot the bill for damages which a suit for libel will undoubtedly entail upon the paper that fondly relied upon his word. Still another reporter had a theory that Dr. McBurney was "unnerved" by a "run of bad luck" he had been having with his cases lately, and so could not be expected to act, in an emergency, with the intelligence and promptness which this reporter always has at command in his critical operations.

It is highly fortunate that the physicians thus barked at are of such established character and skill. Inexperienced men in their situation would be hounded to professional ruin by the improvised doctors who would start up in every well-regulated newspaper office to show them how they had criminally blundered. As it is, we imagine that the hounding will be done by the other side.

Mr. Bourke Cockran, the principal orator at the Home Rule meeting on Sunday, announced in a speech in the canvass of last fall that "Tammany had solved the problem of municipal government," a problem of which he acknowledged the great importance. This being so, he must be of opinion that the first work before the Irish Home-Rulers when they get home rule should be the introduction of the Tammany system into the Irish cities, Dublin, Belfast, Cork, Limerick, and Galway. Why, then, did he not recommend it as a great contribution from the Irish race abroad to the happiness and prosperity of their countrymen at home? To be silent about this great discovery on such an occasion was indeed little short of treason to the cause. Our Irish-American Home-Rulers, in fact, by presenting their solution to the whole British public, would surely disarm even the prejudice of Englishmen. Surely even the political mouths of afflicted Britons would water at the sight of a Tammany Mayor, or Commissioner of Public Works, or a row of Tammany Police Magistrates or Excise Commissioners. Be not bashful or over-modest, Mr. Cockran. Show the hereditary oppressors what you and your colaborers have been doing in exile for the fame of your race.

It is difficult to believe that the English Conservatives are generally well pleased with the Gladstonian bill establishing Parish Councils for the management of parish affairs in the rural districts. Lord Salisbury at least has openly ridiculed the scheme, and, if we remember rightly, Mr. Balfour has done the same thing. The bill occupies a prominent place in the hated and despised "Newcastle programme," and is part of the process of democratization which has produced the state of despondency among the landed gentry described in a recent number of the *Spectator*. The Parish Councils would undoubtedly finish what the County Councils have left untouched of the local dignity and authority of that time-honored English duumvirate, "The Squire and the Parson." It would, too, considerably lower the position of the farmer by the power it would put into the hands of the laborer, between whom and the farmer there prevails a perennial hostility. The English parish is the counterpart, in a rough way, of the New England town, and the Parish Council would represent in a rough way the town meeting; but it would, at first at least, be chosen by a class very inferior in political training to the New England town voters. The parish government has until now been perhaps the most thoroughly ecclesiastical, or one might say the only sacerdotal, bit of government left in Europe since the overthrow of the temporal power in the Papal States, for the chief ruler is the parson. He shares his authority, it is true, to some extent with the churchwardens, but, what with his power as a distributor of charities, and his power over the schools and schoolhouse, and his share in the administration of the poor-law, and his alliance with the squire, his control of the parish may be said to have been supreme.

The Parish Councils will put an end to his reign and to that of the farmer, as the County Councils have put an end to the reign of the squire. That the coming change in both the parish and county governments will disappoint, at first at least, all admirers of English rural life, there can be little question. Nothing better than the old system for the production of a highly cultivated and picturesque landscape, of good roads, of pretty villages, of honestly administered finances, and for surrounding a graded, dignified social hierarchy with reverence, and providing the State with a class of administrators of unequalled integrity and efficiency, has probably ever been seen, at least since the overthrow of the Roman Republic. But, as Bacon has well remarked, the more gentlemen you have in a State, the poorer your private soldiers are. The English agricultural laborer, "Hodge," as he has been derisively called by those who profited by his stupidity, has for two centuries at least been the reproach and shame of English agriculture—a huge, uncomplaining animal, condemned to dig and delve and be coddled during his working years, and die in the workhouse. He is now, after the sleep of ages, going to be made a man of and made to share in the government of the country. He is at last becoming what he never has been, an Englishman. But that, after having escaped from the parson and the squire, he will also escape from the local political "Boss," it is hard to believe. That personage is assuredly lying in wait in the ditches and hedgerows all over England. His day is coming at last.

The last appeal of the Comte de Paris to the French people sounds so like burlesque that it would be quite reasonable to doubt its authenticity. The assertion that "monarchy alone can give France a strong and stable government" has a humorous air, in view of the fact that France has within a hundred years tried five distinct monarchies, with the view of securing this kind of government, with disastrous failure in each case—viz., the Old Monarchy, the First Empire, the Restoration, the Orleanist dynasty, and the Second Empire. Every one of them promised to last for ever and make France happy. The first died on the scaffold and the rest ran away. They all, too, had the benefit of the monarchical tradition, which is now completely dead in France. The present generation in France knows little or nothing about the "monarchical principle." It cannot conceive why the eldest sons of a particular family, in endless succession, should always be wise enough and able enough to give France a strong and stable Government any more than to give France a succession of great poets, or mathematicians, or strategists. Moreover, a king to be really effective as a political remedy needs to be a sacrosanct person. He needs to be what the Romans of the Empire called "divus"—that is, something more than human. But this divinity that doth hedge a king has been long dead in France. Nobody now knows anything about it. Frenchmen do not even pretend to know anything about it, as Englishmen do. When, therefore, anybody steps forward and applies, as the Comte de Paris does, in behalf of himself and his son, for a royal place as a sure cure for national disorder and uncertainty, even Royalists laugh in their sleeves. They are under no delusions about royalty. They want a monarchy because it would be pleasanter for them, and give the well-mannered, well-dressed, and well-born people a better chance for the offices; not because "its sole object would be the public welfare."

Political prophets pursue their calling with more seriousness in Spain than we are accustomed to see. One of the great surprises of the late elections in Spain was the success of the Republican party in the city of Madrid. Its nominees received 27,000 votes, as against only 23,000 for the Government candidates. Now the Governor of the province and the Minister of the Interior had committed themselves to the prediction that the Government ticket would poll 30,000 votes and elect all its candidates. When the returns came in on the night of the election, and showed their prophecies to be so wide of the mark, they both resigned their offices out of hand. This is admirable consistency, and is a custom which we ought to adopt without delay. Why not make it a rule that a man in office must either make no prophecies about elections at all, or positively agree to go out of politics if his predictions come false? Suppose such a rule had been in force last fall, what a slaughter there would havebeen among Western Governors, and how we should have got Foster and Rusk and Wanamaker out of the Cabinet without having to wait till March 4, and the *Tribune* not even keeping up the pretence any longer of being a political organ. It would be manifestly improper to make an *ex-post-facto* application of the rule, but it ought to be put in force in the future, for the terror of political prophets and the relief of a prophet-ridden people.

TAMMANY AND ULSTER.

AS we have said more than once, the chief argument used by the English opponents of Mr. Gladstone's Home-Rule Bill is the argument that the Irish will use all the liberty the bill will leave in their hands for the worst purposes, such as attacks on property, religious persecution, and general oppression of the minority. The weakness of this argument lies in the fact that it might have been used against any written framework of government that ever was made. All constitutions assume the willingness of those who are to live under them to execute them according to their plain intent and meaning. If, for instance, the majority in the United States were to use all the liberty left them by the Federal Constitution to work mischief, the United States as a republic would speedily come to an end. No Constitution could be framed that would suit a community determined to evade it. Therefore the controversy which is ravaging British society to day is really not so much over the merits of the Home-Rule Bill considered as a piece of draftsman's handiwork, as over the character of the Irish for whose use and behoof it is intended.

For our own part, we believe the Conservative fears are, in so far as they are sincere, the product of the anti Irish prejudice which has made the government of Ireland for seven hundred years the great shame of England. We believe the Irish Parliament which Gladstone's bill proposes to create would compare favorably with any other legislative body in the world, barring the House of Commons itself. It would certainly not fall below the level of our Congress or State Legislatures, or the British Colonial Legislatures, or the Parliaments of France or Italy. The English House of Commons stands as yet on a higher plane than any of these, owing to the fact that, through conditions partly social and partly historical, it as yet makes larger drafts on the talent and character of the nation than any other legislative body has done in modern times. But all parties unite in testifying that the Irish members have in no way fallen below the English or Scotch average, in either debating power or business capacity, as shown in committee work. To their absolute purity and sincerity Mr. Balfour, their worst enemy, bore the strongest testimony the other day, as far as his knowledge and belief extended. This testimony is the more valuable because their poverty is notorious, and there could hardly be a better illustration of the ferocity with which English society approaches the Irish question than the fact that this is one of the most frequent of the taunts which the Irish have to support. That their manners are bad is undoubtedly true; but, considering that it is very rare for an English Conservative to address the House on an Irish topic without insulting them, and very rare for a London morning paper to appear without a column or two of criminal accusation, the wonder is that they behave so well, there being so much human nature in Irishmen.

In spite of all this, there is, no doubt, among the Protestant Irishmen of English and Scotch descent in Leinster and Ulster, a deep-seated and, as we see by the accounts from Belfast, almost furious unwillingness to be handed over to a legislature containing a majority of Irish Catholics, in spite of the restrictions and guarantees of the Home-Rule Bill. Most of the Orangemen's threats of civil war we look on as fustian of somewhat the same sort as that called out by the disestablishment of the Irish Church. Should the bill become a law, we have no doubt they will submit, and after a while become reconciled, and that their fears of ill usage and oppression by the Catholic majority will in a few years seem ridiculous even to themselves. But this is mere prophecy.

What is not prophecy, but fact, is, that their fears and opposition are doing more than aught else to-day to stimulate English opposition to the bill. What does most to give substance and strength to this opposition, to give it a practical rather than a sentimental character, is the specimen of government by Irish Catholics which the city of New York has for some years offered to the world. We who live here know very well to what an extent this example is misleading, how far Americans themselves are responsible for giving people like the Tammany leaders a chance to seize the leading municipal offices, and how certain it is that similar results would follow, in any city in the world, from similar supineness, cowardice, submissiveness, and want of civic pride on the part of the intelligent and respectable classes. But foreigners do not know it. English and Irish Anti-Home-Rulers do not want to know it. What they believe is, that the Irish have got possession of one of the leading municipalities of the United States, and have given, and are giving, there a sample of the kind of government which their brethren at home would set up in case they got possession of the Irish Legislature and Executive. This sample they are using, and have long been using, against home rule with deadly effect. It is to day a most powerful weapon in the hands of the Ulster men. It gives bone and sinew to their opposition.

Nothing is more extraordinary in the attitude of the Irish Home-Rulers in this country than their ostrich-like failure to see this. They held a meeting at the Academy of Music on Sunday evening last, "to voice the sentiment of New York in favor of the home-rule measure presented by Mr. Gladstone, and now pending in the British House of Commons." Now whom was this meeting intended to influence? Certainly not the Irish or English friends of the bill. They are convinced already. "Voicing" to them is preaching to the converted. It must be meant to impress the opponents of the measure in England and Ireland—that is, the men who are saying that if England hands them over to the Irish Home-Rulers another Tammany will be set up in Dublin. We must not suppose that they do not know what Tammany rule is. They know all about it, and in truth exaggerate its evils. They think its sway much more potent than it is, owing to their ignorance about our constitutional restrictions. But they are aware that this city is ruled arbitrarily and corruptly by a small band of illiterate Irish Catholics, who have not for years followed any calling but office-holding, and are growing rich on small salaries; that one of them who has no public place at all keeps an office in which he orders legislation by telegraph from the Legislature, and prescribes peremptorily who shall fill the various municipal offices, and sells judicial nominations for cash down; that they have filled the bench of police magistrates with ignorant men who are friends of the criminal classes, and some of them men of bad character themselves; that though they profess to clean the streets, and procure an enormous annual appropriation for that purpose, the money disappears, but the dirt does not; that even in a time of pestilence they put an incompetent man, one of their own relatives, in the Health Office, and set the remonstrances of scientific bodies like the Academy of Medicine, and great commercial bodies like the Chamber of Commerce, at defiance.

Does any rational man suppose their "voicing" could produce the smallest effect in reconciling the Ulster men, or any class of Irishmen who now oppose home rule, and are entreating England not to abandon them to the prospect opened up by the Gladstone Bill? There is no part of the United Kingdom which, both Catholic and Protestant, has furnished more striking examples of capacity for honorable public service in every field of statecraft, the army, the bar, the bench, the civil service, at home and abroad, than Ireland. There is not a man among those who have thus reflected credit on their country to whom the performances of this Tammany gang in New York are not an awful shame and disgrace. We here who have seen New York pass gradually, little by little, under Tammany rule, do not know how it affects people who stand outside of it or see it from a distance; therefore, we find some difficulty in understanding how an Ulster man can talk of fighting sooner than submit to the Redmonds, and Dillons, and McCarthys, and Sextons, and Healys. But the explanation is very simple. In submitting to them he thinks he would before very long have to submit to a lot of Gilroys, Crokers, Barney Martins, Dalys, and Scannels, and that he would be treated in Belfast and Dublin to a police bench filled with "Paddy" Divvers, "Fatty" Walshes, Kochs, Gradys, and the like. There is probably no civilized man, outside our own country, who, having this prospect offered to him as some-

thing threatening, but avoidable by fighting, would not choose to fight. This is the solemn truth of the situation, and it behooves Irishmen in this city who care for the real fame and welfare of their native land to take it to heart.

POSSIBILITIES OF A PANAMA CANAL.

THE word Panama now suggests so universally a huge scandal that its association with an actual canal across an actual isthmus seems only a figure of speech. Yet it would be a mistake to suppose that the project is as yet definitively given up. The Government of Colombia has granted several extensions of the time within which work under the new charter must be begun, and is only now reported to have made a still further extension. In France there is no lack of schemes for reviving the enterprise, either in the hands of the old company or under the management of a new corporation, backed by fresh capital secured from private investors or from the State. A discussion of the whole question from the pen of M. de Molinari appears in the February number of the *Journal des Économistes*, which deserves consideration as well for its tenor as for its author's high standing.

He does not take a very hopeful view of the prospect of resumption of work on the canal, though his article is an argument in favor of it. According to him, there are two powerful reasons why the great enterprise should not now be allowed to fail. The first is, that something should be done to prevent the complete loss of the $250,000,000 already put into the scheme by French investors. The second is, that "the moral injury which the positive abandonment of the enterprise would cause France" must be, if possible, averted. This last consideration is evidently the weightiest in his mind, and he dwells upon it. The Panama Canal is an affair of national interest. If it results in a complete fiasco, there is an end for a long time of French prestige in America. "The loss of the battle of the Isthmus would be equivalent, for us, to an economic Sedan." French capital and commerce would be driven out of all South America. "That is why I cannot too often affirm," says M. de Molinari at the very close of his article, "that the battle of the Isthmus *must* be won."

How it is to be won he gives his ideas, but it must be said that his argument in favor of going on with the canal is really a conclusive proof that the canal cannot be gone on with. If what he urges is the best that can be said in favor of continuing work on the canal as a simple business undertaking, then it is certain that the canal will never be dug as a piece of business. He gives a sketch of the affair from the first, beginning with the famous "International Congress for the Study of the Interoceanic Canal," held in Paris in 1875. That scientific body, through its committee of experts, estimated the total cost of a sea-level canal at $240,000,000, and of a canal with locks at $114,000,000. Against this have to be put the actual sums paid out, according to the report of M. Flory to the French courts, amounting to $290,900,000. For this vast outlay, excavations variously estimated at from one-half to two-thirds of the total that would be required to make a canal with locks had been made by the spring of 1889, though it is admitted by the most sanguine that the effects of the climate and of floods have, in the four years since work was dropped, undone a large part of it.

M. de Molinari practically admits that a fresh start will have to be made, and he estimates that $180,000,000 will still be needed to complete the canal, even adhering to the plan of using locks. This estimate he thinks a generous one, sufficient to meet all contingencies; yet we do not observe that he makes any allowance for the laying of the Monroe Doctrine again. But, taking M de Molinari's figures as they are, the question arises, Where is the money to come from? The small investors are a sucked orange, it is clear, and, even if they still had savings in reserve, would never put them into anything with the Panama label on it. It is only on condition, concludes M. de Molinari, that the "notabilities of the business world, the great bankers and capitalists," go into the scheme that there is any chance of getting the financial backing necessary.

If this is true, there is an end of the business. It is precisely because those great financiers could not be induced to touch Lesseps's original plan that he had to get up all his popular subscriptions and his lottery, and bribe his way right and left. Why should the project be any more attractive to them now? They would have to start out with the burden of some recognition of the rights of the existing shareholders—M. de Molinari suggests 25 per cent. of the face value of their holdings. But if this is all the original investors are to get out of the wreck, the argument that the Canal must be continued in order to prevent them from great losses at once loses its value. With the best face that can be put upon the matter, they will lose three-quarters of all that they put into the enterprise; and what with the necessity of any succeeding corporation making some allowance for their antecedent legal and charter rights, and with the fearful example of their losses to deter other investors, it is certain that capitalists will be as shy in rising to the Panama bait as the small investor who has suffered most from the hook.

It is really this view of the situation which has led many Frenchmen to maintain that there is no hope for the canal except in governmental aid. They take all M. de Molinari's arguments on the score of national prestige and glory and his battle-of-the-Isthmus talk, and convert them into an appeal to the State to take up and finish what they declare, with him, to be a "national enterprise." He is prevented from joining in this cry by his economic and social principles. No stouter defender of individual initiative and opponent of State Socialism can be found in France. Yet it is clear that he is playing right into the hands of the believers in paternal government by his arguments in favor of going on with the canal. After it is proved that private capital cannot be had, how can he withstand their inference that, on his own showing, it is a case for granting State aid to a work of national interest? This is what the Panama Canal has come to after all these years, and it is what the Nicaragua Canal comes to almost at the beginning. Yet one has but to consider the manner of spending vast sums of public money, now almost the rule under popular government, to see that for a government to take up the work of building the Panama Canal or the Nicaragua Canal would lead to an "economic Sedan" much more disastrous than the one M. de Molinari laments.

THE KILT IN DANGER.

THERE was an interesting debate in the English House of Commons, a few days ago, touching what is probably, next to the Roman toga, the most famous article of clothing that has ever been worn by man. It arose out of an ill-conceived plan, now of nearly a year's standing, to consolidate the kilted regiment, known as the Seventy-ninth, or "Cameronian Highlanders," with the Scots Grenadier Guards, a regiment which has nothing Scotch about it beyond the fact that Scott was the name of its first Colonel. This plan was no sooner noised abroad than it excited in Scotland the deepest indignation, being considered a deliberate attempt to blot from existence one of the renowned Highland regiments which, in kilt and tartan, have under the British flag filled the world with Scottish glory. There is, in truth, no quarter of the globe in which the Highland regiments have not distinguished themselves, and of recent years they have been more than once selected, as in Egypt and South Africa, for service of more than usual danger and difficulty.

It is now nearly a century and a half since these regiments were raised, and for fully a century they were, if not Highland, really Scotch regiments. By a providential dispensation, as the supply of real Highlanders began to run low, either through emigration or dislike of soldiering, the Lowlanders began to feel themselves Highlanders under the magic influence of Scott's novels. Those only who remember the account which Macaulay gives of the loathing with which the Lowland Scotch in the eighteenth century looked on the Highland garb, and Highland manners and customs, will be able to appreciate the force of the spell by which Scott succeeded, early in the nine-

teenth century, in disposing nearly every Scotchman to the notion that the kilt, the tartan, the philabeg, and blue bonnet were his original national raiment, in which he looked his best, and which nothing but the advance of a gross and material civilization compelled him to lay aside. The fancy for the Highlands with which the Queen and Prince Albert were seized in their early married life completed the conquest which the Wizard of the North had begun, and converted nearly all male Scots into true Highlanders to whom trousers or "breeks" were a genuine encumbrance, and who with difficulty restrained themselves from cattle-lifting. Every man who came near Balmoral Castle or aspired to deer-stalking, grouse-shooting, and salmon-killing, put on the kilt and tried to get his legs browned, as the only costume for a *persona grata*. The Queen was so taken with the dress that she even insisted on putting her German sons-in-law and grandsons-in-law into it in the summer and autumn, regardless of the danger to their *hochgeboren* knees.

When we say "nearly all male Scots," we doubtless exaggerate. As a matter of fact, the kilt mania has been for the most part confined to sporting Lowlanders, and to persons about the Court, and to the gillies, game-keepers, and the like in the employ of the tenants of the moors and deer forests, and lessees of the salmon rivers. Mr. Campbell-Bannerman, the English Secretary at War, himself a Scotchman, speaking on the question of the Cameronian Highlanders the other day in the House of Commons, said:

"He would not go so far as an honorable and gallant gentleman, a Scotchman, and a member of a great clan family, who, speaking on this subject ten years ago, said that for his part he had never yet seen in Scotland a Scotchman wearing a kilt unless he was paid to do so by an Englishman. [Laughter.] He fully admitted, too, the picturesqueness and the military effectiveness of the Highland dress; but, after all, when they were told that not a tartan must be meddled with, one naturally began to inquire what those tartans were, and it was difficult to determine the question. The Cameron Highlanders themselves wore a spurious Macdonald tartan and not a Cameron tartan at all. [Laughter.] This spurious enthusiasm in favor of the tartan and the kilt, although it was very vivid and active in the large towns, did not exist to the same extent in the glens of the Highlands. It was small among the crofters and the farmers, but it was very great among the shooting tenants and the gillies."

The military history of the kilt has been much the same as its civil history. The popular notion is, and always has been, that the Highland or kilted regiments—nine battalions in all—were really entirely, or almost entirely, composed, if not of Highlanders, at least of Scotchmen. For a great many years this has been far from being true. For fully fifty years it has been found impossible to recruit these regiments in Scotland. For more than that period, as the prosperity of the country has increased and the taste for soldiering in Scotland has declined, it has been found necessary to admit Irishmen and Englishmen very freely to wear the kilt, and pass themselves off in tartans as McKenzies or MacDonalds, Rollos, Murrays, or Keiths. The history of this crackest of them all, the Cameronian Highlanders' regiment, whose fate is now under discussion, well illustrates the passage of the kilt to other legs than Scotia's. The regiment, as is well known, was raised in the last century by Cameron of Lochiel, and was a famous fighting corps in the French wars which closed at Waterloo. Scott's apostrophe, in his "Vision of Don Roderick," on seeing them land in Spain,

"And O, loved warriors of the minstrel's land,
Yonder your bonnets nod, your tartans wave,"

is well known, and covered the Cameronians. Still better known is Byron's splendid tribute apropos of the conduct of the regiment at Waterloo:

"And wild and high the 'Cameron's Gathering' rose,
The war-note of Lochiel, which Albyn's hills
Have heard, and heard, too, have her Saxon foes."

But it is long since the "Evans" and "Donalds" have made much figure in the corps. It is said that when the present Cameron of Lochiel was dining at the regimental mess a few years ago, the talk turned on the history of the regiment, and inquiry was made then and there as to the number of "Cameronians"—that is, men born on the Cameron estates—it contained. It was found, alas! that there was only one, and he was the son of an evicted tenant—evicted, doubtless, to make room for the deer, which now get a living off the soil that once fed the dauntless kilted lines which stood behind Wolf at Quebec and followed Wellington through Spain. The present condition of the regiment, as described by Mr. Campbell-Bannerman, is very melancholy. Between August, 1891, and November, 1892, 936 recruits had to be raised for it. Of these only 360 could be obtained in all Scotland. So they had to pick up the remaining 576 in England, and they got them, of all places in the world, in East London. So that the Cameronians are now in the main Cockneys of the purest type, good fighting men no doubt, but as kilted Highlanders unmitigated frauds; Shooter's Hill or Hampstead Heath being probably the only places in the nature of mountain or moor of which they have had any experience.

THE GREAT DICTIONARY.

EVERY cultivated person should be interested in the progress of the 'New English Dictionary,' edited by Dr. J. H. H. Murray, Vice-President, and Mr. Henry Bradley, President, of the Philological Society. Among subscription-books—that is, books necessarily issued in parts at greater or less intervals—it is surpassed by none in intrinsic worth or in the ease with which the infrequent payments can be borne. Unlike cyclopædias, it can never become completely antiquated, and time will affect it mainly in the particular of neologisms; for, as its illustrations of usage are marshalled in chronological order, the history of each word or meaning may be added to but cannot be detracted from—and we cannot foresee the day when a supplement will be undertaken. The vocabulary of the language is of course ever extending, and new light is certain to be thrown on etymologies now obscure or erroneously determined; but this dictionary must always remain the point of departure for the English lexicographer, and the first appeal in doubtful and disputed matters.

Too few of those who ought to be informed are aware that one volume, comprising the letters A and B, is already finished; and that parts of C and of E—that is, of volumes ii. and iii.—have been issued. The latest report of progress is just a year old, having but now been published as an appendix to the Philological Society's Transactions. On March 4, 1892, Dr. Murray could say of the letter C that, when it was started, the material for it in his Scriptorium filled 320 pigeon-holes six inches wide, containing a pile of slips 160 feet high. "We still," he said, at that date, "have twenty feet thick of this to work through," and perhaps an even larger proportion of the letter—a fifth instead of an eighth. These figures will give some idea of the colossal nature of the task, though it should be remembered that the first three letters of the alphabet are excessively full. And lest any one despair of ever seeing the Dictionary finished, the Report shows that the sub-editors and re-sub-editors, who are scrupulously named and generously praised by Dr. Murray, are engaged all along the line. "Reading" is still going on for the Dictionary, and in 1891 not less than 30,000 quotations were received. From this side of the water, contributions have been made from the beginning, and in one case mentioned by Dr. Murray, liberally; but to an American scholar domiciled in England both Mr. Bradley and Dr. Murray make the highest acknowledgment accorded to any single person. Says the latter, of this volunteer:

"Time would fail me to tell of the splendid assistance rendered to the Dictionary by Dr. Fitzedward Hall, who devotes nearly his whole day to reading the proofs of both volumes [Dr. Murray's and Mr. Bradley's], and to supplementing, correcting, and increasing the quotations from his own exhaustless stores. When the Dictionary is finished, no one man will have contributed to its illustrative wealth so much as Fitzedward Hall. Those who know his books, know the enormous wealth of quotation which he brings to bear upon every point of English literary usage; but my admiration is, if possible, increased when I see how he can cap and put the cope-stone on the collections of over 1,500 readers."

It is only in England, apparently, that women are taking a share in this international enterprise, and there the number is noticeably large, and Dr. Murray's tribute to them noticeably cordial.

Mr. Bradley has found, in dealing with the letter E, that it exceptionally abounds in words belonging to science and philosophy, and in "classical derivatives which, although they may be more or less fre-

quent in literature, are so seldom pronounced that there exists no orthoepical usage with regard to them." Among the as many as four or five different pronunciations often supported by reputable dictionaries he concludes that the best is that "which most effectually and promptly suggests to the mind the written form of the word." His experience with the constantly recurring difficulties of this kind has convinced him, he says, that the advocates of phonetic spelling greatly underrate the force of the objections to their reform. "By long habit certain groups of printed letters have acquired for us an ideographic value, so that to every educated adult the act of reading is partially, what to a deaf-mute it is altogether, a direct translation of printed symbols into thoughts without any intermediate translation into sound." In consequence of this, "most practised readers are able to take in at a glance the drift of a whole octavo page." Mr. Bradley contends that the introduction of a new system of spelling would at first render it necessary "to translate every word into sound before we can understand it," with an obvious enormous increase in the time spent on reading, especially for persons past middle age, to whom the change would mean a considerable loss of working power for the rest of their natural lives.

He admits that the objection to phonetic spelling on the ground of its obscuring the etymology is forcibly met by showing that "our traditional spelling is often positively misleading as a guide to etymology"; and the reply would be conclusive if the language consisted only of colloquial words. But the great body of famous English writers, from More and Spenser down, have been classically educated, and have been accustomed to presume on a like education in their hearers. Nearly all of these "have habitually used words in senses or shades of meaning which are not based on any existing English usage, but which are understood as a matter of course by readers who know Latin and Greek." Hence a large proportion of our classically derived words "can be understood with precision and used with unfailing correctness only by those who are acquainted with their etymology"; and our English vocabulary "includes an enormous number of words of which the written form has an ideographic value, due *not* to its being familiar to the eye as occurring in English books, but to the fact that it reminds us of the spelling of certain words in a foreign language. These words were originally formed as sequences of alphabetic letters, not as sequences of sounds." "If," continues Mr. Bradley, "phonetic spelling were adopted, we should, in reading, often find it necessary first to render the written word into sound, and then to render the sound into the old spelling in order to apprehend the meaning by the light of the etymology." We might as well attempt to alter the pronunciation of colloquial words to make it conform to the spelling. "To do either of these things would really be disfiguring an original to make it accord with an imperfect copy of itself—much as if some one were to alter a text in the Hebrew Bible because the sense of the English version was different."

There is much wisdom, too, in Mr. Bradley's closing remarks conceding the advantage of introducing many small phonetic changes "in the orthography of such words as are really addressed primarily to the ear":

"But it is highly important that the process should be gradual, and the reformers ought not to *begin* by abolishing the useful distinctions that have become established in the spelling of such pairs of homophones as *whole, hole*. The number of such cases is not large enough to add very much to the learner's difficulties. And there is no abstract reason why written English should be condemned to share all the imperfections of spoken English. We all recognize the advantage of writing proper names with initial capitals, though that contrivance is purely ideographic."

A NEW DEPARTURE.

LONDON, March 13, 1893.

GREAT BRITAIN as a whole presents a spectacle of commercial and manufacturing solidarity and prosperity such as the world has never before seen. The industrial has been gradually absorbing the agricultural population, and the former is now out of all proportion larger than that of other countries. From industrial progress arose the necessity for free trade, which still further advanced industrial progress. The importance and political power of the workers have increased year by year, and have not been counterbalanced as elsewhere by a corresponding growth in an independent agricultural interest and by the maintenance of a distinct middle class. The agricultural interest has been drained, and the middle class has, according to the nature of British society, tended towards the aristocracy. The centralized strength of the executive is so predominant that no one class need fear actual violence or prolonged intimidation from any other. There have been none of those object-lessons afforded in other countries on the possible dangers of unsound economic industrial theories. The aristocratic classes, apparently far removed from the consequences of industrial changes as compared to those relating to land, find their power gradually waning. Their only hope lies in conciliating the industrial class. Add to these causes the increase of intelligence, the quickening of the moral faculties, and the growing idea that Christianity ought to be practical, and unwonted legislative results might be expected. Such results are appearing, and it is impossible to foresee the issue. An age which was early taught to regard the 'Wealth of Nations' as gospel, which later relied upon the writings of Mill, and in which the works of Spencer circulate more widely than those of any other philosopher, is now apparently abandoning the old teachings of political economy and preparing to follow those most wayward guides, the feelings.

This may be all for the best. If the mass of human comfort and happiness and elevation in these islands is to be increased, we should all have reason for congratulation. But the change is to many such an uprooting of previous tenets as to the laws which in the main direct the progress of humanity, that they may be pardoned if they, even while drawn along in the current, do not feel altogether confident as to consequences. Thoughtful persons, especially those of advanced years, reviewing their own industrial life, may not easily picture what it might have been if shaped by the theories now sought to be applied. In no direction is the change of sentiment more strikingly shown than in the present attitude of British society towards trades-unionism. Formerly such combinations were regarded as unsound, tending to encourage the careless and idle at the expense of the intelligent and industrious, and to erect unnatural barriers round particular trades to the detriment of men seeking employment. Trades-unionism is now generally spoken of as beneficial. Attention has latterly been drawn to certain passages in Government school-books prepared by Archbishop Whately, in which trades-unionism is condemned. These passages are to be disallowed or expunged. Trades-unionism triumphed in the dockers' strike. That a certain number of men have by that strike largely benefited is now acknowledged; but it is also acknowledged that it brought widespread and acute misery among large classes who formerly lived on casual employment as dock laborers. It is urged that if combination has injured the trade of London, it has at least benefited workmen at other ports. The inexhaustibleness of the wages fund is being taken for granted—the duty of providing work for the unemployed accepted.

Nowhere is the change of sentiment regarding economic theories as to wages more strikingly shown than in Parliament, which in Great Britain so faithfully mirrors the views of the country upon all questions. Until of late years it was understood that competition regulated wages in Government as in other works. In February, 1891, through Mr. Sidney Buxton, now Under-Secretary for Foreign Affairs, descendant of the well-known Sir Thomas Fowell Buxton, was passed a resolution which affects all Government contracts and practically the contracts of all local authorities throughout the kingdom. The First Commissioner of Works, then the Right Hon. David Plunket, Member for Dublin University, still a close borough unaffected by popular sympathies, had inserted in documents to be signed by contractors the clause:

"The rates of wages which I propose to pay to the men on day work under this contract are shown in the accompanying schedule, and in my opinion represent the rates of wages generally accepted as current in each trade to competent workmen."

To this Mr. Buxton moved as an amendment:

"That clauses be inserted in all Government contracts, requiring that the contractor shall, under penalty, observe the recognized customs and conditions as to the rates of wages and working hours that prevail in each particular trade, and that the contractor should, under penalty, be prohibited from subletting any portion of his contract, except where the department concerned specifically allows the subletting of such special portions of the work as would not be produced or carried out by the contractor in the ordinary course of his business."

Considerable discussion ensued, modifications were made, and the following was passed unanimously:

"That, in the opinion of the House, it is the duty of the Government, in all Government contracts, to make provision against the evils which have recently been disclosed before the House of Lords Sweating Committee, and to insert such conditions as may prevent the abuses arising from subletting, and make

every effort to secure the payment of the rate of wages generally accepted as current for a competent workman in his trade."

Seldom has a resolution likely to be so far-reaching in its consequences been passed so easily and with so little comment. Since then, attention is constantly being drawn in the House to infringements by local authorities on the spirit of this resolution, often by questions embodying the implication that the resolution carried with it an injunction to employ only men working in accordance with the rules of trades-unionism. These implications were passed unchallenged until a few days ago, when the Secretary to the Treasury disclaimed any obligation except with regard to wages. It will be interesting to note how long the labor party will rest satisfied with this definition.

A debate last Monday has still further strengthened the assumption of the Labor party. The navy estimates came up for discussion, and Sir John Gorst, as spokesman of the Conservative party, playing the rôle of the true friend of the workingman, in a long speech moved :

"That, in the opinion of this House, no person should, in her Majesty's naval establishments, be engaged at wages insufficient for a proper maintenance; and that the conditions of labor as regards hours, wages, insurance against accident, provision for old age, etc., should be such as to afford an example to private employers throughout the country."

The Secretary at War replied that while he was unable to accept the wording of the resolution, Government, "not being able to close their eyes to the change which had of recent years come over public opinion in this matter," had "*ceased to believe in competition wages*," and would act accordingly. This was accepted by John Burns and the Labor party as even more satisfactory than any specific resolution. In this declaration by a Cabinet Minister we have reached the culmination so far of the acknowledgment of the labor claims. Strange developments may be expected. True, these resolutions concern only Government contractors. Ordinary traders, to make a living, must conduct their business according to competitive rules. Many of them have no doubt much to learn as to the criminality of practices tending to the demoralization and ill-health of those they employ; others are learning that shorter hours and higher pay by no means imply increased cost of production. But every effort will be made by the trades-unions to apply the rules to private trade, and, where this cannot be effected, it will be more and more demanded that Government should fulfil the part of public provider and employer. It may again be found easier to extract extreme concessions from the Conservatives than from the Liberals. The Conservatives are at present irresponsible, smarting under recent defeat, and thirsting for a return to power, and are further removed than the Liberals from the immediate consequences of concession. They have more to fear from concessions to tenants and agricultural laborers than to handicraft workmen. There is not, except in Ireland, any large class of small proprietors whose direct interests are opposed to those of the manufacturing classes, and in Ireland such small proprietors are for the present, in consequence of the opposition of the landlords, thrown more and more into the arms of the Labor democracy. John Burns and Havelock Wilson, the foremost exponents of "labor" in the House, are men of unquestionable ability and of transparent sincerity and honesty of purpose.

It is to the advantage of all parties alike to conciliate the labor interests, and let us hope that all parties are moved less by party considerations than by a genuine desire to carry out the precepts of Christianity and benefit the masses. Knowing the misery and degradation of vast multitudes of their fellow-countrymen, many are prepared to try almost any experiment and to suppress where they cannot forget preconceived economic convictions. It may in the future appear remarkable that an epoch which saw society rent concerning the home-rule measure, involving no departure from already recognized principles of government, saw abandoned by almost universal consent and with little comment economic principles hitherto regarded as the basis of industrial security and progress. D. B.

GONCOURT'S LA GUIMARD.

PARIS, March 16, 1893.

IT has always been a surprise to me that Goncourt should have cut his literary life in two. You would hardly think that the amateur, the lover of the delicate art of the eighteenth century, of the art of China and Japan, could be the same man as the author of 'Germinie Lacerteux' and so many other realistic works. In some senses Goncourt is intensely modern; in others he belongs entirely to the past, and to the most artificial part of the past. Goncourt has drawn from their semi-obscurity the artists of the latter part of the eighteenth century, the illustrators of the books of Dorat and others, the engravers—such men as Eisen, Fragonard, Lavreince, Saint-Aubin, Moreau le Jeune, etc. The Revolutionary school of David had revived the Greek and Roman art, the art of republics; and the conventional, refined, and too feminine art of the eighteenth century had fallen into complete contempt and oblivion when the Goncourts began their collections in the bric-à-brac shops of Paris, and rediscovered the school which had preceded the Revolution.

Why did they not shut themselves up, like so many other amateurs, in the little world which they formed for themselves? Why did they not live only in the past? There was in them a sort of curious dualism. They came to the front of the realistic school, and found their literary documents in life; they lived in modern Paris, not only in its drawing-rooms, but in its studios, its garrets, its barracks, its dancing and singing-halls, its hospitals. At times, however, it seems as if Goncourt wants a relief, as if modern life appeared too coarse and hateful; he has nostalgia of the past, of the Epicurean time of which Talleyrand said: "Those who have not lived a few years before the French Revolution do not know what pleasure it is to live." Goncourt, when he is in that mood, works at some new volume of his 'Actrices du 18e Siècle'—a curious series, which is devoted to Mlle. Lecouvreur, Mlle. Clairon, Sophie Arnould, Mme. Saint-Huberty, Camargo, La Guimard, Mlle. Contat, Mme. Favart. Four volumes only have appeared: Sophie Arnould, Mme. Saint-Huberty, Clairon, La Guimard.

La Guimard is the latest. Its preface is short and is thus conceived:

"One day, in the 18th century, people asked themselves, 'Why do all the dancers succeed in *galanterie* and arrive at the Opéra in a *gilded car*, and why do so few singers make large fortunes?' And probably some allusion was made to the fortune of the dancer whose history I am writing, to the luxury of this *impure*, greater than that of the courtesans of antiquity, Rhodope and Lais, of this *impure* whose hôtel cost as much as a pyramid, and whose theatre in town and country absorbed for the pleasures of her social set the best actors of the three theatres of Paris. And each gave in turn a reason, and when the question was put to D'Alembert, the witty geometer said: 'It is a necessary consequence of the laws of motion.' Things are changed in our time and almost reversed; the great fortunes are made by the great singers, such as Patti, Alboni, Nilsson, etc., and we hear but little of the fortunes made by dancers. 'La Guimard' (such is the name always given to Mlle. Guimard) lived at a time when Terpsichore was still in the ascendant."

Marie Madeleine Guimard was born on the 27th of December, 1743. She was the daughter of an inspector of the manufacture of cloth at Voiron (in Dauphiny) and of Marie Anne Bernard. She was a natural daughter, and was legitimized only in 1745. Under the patronage of M. d'Harmoncourt and of President de Saint-Lubin, she was admitted at the age of sixteen to the corps de ballet of the Comédie-Française. Her first lover seems to have been an actor called Léger. Théveneau de Morande, in his famous pamphlet called 'Le Gazetier Cuirassé,' says, a few years afterwards: "Of all the women who dance in opera, Mlle. Guimard is the only one who did not begin with a *laquais*, a soldier, or a hairdresser; she owes to the dancer Léger her first lessons as well as a child, who was born in a garret, in midwinter, without a fire, without any *courte-pointe* of lace." Readers of the 'Petites Cardinal' will not be surprised that Mme. Guimard, the mother, did not much favor the dancer Léger; she found a more useful friend for her daughter in a financier, and, under his protection, the Guimard entered in 1761 the corps de ballet of the Opéra. The discipline and organization of the corps de ballet is even now very nearly what it was in those times: the corps is like a regiment; the dancers form several classes; promotion is difficult; the work is very hard, and the salary is very small. Guimard was noticed at once; she attracted the attention of Count Butomlin, Ambassador of Russia, of Comte de Rochefort, who gave her a diamond necklace of great value; but she formed a more durable liaison with a man who has left a name in the literary society of the eighteenth century. M. de la Borde was first "valet-de-chambre ordinaire" of the King, governor of the Louvre. He published a 'Choix de Chansons,' in four volumes, which is the finest illustrated work of the last century; the engravings by Moreau le Jeune in the first volume are the best specimens of a delicate art which has not yet been surpassed. It is a great pity that Moreau le Jeune did not illustrate the three last volumes; their illustrations were confided to good artists, but have not the exquisite beauty of Moreau's. (The Duc d'Aumale possesses in his collections a copy of De la Borde's 'Chansons' in vellum, with all the original drawings; it is the copy made for La Borde himself.)

La Borde was a man of the world. He was amiable and intelligent, and Voltaire said of him:

"Avec tous les talents le destin l'a fait naître;
Il fait tous les plaisirs de la société."

He became the protector *en titre* of the Guimard, who gave him a daughter in April, 1763. Guimard became rapidly a favorite of the Paris public and of the Court. "At that time," says Goncourt, "there was a Sultan at the Opéra whose box was a harem, always full of old dancers, pensioned by him, of dancers *seules*, *en double*, *figurantes*, *surnuméraires* [these were the names given to the various divisions of the corps de ballet]. This Sultan was the Marshal Prince de Soubise." Moreau le Jeune has represented Soubise in the magnificent engraving called "La petite Loge" in

the 'Monument du Costume,' a work which is really a monument of the eighteenth century, of its manners and graces and morality. In this "petite Loge" you see a mother—a true or pretended mother—presenting to Soubise, sitting in his chair, a young débutante.

In 1768 we find Guimard receiving an allowance of 2,000 *écus* per month from Soubise, and living in a style which had never been equalled by any dancer. She received money in both hands, as La Borde had continued his relations with her, and La Borde was a fermier-général. She gives three suppers every week—one for the grand seigneurs of the Court, one for the authors, artists, philosophers; a third for a mixed company, entirely devoted to pleasure. She has a country-house at Paulin and a theatre. Princes of the blood go to Paulin as they go to Versailles. She has among her authors Collé, who writes pieces for her theatre, and Carmontelle, who writes proverbs; La Borde composes the music. At the age of twenty-five Guimard led the life of a princess: between her dancing and her suppers, she sometimes visited the poor, she distributed money to the curés. An engraving of the time called "Terpsichore charitable, ou Mlle. Guimard visitant les pauvres," shows her entering a garret where lies an old man; she is followed by a troop of cupids bearing bread, bottles, and soup. Her expenses were so great that she had to take a third protector in the person of the Bishop of Orleans, Mgr. de Tarente, who lived in the coulisses of the academy of dance and of music. (We have his portrait by Gabriel de Saint-Aubin.) She built for herself a hôtel in the quarter which is now called the Chaussée d'Antin and is in the midst of Paris, but which then was almost a desert. The "Temple of Terpsichore," as it was called, was a little palace, a marvel of taste. La Borde saw to all its details. Fragonard was among the decorators, and painted Guimard in the costume of a shepherdess of the Opéra. The house-warming of the Temple was a great event. Two princes of the blood were among the happy few who were admitted to see the "Partie du Chasse de Henri IV.," which was played in the theatre on that great night. She had now two theatres, one at Paulin and one in Paris. Goncourt enters into many details concerning the representations which took place for the amusement of the Guimard and her friends. I confess that I am surprised he should take so much trouble about such trifles. All this light literature of the eighteenth century is like a perfume which has lost its odor; it is very volatile, often very coarse and disgusting.

The Guimard may have been a good dancer, a woman of some wit; she was no better than a common courtesan, and, like all persons of her class, she was occupied only with her quarrels with her rivals. The horizon of such persons is perforce very limited, though they sometimes associate with persons of a high rank; but they reduce these to their own level. The history of the quarrels of the Guimard with other actors and actresses is very tiresome. M. Goncourt is obliged to enter into all the details of this vulgar warfare, for otherwise his book, already very thin, would have been reduced to the proportions of a magazine article. The Guimard was really not a suitable subject for a book; there is nothing in her life to interest the general public. We cannot take much compassion on her when she is ruined in the end. When the ruin came, she had a happy idea: she put her hôtel in a lottery. The following prospectus was printed: "Prospectus of a lottery of the house of Mlle. Guimard which will be drawn publicly, the 1st of May, 1786, in a room of the Hôtel des Menus, Rue Bergère, before a public officer." Then follows a detailed description of the "Temple" and of its furniture. The lottery consisted of 2,500 tickets at 920 livres apiece; there was to be but one winning ticket. The prize was gained by the Comtesse du Lau, who had bought a single ticket; she sold the house soon afterwards to the banker Perregaux at the price of 500,000 francs.

The later years of such persons as the Guimard are generally spent in obscurity. On the 14th of August, 1789, when she was forty-six years old, she married a dancer, Despreaux, who was fifteen years younger than herself. The Revolution soon deprived her of her pensions; she took small lodgings with her husband on the top of the Butte Montmartre, and wrote useless petitions to the Government to get her pension from the Opéra paid. The Empire did not bring back her past opulence; she left Montmartre, however. She died in the Rue Ménars on the 4th of May, 1816, at the age of seventy-four years. Her death passed unnoticed; she had long been forgotten.

Correspondence.

THE PRESIDENT AND HIS KIN.

To the Editor of The Nation:

Sir: A Chicago paper announces that a meeting has been held there of "the Clevelands of Chicago" to take the initial steps towards organizing all the Clevelands of the United States to meet the President at the World's Fair.

As one of the many thousand descendants of Moses Cleveland—the progenitor of the race—who came to this country two hundred and sixty years ago, I wish to enter my protest against the effort, not only as repulsive to good taste, but as laying a needless additional burden on the shoulders of our honored relative who has the misfortune to be President. Surely he has enough to suffer in the penalties inseparable from his office, and his relatives should be the first to seek to alleviate rather than add to the inevitable nuisances attendant upon it.

Family gatherings at best are very equivocal sources of gratification when indiscriminately extended. The weakest and most flatulent members are pretty sure to come to the front, and little opportunity can be afforded for those to find each other out who might really discover such kindred tastes and sympathies as alone make acquaintance desirable or friendship possible. And if such is true of ordinary gatherings, where the members meet on equal terms, how much more emphatically would it be so in this instance, where the predominating influence of one individual would be such that all the rest must perforce appear in the rôle of bobs to the tail of his kite. I have too much respect for him, and too firm a faith in his possession of the most marked traits of the best of his ancestry, to believe it would be agreeable to him.

Eight generations have passed since the advent to this country of the first of the name, and the increase must be many thousand fold. I trust they number among them a reasonable proportion of honest and respectable people. I know they have comprised many truly noble and good men and women; but no one who can look back upon even two or three generations of his ancestry can fail to discover individuals whose intimacy he would not care to seek—and in such a heterogeneous crowd as the ninth generation would present, the claim of brotherhood could hardly exceed that which is due to all our fellow-beings.

I speak for myself alone, having had no opportunity to consult with others, but I am firm in the conviction that the sentiment I have endeavored to express will commend itself to the best representatives of the family as consistent with the hereditary traits of

A Cleveland.

"GOOD CHARACTER AND COMPETENCY" IN CITY GOVERNMENT.

To the Editor of The Nation:

Sir: Secretary Carlisle's determination to enforce the rule of "good character and competency" in the appointment of lighthouse-keepers, on which you recently commented, is one of an increasing number of evidences of the dawn of rational politics. Further evidence to the same effect is furnished by the effort that is now being made to have reason and common sense applied to the administration of municipal affairs in Chicago. A formidable movement, headed by our leading citizens, to effectively protest against "gang rule" and its able exponent, Mr. Carter Harrison, is now on foot. A "citizens' ticket," composed of Republicans and Democrats in equal numbers, has been endorsed by the Republican Convention. The platform pledges the candidates to the merit system of appointments, to the substitution of salaries for fees, adequate compensation to the city for franchises, clean streets, free public baths, parks, libraries, museums, etc.

At a recent mass-meeting held in the interest of this movement, one of the speakers pertinently asked, "What is a city but a business corporation?" and added, "The Mayor we are going to elect is a man who is going to conduct the business of the city on business principles." Mr. Allerton, the candidate for Mayor, said that he did not appear "as a Republican, nor as a Democrat, nor as the exponent of any strictly political party, but as the representative of the good citizens of Chicago, who, whether Democrats or Republicans, desire a clean, pure, economical, liberal administration" of the city's affairs. He further said: "The main object of all parties is to have good government"—a forcible comment, indeed, on the lengths to which partisan madness has driven men, that they should need to be reminded that the only reason for a party's being is "to have good government"!

Another encouraging sign of the times is the fact that the citizens' candidates and the Republican Committee have rejected the assessments levied on the City Hall employees by the present Republican administration, and those who made such "contributions" to the campaign fund may receive them back on application.

This campaign is a matter of much more than local interest. All intending visitors to the World's Fair are personally concerned in Chicago being a place of physical and moral cleanliness, where the atmosphere will not be polluted with soot nor the streets with filth, and where lives and limbs will be safe from the assaults of footpads and "crooks." But the results of this contest will be still more lasting and far-reaching. The election of the non-partisan ticket, and the success and satisfaction that are sure to follow a practical application of the "business principles" theory to city government, will undoubtedly give a tremendous impetus to the cause of municipal reform throughout the land. Although the ultimate triumph of reason in politics is inevita-

ble—unless our huge American governmental experiment is to prove a dire failure—it is capable of being greatly expedited, and for doing just this the coming election offers a magnificent opportunity.

Of course the combination of World's Fair and civic pride explains the present movement. The growing disgust with "machine" methods was precipitated by a desire to present a fair appearance to visitors during the coming season. If the movement proves successful, Chicago will have contributed an additional reason for the approaching jubilant celebration of American greatness; and the stimulus that such success would give to the cause of municipal reform would be by no means the least among the educational blessings that are expected to flow from the Fair.

S. R. T.

CHICAGO, March 25, 1893.

THE ANGLO-SAXON SABBATH.

TO THE EDITOR OF THE NATION:

SIR: In following the very interesting discussion in your columns regarding the Puritan observance of the Sabbath, I noticed that no reference was at any time made to the position of the early English Church with regard to this question. As the matter has been nowhere fully treated, perhaps a few notes at this time will prove of interest to your readers. I shall confine myself to the period before the Conquest.

Both the seventh and the first days of the week were rest-days under the old dispensation (cf. Ex. xii. 16), and the meaning of "Sabbatum" is, therefore, not a little confused in the early English monuments. Of the many examples that present themselves I select a few from the Anglo-Saxon Gospels:

Matt. xii, 8, *τοῦ σαββάτου*, Vulg. Sabbati, Corpus MS. restedaeges, Hatton MS. restesdayges, Lindisfarne Gloss To sunnadae ⁊ to saternes daeg (*waes dhaera Judea sunnadaeg =to Sunday or to Saturday that was the Jewish Sunday.

Mark xv, 42, *παρασκευὴ ὅ ἐστι προσάββατον*, Vulg. Parasceue quod est ante Sabbatum, Corp. Hat. ⁊ is aer saeterdags = the day before Saturday, Rushworth MS. Lind. Gl. ⁊ is fore sunnandaeg=the day before Sunday.

Luke xxiii, 54 *σάββατον ἐπέφασκε*, Vulg. sabbatum illucescebat, Corp. Hat. saeterdaeg onlyhte = Saturday dawned, Rush. Lind. Gl. sunnadaeg inlixade (Rush. -ende) = Sunday dawned.

Luke xxiii, 56, *τὸ μὲν σάββατον*, Vulg. et quidem Sabbato, Corp. Hat. on saeterndaeg (on Saturday), Rush. synnadaeg (Sunday), Lind. Gl. sunnadaeg (Sunday).

In Alfred's Version of Bede's 'Ecclesiastical History,' III., xiv (17), mention is made of "one of the rest-days that is now called Sunday."

This consideration of the regard paid to Sunday as a Jewish Sabbath will prepare us for the discussion to follow. Bede, 'De Temporum Ratione,' c. vi. (Migne, 'Patrologa Latina,' 90, p. 313), directs "that the English Sabbath, like the Jewish, be observed from evening to evening." The Anglo-Saxon laws are the chief testimony to this observance. Cf. Withred, Laws (697 A. D.), Thorpe, p. 17, Schmid, p. 16; Theodore, 'Penitentiale' xvii. sec. 6, Thorpe, 283; xxxviii., sec 8, Thorpe, 298. At a later day the Sabbath rest was extended to include the time between Saturday at none (two P. M.) and Monday's dawn. Cf. Edgar's Laws, II., 5; Schmid, 188; Thorpe, 112; Canute, I., 14; Schmid, 262; Thorpe, 157. What was the reason for this change? Lingard tells us ('Hist. Anglo-Saxon Church,' ed 1845, vol i., p. 341), "At a later period, some time before the reign of Edgar, though probably no change had taken place in the ecclesiastical computation, the freedom of the Sunday was enlarged in favor of the working population." This could be debated; but there is another question of more interest to us at this time. Why did Sunday receive honor in the Anglo-Saxon Church? Two answers are ready from Anglo-Saxon churchmen:

(1.) Aelfric, whose conservatism is well known, holds to the teaching of the Fathers (Thorpe's Homilies, II., 206-30). "Saturday was called rest-day until Christ's passion. On that day Christ's body lay in the tomb, and he arose from death on Sunday, and this day is the day of rest to all Christian men, and holy, on account of Christ's resurrection. We must ever celebrate this day with spiritual honor, etc."

(2.) There were, however, other churchmen at this period who were not unaffected by the theories that had filtered into the Church a few centuries before. One of these was the strong advocate of the Sunday observance in the collection of homilies classed under the name of Wulfstan (Napier, Berlin, 1883). He agrees, of course, with the views of Aelfric (XLIV., 222, 28), but to him the Lord's resurrection was not the only thing that made Sunday a rest-day. The catalogue of Scriptural events that he gives shows the blending of the Jewish Sabbath with the rest-day of the new dispensation. XLIII., 210, 10: "On this day (sunnandaeg) was Adam, the first man, created, and on this day Moses and his troop crossed the Red Sea dry-shod. On this day the Lord began to feed the people with manna, the heavenly meat. The Lord said: 'Six days are given to you to labor, but the seventh is the holy rest-day.'" XLIII., 211, 11: "On Sunday was Christ baptized, and on the same day the Spirit descended upon his Apostles."

The Wulfstan homilist had ample reason to be satisfied with the correctness of this observance. Very strong proof is found in the testimony of Nial, the Scotch deacon (Wulfs. xliii., 211, 27), who had enjoyed the exceptional privilege of a five-weeks' visit to Paradise, and had declared, upon his return, "that God was violently opposed to any work between None Saturday and Monday's dawn."

Another homilist of 150 years later had even stronger support (Old English Homilies, iii., A. 20, 80, Morris, 'Early English Specimens'). The Lord is made to say: "Arise now, Paul, arise; I grant rest according to your request from Saturday at None until Monday's dawn even until Doomsday."

Had "H." given his attention to the Anglo-Saxon codes, he would have noticed quite a difference between them and the statutes of later centuries. The laws forbid in many places trading, travelling, hunting, marriage, and executions upon the Lord's Day. We have besides a remarkable bit of evidence from the early eleventh-century 'Colloquy of Aelfric' (Wright-Wülker, 'Vocabularies,' i., 92). The hunter is asked: "Did you hunt to-day?" He replies: "I did not because it is Sunday, but yesterday I hunted."

I could add much to the present material, but enough has been said to show that the Puritan adaptation of the Jewish Sabbath was anticipated on English soil by over five hundred years.

FREDERICK TUPPER, JR.

JOHNS HOPKINS UNIVERSITY, March 21, 1893.

A VESPUCIAN FRAUD.

TO THE EDITOR OF THE NATION:

SIR: The Latin version of the four voyages of Vespucius issued at the St.-Dié press and made by Bassin is in small quarto, and purports to be translated from the French. Ternaux-Compans says there were no books printed at this press except in this small quarto shape. This Latin edition bears in the colophon the emblem of the St.-Dié press. Some copies are dated in May, others in September, 1507, the type being kept standing between the two issues. This Bassin Latin was used by Grynæus in the several editions of his 'Novus Orbis,' and fourteen leaves from his book in the Paris (1532) edition (pp. 135–160) have been made the basis of what is put forward as a unique copy of a wholly unknown edition of the same Latin version, issued on the same day in May, 1507, and in folio form, but with the difference that it professes to be translated from the Spanish. The pagination of these fourteen leaves has been altered by scratching out the original figures and stamping in new figures, with a star before and after the new figure to conceal the traces of the old ones; but the process is discernible by holding the pages to the light. A similar change has been made in the signature marks, m. n. o. being converted to a. b. c.

For a title-page a leaf containing an address to the reader has been taken from some other book (which called Vespucius *Albericus*) and reversed in binding so as to give a blank *recto*, on which a title has been made with the pen. The final leaf, like the title, is of different paper from the body of the book, and is wholly pen-work. The fabricator has left discernible the lead-pencil rulings which guided him in his work; and the cut which is the emblem of the St. Dié press does not correspond in measurements and otherwise to a genuine impression.

Further, this fraudulent book, which is said to have been found in Italy, has been facsimiled in a hundred copies, and the catalogue of a dealer in Milan has been received in this country, offering these facsimiles at a hundred lire. The professed original has been offered to American collectors at 5,000 marks. The fabricated title reads thus:

DE AMERICII [*sic*] VESPVTII NAVIGATIONE AD INSVLAS NOVAS TERRASQVE INCOGNITAS.
AB HISPANA LINGVA AD LATINAM EIVSDEM AVCTORIS PRIMA TRADVCTIO.

It will be perceived that a peculiar interest would attach to the book from such a title, were it genuine. In the first place, it claims that Spanish was the original tongue of the narrative, and that the translation was not made from the French as the quarto issue of the same day from the same press alleges, and yet the Latin is Bassin's version in each case. There is also in the title a tantalizing ambiguity, which raises a doubt if the Latin was not made by Vespucius himself, and thus it would open the question as to the privity of that navigator to the actions of the St.-Dié coterie, by whom the name of Americus was given to the "mundus novus."

Henry Stevens, in the *Athenæum* (London), July 4, 1885, exposed the forgery of a professed unique edition of Cadamosto's voyages made in the same way by taking pp. 1-78 of the Paris (1532) edition of Grynæus, with a forged title and colophon leaf, which was probably the work of the fabricator of the present Vespucius.

JUSTIN WINSOR.

GRASS WIDOW.

To the Editor of The Nation:

Sir: My attention was caught by a letter in the last *Nation*, signed "F. H.," on the subject of the derivation of the term "grass widow," and, though no etymologist, I venture humbly to present this solution of the question.

"F. H." mentions that "in England the term *grass widow* signifies an unmarried woman who has had a child," and says that the Rev. Robert Forby defined the term as meaning "a fair one whose nuptials, not celebrated in a church, were consummated, in pastoral simplicity, on the green turf." Now, it is, I believe, a fact that many English expressions survive in this country which long ago passed out of use in England, and the term "to grass" a woman, meaning "to rape," is one which I have often heard used. So why may not the Rev. Robert Forby's solution of the problem be the correct one after all?

Henry H. Carter.

Lewiston, Me., March 25, 1893.

Notes.

D. Appleton & Co.'s spring announcements include 'The Gilded Man, and Other Pictures of the Spanish Occupancy of America,' by A. F. Bandelier; 'The United States,' Élisée Reclus's third volume in the North American section of his 'Earth and its Inhabitants'; a 'Guide-Book to Alaska and the Northwest Coast,' by Miss E. R. Scidmore; 'Three Roads to a Commission in the United States Army,' by Lieut. W. P. Burnham; 'General Greene,' by Col. F. V. Greene, and 'General Johnston,' by R. M. Hughes, in the "Great Commanders" series; 'The Story of My Life,' by Georg Ebers; 'Many Intentions,' short stories by Rudyard Kipling; 'The Art of Taking a Wife,' by P. Mantegazza; 'The Simple Adventures of a Mem-sahib,' by Sara Jeannette Duncan; the second volume of Herbert Spencer's 'Principles of Ethics,' and 'The Laws and Properties of Matter,' by R. T. Glazebrook.

Macmillan & Co. will issue in thirteen volumes the Works of the Brontë Sisters, and in two Miss Burney's 'Evelina,' uniform with the charming edition of Jane Austen edited by R. Brimley Johnson; a one-volume edition of Coleridge, uniform with the Tennyson, Wordsworth, Shelley, and Matthew Arnold already issued; in eight volumes, Pepys's Diary, complete for the first time, with the exception of a few unprintable passages, from the transcript bequeathed to Magdalene College, Cambridge, by the late Mynors Bright; 'The English Town in the Fifteenth Century,' by Alice Stopford Green, in two volumes; 'Some Hints on Learning to Draw,' with contemporary illustrations, by G. W. C. Hutchinson; 'The Eloping Angels,' by William Watson; and the following translations: from Goethe, 'Prose Maxims,' by T. Bailey Saunders; from Prof. Cossa, 'Introduction to the Study of Political Economy'; from Prof. Wundt, 'Lectures on Human and Animal Psychology,' by Profs. J. E. Creighton and E. B. Titchener of Cornell University; and from Prof. Zupitza, 'An Old and Middle English Reader,' by Prof. Geo. E. MacLean of the University of Minnesota. Also Mr. William Winter's memorial address on George William Curtis, with a portrait.

The second number of the *Sewanee Review*, the quarterly issued by the University of the South, contains an excellent article on the Rev. Charles Wolfe, who wrote the "Burial of Sir John Moore." We understand that the writer of this, Prof. W. P. Trent, the biographer of William Gilmore Simms, has in hand a careful edition of Wolfe's poems.

The *Bookman* promises many surprises in the new Life of Defoe by Thomas Wright, which will contain not a few unpublished letters, new light on 'Robinson Crusoe,' and fresh facts concerning Defoe's private life.

'Oxford Men and their Colleges,' by Joseph Foster, a supplement to his 'Alumni Oxonienses,' is on the eve of appearing in a volume of 400 pages, containing nearly 100 full-page illustrations from engravings after Turner, etc. Mr. Foster has had the collaboration of numerous Oxford historians for the notices of the several colleges.

A. C. McClurg & Co. have in press 'The Best Letters of William Cowper,' edited by Anna B. McMahan; a large-paper edition of Eugene and Roswell M. Field's 'Echoes from the Sabine Farm'—translations of Horatian lyrics; and 'The Law of Psychic Phenomena,' by Thomson Jay Hudson.

Pietenbring's 'Theology of the Old Testament,' translated by Prof. H. G. Mitchell of the Boston University, is soon to be issued by T. Y. Crowell & Co.

Tait, Sons & Co. announce 'The Last Sentence,' by Maxwell Gray, author of 'The Silence of Dean Maitland'; and Mrs. Oliphant's 'Victorian Age of English Literature,' in two volumes.

The second volume of Mr. James Rodway's 'History of British Guiana' has just been issued from the *Argosy* press, Georgetown, Demerara. Beginning with an account of the occupation by the French in 1782-1783, Mr. Rodway goes on to tell of the downfall of the Dutch West India Company and the consequent changes in the administration of the settlements; next of the capture in 1796 by the British, of the effect of British influence, of the cession to the Dutch in 1802, and of the recapture by the British in 1803 of the colonies, which in 1814 were finally ceded to Great Britain. The work is brought down to the slave insurrection in 1824, of which the author gives a graphic account. The get-up of the volume, in print and binding, maintains the reputation of Mr. James Thomson, the enterprising proprietor of the *Argosy* press. Mr. Rodway is engaged upon the third volume of his History, which will complete the work. He is, we may add, the writer of the bright little 'Handbook to British Guiana,' which, with its wealth of illustrations, has been specially prepared in connection with the colony's exhibit at the World's Fair.

The second volume of David Nutt's edition of Florio's Montaigne (containing the second book of the Essays) presents the same merits and demerits as its predecessor: the merits of the publisher, the demerits of the editor, Mr. George Saintsbury—or shall we say the late editor, since the word *edited* is now dropped from the title-page? No fewer ancient misprints adorn these pages than the previous ones, as if time had rendered them too sacred for the hand of man to touch. *E. g.*, on p. 41, in a charming passage about Amyot's translation of Plutarch's Lives—a passage that ought to be made *easy* to every reader—Florio said (or rather Florio's printer) in 1603, and continues to say in 1893: "We that are in the number of the ignorant had been utterly confounded had not his booke raised us from out the dust of ignorance. God-a-mercy his endeavours we dare not both speak and write: Even Ladies are therewith able to confront Masters of arts." Montaigne said: "Sa mercy, nous osons *à cett' heure* et parler et escrire"—not "not" dare, but *now* dare. On the same page Montaigne uses the phrase "par longue conversation." Florio's printer made this "through a long conversion," and the present editor so reads it. He reads a great many other strange things in Montaigne's book that were never in Montaigne's mind, and consequently these volumes are not very desirable for any one who is not a student of Montaigne, or of English literature in the sixteenth and seventeenth centuries.

It is singular that there is no one history of English literature at all satisfactory as a text-book. Taine's is too long and labyrinthine, Stopford Brooke's too short, and all others impossible. Especially is this the case when, as in academies, scientific schools, and some of the smaller colleges, it is necessary that the student be also furnished with selections from the works of the more important authors, instead of being turned loose in a well-filled and well-arranged library. The nearest approach to the text-book that will meet such requirements that is not a compound of useless biographical details and inane criticism, and that properly treats the history of literature as a part of general history, is Mr. Henry S. Pancoast's 'Representative English Literature, from Chaucer to Tennyson, selected and supplemented with historical connections' (Henry Holt & Co.). The volume is an octavo of 500 pages, of which about a half consists of skilfully chosen selections. The style is more than respectable, the text accurate, the method excellent. Not even the dullest pupil could study it without feeling the historical and logical continuity of the facts presented to him; and in the hands of skilful teachers in the secondary schools, it may do much towards awakening real interest in literature. It is along the line of teaching which Mr. Pancoast's work suggests that progress must be made.

Prof. McLaughlin's 'Literary Criticism for Students' (Henry Holt & Co.) is a reprint to the extent of some 200 pages of familiar selections from Jonson, Dryden, Addison, Swift, Johnson, and eight well-known critics of this century, including, curiously enough, Mr. R. H. Hutton. The preface seems to us somewhat enigmatic, and the notes which conclude the volume consist largely of mere summaries of the text. Interesting as such selections are, it is hard to see who can be the better for this reprint of them. Literary criticism, as such, cannot be made a subject of study in the secondary schools, nor, except in rare cases, in the first two years at college; and older students would need a text-book of a very different sort.

A droll conception of an editor's duty is exhibited by Mr. George in his 'Select Orations of Daniel Webster' (Boston: D. C. Heath & Co.). He has not remarked on the liberties that Webster took with Cicero (pro Flacco 4) in the "Dartmouth College Case" (p. 58), which "the general reader" would not be likely to detect, and he actually does not understand Webster's palpable allusion to Virginia and the "noble James" in the "Bunker Hill Monument," where the orator says, "Nor will our brethren in another and ancient colony forget the place of its first establishment till their river shall cease to flow by it" (p. 122). This, we are told in all seriousness, is a reference to Maryland and Father White and the *Ark* and the *Dove*. We should as soon have expected Ararat and Father Noah, the other ark and the other dove. By the way, the fine description of Columbus in the opening of the same speech is better

than ninety-nine-hundredths of the poems that have been written on the subject, and might have elicited a line of comment in the year of the Columbian Fair.

A pleasant story of the works and ways of some children during their summer holiday is 'That Mary Ann' by Mrs. Kate Upson Clark (D. Lothrop Co.). Kindness, grammar, and a suspicion of woman's rights form the triple didactic strand which binds together the various incidents, many of which are amusing and all well told. Occasionally the little fishes talk like whales, being not so much grammatical as pedantic, but usually they are natural and generally interesting. Mrs. Clark has succeeded in making of simple materials a readable book quite above the average of children's stories.

The annual report of the Boston Browning Society contains an interesting though not extensive list of titles of works by and about the two Brownings at present in the library of the Society. It is of interest to note that there is a membership of over 200 women and not quite thirty men. Most of the latter, however, are persons of some literary repute, and seem to have held themselves responsible for a large share of the original work done during the year.

The Educational Club of Philadelphia has printed in a neat pamphlet the letters of advice and of welcome it received from well-known men throughout the country. These letters are of very varying value. The most interesting—and the one which most clearly reveals the need of an educational club in Philadelphia—is from Mr. Henry Carey Baird, who thanks God that he never went to college, and who boasts of a strong feeling against institutions of learning, principally because they teach "so much bad political economy—a thing so vicious that to it can be clearly traced the late rebellion, which, I am firmly convinced, would never have taken place had there been no colleges in the land."

The current Proceedings of the American Philosophical Society contains a paper by Dr. Elliott Coues describing minutely the original MS. journals and field note-books of Lewis and Clark, which he has arranged, continuously numbered, paginated, and indexed in the course of his consultation of them while editing a new edition of Biddle's 'History of the Expedition.' Thirteen bound volumes are in the handwriting of the two explorers, which was so good, though different in character, "that there is perhaps not a word, possibly not a letter, in the whole of these manuscripts not now distinctly legible." Dr. Coues bestows the highest praise on Biddle's labors as an editor of these materials, and explains the extreme meagreness of the natural-history notes by showing the intention to have them separately worked up and published by Dr. B. S. Barton, who died soon after the History appeared.

A 'Catalogue of the Collections of the Bostonian Society in the Memorial Halls of the Old State-house,' just edited by the Society's clerk, Mr. Samuel Arthur Bent, is a pamphlet of 91 pages octavo, embracing 1,082 numbers exclusive of perhaps a third as many objects in special cases or portfolios, and a large quantity of programmes, bills of fare, tickets of admission, orders of exercises, and the like mounted for binding but not enumerated. By far the greater part of this priceless exhibition relates to and is illustrative of Boston, her topography, growth in area, and changes in laying out and in grade, succession of buildings, devastations by fire, and history, in both its local and its national aspect. It is seldom that any object creeps in so foreign as a fragment of the old Roman wall of Britain, nor should such intruders be welcomed to a limited space where even Bostonian relics press upon the accommodations for the literary and pictorial souvenirs of greater worth. A separate historical museum may ultimately arise to meet the exigencies of accumulation. The portraits are numerous, and those of Bostonians proper form an imposing array of great citizens. In the smaller pieces, such as the civil and military commissions, deeds, broadsides, caucus lists, autograph letters, etc., the antiquarian and historian have a rich field of exploration and storehouse of illustration.

Another preservative institution in Boston is the (State) Commission of Public Records, which has been reëstablished after a singular legislative lapse with regard to its maintenance. Commissioner Swan's fifth report on the custody and condition of the public records exhibits anew the qualities which bespeak fitness for his post. We can only mention here its list, supplementary to that of the first report, which shows the extent to which the Commission has aided in the recovery of lost or mislaid, and the rescue of perishing, records of towns, courts, and vital statistics. In Boston alone have turned up three thousand indentures binding apprentices filed with the town clerk from November 27, 1734, to 1805. These bear the signature of the Selectmen of Boston, are of great historical and genealogical value, and will undoubtedly be published by the Boston Record Commissioners. We have more than once remarked on the utility of these reports of Mr. Swan to States, counties, and towns outside of Massachusetts to which the preservation of records is of importance; and what community is to be excepted? So we again notice his exhibition of the excessive and impossible requirements of town clerks annually made by heedless legislatures. Mr. Swan enumerates *seventeen* added to the clerk's load by last year's Legislature in Massachusetts, besides three new penalties for neglect!

House Document No. 150 of the Massachusetts General Court is a substantial volume of 147 pages, illustrated with thirty-one plates and fourteen maps and diagrams. It is the Report of the Board of the Metropolitan Park Commissioners created last summer, and discusses in a broad way the need for open spaces (great and small), hill and pond and river and forest preserves, and access to the seashore, of the metropolitan district, viz., the territory within a radius of eleven miles from the Boston State-house. A large colored map of this district, on the scale of an inch to a mile, accompanies the reports of the Board's Secretary, Mr. Sylvester Baxter, and landscape architect, Mr. Charles Eliot, and shows the existing parks, pleasure-grounds, and connecting boulevards, and the suggested acquisitions. Four acts in aid of the proposed measures are recommended to the Legislature, and we anticipate their adoption. They are in line with the sewage measures already applied to the district, and have the most necessary relation to the water supply and general sanitary condition of the twelve cities and twenty-four towns grouped together by the Commissioners, as well as to the recreation of the 900,000 inhabitants. We commend this report to all legislators and to all public-spirited citizens of metropolitan districts the land over. It ought to be epoch-making.

Announcement is made in a recent number of the *National Geographic Magazine* that the National Geographic Society of Washington offers a gold medal for the best geographical essay written by a scholar in a public high school of the United States, and a certificate of efficiency to the best essayist of each State. The subjects of the essays will be within the continent of North America. The essays must be composed entirely by the scholar, and must not exceed 2,500 words in length. It is planned that the essays from each State shall be submitted to the State Superintendent of Public Instruction, who shall select the best three; these will be forwarded to Washington, where a committee of the Society will choose the best essay for each State and for the United States. In order to extend the usefulness of this project, the Society solicits gifts for medals or scholarships; and of these two means of encouraging study, we would emphasize the latter as by far the better.

Three additional folios of the Geologic Atlas of the United States, similar to the Chattanooga folio, of which we gave editorial description a month ago, have now been issued. One includes Lassen Peak, in Northern California, with text and geological map by J. S. Diller. Special illustrations are given of the Cinder cone, northeast of the Peak, one of the youngest volcanic eruptions in the country. A second folio contains the Sacramento, Cal., sheet, with a page of general outlines of the geology of the gold belt of the Sierra foot-hills, and with a special descriptive text and geological map by W. Lindgren. The third folio includes the Hawley sheet of Northwest Massachusetts, with general and local text, as well as geological map, by Prof. B. K. Emerson of Amherst College. Other folios will soon be issued.

The "De Vries portrait" of Washington is now in the market at the price of one thousand Dutch guilders (Frederick Muller & Co., 10 Doelenstraat, Amsterdam). The "discovery" of this oil painting, signed by the artist "C. Polk pinx. 1793," was one of the interesting results of the trip of the Holland Society to the fatherland in 1888. The Rev. J. H. Suydam, D.D., of Rhinebeck, N. Y., described it in the Year-Book of the Holland Society for 1888–1889. A copy of the portrait is in the Society's Year-Book for 1890. The owner of the painting, Mr. De Vries, senior, of Arnheim, who died in 1892, stated that the painting was presented by Washington himself, the gift being accompanied by an autograph letter, to Mr. Claas Taan, the owner's ancestor. Unfortunately this autograph letter has been lost, but the other documents concerning the picture, the first owner's will, declaration before the notary, correspondence, etc., are at the disposal of the purchaser. Claas Taan was one of those enterprising Hollanders who were prompt to sympathize with the American colonies. Running the blockade maintained by the British cruisers during the Revolution, he brought provisions into Baltimore at a critical juncture. He afterwards held property in Baltimore, and it is evident that Washington appreciated the Dutchman's enterprise very much as he did that of his more famous countryman, Prof. Luzac of Leyden, to whom he also sent an autograph letter of thanks, accompanying it with the gift of his camp-stool used during the war of Independence. Charles Peale Polk, as Tuckerman's 'Book of the Artists' (p. 45) informs us, passed a year or two in America, and several portraits of Washington bear his signature, one of which belonged to the estate of Arthur Lee. Some American institution or society should possess this picture.

—Sir William Anson's treatise on 'Parliament,' forming the first volume of his 'Law

and Custom of the [English] Constitution' (Oxford: Clarendon Press; New York: Macmillan), and appearing first in 1886, has deservedly reached a second edition. It is written with refreshing brightness and clearness, in that easy but not undignified conversational style which characterizes the best Oxford lectures. Addressing himself primarily to students of law, Sir William Anson endeavors to limit his range to the existing law and practice, introducing only "so much of history as is necessary to explain how they have come to be what they are," while he discusses general questions less and enters into detail more than Professor Dicey. Considering the struggle that is now going on in France and elsewhere between opposing tendencies—towards presidential government on the one side and towards cabinet government on the other—it seems a pity that the author has not occasionally placed himself at the point of view of the intelligent foreigner and explained some things which he takes for granted—for instance, the existence of two great parties. It may be remarked, however, that the more rabid American-Irish critics of Mr. Gladstone's Home-Rule Bill will find here an explanation of the practical meaning of several of the clauses they have failed to understand, and especially that concerning money grants. Fortunately for the general reader, Sir William Anson does not confine himself so rigidly to the exposition of facts as his preface leads one to expect, but enlivens his pages with more than one expression of opinion worth listening to on Proportional Representation and other proposals.

—In a short monograph, as well conceived as it is close compacted with historical facts and authorities, Mr. Caleb William Loring of Boston has subjected to a new discussion the perennial question whether, under the Constitution, a permanent National Union or a dissoluble league was established by the United States. The full title of his treatise is 'Nullification, Secession, Webster's Argument, and the Kentucky and Virginia Resolutions, considered in reference to the Constitution and historically' (G. P. Putnam's Sons). The author has been incited to this reinvestigation by an intimation of Mr. Cabot Lodge, in his 'Life of Webster,' to the effect that Hayne, in his famous controversy with the Massachusetts statesman, had the better of the argument, however much he may have been worsted in the trial of oratory. Mr. Lodge, it will be remembered, adventures the bold statement that "when the Constitution was adopted, it is safe to say that there was not a man in the country, from Washington and Hamilton on the one side to George Clinton and George Mason on the other, who regarded the new system as anything but an experiment entered upon by the States, and from which each and every State had the right peaceably to withdraw—a right which was very likely to be exercised." Mr. Loring does not find it difficult to explode this astonishing assertion. Conceding that the Constitution, regarded in the mode of its adoption, represents a "compact" among the States and the people adopting it, he contends, with Madison, that the States and people under it made themselves into a perpetual, indissoluble union; that this was the understanding at the time it was ratified; that this understanding came again and again into formal expression; that it was this understanding which gave its vehemence and energy to the debate waged over the ratification of the instrument; that the Virginia "Resolutions of '98," so far from traversing this understanding, do but confirm it when those resolutions are rightly interpreted; that the Kentucky "Resolutions of '98," though asserting, as originally drawn by Jefferson, an absurd right of "nullification," reduced that alleged right to the form of a "solemn protest"; and that, consequently, the doctrine of nullification and secession, as read between the lines of the Constitution at a later day, is as unhistorical as it is illogical in theory and anarchical in tendency. This whole inquiry has a profound moral significance in the eyes of the writer, because he is unwilling that anybody should even tacitly rest in the pagan maxim that what was once a right under the Constitution may have been made impracticable by force.

—Much as has been done by Marshall, Moor, Forby, Spurdens, Nall, and many occasional note-takers towards registering and elucidating the dialect of East Anglia, the subject is by no means yet exhausted. Of this fact a conclusive illustration has recently been furnished. On the last day of 1892, a discussion of East Anglianisms was initiated in the columns of the *Eastern Daily Press*, published at Norwich, and was kept up with surprising spirit, chiefly in letters, for nearly two months. These letters were contributed by no fewer than ninety-five persons, among whom were not only gentlemen and clergymen, but farmers and laborers. Some of them are trifling enough certainly, while others are of genuine value, and bring to light peculiarities of expression hitherto unrecorded. In the course of them are specified not far from five hundred words and phrases, of which a considerable number are etymologized or otherwise explained satisfactorily. Though the circumstance hardly calls for remark, the bulk of the various contributions would be reduced at least a fourth part by eliminating repetitions and irrelevancies; the authors of many of them, by reason of unacquaintance with literature, or from unfamiliarity with English as spoken elsewhere than in their own neighborhood, having often mistaken as dialectal what is common to a large tract of Great Britain, if not to its entire extent. The letters in question, prefaced and preluded by Mr. Cozens-Hardy, have been collected into a pamphlet entitled 'Broad Norfolk,' issued by the Norfolk News Company, Norwich, at the inviting price of sixpence. An uncommonly good sixpennyworth the purchaser has in it, too. Almost every page of it will reveal to New Englanders the birthplace of dozens of the oddities of speech and pronunciation which distinguish them from other Americans. Except for the unrepublican "master," how, as to one every here and there, his heart must warm towards the gusty home of his Puritan forefathers, to hear, if only on paper, from his five-and-twentieth East Anglian cousin, "My master du say, if I du as I oughter du, I shouldn't du as I du du"! "I am like St. Paul," again confesses the humble cousin aforesaid. "What I oughter du I don't du; and what I du du I don't ought." As to this far-off kinsman's *don't ought*, which the vulgar use all England over, it is not perceptibly improved on in the Yankee's *hadn't ought*.

—The controversy for supremacy which for some years agitated Chicago and St. Louis, and still draws a dividing line between Minneapolis and St. Paul, has in shape been transferred to Seattle and Tacoma, in the State of Washington; but in this case public feeling seems to be aroused less over population and business interests than over the simple name of a mountain—Tacoma or Mt. Rainier, the most symmetrical and perfect in outline of all the giant summits of the United States. With an estimated elevation of 14,444 feet, it overtops by two feet the famous Shasta Butte of California, and falls by but a few hundred feet below the crowning elevation of the national domain (exclusive of Alaska). There is a measure of truth in a recent utterance (February 6) made before the Tacoma Academy of Science, that it "is the most famous mountain peak in our country; celebrated the globe over for its simple grandeur, it behooves our people to protect it, and the park around it, jealously and with sleepless vigilance." The protection proposed at the present time is that of "officially" announcing a name, and, naturally enough, for the residents of Tacoma the name of their own town presents itself with special appropriateness and is endorsed to the Academy of Science for official legislation. At a largely attended meeting of this body—about 120 persons being present, including delegations from the Puyallup, Nesqually, and Klickitat tribes of Indians—much testimony was presented bearing upon the true or original name of the mountain, which, by a majority evidence, would appear to have been Tak'oma or Takh'obet (Tacobet), meaning, as variously interpreted by different authorities, 'the mountain,' 'the snow-mountain,' 'rumbling noise or sound,' 'nourishing breast,' 'the gods,' 'friend at first sight,' and (the possible Nahuatl interpretation) 'the place from which you get coal.' Vancouver's name of Rainier (Regnier) is ardently contended for by the inhabitants of Seattle, and has already largely crept into geographical literature. The National Board of Revision of Geographical Names will have here a delicate situation to deal with.

—Protestant missions in China can hardly be said to be successful, if indeed they are not, as some observers hold, absolutely losing ground. They have been established for half a century, and there are now more than 1,300 foreign laborers in the field, and yet their converts number but 37,000, and the hatred felt for them by all classes is apparently stronger than ever. The principal reasons for this seeming failure are given very clearly and dispassionately by a writer in the London *Times* while discussing the difficulties of the diplomatic relations of China with the Powers. Among these are the implacable hostility shown by the missionaries, with rare exceptions, to the native religions and ethics, especially to their ancestor worship, and the more or less conflicting and confusing rites and teachings of the numerous "polyonymous" societies and sects. "The missionaries," says this writer, "have not agreed among themselves as to the Chinese word to express the single Deity whom they preach, and for whom the Jesuits, the Americans, and the English have each coined or employ a different title, with the result of complete bewilderment to the native understanding." These teachers, in addition, come uninvited and against the desire of the people, and are in reality only maintained by force; the little congregations, formed here and there, being feared by many thoughtful Chinese as the beginnings of a "secret society, hostile to the commonwealth, of damage and detriment to the State." Nor is this fear without reason, when it is remembered that "the Taiping rebellion, by which over 20,000,000 of her people perished, was in its inception a Christian movement, led by a Christian convert, and projected to Christianize his countrymen." The

writer advocates a closer supervision by the embassies over missionaries, a more careful selection by the societies of their employees, the restriction within the narrowest limits of orphanages and sisterhoods, and deprecates especially the employment of young unmarried foreign girls, whose presence in China is a real detriment to the cause which they serve.

—G. Kruell's new portrait of Gen. Sherman may well be rated the greatest work of this artist and the highest achievement in wood-engraving. One naturally compares it with the masterly Grant in the same series, and it is most instructive to observe how the technical treatment adapts itself to the character in each case. In Grant we have sheer weight, endurance, tenacity, almost stolidity, completely expressed; in Sherman's seamed and weather-beaten face, which looks directly at us, we have the nervous organization, the keen and alert intelligence, the firmness, and the poise, never so perfect as in the heat of battle, rendered with a vital consistency. Every inch of the block testifies to the artist's ripened command of the qualities which made his Lincoln, Grant, and Webster in particular such remarkable performances; and in none has the breadth of treatment which we associate with the brush been more conspicuous. A work which we know to have been based on a photograph from life seems to be a translation of a canvas into black-and-white, and forcibly suggests the painter-etcher. Both the grand manner of this engraving of Sherman and the stamp of the great captain in the man himself entitle the portrait to a place in the choicest gallery of art or fame. Mr. Kruell's address is East Orange, New Jersey. The portrait may be seen at F. Keppel's, 20 East Sixteenth Street, New York.

COMPLEX STATES.

Staatenbund und Bundesstaat: Untersuchungen über die Praxis und das Recht der modernen Bünde. Von J. B. Westerkamp. Leipzig: F. A. Brockhaus. 1892.

THE main title which the learned author has chosen for his book is too indefinite to be quite satisfactory, and the sub-title is to some extent misleading. The (objectionable) word "modern" with him means not merely "of our time," as one would naturally suppose; even the Middle Ages come in for a little share. The reader, therefore, gets considerably more than he is likely to expect. On the other hand, the definite article "der" implies that all the complex States of modern times receive some attention. Such is, however, not the case. Some are omitted entirely, partly because the author did not deem them of sufficient importance, and partly because he could not procure the necessary materials. For the same reasons a number of others fare but little better. They are so summarily treated that, as to them, the word "Untersuchungen" is unquestionably too pretentious. Now and then one is almost tempted to ask whether it was at all worth while to say what is said if the author either would or could say no more.

We lay no great stress upon these criticisms. They are of a formal character and do not affect in the least the author's main purpose. This deserves the commendation of all publicists, and, in spite of many exceptions which must be taken as to details, it has so far been attained that the book, though very far from being a great work, is a valuable contribution to the literature of political science. This main purpose is to determine the distinctive political nature of the "Staatenbund" and the "Bundesstaat," not by theorizing, abstract reasoning, but by comparing the law and the practice of the complex States which theory and practice have assigned to the two different classes. The results of this comparison are summed up in the third part (pp. 450-512). That the author does not settle the hotly argued question beyond the possibility of further controversy need not be affirmed. But though the goal may never be reached, the road he has taken is the right one, and even those who do not share his views will have to admit that his assertions are highly suggestive and cannot be disposed of in an off-hand way. Here we can mention only that he looks for the "characteristic difference" to "the mode of changing the federal constitution and to its guaranties," which, in the "Bundesstaat" must be of such a character that "self-sufficiency" is secured to the federation. Prof. Westerkamp does not claim the merit of novelty for his theory. He frankly states (p. 468) that he has "in the main" taken it from the 'Federalist.' The number of quotations from this "admirable" work of "the great jurists and statesmen, Alexander Hamilton, James Madison, and John Jay," bears witness to the high estimation in which he holds it. It is, in his opinion, evidently *facile princeps* among all treatises of its character. And his admiration for the political instrument commented upon is fully as great as that for the commentary and the commentators. His German readers are told, in so many words, that the Constitution of the German Empire falls considerably short of the Constitution of the United States, and between the lines of the whole book is to be read as plainly as if it were printed in black letters, that the latter is by far the nearest approach that has been made, and perhaps ever will be made, to the ideal governmental system for a complex State.

That the Constitution of the United States is printed in full in the appendix is, therefore, not surprising. Why the Articles of Confederation are made to share this honor is not equally apparent. The author, as little as anybody else, considers them a model Constitution, and they are neither less accessible nor more important and instructive than several of the other constitutions, not one of which is deemed worthy of being submitted in full to the reader's examination. The space allotted to them could have been made better use of—for instance, by a brief notice of the Confederate States, which have, after all, held too prominent a place in history to be entirely overlooked in a work treating of the "moderne Bünde." The few important features in which their Constitution differed from that of the United States deserved to be pointed out; and, above all, some remarks on the pretended right of secession were rendered indispensable by the rule which the author has laid down for himself, for the United States have, neither in theory nor in practice, *always* and *universally* been acknowledged to be a "Bundesstaat." It is true, in a foot-note on p. 137, the author promises to treat the question of nullification and secession, but he seems afterwards to have forgotten all about it. We have at least, in reading the book from beginning to end, not noticed the fulfilment of the promise, and, in searching once more expressly for it, have failed to find anything. The index contains neither of the two words. Perhaps the explanation of this rather astonishing forgetfulness is partly to be found in the fact that Prof. Westerkamp's conception of the constitutional history and import of the civil war is—to put it mildly—rather hazy. According to him (p. 489), "the question at issue in it was whether a great and important part of the North American Continent should belong to freedom or negro slavery." If this erroneous statement could be attributed only to looseness of expression, one might pass it over. But it is indicative of a serious defect in the author's scholarly outfit for the work he has undertaken. Even as a jurist his studies do not go—apart from European countries—to the depth we should have expected of a German professor. In the list of books to which he acknowledges himself indebted, the United States do not make a very formidable show, and with regard to Mexico, the Argentine Republic, and Canada (not even Bourinot), his literary resources have been more than scant; while Australia, though it has a place assigned in the text, is not represented at all in his list. And if he has been satisfied to work, as to the Western Hemisphere, with a too poorly stocked law library, he has almost entirely dispensed with an historical library. Bancroft's 'History of the Formation of the Constitution of the United States' and Greeley's 'American Conflict' are his whole stock in trade.

A publicist, however, who lacks a broad and solid historical foundation, cannot help tripping and falling. Prof. Westerkamp does not seem to realize that fully, and he has paid the penalty. Two illustrations will suffice. On p. 117, Mr. Calvo's assertion is quoted, that the Constitution of the United States "sprang from the union of different States, which had existed as independent States and could have continued to exist separately." As the author does not make any comment whatever, one must infer that he does not think this opinion open to any objection. And on p. 494 he energetically champions, against Mr. Bryce—and, for that matter, all competent Americans—Gladstone's oft-quoted sentence, declaring the Constitution "the most wonderful work ever struck off at a given time by the brain and purpose of man." He has evidently no idea that the degree of originality attaching to the Constitution has been the subject of critical historical examination, with which one must be acquainted if one claims the right to enter the lists in this controversy. The inadequate treatment of the fundamental question of sovereignty is, in part, also due to deficient historical knowledge. The principal reason of it, however, is not that the author is too little of an historian, but that he is not thorough enough, and too rash as a jurist. He is a keen dialectician. His eye is sure to detect a joint in the adversary's armor, and he thrusts his blade with telling force into it. Especially Laband is handled roughly and comes always second best out of the scuffle. But Prof. Westerkamp's constructive power is greatly inferior to his critical acumen. By failing to give his definition of sovereignty, he envelops himself in the haze which so often renders the most learned discussions of this knottiest of all the theoretical problems confronting the publicist exasperating and utterly barren. "Staatsgewalt" and "Souveränetät," "United States" and "Government of the United States," are promiscuously used as identical terms. The inevitable consequence is, that we are completely at sea, floundering this way and that way, but gradually drifting towards a genuine Newfoundland fog, which closes around us on p. 134 in the assertion that the controversy in the United States was, "which of these two *governments* (State or national) was sovereign."

As his own reflection has not revealed to him the difference between Union and Federal government, State and State government, it is hardly surprising that the utterances of others, bearing on these points, are read with half-closed eyes. Cooley is quoted by him in support of his views, but he does not understand the Judge. He does not notice that Cooley does not speak of a "division of *sovereignty*," but of a "division of the *powers* of sovereignty," because to our author that is a distinction without a difference. Nor has he quite understood Jameson's position, overlooking, besides, that the Judge, in the fourth edition of his work, which appeared in 1887, expressly declares, on p. 656, that Von Holst's criticism has induced him to drop the word "quasi-sovereign," which he (Westerkamp) still attributes to him in 1892. If he had read p. 22 of Cooley's 'General Principles of Constitutional Law,' he might have come to see that the gulf between the opinions of the two learned judges is nothing like so wide and so deep as he seems to suppose. But this work of Cooley's is one of the many books that are not in the author's library. It is a pity, for, so far as one can learn from his treatise, his other reading has not made him acquainted with the rather important fact which is thus stated by Cooley (p. 23): "In America the leading principle of constitutional liberty has from the first been that the sovereignty reposed in the people." As there is no allusion to this, it cannot be wondered at that the preamble of the Constitution is not deemed worthy of the least consideration; it is mentioned but once in an indifferent sentence quite at the end of the book. Though the admiration of Prof. Westerkamp for their Constitution is all the most fastidious Americans can demand, the treatment it receives at his hands is not in all respects exactly what one would wish. But, in spite of this and other defects, American and other students of comparative constitutional law will find the book worth its price.

THE ROYAL NAVY OF FRANCE.

La Marine Royale en 1789. Par Maurice Loir, Lieutenant de Vaisseau. Paris: A. Colin & Cie. 1892.

THIS interesting work takes its place as a companion volume with Albert Duruy's 'Armée Royale en 1789,' treating as it does of the state of the French Navy under the monarchy upon the eve of the Revolution. The author does not, however, confine himself strictly to the limits of the year 1789, but gives, wherever he considers it necessary, an account of various matters, occurring during the reign of Louis XVI., which caused the royal navy to be what it was, in composition, administration, spirit, and discipline, when, in that and the following year, it was overtaken and overwhelmed by the turbulent forces of the French Revolution.

The first chapter is devoted to a review of the effective force of the several European navies in 1789; France being then, in the number of her vessels, the second naval Power in Europe and the world, exceeded only then, as now, by Great Britain. In the quality and speed of their vessels, however, the French led all naval Powers. Their constructors and designers especially excelled those of the English navy in scientific acquirements, the results showing in the beauty and strength of the hulls, the weatherly qualities of the ships, and the establishment of that uniformity in the various types so necessary in the sailing and manœuvring of fleets. The superiority of the French models was conceded by the English to such an extent in the wars that followed, that some of the best French ships that were captured served as models for the British constructors. It is a noticeable fact that the life of a French ship varied to a great extent according to the port in which it had been constructed. The ships of Brest, built from the timber of Brittany, lasted little more than ten years, while those of Toulon, built of the woods of Italy and Dauphiny, attained a life of more than thirty years. The French ships were as fortunate in their guns as they were in their gunners, and compared favorably with the English Navy in the size of their ordnance as well as in skill of gunnery.

The officers of the French Navy were drawn at this time almost exclusively from the nobility—not from the "haute noblesse" of the Court, who had no fondness for the sea and the exile from France and the Court which seafaring involved, but from the "petite noblesse" of the provinces, more particularly from the maritime provinces. The great interest the King took in the navy, the creditable showing the French had made along our coast and in the West Indies during our war for independence, not long since ended, and more especially the brilliant success of Suffren in the East Indies, had placed the navy high in the popular favor. After the news of the first success of the French in our war, even the women led in the enthusiasm of the day by adopting a "coiffure à la *Belle Poule*," though later, when De Grasse was defeated and captured in the West Indies, the author says that characteristically "elles avaient ôté le cœur qui ornait leurs croix à la *Jeannette*, pour en faire des croix à la de Grasse, c'est-à-dire sans cœur."

In 1786 a number of excellent changes in the personnel were made by Castries, then Minister of Marine. The principal one relating to the officers was the consolidation of the *grand* and *petit corps* of the navy, the first being constituted, as before mentioned, from the noblesse, and the latter from the French East India Company, the merchant service, and from sons of merchants, merchant captains, and "gens vivant noblement." Besides these were found in times previous a small number of officers who interchanged between the army and navy. The Count of Roquefeuil is mentioned as an example, he having served in the cavalry in the intervals between his cruises, and dying finally a vice-admiral. These latter, as well as those who came in from the bourgeoisie, had never been well received by the *grand corps* in past days, and had been subject at times to treatment as intruders.

The great weakness of the French Navy before the Revolution was in the crews of the vessels. The men, with the exception of the seamen gunners, were procured by a system of classification and conscription which was rigorous in its principles, brutal in its application, and life-long as to its duration. It resulted in driving away the seafaring population from the coast regions of France, and causing great hardships for those who remained as well as constant desertions from those afloat. This system of classification, which had been gradually extended over the basins of the larger rivers, eventually included one-fourth of the entire territory of France. To such an extent had the available population for this conscription been reduced that, in the latter years of the monarchy, recourse had to be made to landsmen and soldiers and to foreign seamen from the Mediterranean ports of Italy and the Levant. The great redeeming feature of the seamen of the fleet was the corps of seamen gunners created in 1786 by voluntary enlistment for a term of eight years. Nothing caused greater disaster to the French Navy after the beginning of the Revolution than the dispersion of this body of men, the successors to the "bombardiers" of former years. The curious ground given for the abolition of this body was the danger of class distinctions, and the encouragement of close action and boarding.

The royal navy had its abuses in the pension and honorary lists, as was to be expected, during the reign of Louis XVI. They taxed a treasury already empty, and were paid at the expense of the salaries of the officers and the pay of the seamen and the workmen of the arsenals. The pay of the latter was so constantly in arrear, and their discontent so great, that they were ripe for an uprising at the outbreak of the Revolution, the workmen at Toulon being the first in France to demand and secure the right to wear the tri-colored cockade. The administration of naval affairs on shore was in a sad state in 1789, as was particularly evident from the prolonged delays in auditing accounts and from those ever-present signs of bad administration, a confusion and multiplicity of papers. Then, as now, the greatest amount of detail attended the smallest expenses. It is interesting to read the author's account of the controversy for position between the sea-going surgeons of the medical corps of the navy and the physicians who served on shore at the arsenals and hospitals. One of the latter exclaims against the pretensions of the former class by drawing attention to the great gulf between the practice of medicine and that of surgery. "No power," says he, "could join two sciences with objects so diametrically opposed to each other. Surgery knows only how to destroy; medicine to preserve, reproduce, regenerate."

One of the most entertaining chapters of the book is that giving the traditions and usages of the naval service at the time in question. It has been charged and denied that the discipline of the officers especially was lax. There seems to be good evidence to believe it so, though it comes from other professional writers than the author. Yet he gives an instance of one curious custom between officers and men which could not fail to be subversive of good discipline. When it happened the work on board ship was especially difficult, and the seamen worn out and fatigued, a last effort still being necessary to masthead a topsail or weigh an anchor, the Captain would often cry out, "Charivari!" We give the result in the author's words:

"'Pour qui?' demandait une voix de l'équipage. 'Pour le commandant, qui a une perruque aussi,' répondait une seconde voix; et aussitôt de toutes parts, de toutes les bouches, les plaisanteries, les épigrammes pleuvaient sur le commandant, sur ses habitudes, sur sa sévérité, même sur la vertu de sa femme. C'était un brouhaha insoutenable, où chacun criait et vociférait, s'ingéniant à finir les phrases par un rime en *i*. Cette pluie de quolibets et de lazzis durait jusqu'à ce que la manœuvre fût achevée, et presque toujours elle l'était rapidement, car ce droit à la raillerie, cette autorisation d'irrespectueuses facéties, cette revanche des subordonnés sur les supérieurs, donnaient du cœur aux moins courageux."

Notwithstanding the abuses and defects, the French Navy in 1789 was a fine organization, which went down before the storms of the Revolution; and, unlike the French army, the blows given it were mortal ones. Existing as it did in what has been well termed the prosperous naval era of Louis XVI., it did not emerge from the Revolutionary periods, as did the army of France, to form under Napoleon a military force of a spirit and organization unequalled in the world's history. The magnifi-

cent successes of the latter only brought out in greater contrast the equally striking failures of the former.

BURDETT'S HOSPITALS OF THE WORLD.

Hospitals and Asylums of the World. Their origin, history, construction, administration, management, and legislation; with plans of the chief medical institutions. By Henry C. Burdett. In four volumes and a portfolio. London: J. & A. Churchill.

THIS is by far the most comprehensive and elaborate treatise upon hospitals of all kinds which has ever been published, and its appearance marks an epoch in the history of hospital aid. Its author, Mr. Burdett, is well known to medical men as the editor of the *Hospital* and of the *Hospital Annual*, and as the author of the best work in existence on cottage hospitals; and he is well known to business men as the secretary of the Share and Loan Department of the London Stock Exchange. In his preface he states that this work has cost him fourteen years' labor and a large amount of money, which we can well believe, for the difficulties in the way of collecting recent plans and accurate data for so many institutions scattered all over the world must have been enormous, and the failure of his first publishers after the publication of the first two volumes must have seriously increased the outlay. His remark that it has been "a labor of love" is almost superfluous. Nothing but deep interest in the matter, combined with great energy, perseverance, and power of inducing others to help, could have produced a work so rich and accurate in detail as this appears to be.

The first volume is devoted to the history and administration of asylums, or hospitals, for the insane. Commencing with the myths of madness found in ancient Greek literature, we find that neglect of the worship of Bacchus was supposed to be a potent cause of insanity—which is just the reverse of modern experience. The first known asylums for the insane were at Jerusalem and at Constantinople about the end of the fifth century A. D. The next chapter deals with the period from 600 to 1750 A. D., characterized by the prevalence of the theories of demoniacal possession, witchcraft, etc., as causes of insanity, and by corresponding cruelty of treatment of many of the unhappy sufferers from this disease. The author extends the period of brutal and cruel treatment of the insane down to 1850, but there were many exceptions to this in the early part of the century. The present methods of caring for the insane in different countries are given at length; a considerable space being allotted to the United States, and special commendation bestowed upon the New York State law of 1890 and the work of the State Commission in Lunacy.

The second volume is devoted to asylum construction, with numerous plans. The plans of modern asylums are very much alike, being of the corridor and the pavilion types. What is called a "model plan" is given, with the claim that it includes all the most important features and provides for classification of the patients. It contains more enclosed courts than would be approved of by American superintendents. Mr. Burdett truly says that it is too much the custom to build an asylum before appointing its superintendent; that the idiosyncrasies of individual superintendents render it undesirable to call in a particular expert and erect a building in accordance with his views when he is to have nothing to do with its management. It is certainly best first to select the superintendent, and then have him advise with the architect from the commencement of the preparation of the plans, and superintend the erection of the buildings from start to finish. The volume concludes with a bibliography of sixty pages in fine type, relating to asylum matters, in one alphabetical series by names of authors. This is convenient for the use of a librarian in checking off a catalogue, but not so for the seeker of information with regard to a particular branch of the extensive subject of the care of the insane. If, for example, one wishes to find the publications relating to lunacy legislation, he has to read sixty pages of fine print and pick them out for himself, whereas the classification should be such that the laws relating to the insane not only come in a separate group, but are still further classified by countries.

The third volume, containing over 900 pages, treats of the origin and history of hospitals, of systems of hospital administration, revenues and expenditures, of hospital Saturday and Sunday funds, nursing systems, dispensaries, and of various special forms of hospitals, including those of the military and naval services. The author's knowledge of the practical problems of finance is well shown in the chapters on hospital revenues and expenditures. He refers to Mr. Goschen's success in reducing the interest on consols from 3 to 2½ per cent., pointing out its effects in producing dissatisfaction among the fund-holders, besides the possible unsatisfactory results in a political point of view, and draws the conclusion that narrow economies are sometimes undesirable and that they are especially so in hospital finance. We do not see the force of the argument so far as Mr. Goschen's work is concerned, for the comment appears a little like the maxim that "a national debt is a national blessing," and, therefore, that a church debt or an hospital debt may be a good thing also; but it is perfectly true that mere cutting down or objecting to expenditure is no sign in itself of financial wisdom; it depends upon the items.

Taking the sources of revenue of voluntary hospitals as being (1) annual subscriptions; (2) donations; (3) grants from public funds; (4) legacies; (5) invested properties; (6) pay patients; (7) nurses' training-schools, and (8) miscellaneous, the comparisons given between different hospitals as to the relative amounts derived from each of these sources are curious and interesting. The general hospitals in London obtain about 9 per cent. of their income from annual subscriptions, and nearly half of their income from invested funds, while in the provinces, 28.6 per cent. of the income comes from subscriptions, in Scotland nearly 20 per cent., and in Ireland about 17.5 per cent. The proportion of revenue derived from pay patients is only about 2 per cent. in the London General Hospitals, while it is 8.7 per cent. in the provinces. It is noted that large invested funds for hospitals are rarer in America than in Europe, and that the income from pay patients is greater.

Elaborate tables are given showing the average expenditure yearly per bed in different hospitals, and these will be found very interesting by those who are concerned with hospital management. The differences between hospitals in this respect are very great, but it requires an intimate knowledge of the peculiarities of each institution and of the work it is doing to enable one to judge fairly as to whether there has been extravagance or not. Small hospitals, as a rule, involve a greater annual cost per head than large ones; teaching hospitals are more expensive than those in which no instruction is given.

The chapter on nursing systems gives an excellent summary of the various methods of organization of this important branch of hospital work in different countries, and the part relating to the United States, although condensed, is very good. The chapter on the relations of medical schools to hospitals is one of special interest to laymen as well as to physicians, and it is clearly shown that the connection of such a school with a hospital is a most important aid to the charitable work of the latter.

The fourth volume is devoted to hospital construction, and with it is a large atlas of plans of the best modern hospitals of all countries, including, also, plans of convalescent institutions, nurses' homes, and certain medical school buildings drawn to a uniform scale. To hospital architects this part of the work is an indispensable necessity, but, while the information is technical in character, it is presented in a way that will be easily understood by any one who can read floor plans. Mr. Burdett urges that trustees or committees who are charged with the responsibility of hospital construction should begin by employing an expert thoroughly acquainted with hospital administration in its most recent developments, and associate with him a good architect. Neither a committee of physicians nor an architect, nor both of them, are likely to produce as good results as will be obtained by employing a hospital expert in the first place. This encyclopædia of plans appears to include types of the best modern hospitals, and of all these the highest praise is given by the author to an American institution, the Johns Hopkins Hospital in Baltimore, which, he says, "is by far the most complete and perfect set of buildings which have ever been erected for hospital use." The section on hospitals for contagious and infectious diseases, with the plans in the atlas for such institutions, should be of special interest to our municipal authorities at the present time.

The whole work is well printed in good type on good paper, and is neatly and strongly bound. Its publication is specially opportune in view of the fact that the first congress on hospital aid for the sick which has ever been organized is to meet in Chicago in June next, and probably every one who prepares a paper for that meeting will consult these volumes or some of the author's data. We shall be interested in seeing what additions or corrections to this work will be produced at the Chicago Conference. In conclusion, we would advise every public library to secure a copy of the work without unnecessary delay, since the edition is limited to 500 copies.

The Parsifal of Richard Wagner. From the French of Maurice Kufferath. Tait, Sons & Co.

SOME years ago Prof. Kufferath of the Brussels Conservatory undertook to prepare a series of monographs on Wagner's operas and music-dramas. "Lohengrin," "Siegfried," "Walküre," and "Parsifal" have thus far appeared, and it is very much to be hoped that the demand for them will be sufficient to encourage the author in persevering in his task, which he has performed admirably. Prof. Kufferath is erudite without being pedantic, and he has the French literary sense which prevents him from overloading his pages with details interesting only to a few specialists. The fact that, nevertheless, each of his treatises numbers from one hundred to two hundred pages and more, shows

what a wealth of material for comment there is in Wagner's music-dramas. Imagine any one writing two hundred pages on even such great and famous operas as "Faust," "Carmen," "Don Juan," or "Fidelio," and the difference will be at once apparent. The author gets his material from every imaginable source. In the case of "Lohengrin," the letters to Liszt regarding the first performance of that opera in Weimar form the basis of one of the best chapters, and in each case the author has closely scanned the ten volumes of Wagner's literary works for any pertinent allusion—a process which is now facilitated by the appearance of Glasenapp's 'Wagner-Encyclopädie.'

The only one of Prof. Kufferath's monographs accessible in English is the 'Parsifal,' which has been translated for the Seidl Society in Brooklyn. The table of contents gives some idea of the scope of the book, which in its English edition has no fewer than 300 pages: The Legend, History and Poetry, Perceval, Parzival, The Drama, The Genesis, The Performance, The Score, Conclusion. On page 32 there are some striking remarks on the "extraordinary ignorance of the majority of French writers about the real poetic origin of their literature," ending with the question, "Do you wonder, after this, that, upon the appearance of Wagner's dramas, the critic was found so inadequate and incompetent?" The different versions of the Parsifal legend by various great predecessors of Wagner are compared with his own by one who knows those poems at first hand and not from the histories of literature. The analysis of the score and its leading motives, too, is in a much less dry and schoolmasterly style than such analyses are apt to be, and there are plenty of illustrations in musical type to make every point clear. And instead of making mere general assertions, Prof. Kufferath speaks with the knowledge of a specialist, as, for instance, on page 280, where he points out the evidences of Palestrina's influence on Wagner's last work, in certain austere successions of harmonies, without those connecting notes which are characteristic of modern music.

There are some misprints in the book (*e. g.*, harmonics for harmonies, repeatedly); but on the author's part we have noticed but one error, in the last line of page 204, where he should have written "Tannhäuser" instead of "Lohengrin." The English edition is provided with sixteen illustrations of characters and scenes in "Parsifal." Prof. Kufferath's writings should be in the library of every collector of Wagner books.

The Lost Atlantis, and Other Ethnographic Studies. By Sir Daniel Wilson, LL.D., etc. Macmillan & Co. 8vo, pp. 411. 1892.

THESE eight "monographs, linked together by a slender thread of ethnographic relationship," were published at different times during the author's life, and it was while the volume in which they now appear was going through the press that death put an end to his useful career. This event, sad enough at any time, is doubly so under the present circumstances, for, aside from the loss to the scientific world, it is permitted us to believe that if this volume could have received the author's usual careful revision, some of the shortcomings of which there is reason to complain might have been avoided.

Naturally enough, these papers, being upon different subjects, are of different degrees of merit—"The Lost Atlantis" and "The Vinland of the Northmen" being among the least satisfactory, though this is due not so much to the way in which these matters are treated as to the fact that they belong to a realm in which fancy is often made to do duty for fact. Of the remaining papers, "The Pre-Aryan American Man" and "The Huron Iroquois" are among those in which we are more particularly interested, and in which, we regret to say, there is the most to condemn. That they are largely made up of compilations is a necessity of the case; and, however adequate they may have been when first published, yet times and opinions change, and, judged by the standard of to-day, they will be found to contain statements some of which can hardly be said to be in accord with current opinion, while there are others which cannot be reconciled with each other without allowing a latitude in the use of language that is out of place in a publication of this character. Thus, for example, even if it be admitted, as is claimed, pp. 106–183, that the Moundbuilders are a "vanished race," we do not see how that fact can be made to agree with the "affinity" which is said, pp. 103–270, to exist between them and the Creeks, the Pueblos, and other Indian tribes; or how it can be reconciled with what we are told, pp. 103, 172, 287, about the Allegewi, or, as they are sometimes called, the Tallegwi, a mythical tribe of Moundbuilders who are said to have lived in the Ohio valley at some time in the past, and who, having been driven from there by the Iroquois and Delawares, moved southward and were absorbed by the Cherokees, Creeks, and Choctaws. Of the "geometrical knowledge" displayed by this people in the erection of their mounds and earthworks, it is not necessary to speak, as it is admitted, pp. 106, 168, 272, that they were living in the stone age, and neither mathematical skill nor the existence of an "overruling caste" is compatible with that stage of development. Unquestionably, some of their works are of great size and necessitated a vast amount of patient labor, but in none of them is there evidence of any greater constructive ability than is shown by the beaver and the white ant in building their dams and nests. As has been elsewhere said, squares as large and with angles as perfect as any of those in the Ohio valley can be constructed with the aid of three straight sticks and a moderately good eye; and the circles, even those of a large size, are not beyond the compass of a boy with a string.

These are some of the points upon which there is room for a difference of opinion, but they do not exhaust the list, nor do they indicate the differences in the character of the statements to which we object. Take, for instance, the assertion, pp. 269, 328, that, among our Indians, the cultivation of the fields was left "exclusively" to the women, and the only answer possible is a flat denial, and a reference to Charlevoix, Lafitau, Lawson, Adair, etc., from whom we learn that wherever, east of the Mississippi, corn was grown, the old men and the children, to say nothing of the captives or slaves, always aided in the work. So, also, on p. 142, we are told that the "colored race" now numbers "six millions in the United States alone, the descendants of European and African parentage." This is certainly a startling statement, and possibly it is a slip of the pen; but, assuming that it is a careful estimate of the number of persons of mixed white and negro blood now in this country, we can only say that we should like to see the evidence upon which it is based. But fault-finding is at best a thankless task, and in the present instance it is so peculiarly ungracious that we should have shrunk from it but for the fact that Dr. Wilson's endorsement carries such weight that it is in itself sufficient to give currency to opinions which are, to say the least, of doubtful authenticity.

In conclusion we invite attention to what is said, pp. 64, 248, 267, as to the "approximate correspondence" in the skulls of the Iroquois Indians and the Greenland Eskimo. Both are dolichocephalous, or long-headed; and, as far as the index of breadth is concerned, there is less difference between them than there is between the Iroquois and some of their short-headed Indian neighbors, so that if the shape of the skull is to be taken as an indication of race, we are driven to the conclusion that, instead of being racially distinct, the Iroquois and the Eskimos are "chips from the same block." This is, no doubt, contrary to the received opinion, for Humboldt's dictum as to the difference existing between the Eskimo and the Indian has been slavishly followed, though it has been long known that, so far as this conclusion was based upon a comparison of the skulls, it was without foundation. Instead of there being but one type of skull among our American Indians, and that brachycephalous, or short, as he and Dr. Morton assumed, there are in point of fact three—the long, the short, and the intermediate—just as there are among the different families of the Eskimo; and it depends upon which particular kinds of skull you happen to examine whether you find resemblance or diversity. To this extent, then, these writers were wrong, though it must not be supposed that we intend to assert the reverse of their proposition, and maintain that the Eskimo and the Indian belong to the same stock. So far are we from anything of the kind that, although it may be true, the final settlement of the matter depends upon considerations upon which we have not touched. What, however, we do assert is, that, in view of the existence of tribes with differently shaped heads, scattered about over both North and South America, craniometry, except within certain narrow limits, and then only as confirmatory evidence, cannot be used as a basis for determining questions of race.

Advanced Building Construction: A Manual for Students. By the author of 'Notes on Building Construction.' Longmans, Green & Co. 1892.

WE have here one of the better class of cram-books, and very good of its kind. It is intended to meet the examination in construction of the English Science and Art Department, and therefore describes the English art of building, which in many details, both of terminology and practice, differs from the American; but it is a good account of a system of building most of whose forms and methods are applicable everywhere and are good for every constructor to know. It gives no theory and no formulæ, and only a few introductory maxims of statics, but confines itself to the serviceable properties of materials, and the methods of putting them together for building in timber, iron, brick, and stone. Its timber framing is a generation behind the American practice, retaining the system of wooden king and queen-posts, with their heads clipped between strut and straining-beam—a system that inevitably leads to sagging, and would be intolerable with any kind of timber used here for framing. Its iron framing, on the other hand, is perhaps a wholesome example, the truss-work being entirely of link-and-pin construction, and riveting being reserved for girders. The joiner work, too, is instructive in its thoroughness.

HENRY HOLT & CO., N. Y.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

FOX ISLANDS.

TO LET—for the summer—Two very charmingly situated cottages, directly upon the water; grounds occupying exclusively a peninsula of 50 acres on Fox Island Thoroughfare, Maine, in the large island township of Vinal Haven. Each house is fully furnished-has a boat harbor, barn, etc., and boat houses, half-a-mile from village and steamboat landing; houses contain 7 and 10 rooms; rents $175 and $225; exceptional chance for two families wishing to be near together; will be let together or separately.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

NORTHAMPTON, MASS.

TO LET—Furnished, the new cottage of the late Mrs. Harrison O. Apthorp; contains nine rooms, is fully and tastefully furnished and beautifully situated on high land, with broad view of the Connecticut Valley and Mts. Tom and Holyoke; has all modern conveniences and is within a short distance of railroad station; rent low to a careful tenant for two or three years. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

BEVERLY SHORE, MASS.

FOR SALE OR TO LET—An estate of 20 acres of very high land, directly on the water. Large house, fully furnished, stable, gardener's cottage, gardens, and beautiful trees. Will be sold at a low price to settle an estate. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

YALE MIXTURE

FOR THE PIPE.

A Delightful Blend of St James Parish, Louisiana, Perique, Genuine Imported Turkish, Extra Bright Plug Cut, Extra Bright Long Cut, and Marburg Bros.' Celebrated Brand "Pickings."

Marburg Bros.

PENINSULA.

FOR SALE—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and contains every element of fine seashore scenery. Controls on its inner side a land-locked harbor with deep water for its whole length, has fine views of the mountains and the land is wonderfully diversified comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.

It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.

Price, $3,500.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ASHFIELD, MASS.

TO LET—Furnished, for the summer, a very attractive old-fashioned house in the beautiful hill township of Ashfield, Mass., near the summer home of the late George William Curtis. House contains 12 rooms; ample land, stable, etc.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate,

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other Medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Cassell Publishing Co.

HAVE JUST ISSUED:

By Mrs. W. K. CLIFFORD.

A WILD PROXY.

A Tragic Comedy of To-Day. By Mrs. W. K. Clifford, author of "Mrs. Keith's Crime," "Aunt Anne," etc. 1 vol., 12mo, cloth, $1.00.

Mrs. W. K. Clifford is one of the most popular novelists of the day, possessing a style of her own, which is at once bright and entertaining.

By E. W. HORNUNG.

TINY LUTTRELL,

A Novel. By E. W. Hornung. 1 vol., 12mo, cloth, $1.00.

A Story of Australian life, with a turn at England to give it contrast. The book promises to be a favorite.

BY A. H. PETISCUS.

THE GODS OF OLYMPOS;

Or, Mythology of the Greeks and Romans. Translated and edited from the twentieth edition of A. H. Petiscus, by Katherine A. Raleigh, with a Preface by Jane E. Harrison. 1 vol., 8vo, extra cloth, $2.00.

BY JULES VERNE.

MISTRESS BRANICAN.

A Novel. By Jules Verne, author of "Cæsar Cascabel," etc. 1 vol., 12mo, illustrated, *Cassell's Sunshine Series*, cloth, $1.00; paper, 50 cents; small 8vo edition, extra cloth, $2.00.

"Beneath the surface of all the writings of this noted author there is an abundance of information which is scientifically accurate."—*Iowa School Journal.*

BY KATE MARSDEN.

ON SLEDGE AND HORSEBACK

To the Outcast Siberian Lepers. By Kate Marsden, Member (Special Badge) of the Royal British Nurses' Association, Fellow of the Royal Geographical Society, etc., etc. Illustrated from photographs and drawings. 1 vol., 12mo, cloth, $2.00.

Ever since Miss Marsden began her devoted work among the outcast lepers of Siberia the world has been eager to read her own story of her adventures and experiences. That story is given in the present volume and will be found as thrilling as the wildest romance. No one can read it without thoroughly appreciating the devotion and heroism of the author, who alone faced the rigors of two Siberian winters, in a work so completely and so nobly philanthropic.

BY FRANK BARRETT.

OUT OF THE JAWS OF DEATH.

By Frank Barrett, author of "The Admirable Lady Biddy Fane," etc. 12mo, extra cloth, $1.00; paper, *Cassell's Sunshine Series*, 50 cents.

"His masterpiece thus far."—*Boston Daily Traveller.*

BY FRANK FRANKFORT MOORE.

"I FORBID THE BANNS."

The story of a comedy which was played seriously. By Frank Frankfort Moore. 1 vol., 12mo, cloth, $1.00.

This is a story that is bound to attract more than passing notice. Opinions of the book may be as wide apart as the poles, except as to its interest. On this point the verdict will be unanimous in its favor.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company,

104 and 106 Fourth Ave., N. Y.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

The cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,

Cambridge Place, Paddington, London.

THE

Harvard Graduates' Magazine.

Issued Quarterly.

The next number, ready April 1, will contain a very important article on

PHILLIPS BROOKS,

By Prof. C. C. Everett, accompanied by a portrait engraved by Kruell. Also an account of Lafayette's Visit to Harvard by the late

DR. A. P. PEABODY.

The question of SECONDARY EDUCATION is discussed by the Headmasters of Worcester Academy, Phillips Andover Academy, Phillips Exeter Academy, Chauncy Hall School, Boston Latin School, Hopkinson's Private School, and the Berkeley School (N. Y. City). Prof. C. H. Moore writes on "The Study of the Fine Arts," and there are contributions by C. J. Bonaparte, Henry L. Higginson, and others, besides the usual reports of Departments, Athletics, etc., etc. 168 pp, Subscription, One Dollar a Year; single copies, fifty cents each. Send orders at once to the

Harvard Graduates' Magazine,

6 Beacon Street, Boston, Mass

American History Series.

THE COLONIAL ERA.

By Prof. GEORGE P. FISHER, D.D., of Yale.

With maps. 12mo, $1.25.

"A capital introductory work for students. It is well knit, readable, enlightened in spirit, and sound in method."—*The Saturday Review.*

"Method, lucidity, and fairness are the characteristics of this work, which, though not ostensibly a school text-book, would serve admirably for instruction."—*London Spectator.*

THE FRENCH WAR AND THE REVOLUTION.

By Prof. W. M. Sloane of Princeton. With Maps. 12mo, $1.00.

"The highest praise we can award to the volume is to say that it is entirely worthy to stand by the side of Prof. Fisher's study of 'The Colonial Era' which preceded it. If the two divisions of the series yet to come are equally good, we shall have a history of the United States which in conciseness, philosophical significance, and adequate arrangement of fact has never before been approached."—*Boston Beacon.*

*** *Sold by all booksellers, or sent postpaid by*

Charles Scribner's Sons,

743-745 Broadway, New York.

SPECIAL CATALOGUES, describing HOUGHTON, MIFFLIN & Co.'s Books of *Art, Biography, Essays, Fiction, History, Poetry, Politics, Religion, Science,* and *Travel,* will be sent to any address upon application. 4 Park St., Boston.

Charles L. Webster & Co.

PUBLISH TO-DAY:

The £1,000,000 Bank-Note

And Other New Sketches.

By MARK TWAIN. With frontispiece. Small 8vo, cloth, $1.00; stamped leather, $1.50.

This volume contains Mark Twain's new story of 'The £1,000,000 Bank-Note,' together with several other stories by the same author, which have never before appeared in book form. They include: 'Mental Telegraphy,' 'Playing Courier,' 'A Letter to Queen Victoria,' 'About Ships,' 'The German Chicago,' and 'A Majestic Literary Fossil.'

Tenting on the Plains.

By ELIZABETH B. CUSTER, author of 'Boots and Saddles.' New cheap edition. Illustrated by Frederic Remington. 12mo, cloth, $1.00.

The edition is printed from new plates, with the original illustrations, and bound in a handsome and appropriate cover. It is one of Mrs. Custer's best books, and can be very favorably compared with her 'Boots and Saddles.'

RECENT ISSUES:

A Perplexed Philosopher.

An Examination of Herbert Spencer's Utterances on the Land Question. By HENRY GEORGE, author of 'Progress and Poverty,' 'Protection or Free Trade,' 'Social Problems,' 'The Land Question,' 'Property in Land,' 'The Condition of Labor,' etc. 12mo, cloth, $1.00; paper, 50 cents.

"He has made a book which every admirer will be glad to read."—*Boston Globe.*

"The doctrines of which Henry George is the great apostle are reiterated with all the power of his strong mind and ready pen."—*Washington Star.*

Mrs. Cavazza's Italian Peasant Stories.

Don Finimondone:

Calabrian Sketches:

By ELISABETH CAVAZZA. With Frontispiece by Dan Beard. "Fiction, Fact, and Fancy Series." Cloth, 12mo, 75 cents.

"She succeeds entirely in the effort of communicating a wild native flavor to her romances of Italian peasant life."—*Philadelphia Ledger.*

"She has made studies of peasant nature, and has caught wonderfully closely the homely humor and pathos of their talk and lives."—*Christian Union.*

The Legends and Myths of Hawaii:

The Fables and Folk-Lore of a Strange People.

Edited, with an Introduction, by the Hon. R. M. DAGGETT, late U. S. Minister to the Hawaiian Islands. An octavo volume of 530 pages. Two steel portraits, and twenty-five other beautiful illustrations. An exhaustive Index. Cloth, $3.00.

The Nation

VOL. LVI—NO. 1449. THURSDAY, APRIL 6, 1893. PRICE 10 CENTS.

NEW TEXT-BOOKS FOR SCHOOLS

PUBLISHED BY HARPER & BROTHERS.

The Foundations of Rhetoric.
Price $1.00. By mail $1.10.

THE FOUNDATIONS OF RHETORIC, by Professor Adams Sherman Hill of Harvard University, is a model text-book for the use of the student or the private learner in the study of the English language. A writer in the *Cincinnati Commercial Gazette* commends it as follows: "I wish I could persuade every one who writes for the press or who delivers public addresses to begin at once the study of *The Foundations of Rhetoric*. . . . I recommend it to experienced writers as well as to beginners; to the learned not less than to those of limited education. . . . I invite the attention of all who desire to acquire the art of writing English correctly and of all who desire to preserve the ability to write it correctly to this invaluable work." A sample copy for examination will be sent postpaid to any instructor on receipt of 80 cents.

The Principles of Ethics.
Price $1.75. By mail $1.92.

This work, by Professor Borden P. Bowne of the Boston University, is an introduction to fundamental moral ideas and principles rather than a detailed discussion of specific duties and virtues. It is an ideal text-book of Moral Philosophy and bears upon its pages the impress of a true scholar and metaphysician. It has already been introduced into Smith College, Northampton, Mass., Wesleyan University, Middletown, Conn., DePauw University, Greencastle, Ind., Ohio Wesleyan University, and many other leading institutions. A sample copy will be sent postpaid to any instructor wishing it for examination on receipt of $1.46.

The Elements of Deductive Logic.
Price 90 cents. By mail $1.00.

This work, by Professor Noah K. Davis of the University of Virginia, is designed as a text-book for undergraduates. It comprises the body of approved logical doctrine, so that in a limited time a student may acquire a rounded knowledge of the fundamental forms of thought and be prepared for the pursuit of the philosophical sciences. "In an experience of more than thirty years as a student of logic, and as a teacher of the subject to college classes, I have not before seen a treatise so valuable as this."—*J. T. Murfee, Supt. Marion Military Institute, Marion, Ala.* A sample copy for examination will be sent, postpaid, to any instructor on receipt of 75 cents.

English Words.
Price 84 cents.
By mail 92 cents.

ENGLISH WORDS, by Professor Charles F. Johnson of Trinity College, is an examination into the literary value of words as far as can be done in a brief study of derivations. The treatment of the subject is popular in form and exceedingly interesting. "One glances at a page," says Professor Lyon of Bristol, Tenn., "reads on and on, completes the book, and is irresistibly filled with a desire to know more. The mere perusal of such a work by the student must have the most beneficial effect." A sample copy for examination will be sent postpaid to any instructor on receipt of 60 cents.

Supplementary Reading.
Price 30 cents each.
By mail 33 cents.

The publication of HARPER'S SCHOOL CLASSICS places within the reach of teachers of English Literature a number of the best authors in a convenient form for class use. All the numbers are bound in cloth in uniform style and are printed in clear type on good paper. The following volumes have thus far been published—many of them annotated for class purposes—and others are soon to follow: Lawrence's PRIMER OF AMERICAN LITERATURE, Lawrence's ENGLISH LITERATURE PRIMER—Romance Period—Lawrence's ENGLISH LITERATURE PRIMER—Classical Period—Lawrence's ENGLISH LITERATURE PRIMER—Modern Period—Conant's PRIMER OF GERMAN LITERATURE, Conant's PRIMER OF SPANISH LITERATURE, Macaulay's LIFE AND WRITINGS OF ADDISON, Macaulay's LORD CLIVE, Macaulay's WILLIAM PITT, Macaulay's JOHN HAMPDEN-LORD BURLEIGH, Macaulay's MACHIAVELLI-WALPOLE, Knatchbull-Hugessen's OLIVER CROMWELL, Addison's SIR ROGER DE COVERLEY, Cowper's TASK and EGINHARD'S LIFE OF CHARLEMAGNE.

The above books may be had of all booksellers, or will be sent by the publishers on receipt of price as quoted. Harper's Illustrated Bulletin of School and College Text-Books, Numbers One, Two, and Three, will be sent free to any address on request.

School Agencies.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

THIRTY-TWO portraits and sketches of eminent teachers form the literary part of the manual of the School Bulletin Agency this year, and the little book will be sent *free to any teacher or school officer* on receipt of postage stamp. The portraits are of Pythagoras, Socrates, Plato, Aristotle, Epicurus, Seneca, Erasmus, Melancthon, Sturm, Montaigne, Comenius, Locke, Rousseau, Basedow, Richter (Jean Paul), Mrs. Schimmelpennick, Pestalozzi, Froebel, Jacotot, Hannah More, Thomas Arnold, "Uncle Sam" Taylor, Sir William Hamilton, Hugh Miller, Horace Mann, PORTRAITS George B. Emerson, David P. Page, Warren Colburn, Emma Willard, Francis Dwight, Henry Barnard, and Wm. T. Harris. This little book is got up as an advertisement of this Agency, but it by no means follows that it is without value. The portraits and sketches have cost a good deal of time and money, and are worth keeping; indeed this is the first of what may prove quite a series of such collections. We send to all who write in good faith, and trust they will find it valuable, as well as FREE.

MACMILLAN & CO.'S NEW BOOKS.

The Great Dictionary.

NOW READY.

PART I. A to Ant	$3 25	*PART IV. (Sec. II.) beginning Vol. II., C to Cass*	$1 25
II. Ant-Batten	3 25	*V. Cast-Clivy*	3 25
III. Batter-Boz	3 25	*VI. Clo-Consignor*	3 25
IV. (Section I.) Bra-Byz, completing Vol. I.	2 00	*VOL. III., Part I., E-Every*	3 25

VOL. I. (A and B) pp. xxvi—1,240, bound in half morocco $13 00

THE NEXT PART WILL BE PUBLISHED EARLY IN MAY, SIMULTANEOUSLY WITH ITS ISSUE IN LONDON.

A NEW ENGLISH DICTIONARY

On Historical Principles, founded mainly on the materials collected by the Philological Society. Edited by

JAMES A. H. MURRAY,

B.A., Lond., Hon. M.A., Oxon., LL.D., Edin., D.C.L., Dunelm, etc.; sometime President of the Philological Society; with the assistance of many scholars and men of science.

"*EVERY CULTIVATED PERSON SHOULD BE INTERESTED IN THE PROGRESS OF THE 'NEW ENGLISH DICTIONARY,' EDITED BY DR. J. A. H. MURRAY, VICE-PRESIDENT, AND MR. HENRY BRADLEY, PRESIDENT, OF THE PHILOLOGICAL SOCIETY. AMONG SUBSCRIPTION-BOOKS—THAT IS, BOOKS NECESSARILY ISSUED IN PARTS AT GREATER OR LESS INTERVALS—IT IS SURPASSED BY NONE IN INTRINSIC WORTH OR IN THE EASE WITH WHICH THE INFREQUENT PAYMENTS CAN BE BORNE. UNLIKE CYCLOPÆDIAS, IT CAN NEVER BECOME COMPLETELY ANTIQUATED, AND TIME WILL AFFECT IT MAINLY IN THE PARTICULAR OF NEOLOGISMS; FOR, AS ITS ILLUSTRATIONS OF USAGE ARE MARSHALLED IN CHRONOLOGICAL ORDER, THE HISTORY OF EACH WORD OR MEANING MAY BE ADDED TO BUT CANNOT BE DETRACTED FROM—AND WE CANNOT FORESEE THE DAY WHEN A SUPPLEMENT WILL BE UNDERTAKEN.*"—From Evening Post Editorial, Saturday, March 25, 1893.

Now Ready, Vol. I. of Mr. Bryce's Great Work. New Edition, Thoroughly Revised, price $1.75.

The

American Commonwealth.

By the Right. Hon. JAMES BRYCE, D.C.L., author of 'The Holy Roman Empire,' M. P. for Aberdeen. New, Revised, and Enlarged Edition, with Additional Chapters. In 2 volumes, large 12mo. Third Edition, revised throughout.

Vol. I. *Now Ready.* $1.75.
Vol. II. *In the Press.*

"His work rises at once to an eminent place among studies of great nations and their institutions. It is, so far as America goes, a work unique in scope, spirit, and knowledge. There is nothing like it anywhere extant, nothing that approaches it. . . . Without exaggeration, it may be called the most considerable and gratifying tribute that has yet been bestowed upon us by an Englishman, and, perhaps, by even England herself. . . . One despairs in an attempt to give, in a single newspaper article, an adequate account of a work so infused with knowledge and sparkling with suggestion. . . . Every thoughtful American will read it, and will long hold in grateful remembrance its author's name."—*New York Times.*

"All too brief and inadequate as this review may be, it indicates the lofty tone and impartial spirit of a work that takes instant rank as the keenest critique and most trustworthy description of our social and political life. The only way to enjoy such a work is to read every line of it."—*Philadelphia Press.*

Now Ready. New Edition, with Additions: Vol. I. $1.50.

The Diary of Samuel Pepys.

With Lord Braybrooke's Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. Vol. I., $1.50.

*** Also Large-paper Edition, Limited Edition, $5. Sold only in sets.

Fourth Edition of Sir John Lubbock's New Book.

The Beauties of Nature

AND THE WONDERS OF THE WORLD WE LIVE IN.

By the Right Hon. Sir JOHN LUBBOCK, M.P., F.R.S. With numerous illustrations and full-page plates. Uniform with the new edition of 'The Pleasures of Life.' 12mo, cloth, gilt, $1.50.

"His volume is a perfect storehouse of information, imparted in a style that at once charms and interests."—*Saturday Evening Gazette, Boston.*

Now Ready. 12mo, cloth, $1.25.

The World of the Unseen.

An Essay on the Relation of Higher Space and Things Eternal. By Rev. A. WILLINK. 12mo. cloth, $1.25.

"We believe that no thoughtful or intelligent person who begins to read this litt e book will willingly lay it down unfinished. We think most persons who have read it once will read it several times. We venture to predict that the book will be as popular as 'The Unseen Universe,' or 'Natural Law in the Spiritual World.' It seems to bring the unseen so near 'that the smallest movement in the Fourth Direction would immediately bring us into it.'"—*Churchman.*

New Edition. 18mo, 2 vols., $1.50.

Amiel's Journal.

Translated, with an Introduction and Notes by Mrs. HUMPHRY WARD, author of 'Robert Elsmere,' 'David Grieve,' etc. With photogravure portrait. New Edition. 18mo, 2 vols., cloth, $1.50.

George William Curtis.

By WILLIAM WINTER. With Portrait. 18mo, cloth, 75 cents.

Now Ready. A New Book by F. Marion Crawford.

The Novel. What It Is.

By F. MARION CRAWFORD, author of 'Children of the King,' 'Saracinesca,' etc., etc. Uniform with the pocket edition of William Winter's Works. With photogravure portrait. 18mo, cloth, 75 cents.

Just Ready. A New Poem entitled

The Eloping Angels,

By WILLIAM WATSON, author of 'Lachrymæ Musarum,' 'Poems,' etc. 16mo, cloth, 75 cents.

NEW NOVELS.

Now Ready. By Mr. Henry James.

The Real Thing, and Other Tales.

By HENRY JAMES. 12mo, cloth, $1.00.

The Marplot.

By SIDNEY R. LYSAGHT. 12mo, cloth, $1.00.

"The story is extremely interesting. It is fresh, it is unhackneyed, it is full of fine touches, it is strongly individualistic. There is promise of work of genuine power in it. The vein of irony that runs through the whole book reminds one distinctly of George Meredith, but the book itself in idea and form is entirely free from the imitative element."—*Christian Union.*

The Story of John Trevennick.

By WALTER C. RHOADES. 12mo, cloth, $1.00.

A Mere Cypher.

By MARY ANGELA DICKENS. 12mo, cloth, $1.00.

"The story is one of power."—*Philadelphia Bulletin.*

The Nation.

NEW YORK, THURSDAY, APRIL 6, 1893.

The Week.

THE fourth-class post-offices long ago became a national scandal of the first class. They are unprotected by any kind of civil-service law or tenure of-office act, or even traditional decency of treatment, and have long been the choicest prey of the spoilsmen. The wholesale massacre of fourth-class postmasters has come to be taken as one of the natural and necessary incidents of the passing of the Administration from one party to another, and that the heads of 50,000 petty officials in the postal service should fall has been regarded as a step as proper and inevitable as a change of Cabinet. Moreover, as Senator Lodge has said, it is not the President who appoints these officers, nor the Postmaster-General, nor even the Assistant Postmaster-General, but the Congressmen. They are the true over-lords of all the fourth-class postmasters, and the Post-office Department is simply a great machine to record and execute their wishes. It is considered one of the inalienable rights of a Congressman to have a personal dependent in every minor post-office in his district. Mr. Lodge introduced a bill to take the fourth-class offices entirely away from Congressmen, but found that he might as well have tried to abolish the salaries of Congressmen. So the irrational process has gone on from year to year, to the demoralization of the service and the disgrace of both parties and the country.

That the situation is one full of difficulties must be admitted. Clarkson made a clean sweep four years ago, and obediently filled the offices with the henchmen of Republican Congressmen. It is too great a strain on human nature to expect that all those men should be undisturbed. Doubtless many of them ought to be removed on the ground of unfitness. But what guarantee is there in the system now apparently being pursued at Washington that their successors will be any better, or that their tenure of office will be, or deserve to be, any more secure? As far as one can see, all that Assistant Postmaster-General Maxwell is doing is to collect a choice lot of victims for the Republican guillotine when it is next set up. In the proceedings up to date there is no promise of any more decency or stability than there has been in the past. But President Cleveland is in a position to secure a good degree both of decency and stability in this important part of the public business. He could have the appointments to fourth-class offices made as cautiously as to other offices, first filling vacancies and allowing removals only for cause. Then he could bring the whole matter forcibly before Congress, and call for legislation which would secure something like an equitable division of these petty offices between the parties, or provide for some non-partisan way of filling them, or relegate the whole matter to popular local elections. He owes it to himself, to his party, and to his country to take measures in some way to put an end to a practice which does so much to make the United States appear, in the words of the *Civil-Service Chronicle*, "the civic fool of the world."

The mission to England being, for reasons of all sorts—political, religious, social, commercial, and linguistic—the most important and most attractive of all our diplomatic appointments, there is always twice or three times as much public interest in the filling of it as in that of any other. Consequently there has been a general feeling of satisfaction, which—considering what strange things sometimes happen in our diplomatic service—might almost be called a feeling of relief, on hearing of Mr. Bayard's selection for the place. His professional equipment is of the very best, for, besides his long service in the Senate, he has had the benefit of four years' experience as Secretary of State, during which his management of our foreign relations was both dignified, prudent, efficient, and law-abiding, and upheld worthily the traditions of Webster, and Marcy, and Seward, and Fish, and Evarts, and Frelinghuysen. He has, too, the great advantage of being a sound lawyer, the importance of which qualification was unhappily brought out by his successor's want of it. Mr. Bayard's social equipment, which is of more importance in England than elsewhere, we need not insist on. If he is not as brilliant an after-dinner speaker as Mr. Lowell or Mr. Phelps, he has always lived in good company, and among men of education can always give a good account of himself, and in the matter of personal character, which in these days needs mention, occupies a place which never calls for explanation or apology. He, in fact, will worthily fill the place of our first Ambassador to England, even if the title possess the enormous importance which some of our jurists attribute to it.

The Chilian Mission has acquired great importance through recent events, and President Cleveland appears to have seen the need of choosing for it a man of political experience and personal standing. Ex Gov. Porter is a great improvement over Mr. Cleveland's selection for the post eight years ago, and his appointment will be admitted, even by Republican organs, now that the campaign is over and the Irish vote hopelessly lost, to be incomparably better than Egan's. The Chilians may well be thankful to be no longer regarded by this country as just the ones to foist professional Irishmen upon. Now that they are themselves sending a minister to the United States, and are about to receive from us a man who will not need to dodge the English police on his way to their country, we may hope for a full restoration of friendly relations between the two republics.

The office of Solicitor-General is scarcely second to that of Attorney-General in importance, and the President has been as careful in filling one as the other. Mr. Maxwell not only is a man of high character, but is a lawyer of exceptional ability, so that his appointment is really an ideal one. No slight indication of this is yielded by the astonishment and pain it has caused the Ohio politicians. They had no inkling that Mr. Maxwell was even among those "prominently mentioned" for the office, and his nomination has staggered them so that they have not yet been able to claim the credit of suggesting it. They admit that he is eminently fitted for the position—they could not well do otherwise in face of the enthusiastic commendation of Mr. Maxwell by his professional brethren—yet mutely and pathetically point to the fact that, as the Washington correspondents say, he is "not known here," and is "unidentified with politics." But they ought to reflect that there is such a thing as being altogether too well known and too much identified with politics.

The stir of opposition that has been made at Vienna by the appointment of Max Judd as Consul-General of the United States at that place, has put some people in the way of thinking that foreign Governments have no right to object to our appointments to consular positions. This view is the natural outgrowth of our way of looking at the Federal offices—as the spoils of war won by the victors at the last election. If a consulship is like a bone which falls to the share of a dog, there will naturally be a disturbance if anybody interferes with the comfortable enjoyment of it. But if a consulship is a privilege extended by one country to another on certain conditions, the first of which is that the consul shall be an acceptable person, the case wears a very different aspect from that of a post-office at home, or any ordinary bone in the collection of domestic spoils. Woolsey's 'International Law' (p. 155) says:

> "Consuls, on exhibiting proof of their appointment, if *not objectionable persons*, receive an exequatur or permission to discharge their functions, within the limits prescribed."

The mere fact that an exequatur from the foreign Government is required before the

consul can enter upon his duties, establishes the difference between this bone and the general mess. In the case of Keiley, who was appointed Minister to Austria eight years ago, we took the absurd position that the reasons for not receiving him in that capacity must be satisfactory to us. The position was untenable, and we had to abandon it. Consuls and ministers do not stand in the same category in all respects, but they are alike in the particular that both the minister and the consul must be acceptable persons to the Government to which they are accredited, and that if they are not acceptable, there can be no debate about the reasons why.

In this view, which is the only view that international law allows to be taken of the case, Austria can object to Mr. Judd as Consul-General because he is a Jew or because she does not like the way he cuts his beard. That is none of our business. The Consul General goes to Vienna to certify invoices, to take acknowledgments, and to do certain other things to promote our convenience. He exercises certain limited governmental functions which require the permission of the government of the territory, and it is quite proper, and indeed necessary, that he should be an acceptable person. We had in our early history a great deal of trouble with revolutionary France as to the character of the consuls she sent to us, and we insisted in every case on the right to reject non-acceptable persons and to revoke their exequaturs whenever they made themselves offensive. In the very nature of things, there could be no discussion of reasons, because the very reasons that made those consuls unacceptable to us commended them to their own Government. Mr. Judd, we are assured, is a gentleman of unblemished character. Nevertheless, he is a former subject of Austria, and this in itself creates a certain embarrassment. Moreover, in Austria the anti-Semitic feeling is very keen at the present time, yet there are different grades and strata of anti-Semitism. Our present Consul-General at Vienna, Mr. Goldschmidt, is a Jew, but not a Polish Jew like Mr. Judd. We do not know any difference in this country between Polish Jews and any other, but it seems that they do recognize such differences in Vienna. Hence the turmoil over the appointment of Mr. Judd. It may be that the Austrian Government will take no notice of this "row." A consul is not a diplomat. He is not received at court. He is not in society. Hence the unpopularity of Mr. Judd in Vienna may not be deemed a sufficient ground for withholding his exequatur. Nevertheless, Mr. Judd, who is a man of wealth, and of some distinction as a chess champion, could hardly wish to occupy a position where he would create ill feeling or would be subjected to coolness, if not to rudeness, during his whole term of service. The best thing for him to do under such circumstances is to resign. This he can do now without any loss of self-respect.

The position taken by Senator Hoar on the question of admitting the new Senators from Montana, Wyoming, and Washington, who have been appointed by the Governors of those States after the Legislatures had failed to elect, was considerably weakened by an admission which he felt it necessary to make in order to support his main contention His main contention is, that the Constitution must be so construed as to keep the Senate full at all times. But the Constitution provides only for the filling of vacancies which happen "during the recess of the Legislature." When the case of Bell (Senator from New Hampshire) came up in 1879—a case similar to the ones now under consideration—Mr. Hoar held that the Governor had no power to fill a vacancy if the end of a Senatorial term had come while the Legislature was in session. But obviously the need of keeping the Senate full is just as pressing whether the vacancy occurs one day after the Legislature adjourns or one day before. So Mr. Hoar announced in the debate last Wednesday that he had changed his mind on this question. He now holds that the words "during the recess of the Legislature" are not to be taken in their strict and literal sense, but should be subjected to "a broad construction." Senator George then put to him the case of a second meeting of the Legislature and its failure to elect, and wanted to know whether it was Mr. Hoar's idea that the Governor's appointee should hold on or whether the Governor should again appoint a Senator. Mr. Hoar held that the Governor should again use the appointing power. This seemed to Senator Platt of Connecticut to be a *reductio ad absurdum*, and he announced his intention to vote in favor of the minority report. There appears to be no division on party lines in the Senate on this question.

The effort to secure the admission of any more new States having failed at the last session, there ought to be a thorough discussion of the merits of the case in regard to each of the applicants before the matter is again taken up in Congress. At the same time the question should be carefully considered of doing something to abate the present scandal of Nevada's having two Senators and one Representative, with a voting population of only about 11,000, which is steadily growing less. It is not generally known in the East that four years ago the Legislature of Nevada, in view of the declining population of that State, passed a law authorizing Congress to add to it any adjoining territory. Such action would be necessary before Congress could take any step, inasmuch as the Constitution provides that no new State shall be formed or erected within the jurisdiction of any other State, and that no State shall be formed by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Congress. When the Nevada Legislature passed this resolution, there was talk of uniting a slice of the Territory of Idaho with Nevada, but as the former has since been admitted as a State, this project is no longer feasible. But it would still be possible to unite Utah and Nevada, and thereby make a good-sized State; and when the time comes for Utah's admission, this ought to be done unless there be some reason to the contrary stronger than appears on the surface.

Kansas, which was the only Northern State that did not have a ballot-reform law on its statute books in the last election, has now enacted one, and with it also a Corrupt-Practices Act. The number of States with such ballot laws is now thirty-seven, and the number with corrupt-practices laws is now six. We have not seen the full text of the Kansas Ballot Law, but it is said to be an application of the Australian system similar to that adopted in other States. The Corrupt-Practices Act requires sworn publication, after election, by both candidates and committees, forbids specified forms of "treating," and requires that all successful candidates found guilty of violating the law shall forfeit their offices. Other violators are to be punished by fine and imprisonment. No limitation is placed to the expenditures of candidates, and the law has the defect common to all other similar American laws, save that of Missouri, just enacted, of making it nobody's duty to enforce it.

At a dinner given at Canton, Ohio, on March 29 to "boom" Gov. McKinley as a Presidential candidate, a letter was read from Senator Sherman on the silver question and on the currency question in general. The Senator, as usual, is somewhat sparing in the dissemination of the truths of finance. He gives the people no more than their stomachs will bear—indeed, rather less. He says that "the real remedy of the silver problem is to put into our silver dollar enough silver at market value to be equal to a gold dollar, and to maintain all forms of money, whether coin or notes, of equal or interchangeable value." If this had been done at the time when the so called Sherman Law was passed, what would have happened? Silver was then worth $1.08 per ounce, and the silver dollar was worth as bullion about 84 cents. Silver is now worth about 83 cents per ounce, and the silver dollar is worth 64 cents as bullion. Consequently, if we had put enough silver into the dollar

then to make it worth a gold dollar, it would now be 20 cents short, and the whole job would need to be done over again. In fact, it would need to be done over at least once a year. Mr. Sherman always mixes some sound doctrine with his popular fallacies. He says, for example:

"The pensions of our soldiers, the value of the savings deposits of our people, and all existing contracts would be reduced one-third in value. Gold would be demonetized, exported, and hoarded, and the basis of our entire financial system and of all values would be measured by money of less purchasing power than now, and on a footing with the financial systems of China and Japan and all the South American States, and we should be separated from the standards of universal use in the great commercial countries of the world."

All very true, but why could not Mr. Sherman go as far, at least, as he went a few months ago when he voted for the repeal of the Sherman Silver-Purchase Act? This Canton dinner was a very good place for him to tell all that he believes on the subject of the currency. The absence of any allusion to the Silver-Purchase Act might be construed to signify that he has changed his mind, but that is not probable.

An interesting problem of the year, not unconnected with the "balance of trade" question, is the effect which the World's Fair will have upon American travel in Europe. The influence of our foreign tourists, through their expenditures abroad, upon the trade debt of our country to European nations, is a factor of very considerable importance. A recent English work on international finance reproduces a few interesting statistics. When the payment of the Prussian indemnity was under discussion, M. Léon Say, reckoning up the resources of France on a balance of exchange, estimated the amount spent yearly by tourists in his country at $80,000,000. More specifically, a British Foreign Office report of 1891 on the foreign trade of Italy calculated that for the preceding ten years American tourists alone had expended in Italy an average annual sum of $35,000,000. To this must be added not only the additional outlay of our tourists in Germany, Switzerland, Great Britain, and elsewhere, but the continuous payments of the 50,000 or more native Americans resident in London, in Rome, Berlin, Paris, and other "winter cities" of the Continent. Practically all of these people, tourists and residents alike, meet their expenditures through drafts on New York bankers, and the sum total of such annual payments may safely be reckoned as in excess of $100,000,000. It is not, of course, to be expected that the attractions of the World's Fair will this year extinguish the greater part of such expenditures; but that the number of tourists from America will be materially reduced can hardly be doubted. To this extent, the "balance of trade" will clearly be affected in our favor, though we have no precedent by which to judge the full measure of its influence. The Centennial Exposition of 1876, as it happened, immediately preceded a radical change in our merchandise trade balance from the import to the export side; a change whose permanent influence far overshadowed every minor factor.

The decision of Judge Taft in the boycotting case of the Toledo and Ann Arbor Railway is apparently a new thing in the jurisprudence of the country, yet it is in line with other decisions made by the Supreme Court of the United States, and is therefore quite likely to be sustained on appeal. The fundamental principle is the same as that announced in the Chicago elevator cases, namely, that public interests are paramount, and must prevail over private interests in all cases of doubt. Probably the Inter-State Commerce Law was not framed with a view to prevent Mr. Arthur, as Chief of the Locomotive Brotherhood, from boycotting the Ann Arbor or any other railway, and thus paralyzing trade and industry in a thousand places remote from the scene of conflict, but since its terms include such cases, the courts cannot do otherwise than make practical application of them. The decision of the Court does not restrict in any way the right of railroad employees to resign their positions and to discontinue work, but it does prohibit combinations of persons from interrupting the commerce of the country by set purpose and system. There can be no doubt that such combinations do come within the prohibitions of the Inter-State Commerce Act.

The position which the Lake Shore engineers intended to take was that of refusing to haul Ann Arbor freight, while still holding their positions for other work on the road. This, the Court says, the law does not allow. Accordingly, Mr. Lennon (one man out of the five who were held to answer for contempt of court) was fined $50 and costs. The other four, who simply resigned and went out of the company's service, were discharged. Lennon made a pretence of resigning in order to escape the penalty of disobedience of the Court's order, but the proof showed that he had not resigned at that time. He expected to be protected in some way for his disobedience, and so he took the risk. A fine of $50 was a very light penalty, but was quite sufficient to advertise the purpose of the Court to enforce obedience hereafter.

The Supreme Court rendered an interesting and important decision on Monday. One Lascelles, a swindler who cut a great figure for a while as the son of Lord Beresford, was arrested in New York upon a warrant of extradition from Georgia charging him with being "a common cheat and swindler" and with "larceny after trust delegated"; but after being taken South he was again indicted, this time for forgery, tried, and convicted. His counsel insisted that he was liable to trial only for the crime charged in the warrant of extradition, and that his conviction for another offence was in violation of his constitutional rights. The Court acknowledges that a fugitive from justice in this country who is brought back from a foreign nation under a warrant of extradition can be tried here only for the crime charged in that warrant, and the contention of the swindler's counsel was that the same principle held as between the States of the Union. The case presented this point to the Supreme Court for the first time, and its decision is overwhelmingly against the claim that "the States of the Union are independent governments, having the full prerogatives and powers of nations, except what have been conferred upon the general Government, and not only have the right to grant, but do, in fact, afford, to all persons within their boundaries an asylum as broad and secure as that which independent nations extend over their citizens and inhabitants." The Court pronounces this assumption "a fallacy" which is without any support in the Constitution, and it concludes that, "upon a fugitive's surrender to the State demanding his return in pursuance of national law, he may be tried in the State to which he is returned for any other offence than that specified in the requisition for his rendition, and that in so trying him against his objection no right, privilege, or immunity secured to him by the Constitution and laws of the United States is thereby denied." The most interesting feature of this decision is the fact that it was written by Judge Jackson, the ex-Confederate Democrat from Tennessee whom President Harrison appointed to this bench just before the end of his administration.

The fall of the French Ministry on a petty amendment to the budget, after weathering for three months the fierce Panama gales, is a fresh proof of the legislative paralysis which has stricken the country, and will doubtless strengthen the demand for dissolution. There seems to be a splendid opening for a "strong man," but so far he does not appear. M. Constans has been supposed to be lying back until the right time came for him to show that he was the man for the hour, but all the announcements that he would soon appear as the expected saviour of society, have proved so premature or unfounded that the suspicion has now got abroad that he either thinks society is beyond saving, or is aware of something in his own record which an enemy might bring out in Parliament, to show that he was in need of saving along with the rest of them.

THE POSTAL SCRAMBLE.

THE wholesale removal of fourth-class postmasters will cause great regret among those who expected a considerable improvement on the Clarkson methods when this Administration came into power. It is perhaps allowable to mention the sentimental objection to it first, although this may not be the most important. It is, then, impossible to make changes of this kind, at this rate, on the kind of information which the Department can get from any one but its own officers, without doing great injustice—that is, without ousting a great many competent postmasters guilty of no offence except that of being Republicans. This injustice has always been recognized as one of the very bad features of the spoils system, the one which is most demoralizing in its influence on the Government service. An official force, each member of which feels that no moral relation exists between him and his superiors, and that he may at any time be deprived of his livelihood without being heard in his defence, or on the *ex-parte* evidence of rivals or enemies, cannot possibly be efficient. No administration, therefore, which proposes reform of any kind can safely begin the work by doing moral wrong to a large number of people. In truth, the old system of kicking postmasters out for the simple reason that their places are needed for supporters of the party in power, has many points of superiority to the system of dismissing them on secret charges, which they have no opportunity of answering. The one is brutal, but the other is unfair and somewhat hypocritical.

It may be that two-thirds of President Harrison's appointees were unfit, but the mode of replacing them is of almost as much importance as the quality of their successors. The most discreditable and even scandalous spectacle in our politics, everybody admits, is the rush for office after the advent of a new party to power. Everybody except the office-seekers is ashamed of it. The incoming President and heads of departments all deplore it. It has been found necessary, now, to close the public offices on certain days of the week, in order to enable the chiefs to attend to the public business, so great is the horde of people who want small places, especially post-offices. President Cleveland, in spite of the warnings he has given, is beset by them almost to the extremity of endurance. But no change for the better can be looked for until some President summons up the courage, not only to reduce the number of appointments made immediately on taking office, but to stop completely the practice of wholesale removals in the first three months of his term; and the only President from whom we can look for this consummation is a President in his second term. It seems as if, in the present state of human nature, it was useless to expect it from any President in his first term.

As long as this practice is kept up, all warnings to office-seekers not to come to Washington, and all advice to them, such as Secretary Hoke Smith has given, to take up some other calling than Government service, will fall on leaden ears. In no department does it work so much mischief as in the Post-office Department, because the nerves of this Department extend all over the country and penetrate to the remotest hamlets. The Treasury or the Interior might make an absolutely clean sweep within a week without making the same impression on the office-seekers' imagination as the mere beginning of the process in the Post-office Department. As soon as—to use the figurative language of the spoilsmen—it is known that "the guillotine is set up," and "the headsman's axe has been sharpened," and "the work of decapitation has begun" in the Post-office Department in Washington, a tremor runs through the whole office-seeking world. Every village is thrown into a fever of excitement. The effect on the popular mind is much like that of the news of the opening of a public lottery. All the impression made, if any has been made, by the civil-service-reform talk in the party platform, or in the Presidential letter of acceptance, or in the campaign speeches, vanishes like a morning mist. Thousands fall to work to make "charges." Thousands more pack their gripsacks and start either for Washington or for "the home" of the Congressman for the district. The opening of the postal lottery discredits the denials made about removals in other departments. It makes people believe that vacancies could be made in the same manner elsewhere if the Administration chose. It shakes popular confidence, in the outlying districts, in the genuineness and honesty of the competitive system as administered by the Civil-Service Commission.

What, too, it may fairly be asked, is the object of this post-haste? Why make one hundred changes a day, or even fifty? What will happen to the postal service if the present incumbents stay in office even for a year? Undoubtedly the postal service has not been good during the past four years; but it has not been so bad that we cannot possibly stand it a month longer. Moreover, no service was ever improved in a hurry. Improvement means careful inquiry about the actual incumbent and about all the candidates for the place, and careful inquiry means time and pains. The guillotine is just as ineffective an instrument of administrative as of political or social reform. The craziest of the French Jacobins used to maintain that there could be no permanent purification of politics in France without the fall of 100,000 heads. Are our postal "headsmen" any less crazy?

Not the least of the objections to wholesale decapitation is, that the spectacle diminishes greatly the popular interest in the really important questions of the day. We have all been fighting a hard battle for eight years over the tariff and currency questions. We have won the victory, and, after wiping our fevered brows, have sat down to wait for currency and tariff reform at the hands of the Administration and Congress which we have elected. What do we now hear? Nothing whatever about the currency or the tariff. What do we see? The Senate fighting over its own doorkeepers, messenger-boys, and scrubbing-women; the House, which could not bear, we were told, to meet for tariff legislation, on account of the approach of the hot weather, assembling unofficially in Washington to divide offices and push "claims"; the Post-office Department rousing them to madness by the dull clang of the guillotine, and the attention of the whole country concentrated, not on the national safety, honor, and welfare, but on the distribution of some thousands of little places in which the public has no interest whatever, and the scramble for which would make even Liberians and Haytians ashamed.

AMBASSADORS.

THERE has been a good deal of discussion among us for some years past, and not a little lamentation, over the fact that the United States had no "ambassadors," that is, no officers of the first grade in the diplomatic hierarchy, to represent them at foreign courts. The complaints have mostly come from our ministers abroad, who found themselves, not exactly humiliated, but what the French called "déconsidérés," by occupying only the second rank, that of envoys extraordinary and ministers plenipotentiary. What suffering has resulted to them from this we have never been able to discover beyond the fact that if a minister plenipotentiary were waiting in the anteroom of a minister of foreign affairs for an interview, and the ambassador of another, and it might be inferior, Power came in later, the ambassador would see the Minister of Foreign Affairs first. Some have gone further than this, and averred that if a minister plenipotentiary were actually in the Foreign Minister's room and conversing with him when an ambassador was announced, the Foreign Minister would have to drop the minister plenipotentiary then and there, and give his attention to the ambassador, or, in other words, be guilty of a gross piece of rudeness.

Now, it is true that so great an authority as Prince Bismarck, in a speech before the Reichstag in 1871, did say this, when arguing for the raising of some German mission to a higher rank:

"A minister plenipotentiary may have waited an hour in the antechamber of a minister of foreign affairs; at the moment when he is about to be admitted arrives an ambassador, and, according to the usage of most courts, as far as I know, it is the ambassador who goes in. The minister plenipotentiary has then to wait still longer, and, it may

be, cannot be received at all on that day. From this result mortifications and annoyances which may be avoided by a simple change of title. *No minister plenipotentiary, if he has a proper sense of his own dignity, will submit to such treatment, and for my part I have found myself so placed as to be able to resist it with success*, but not without producing a coolness out of all proportion to the importance of the incident."

But we observe here two things: first, that the usage is only observed at some ("most") courts, and, secondly, that a minister who had an object in disregarding it could do so, as Bismarck did, successfully. What this means is, that the rule is one of those drawn up at the Congress of Vienna by the sovereigns who had just come out victoriously from the Napoleonic war, and had their heads so full of their importance that they soon after formed the Holy Alliance. To them, as to most sovereigns of that day, etiquette and gradations of rank and rules of precedence were among the most important things in the world, and the enforcement of them one of the chief duties of life. Hence the ambassador, as "representing the person of the sovereign," was a sacrosanct personage, who had to be taken to court in a court carriage on his presentation, and brought home in the same way under a guard of honor; who took precedence of all other diplomatic officers everywhere, had a right to personal interviews with the monarch to whom he was accredited whenever he pleased, besides many other "solemn nothings," as they have been cleverly called.

But the world has greatly changed within seventy-five years. Diplomacy, which used to consist in the messages of one sovereign to another, transmitted by functionaries who called them their "masters," or "august masters," has become quite a different thing. It has become a business which, when serious, is now generally transacted by special envoys or special negotiations. The resident diplomatic agents have greatly declined in importance, owing to the facility with which they can always communicate with their own governments, and the extreme rarity, therefore, of occasions on which they have to take any responsibility. The consequence is that the etiquette of the diplomatic business, as established by the Congress of Vienna, has fallen into considerable disuse and even into contempt. It is studied in Germany—the great home of etiquette and abstruse learning—more than anywhere else, owing in part to the large number of high mightinesses that the country contains and maintains. One of the German authors, Moser, has written a treatise on an ambassador's "Right to a Coach and Six" (*Recht mit sechs Pferden zu fahren*).

That any minister plenipotentiary need now suffer in any country the indignities of which Prince Bismarck speaks, we do not believe. That any American minister has suffered them, we shall take leave to doubt until we hear of a concrete case. As a matter of fact, a minister plenipotentiary who has anything to do, and has a fair amount of common sense, does not go and loaf in an anteroom when he wants to see the Minister of Foreign Affairs. He writes and gets an appointment, and when he has got it, if he has any self-respect, he makes the Minister of Foreign Affairs keep it. Who is the American minister who, when an ambassador came in, has arisen and sneaked out in obedience to etiquette? We have heard a good deal about the possibility of such a tragedy, but we have yet to hear the name of the victim and the time and place of its occurrence. That other right which an ambassador has—the exclusive right to claim audiences of the sovereign to whom he is accredited—has been thoroughly exploded. Whatever his rights were in the days of Louis XIV., he now has to transact business through the responsible ministers of the Crown, like everybody else.

We have no intention, however, of arguing against the introduction of the ambassadorial rank into our system. The matter has derived ridiculous importance from the opposition to it on the part of Congressmen who supposed that, by denying ourselves ambassadors, and preventing our ministers from wearing court dress, we were in some manner covering democratic institutions with glory. All this sort of controversy is as absurd as disputations over points of heraldry. We are glad to have Mr. Bayard an ambassador if it will add in the smallest degree to his comfort or importance in London. What we regret is to see such discussions concealing or turning attention away from the real improvements needed in our diplomatic service. The defect of ours is not that it has not the same strict gradations of rank, or the same rigid rules of etiquette, as that of European Powers, but that it is not a service at all in the proper sense of the term. Ambassador, envoy and minister plenipotentiary, minister resident, and chargé-d'affaires are terms which do not mean with us what they mean in Europe. In fact, with us, as terms of distinction, they mean nothing whatever. In Europe they mean what high rank in the army means—that is, the holder has been in the diplomatic business from his youth up, has had much experience in the transaction of it, is familiar with the manners, customs, constitution, history, and language of the country to which he is accredited, is acquainted more or less thoroughly with its statesmen and with his colleagues of other nations, and associates on easy and familiar terms with the ruling class, and has reached his high place through long and very meritorious service. Of course this is not true of every case, but it is true as a general rule. We need not describe the manner in which our diplomatic staff is made up every fourth year. Everybody who is familiar with it knows that there is a certain absurdity in making a fuss about the titles we use in it as long as we are so indifferent to its quality.

WHICH IS THE BARBAROUS NATION?

FIFTY years ago, the United States, by a judicious commingling of gunboats and diplomacy, was engaged in the great work of forcing China to abandon her barbarous policy of excluding foreigners. The treaty of 1844, negotiated by Caleb Cushing, was rightly hailed as marking a great triumph for civilization. Its first article proclaimed "a perfect, permanent, and universal peace and a sincere and cordial amity" between the two countries, "without exception of persons or places." At first, it is true, citizens of the United States were to have the right to enter only the five treaty ports. But this was only an entering wedge, and by the Burlingame treaty of 1868 the whole country was thrown open, on the ground of "the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of citizens and subjects respectively from the one country to the other for purposes of curiosity, of trade, or as permanent residents." It was this treaty, still in force nominally, which granted to "Chinese subjects visiting or residing in the United States" "the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation."

This country also took great pains to have the rights of its citizens in China carefully defined. They were to enjoy "all proper accommodation in obtaining houses and places of business." They were to be entitled to "the special protection of the local authorities of the Government, who shall defend them from all insult or injury of any sort on the part of the Chinese." They were to be "suffered to prosecute their commerce in quiet and without molestation or embarrassment." The two countries solemnly agreed not to "insult or oppress each other for any trifling cause," and guaranteed that the citizens of either should be exempt in the other "from all disability or persecution on account of their religious faith or worship." To have obtained such concessions from China was properly regarded as a great victory for enlightenment and civilization over barbarism, and the United States was not slow in so proclaiming it.

Out of its own mouth, therefore, is the country now condemned as barbarous, for in its dealings with China in the past few years it has gone over to those very practices which a half-century ago it was urging China to give up. If it was barbarous in China to shut out foreigners in 1840, what is it for the United States to shut them out in 1890? If no one but barbarians would persecute aliens and burn their houses and mob their persons, in the early years of the nineteenth century,

what term ought to be used to describe those who do the same things in the closing years? We are even worse than the China of 1840, because we have violated our pledged word. Our own Supreme Court has decided that the Exclusion Act of 1888 was in flat violation of our treaty obligations, though it held that Congress, as the organ of a sovereign people, had a right to pass the law. In other words, a nation, like a man, had a right to declare that it would not stand by its agreements. As a crowning infamy we have passed the Geary Law, though there is reason to hope that the Supreme Court will declare this invalid, not simply because it violates our treaty obligations, but because it outrages the elementary rights of man, and breaks down the safeguards which the common law throws around every human being.

We do not mean to point out again the inhumanity of the Geary Law, or the unnecessary cruelty with which preparations are being made to enforce it. A concrete case of persecution will show how skin-deep is our civilization when it is a question of dealing with a Chinaman. The town of Great Falls, Montana, is one made up, in the main, of intelligent people, though no one could have guessed it from the treatment which befell a Chinaman there on the 23d of March. We take the account from the two daily papers of the place, one Republican and one Democratic, as it was published the next day. The *Tribune* said that there was considerable excitement in the city when "the news spread like a prairie fire" that a "pig-tailed Celestial had planted his wooden-soled shoes upon the sacred soil of Great Falls—a city where the people of his race are excluded." The rash foreigner announced that he proposed to open a laundry, and, according to the *Leader*, "appeared to be well supplied with money." He must have been intelligent, too, for he at once endeavored "to propitiate the curious and hostile bystanders by offering to treat them."

Accounts differ as to how many "accepted his hospitality," the *Tribune* saying "only a few," and the *Leader* "no one." At any rate "a meeting of the labor union" was soon held, and "the sentiments expressed were all in one strain: 'Avoiding violence, the Chinese must go.'" Violence was avoided by having a policeman arrest the Chinaman, drag him off to jail in the midst of a howling mob, and smuggle him out of town in the dead of night with orders never to show his face there again if he valued his life. In this way was settled the great truth that, as the *Tribune* put it:

> "There is no room for the almond-eyed sons of China in this city. Butte and Helena can harbor and patronize them to the exclusion of honest labor, but as long as the stars and stripes float over Great Falls no pig-tailed saffron will be allowed to call this city his home."

The *Leader* explained the proceedings as a part of a settled policy, saying:

> "There have been four or five attempts in the last few years by the Chinese to obtain a foothold in Great Falls, but the people of this city are determined to keep out the pig-tailed Celestials at any cost, and as soon as their presence here has become known, sufficient arguments and reasons have been presented to them to convince them that this city was an undesirable place of residence."

Such prejudice and cruelty, solely on the ground of a man's color or the country of his birth, the United States has denounced as barbarism on the part of China. It becomes a pertinent question, Which is really the more barbarous nation now, China or the United States?

A MISSING LINK.

"LOOK there, Alphonse," says *Punch's* Frenchman at the World's Fair of 1851, before an English washstand with all the appurtenances; "what sort of a machine do you call that?" "How droll!" answers his companion from across the Channel; "I'm sure I don't know." In some such frame of mind we can fancy our American politicians to have read a recent despatch from Berlin, saying that members of the Reichstag must forego the usual quiet of the Easter recess. "The imminence of dissolution sends most of the members to face their constituents." "To face their constituents"—how droll! Why, it was only the other day that the New Jersey Legislature adjourned and fled in terror before a mass-meeting of their constituents convened at Trenton to call them to account for their shocking race-track bill. The fugacious body has since dissolved and disappeared out of sight, and the truth is, that it will be remembered only by the blacklist which the outraged morality of the State has scattered broadcast against future political aspirations on the part of a gambling fraternity.

In this year of centennial statistics, more or less wisely gathered, it would be most instructive to have a census taken in single towns or counties, if not in a whole State, among the electors, upon this line of inquiry: Do you know the name of your Representative or Senator in the Legislature? Do you know what party he belongs to? Do you know his occupation, station in life, and previous history—in short, the facts which bear upon his fitness for the office of lawmaker? Had you any reason to suppose he was nominated for his fitness? Have you ever seen him? Do you ever expect to see him? Do you know what part he took in the doings of the Legislature—what bills he introduced, what he opposed, what votes he dodged, how constant and assiduous he was in his attendance? The replies to these questions would, we believe, be fairly startling, and would throw a flood of light on the divorce which now exists between representatives and constituents, or, in other words, on the fallacy that we are living under a representative system—a government of the people, by the people, and for the people. Our ruling class, in fact, is for the most part self-imposed upon the people, and, once elected, has no real responsibility to the people.

There are, no doubt, permanent causes which tend to make public life in a republic the goal of ambitious men of humble origin and education and low moral tone, and less and less attractive to quiet men of culture and respectability. In the absence of a titled class, public office furnishes a cheap avenue to distinction at all points of the scale; the working of the party machinery in primaries and caucuses gratifies the social craving among unlettered men, and gives them a mode of passing their evenings without ennui, whereas such occupations are repulsive and fatiguing to the refined and home-loving citizen. Again, apart from the hope of public plunder, office may considerably better the pecuniary condition of some who take it, while the middle and well-to-do classes must make a positive and often a very serious sacrifice to neglect their business in the public service. We can never expect to see, and perhaps it is not desirable to see, the time when something of sacrifice will not be involved in office-taking on the part of the intellectual and moral élite, and certainly the political path to elevation should not be closed to legitimate ambition. What is needed is for the community to throw its weight in favor of diminishing the obstacles to self-sacrifice, and of increasing the obstacles to unworthy ambition.

To limit ourselves for the moment to State Legislatures, their work ought to be closely followed by the public, and the means of following it ought not to be confined to reports of the press in city or in country. These are now rarely full or intelligent, even if any attention whatever is given to the ordinary proceedings at the State capitol. The *laws* are promulgated, and, as paid advertisements, help keep alive the weaker sheets, whose readers have little chance to observe the august process of making the laws. One Legislature follows another, leaving no clear impression of the physiognomy of the session or the ability and purity of the body as compared with its predecessors. When its members disperse, they return to figure, if at all, as individuals, not as partakers in a great public trust for which they ought to render an account to somebody. If they have not scandalously misbehaved, hundreds and thousands of the voters who sent them to the Legislature have absolutely no ground for refusing to reëlect them—as they could give none for electing them in the first place, except their party label. Thus, whether he stands again, or retires to private life in the game of rotation or because he is satisfied either with his experience, his title, or his gains, the so-called Representative is wholly unconcerned with the need of his constituents for information about himself and his colleagues in the discharge of representation.

This is because the practice of facing constituents with records instead of with

promises does not exist among us. It does not exist because our political products are not popular and of the people, but of the Machine, to which the real responsibility of its creatures lies. Our popular elections are under duress because the nominations do not proceed from the people, and to redress one evil the usual sole alternative is to embrace another—that is, to vote for the opposition candidate. Why, then, should the constituency take enough interest in its compulsory choice to call him to a fictitious accounting? Or why should he be taken from a class capable of writing or speaking good English that he may justify on a platform the fictitious trust reposed in him? The result is, that such political education through discussion of public questions as the voter gets is either wholly through the newspapers, or in the heated meetings of the campaign preceding an election. Those questions are hardly ever discussed retrospectively with reference to legislative and personal action, and in the calm of the recess.

There is, however, no reason why this practice should not be instituted, especially in suburban and country districts. A handful of men, a self-constituted committee, can at any time ask a candidate openly whether, if elected by the aid of their votes, he will, on the adjournment of the Legislature, present himself to his constituents prepared to give a general sketch of the doings of the session, and of his own share in them, and to answer such questions as his constituents may feel moved to put to him. If the candidate agrees, the committee need only raise the trifling sum required to hire a hall; or they may go further and procure a shorthand report, to be given to the local newspaper and so spread to every corner of the district. Now the base and the incompetent will not relish this test, which will act as a sobering restraint on their ambition. The mere *sight* of them will often be enough to discredit them fatally before they have opened their lips; and one such exposure will make a place for an honester and more capable man, whether of high or of low degree.

We think we do not exaggerate the effect for good of this simple device, which completes the circle of the suffrage: the receipt of the popular commission at the polls, followed by a report of the manner in which it has been executed. Interest in men as in measures would cease to be spasmodic and periodic, and the State—were the practice to become universal—would be conscious of its own political development, as it is not now and cannot be, where all is left to chance or to intrigue, and where the people's delegate returns not in his orderly ellipse to the point of starting, but flies off into cometary space, never to be seen again. That Congress would profit by the same practice is a matter of course; but to reform the State Legislatures is to reform Congress.

THE ITCH FOR PUBLICITY.

In no way did the late M. Taine better show the seriousness, approaching austerity, of his conception of the scholar's life than by his consistent avoidance of all the modern methods of puffery. He was the deadly enemy of reporters, few of whom ever got beyond his door, those who did finding it a case of going farther and faring worse. Photographers spread the camera before him in vain The world will never know, through the illustrated papers, what was the furniture of Taine's study, or what were his pet animals, or how he looked when "at work." In short, he had the absurd and antiquated idea that the world had a right to know him only through the writings which he chose to give to the world, and that he was under no obligation whatever to furnish themes for idle chatter to that servants' hall which, according to M. André Hallays, modern society has become.

Since his death, new proofs have accumulated of his freedom from that rage for exhibiting themselves which makes so many of our notabilities uneasy when not in the focus of the public gaze. He had long kept a diary, in which he was in the habit of writing down every day, for his own eye, his impressions of the men and events of his time. This he committed bodily to the flames a few days before his death. What a waste! It must have contained material for wrecking a dozen reputations, for inflicting exquisite torture upon the families of a score of his contemporaries. Was there no Froude by to pluck such precious brands from the burning?

The care Taine took in regard to posthumous publication of his writings is equally obsolete—or else prophetic of the course to which in the future literary men are in a fair way to be driven. The provisions of his will bearing on the subject were made public by his widow on March 15 in a letter to the *Journal des Débats*. It seems that the *Figaro* had printed in its literary supplement a dozen unpublished sonnets from Taine's pen. There was nothing in them discreditable either to his character or his literary ability, but note with what an old-wives' mystery and nodding they were heralded, as if some choice bit of scandal:

> "These verses were never intended to see the light; only a few friends knew of their existence. The philosopher wished to keep his work secret as if it were a sin. How, then, did *Figaro* procure these beautiful sonnets? That is our secret. Chance put us on their track, but it was only with the greatest difficulty that we could get our hands on them."

This drew out the letter from Mme. Taine. The sonnets were only a recreation of her husband's on summer evenings, she said; they were never meant for publication; but three copies of them were in existence outside the family. Lest such breaches of confidence might be repeated, she would give to the public Taine's testamentary disposition of his literary remains. The clause in question is as follows:

> "I expressly charge my wife and my heirs to prevent as long as they live, in all legal ways, the publication of my confidential and private letters, of all kinds and descriptions. I also direct my wife and children to transmit this prohibition to their heirs and descendants, to be observed indefinitely. The only letters or correspondence which can be published are those relating to matters purely general or speculative—for example, philosophy, history, æsthetics, art, psychology; and from them all passages must be cut out which touch, remotely or immediately, upon private life, and none of them can be published except on the authorization of my heirs, after the said passages have been cut out by them."

The extract is worth reproducing, if only as a sign to an evil generation. Privacy is rapidly becoming one of the lost arts. A man who professes to wish to be by himself, to refuse to take the public into his confidence as to all his thoughts and plans, social, political, literary, religious, is set down as an obstinate curmudgeon, or a semi-lunatic, or else as a peculiarly crafty fellow who makes a show of reserve only to provoke greater interest in the clean breast of all his affairs which he proposes finally to make. We all remember how the reporters were "at fault," like so many puzzled pointer dogs, when the great Fayerweather gifts to charity were made so unostentatiously. "What, a million and a half given away and *we* not called in! What can be the man's sly scheme to advertise himself?"

We think Taine's example is of particular value because it is that of a literary man. It is probably useless to look for any speedy abatement of the itch for publicity on the part of many of our fellow-citizens. The politician will not soon give up his reporter, nor the eminent citizen and general oracle his typewritten impromptus. Reformers ought not to be too suddenly subjected to the discouragement of not seeing their names in the papers, nor can philanthropists be expected to find out in a single day the joy of "doing good by stealth." But we surely have a right to look for a finer feeling and a more shrinking modesty in those who are supposed to pass their days in the still air of delightful studies, or who set themselves to direct the thought and taste of their fellowmen. Who can estimate the damage done to the more delicate sensibilities of English-speaking people by the indiscretions and outrages and self-advertising of literary men in the past thirty years? It is actually no longer considered indecent for a writer to puff his own works in advance of publication, so that it is getting to be quite the common thing to see the public appetite whetted by the announcement that Mr. —— thinks his last volume is quite the best thing he has ever done.

It seems clear that the shocking indiscretions and immodesty of many modern writers are to be traced to the same cause as the impertinence and coarseness of modern journalism—the jingle of the guinea. Literary gossip and scandal, with a flavor of betrayed confidence about them,

command their own terms. It was a rule laid down by Carlyle, at a time when he could not have dreamed of the horrible illustration of it he himself was to furnish—

"If you intend to interest reader —that is to say, idle neighbors and fellow-creatures in need of gossip—there is nothing like unveiling yourself: witness Jean-Jacques Rousseau, and many other poor waste creatures, going off in self-conflagration for the amusement of the parish."

But it is evident that there is already beginning to be a reaction against this sort of conflagration, and that serious minds like Taine and Tennyson will be more and more driven to the burning up of their diaries and letters, instead of exposing themselves and their friends to the flames, thus lending a new meaning to the Scriptural phrase, "saved, yet so as by fire."

THE FRANCO-SWISS CONVENTION.

PARIS, March 19, 1893.

THE Panama affair is more than ever the question of the day. At the present time the whole of France seems to exist for it alone. There is no end to the incidents that occur at the Chamber and Court of Assizes, and every day brings some fresh revelation. But the very multiplicity of these revelations and incidents serves rather to obscure than to clear up the situation. No one seems to know where we are and where we are drifting to. Neither in the Government, nor in the Chamber, nor in public opinion is there anything to be discerned that is clear and precise; and if one wishes to speak with exactitude and impartiality of the whole matter, one needs to let a few weeks go by in order to be able to appreciate the relative importance of the different elements and to draw sound conclusions from them. The Panama affair, however, is by no means the only question worthy of attracting attention in France. Far from it. While people had eyes only for this deplorable scandal, the Chambers were taking a decision, less noticeable, but perhaps graver in some respects, than the incidents at present occupying the public mind. It is very evident that economic questions are every day exercising more influence upon international politics, and for this reason the vote of the Chamber with regard to the commercial treaty existing between France and Switzerland cannot be lightly passed over. The consequences of this decision may not be felt immediately, but, if care is not taken, they may be none the less serious. It will be well, therefore, to give some little consideration to this subject.

To be able to understand what has taken place, it is necessary to go back to the first beginnings of the protective system which France has recently introduced, as also briefly to refer to the commercial policy pursued during the last few years. As will be recollected, in 1860 a commercial treaty with England was signed that marked a veritable revolution in the history of our commercial relations with other countries. Up to that time France had hedged herself round with a protective system of the most exclusive kind. This treaty, which granted to England a reduction of tariffs, was a first step taken in the direction of free trade. The treaties signed with other Powers during the years that followed further accentuated this evolution; and France soon found herself connected by contracts with the greater part of the countries of the world. A double tariff was then in use: there was a general tariff applied in the case of countries having no treaty with France, and a conventional tariff, as it was called, on a much lower scale, applicable to countries to which either particular concessions had been made, or to which had been accorded the most-favored-nation clause.

Nevertheless, ultra-protectionist ideas continued to number a large body of advocates in France, and the system of treaties initiated in 1860 was from time to time violently attacked on several of its points. The country, however, remained faithful to it, at least in its main lines, and the various commercial treaties were successively renewed. A short time after the last renewal, in 1881, protectionist tendencies appeared to be gaining ground, owing to causes somewhat complex and in general of too technical a character to be able to be set forth here. One example may be cited —the phylloxera. Up to the time that this plague invaded France, the vine-growers, who exported their wines, had been free-traders. As soon, however, as the yield fell off in quantity and quality to a formidable degree, and France began to import wines, the vine-growers became protectionists. This protectionist movement had as first consequence the augmentation of certain duties that did not figure on the conventional tariff list, and which therefore were always free to be modified. It was not long before matters went to a greater length, and measures of a more drastic character were decided on. The Government, supported by the Chambers, resolved to profit by the expiration in 1892 of all existing commercial treaties, and to abandon the system it had previously maintained. No more treaties were to be made containing special tariff clauses, and the different foreign Powers, instead, were to be invited to choose between two tariffs, both of which had been previously voted by Parliament. There was the maximum tariff, with nearly prohibitive duties, which was to be applied in the case of countries unwilling to accord sufficient concessions to imports from France; and there was the minimum tariff, by which all other countries might profit, but which, it is worth remarking, was made very much higher than the formerly existing conventional tariff. Nevertheless, the Government hoped to get it accepted by the foreign Powers it wished most to come to an understanding with, in exchange for the lowest existing tariff of these latter.

This hope was not well grounded, and Switzerland in particular protested against the course pursued by the French Government. It accepted the tariff, but only provisionally, and on condition that the French Government would consent to examine the Swiss claims and submit them to the Chambers. Negotiations were entered into on the matter, and, after some months passed in parleying, an understanding was arrived at that the French Ministry should ask the Chambers to reduce the duties of the minimum tariff on certain articles in which Swiss trade was especially concerned. The Chambers refused the proposal. This refusal was equivalent to the interruption of all commercial agreement with Switzerland, and involved the cessation of the *modus vivendi* that had been provisionally adopted. Swiss products were at once submitted to the maximum tariff by France, and French products entering Switzerland were in return compelled to pay very high duties.

The conclusions to be drawn from France's refusal to agree to the commercial treaty proposed by Switzerland may be said to be of two kinds, according as the fact is considered from the political or from the economic point of view. From this latter point of view there appears first the manifest intention to persevere in the protectionist policy initiated by the adoption of the now-existing tariffs. I do not pretend here to settle the delicate question as to whether the policy is good or bad; but it is at least permissible to affirm that such a policy is accompanied with certain drawbacks. The best proof of this is, that those who are most affected by the change are far from approving the attitude taken up by the Government. Even before the vote of the last tariffs, many Chambers of Commerce, and those not the least important, protested against the course about to be taken. Further, when one comes to consider Switzerland, the disadvantages certainly appear to outweigh the advantages. It is true that Swiss competition is particularly keen in some French industries—the clock trade for instance; and it is only natural there should be a desire to protect such trades. But between a limited protection like this and the extreme measures actually taken, there can be no comparison, especially as these measures may produce consequences almost irrevocable.

The importance of the Swiss market to French trade is not a matter on which doubt can exist. This is not the place to quote statistics, as figures always need to be discussed and commented on, or else ample evidence might be forthcoming to prove this importance. The proof will, however, appear in the very fact that the Government, in order to avoid, if possible, the closing of the Swiss market to our products, consented to propose to the Chamber a modification of the tariff recently voted. Now the refusal of the Chamber to admit the proposed modification has had the effect, as I have above indicated, of subjecting French products entering Switzerland to exceptionally high duties. And under such conditions French products will no longer be able to compete with the products of countries that are more favored, as, for instance, those of Germany. The orders formerly given by Swiss merchants to French houses will henceforth be executed in other countries; and if these other countries succeed in satisfying the Swiss demand, France will not be able, even if the existing system be abolished, to regain the position it occupied until recently.

Outside of these economic conditions there are others, more delicate and more difficult to set forth, which render the measures just taken fraught with very serious issues. The rejection of the proposed convention has produced a deep impression in Switzerland, and the line of conduct pursued in this matter, considered in conjunction with other incidents wherein France has not shown all the amenity she might have done, has powerfully contributed to call forth throughout the Helvetic Confederation a certain feeling of hostility towards us. Now this state of things is disagreeable in more than one respect. Granted that Switzerland is a neutral Power, and that its hostility, in case of conflict, cannot show itself in as grave a way as if it were a country untrammelled in its movements, yet this hostility can manifest itself in many ways by reason of the constant relations the various States are compelled to maintain with each other. In certain contingencies it might even become very troublesome, as, for instance, in the case of international railways (there are some branch lines in Switzerland at the present time under French control), or of industrial or literary property of any kind.

It would seem as though France more than any other Power ought to endeavor to remain on good terms with Switzerland. The time has certainly gone by when a French sovereign entitled himself the protector of the Helvetic Confederation. France, notwithstanding this, had continued to preserve a preponderating influence in the policy of the Confederation. Alone among all the other Powers, it maintains an ambassador at Berne instead of an ordinary minister, and this distinction seems to indicate a certain difference in its relations with Switzerland from those kept up by other nations. Thus, for example, in negotiations with Oriental Powers, it is French representatives that are intrusted with Swiss interests. These relations, difficult to be defined, these ties existing between the two countries, are the things at stake in the present crisis, which, by the measures recently taken, threatens to end in a rupture. This would be a disadvantage for France, and the more so as the other Powers would not fail to profit by the situation, in order to improve their own relations with the Confederation and thus isolate France.

This isolation appears, indeed, to be one of the consequences that attach to the ultra-protectionist policy we have entered on, and in which the rejection of the Franco-Swiss convention shows that we have decided to persevere. Nor is it merely a question of economic isolation, for the connection between economic questions and questions of a purely political order is such that the one involves the other. Some economists, as I have already had occasion to observe, dream of a union between the European States, based on commercial questions, and the necessity that exists of coming to an understanding so as to cope with the competition, every day more formidable, of the United States. I do not know how far such a combination may come to be a realized fact. One thing is certain, and that is, that the events I have endeavored to sketch thus briefly are not calculated to hasten the accomplishment of any such union. S.

AMERICAN DIPLOMACY.

ITALY, March 18, 1893.

FEW Americans living abroad, as some of us, for our or our parents' sins or our defects, are obliged to, and others of us do because they prefer it simply, will regard the return of Mr. Cleveland to the Presidency without some such feeling as shipwrecked mariners on a raft have when they sight a ship on the horizon. One of the disastrous effects of living abroad, in the midst of old culture and the traditions of society which has been organized for generations, so that it has become in a way classified by the process of deposition—*i. e.*, settled in its ways and customs—is that we get accustomed to, and learn to like, orderly and organized administration of public affairs, stable civil service, the smooth way of getting along which results from functionaries of all kinds having been thoroughly habituated to their duties, etc., etc. This state of mind may be, and probably is, regarded by the average home-staying American as slavish deference to aristocracy and rotten institutions, but it nevertheless causes a sensation of social well-being and repose which American society, even in Boston, can never give, till America is, socially and politically, organized. Now, though the number of Americans who come abroad, or who live more or less abroad, is many ten thousands, and though they are supposed by the natural process of cultivation to carry back some good results of their life abroad, I do not pretend that they are entitled to weigh in the national councils as to home government for as much as those who stay at home; but there is a branch of the public service which seems to have been organized for our special benefit (or, if not for that, then I must say that I can conceive of no other purpose in it), and that is the diplomatic, and in reference to this I think we have a right to be heard.

We (collectively) have suffered for years not merely the mortification of seeing as the representatives of our country at foreign courts men whose diplomatic incompetency made them the laughing-stock of their colleagues, but sometimes men whose ignorance of the ordinary usages of refined society, American or European, makes us blush when they put their feet in a drawing room where gentlemen and ladies are assembled. It has happened that these representatives of our country became, by their curious ways, the standing joke of the communities in which they figured. I remember one who, unable to speak any language but English, used to ask an audience of the sovereign to whom he was accredited, whenever he had a piece of business which demanded an interpreter, and another who sent back the invitations to a court ball for his family, saying that "he did not allow his women to go to parties where women danced half naked"; and of both these the absurd doings were the laughter of the town. They were extreme cases, but is it not commonly the case that the ministers we send abroad know neither French, which every diplomat is compelled to know in every other country, nor the language of the country he goes to? Since I have lived in Italy, the only minister we have had who did not in some way or other call attention to his ignorance of diplomatic or social usages was the late George P. Marsh, though we do sometimes manage to send a secretary of legation who is competent to perform the duties of his chief, if that were the usage. This complete indifference to the diplomatic qualities of the minister, or his fitness for the transaction of diplomatic business, makes it clear that the object of his coming is to preside over the American society in the capital to which he is sent. There is no *tertium quid*.

It is a recognized fact that all our diplomacy is done at Washington, and that, with the exception of England and Turkey, we have never had any real use for a minister abroad; and in Turkey, though we had need of activity in the minister, we never got any good from him, and the murders of the Smyrna missionaries are unpunished to this day. As we can hardly send a minister to London who does not speak the English language, we have a large field for choice, and there is no pretext for sending an incompetent man; but anywhere else we can, and generally do, blunder. The American public does not understand that diplomacy is a business which, like any other, has to be learned, and that therefore we have no diplomats; but these are facts. Why have them since we have no need of them? What we want, and all we want, is a decorous figure-head for the American community at the capital to which he is accredited—a court personage, somebody to present us at the receptions, receive once a week during the season, and figure in the lists of the diplomatic dinners, etc., etc.—for, in spite of our vociferous republican simplicity, I find no foreign colony so insistent on the presentations at court and the right to social eminence, I might say preëminence, as the American, and our minister must be a man to smooth matters for us in these respects. And how can he be all this, knowing neither court etiquette, French, nor good manners? Every American claims to be a gentleman or a lady, and is bound to insist that the man who represents him at court shall be a gentleman in the full sense of the word, recognized as such by the standard of the country where he goes, and received into fellowship by the court officials and the diplomatic body, which is always composed of gentlemen. What figure does a man make who has to take an interpreter to converse with the King or Queen? And supposing that by chance a bit of diplomatic business must be done, requiring tact and argument, how will a minister manage who can talk no language that the Minister of Foreign Affairs understands? But this is the case with three-fourths of our representatives abroad. And we think of raising them to the rank of ambassador—to make their unfitness more conspicuous, I suppose. And we pride ourselves a great deal on being a thoroughly practical nation! We are extravagantly sensitive about our national dignity, and there is not a country in the civilized world, except England, where our so-called diplomatic service does not, at one time or another, make us ridiculous.

We have got so far towards an establishment as to have appointed some secretaries of legation who hold from one minister to another, because otherwise the new minister would be as helpless as a new-born babe; but there is no promotion and no certainty of permanence in the position. The best and most useful secretary lately in the service resigned a few days ago, weary of perpetual underservice without recognition or the chance of promotion, and disgusted with the conditions of our diplomacy. Both minister and secretary are paid such miserable pittances that without private fortunes they must live in a way which makes the United States of America seem the meanest (as it is supposed to be the richest) country in the world. Our figure abroad is the bitterest satire on our pretensions at home. We swagger and boast of the wealth we hold, the debts we have paid, and the inexhaustible resources we possess, and we send a minister abroad to represent all this dignity and greatness on a salary that compels him to live in an apartment on the second story, or in a house in some obscure part of the city he will spend four years in—furnished lodgings, and probably taken by the month.

All this is schoolboy's management. It is indecent and unworthy the nation. If we want a diplomatic service, we should organize it properly and pay it decently. Increase of the salaries would, of course, intensify the eagerness for diplomatic appointments, but when these are included in a permanent civil service, the eagerness will do no harm. If it should be decided, on the contrary, that what we want is a sort of figure-head for the American colonies abroad, let the appointments be made as now, but let us be sure that the minister is a man whose manners and education will not make us ridiculous.

Correspondence.

FAILURE INSURED.

TO THE EDITOR OF THE NATION:

SIR: The April *Forum* contains an article by Seth Low on "The Great Democratic Opportunity." With the profoundest respect for such high authority, it must be said that no

such opportunity exists. Prophecy in politics is neither safe nor wise, but, in the desperate hope of enforcing a lesson, I will venture to predict that within four years the country will be even more disgusted with the Democrats than it has been with the Republicans, if only for the want of that organizing skill in party tactics which the Republicans have at least learned in their twenty-five years of rule. Mr. Cleveland's nomination and election furnished magnificent testimony to the power and the character of the people of the United States, but there it all ends. He has not the slightest power over either policy or legislation. His inaugural address might as well have been a general exhortation to virtue, honesty, and patriotism, which, indeed, is about the view the English papers, noticing it extensively, take of it. He does not dare to call an extra session, because he has no knowledge or confidence as to what the new Congress will do. Some time since the *Evening Post* suggested that he should refuse to make any disposition of the offices until the Silver Bill was repealed. But is not that the quintessence of the spoils system, that the offices should be used to bend Congress to the will of the President, good or bad? Is not that the way that President Jackson laid the foundation of the evil system? And does it not carry the logical consequence, which followed almost instantly upon Jackson's action, that Congress will use legislation to bend the will of the President in regard to the offices? And yet it is the only positive power over legislation which he possesses.

The new Congress will meet as a perfectly disorganized mob, without official guides or leaders of any kind, and in its conflict with the lobby will be just as certain to be beaten as a regiment, even of the bravest men, would be which should go into battle without officers. The nation as a whole will have no representative; all its effort in electing a President, and through him an administrative staff, being almost completely thrown away. The one important question, how to get a majority, will be from the start a process of intrigue and lobbying, in which honest and public-spirited men stand no chance against knaves and those who are looking after their own private interests.

It is to be hoped that some day, when the country gets tired of the weary round from Republicans to Democrats and back again—on the principle of the traveller who was told that, whichever road he took, he would wish he had taken the other—it may think it worth while to consider whether there is not something to be gained from a change of organization. G. B.

Boston, March 31, 1893.

EVIDENCES OF CURRENCY INFLATION.

To the Editor of The Nation:

Sir: It is remarkable that, in spite of the plain facts of the monetary situation, many intelligent and educated people, including some of large business experience, still insist that the prolonged export of gold is not an indication of an inflation of the currency. A short review of the situation will show that this is a mistake.

The reasons that have been given for the loss of gold may be summarized thus:

(1.) That the balance of trade is against us.

(2.) That our securities are coming home.

(3.) That Europe is hoarding gold and paying a premium to get it.

(4.) That the *continuance* of the loss of gold is made possible by the silver issues—that is, that our currency is inflated.

To consider these in their order: In 1887, with the balance of trade (using this phrase in the ordinary sense of balance of trade in merchandise) in our favor to the extent of about 6½ millions, the net *imports* of gold were about 35¾ millions; in 1888 the balance of trade was about 33 millions against us, and the net gold exported was about 23½ millions; in 1889 the balance was 56½ millions in our favor, and the net export of gold was nearly 39 millions; in 1890 the balance was in our favor 34 millions of dollars, and the net export of gold was a little less than four millions; in 1891 the balance in our favor was 142 millions, and our net loss of gold was 34 millions; and last year, 1892, the balance was in our favor by 62 millions, while yet we lost 59 millions of gold. The lack of correspondence between the movement of the balance of trade and that of gold, and the great irregularity of the divergence, show that the trade movement is not a sufficient explanation of the gold outflow.

As to the second statement, that our securities are being sent home, there is not much evidence that this is being done to any great extent; but in so far as it is so, it would point to currency inflation here. For the possible causes of the "unloading" by European holders are either that they can find better investments elsewhere, or that they are in need of money for trade purposes, or that they distrust our monetary policy. The first reason is not true, and there appears but little evidence to support the second; hence the third must be accepted as the true explanation. That is, in the judgment of foreign investors we are in danger of being driven to an inferior currency.

In the next place, there seems to be little doubt of the truth of the third statement mentioned above. Europe is partly hoarding gold and partly purchasing it for specie-resumption purposes, especially in Austria. Now, if the amount of money in this country were not more than necessary to do business at current prices, the drain due to this cause would have been cut off by lower prices and a higher rate of interest here. But these effects have not been produced in anything like the degree that such a drain of gold as we have experienced would have caused if not counteracted. Hence, it must have been counteracted by an increased supply of currency here sufficiently large to maintain the same approximate level of prices and interest in the face of the loss of gold. In other words, Europe could not continue to take our gold, especially with the balance of trade in our favor, unless its loss were made up for us by some other currency. Hence, the fourth statement made above is true, that the *continuance* of the loss of gold, in various states of trade, is made possible by our silver issues. The conclusion is irresistible that we are coming gradually to an inferior currency.

But, in addition to this negative evidence, there is some of a positive nature which points strongly in the same direction. First, "a comparison of the figures [of per-capita circulation] for the four countries which may be said to lead the civilization of the day," gives the United States $25.62; the United Kingdom, $17.90; France, $43.11, and Germany $16.40. Excepting France, where the per-capita circulation is largely due to the comparatively small development of a credit system and to the ignorance and prejudice of the peasants, this country leads in the comparison above by an amount far too great to be sufficiently accounted for by any peculiar national conditions. Moreover, in spite of our tremendous loss of gold, our per-capita circulation continues to increase, and it has increased in a more rapid ratio since the present Silver Law went into effect.

Evidence of inflation is found, too, in the actual replacement of a large amount of gold with nearly double its amount of silver in actual circulation. The gold production of the United States for the four years 1889 to 1892, inclusive, was $132,820,000*. Of this, $45,600,000 was used in the arts, not including old material. Deducting the latter sum from the former, we have $87,220,000 as the additional amount of gold available for monetary purposes for these four years. The net exports of gold for the same time amounted to $135,920,000.† Thus, the amount of gold available for monetary purposes for this period fell $48,700,000 short of the quantity needed simply to repair the loss by export, to say nothing of the additional amount needed by expanding business and population. In the meantime, however, the silver, including standard dollars and certificates outstanding, increased $199,000,000. Thus, not only was the hole in the circulation due to the loss of $48,000,000 of gold filled by silver, but an additional amount of $151,000,000 of silver was also forced in. Allowing for all errors, and for factors not taken into account, this is an addition far larger than the natural expansion of the business of the country would warrant. It points irresistibly to silver inflation.—Respectfully yours,

David Kinley.

Madison, Wis., March 24, 1893.

THE PARCELS POST.

To the Editor of The Nation:

Sir: At the risk of being set down as a too credulous believer in the results of the late election, I venture to express a hope that the noble and patriotic self-denial of the friends of American industry will be so far relaxed as to permit the examination of both sides of the comparatively unimportant question of what we know abroad as the "parcels post," the convenience of which very few Americans appreciate. In the anxiety of the Complete Protectionist to put every possible obstacle in the way of importation short of absolute prohibition, the provisions of the Postal Union for the easy transmission of small objects by the post are not extended to Americans. I suppose the Complete hesitated at the amount of annoyance that would logically be given the importers in this small way if the custom-house usages were applied to them, and so he decided not to permit it. The consequence, owing to the immense predominance of the American production of desirable trifles, is that we who live abroad, and would gladly order from home many little conveniences to which we are accustomed, and which we might introduce by showing them, are precluded from doing so through the fear that some small importations might steal in, or give the custom-house authorities a greater amount of trouble in collecting the duties than they (the duties, I mean) are worth.

I am certain that our commerce loses three times as much as that of Europe by this interdict, and I can testify that Americans abroad are the chief sufferers by this practice of cutting off our noses to spite our faces. At this moment, for instance, I want a supply of reading-glasses, and there is an American produc-

*In this estimate $34,000,000 is allowed for the production of 1892, the figures for which are not at hand. This amount would allow for a production of half a million more than was produced in 1891. An estimate of $12,000,000 is also made of the amount used in the arts in 1892.

†According to the *Commercial and Financial Chronicle.*

tion which is so far superior to anything I can purchase on this side that I would at once order half-a-dozen if I could get them as I could from England or from any European manufacturer; but to get them I must find some friend in England who will allow them to be sent there in a consignment of goods, and then send them on to me by the parcels post. No long time passes without a similar want being known in the family, but the miserable apprehension that importation as well as exportation should be made easy has made this relief impossible. Of course the Complete will say that we had better come home, and that Americans who stay abroad have sacrificed all claim to relief from the consequences; but how about the interests of trade and American manufactures? This phase of protectionism is not more absurd than any other, but it is so little and so ridiculous!—Yours truly,

ALL ABROAD.

ROME, March 10, 1893.

PAROCHIAL CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: The reflection was very justly made that our American criticism was provincial, that the attitude of our critics towards our local celebrities was much like that of a boy who picks up his first quartz crystal and thinks it a diamond. Dickens, we remember, ridiculed our fathers for their characteristic exaggeration. But it was supposed that we had outgrown this youthful appetite for superlatives, and that our best criticism might fairly rank with that of England or the Continent. Unfortunately for the realization of this hope, there burst upon us from time to time, from quarters least expected, startling proofs that our criticism is still provincial. The latest melancholy example of this is in the *Atlantic Monthly* for April, in an article on Phillips Brooks, signed by Alexander V. G. Allen. That at this time, so near Phillips Brooks's death, the average critic should become a eulogist is unavoidable, but that a supposed competent critic in such a periodical as the *Atlantic* should give vent to the following extravagances makes us wonder whether indeed we have made any advance in criticism:

"Phillips Brooks was hampered by no limitations of theory or conventionality; when he entered the pulpit, *he was as impersonal as Shakspere.*"

"His true place is with those who loom up in the Church's history as larger than institutions. He belongs with St. Paul, . . . with Athanasius, . . . with Francis of Assisi, . . . with Luther."

"His place is secure among the greatest: with Schleiermacher and Goethe; with Coleridge, Carlyle, Tennyson, and Browning; with Hawthorne, Emerson, Channing, Longfellow, and Whittier. Though the last to appear, *he was in some respects the greatest of them all.*"

"Had he gone into literature, . . . it seems as if his excellence would have been equally assured."

"Had he given himself to speculation, he would have been a philosopher of the highest order."

He has, continues this writer, preached sermons which deserve to be placed with St. Paul's sermon on Mars Hill, and which will, presumably, be read as long as that is read. "The attestation of their truth is the response they have produced, as though the people had stamped them with approval—that verdict from which there can be no appeal."

But I need not multiply instances, nor would I cite these were it not that, as an admirer of Phillips Brooks, I regret to have his memory injured by this unwise comparison of him with men with whom he would have been the first to say he could not be compared. Moreover, it draws the attention of men away from those very real qualities in him which made him a noble influence in his day and generation.

CLIO.

BOSTON, March 31, 1893.

POPULAR ETYMOLOGIES.

TO THE EDITOR OF THE NATION:

SIR: May I be allowed to express some doubts in regard to the explanations given of the "popular etymologies" examined in an article contained in your number of the 9th of February last? I note the following statement:

"In the development of language not only may we observe known and formal laws of change; but we become aware that imagination or caprice or accident plays no small rôle . . ."

I am under the impression that these words convey an entirely wrong idea of actual facts, (1) that the invariable cause of *even* "popular etymology" is always to be found a phonetic one; (2) that imagination, caprice, or accident can hardly be said to play any rôle in these formations; in fact, that there are no such things in the everlasting process of change that constitute the eternal life of articulate speech. These assertions can easily be verified by an unprejudiced mind, in connection with the English formations quoted in the article, in which evidently the popular meaning was determined by the sounds.

In regard to βόσπορος giving Bosphorus, it would, indeed, be anything but popular etymology if the influence of φέρω is admitted, for it is a very clear instance of learned, and *very learned*, etymology if such be the case; and the same may be said of τρόπαιον *trophœum*. What should be borne in mind in order to understand this change of *p* into *f* is solely the nature of these two sounds—that is to say, the physiological cause only. Nothing is more frequent, on this account, than the change of a dental labial into a bilabial, and vice versa.

προβοσκίς *promoscis promuscis* is plain enough: *b* and *m* are identical sounds as far as their place of articulation is concerned, the only difference being that the velum palati is opened for the last. Hence the constant interchange of these two sounds in their passage from one language into another. The same explanation holds good for the change of *d* into *l*; the place of articulation being also the same, and the sides of the tongue being simply lowered for the formation of the *l*.

"*J'en passe . . . et des meilleures.*" I feel bound to withhold any further criticism, lest I should, unwillingly, appear harsh in my treatment. I earnestly hope, however, that the writer may reconsider what he says about βουκόλος *bubsequa* and *baccalaureus bachelor*. Any one acquainted with old French declension cannot help smiling at the latter.

The fact is that, except for the English words cited at the beginning of the article, not a single word quoted in it is due to popular etymology. And now the question confronts us: What is popular etymology? I shall define it: "The influence exerted upon foreign words by certain meanings existing in the language into which they pass, owing to similarity between the sounds expressing that meaning and the sounds of the foreign word." Consequently, the point I particularly wish to emphasize is this: Phonetic laws alone should be invoked in order to reach an explanation. In presence of any form, no matter how strange it may appear, the method is: (1) to consider the nature of the sounds; (2) to inquire into their relations to other sounds. The science of phonetics is comparatively new, and its most pressing need at this stage of its development is to get at *facts*. Theories are confusing; imagination, caprice, or accident cannot help. First, let us have the facts; next we shall deduce laws; for, like all living organisms, language obeys laws, and laws alone. Rather than call into play imagination, caprice, or accident in order to explain scientific facts, let philology stay where it was put by Voltaire, who defines it as a science "où les consonnes n'y font rien et les voyelles pas grand'chose."

Yours respectfully, RENÉ DE POYEN.

MT. WASHINGTON, MD., March 22, 1893.

[The purpose of our notice was to give a short and readable résumé of Keller's book, without, however, ourselves assuming the responsibility therefor; in fact, being fully aware that much of his material was unproved conjecture. We accept Mr. de Poyen's definition of popular etymology; we have never entertained any other. We should have guarded more carefully our remarks about "imagination, caprice, and accident," but our meaning has been mistaken, else Mr. de Poyen would not have made the sweeping statement in regard to the words we selected almost at random from Keller's hundreds. To be brief, we are told by Brugmann that *l* appears for *d* in about twelve Latin words, *e.g.*, *lacruma* for *dacruma*, *lingua* for *dingua*. "This change, due to the dorsal articulation of the *d*, was possibly not occasioned by any special phonetic conditions whereby *d* stood in the words in question opposed to other Latin words containing *d*, but had its origin in some local dialect." But granting that the change of *dingua* to *lingua* follows phonetic laws, then, after the change had been made, it was an accident—we think—that there existed in Latin a root *lih*, *lich* (in *lingere*, which has no connection with *lingua*) to which it pleased the popular etymologist to refer the newly made word. Was it not an accident that *pubes* existed ready to the hand of the popular etymologist to give to *pubeda* its special meaning? According to our understanding of it, this is Keller's point of view, as it was our own, and we think that it differs no whit from Mr. de Poyen's. We need not, therefore, speak in detail of the history of the challenged words. As for *bachelor*, the views given are not original with Keller, who makes no claim of the sort, but seem to be generally accepted. (See Skeat *sub voce*.)

We add the remark that Keller will have done much to advance the science of language if his book do nothing more than call forth unsparing criticism, and prompt painstaking research in refutation of his theories and etymologies.—ED. NATION.]

GRASS WIDOW AGAIN.

TO THE EDITOR OF THE NATION:

SIR: I have been a good deal surprised at the discussion over the phrase a "grass widow." The phrase was in common use in Boston when I grew up; and when I first asked what it meant, I was told it was the survival

of a phrase brought in with the Norman conquest—"a widow de grâce," that is, by courtesy; her husband (dead or alive) being unaccounted for. Of course, the French phrase was easily degraded to a "grass widow."

CAROLINE H. DALL.

WASHINGTON, March 29, 1893.

THE ANGLO-SAXON SABBATH.

TO THE EDITOR OF THE NATION:

SIR: Mr. Tupper is quite right in saying, in your last issue, that the Puritan adaptation of the Jewish Sabbath was anticipated upon English soil by over five hundred years. But such adaptation was, so far as is known, substantially without influence upon the post-Norman development of those Sunday customs which we have inherited. Consequently, in my necessarily brief sketch (*Nation*, No. 1339) of the development of the "American Sabbath," "the Anglo-Saxon codes" were passed over in silence—not in ignorance: the words "English statute law" were chosen purposely to exclude them.

The Anglo-Saxon Sunday laws are quite similar to contemporary Continental laws collected by Irmischer ('Staats und Kirchen-Verordnungen über die christliche Sonntags-Feier,' 1839), and, like Mr. Tupper's other data, of no small interest. But, whatever their effect in Anglo-Saxon times, the inference is not warranted that they exerted a wide-reaching subsequent influence. On the contrary, they seem to have been long forgotten in England itself, though attention enough was finally devoted to them when, upon the publication of the 'Book of Sports,' the Sabbatarian controversy took a legal turn. ITHACA, N. Y.

THE NEW ENGLISH DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: In an article on "The Great Dictionary," in the current number of your journal, you say: "We cannot foresee the day when a supplement will be undertaken." But a supplement is already in preparation by Dr. Murray and his assistants. It will contain, if I understand it rightly, quotations of an earlier or a later date for a given word than those already found in the Dictionary; words which have sprung up since the publication of the several parts of the Dictionary; words already in use, such, for example, as Mrs. Browning's *angeldom*, but which have been overlooked in the Dictionary; and such other matter as may seem of importance.

A READER FOR THE DICTIONARY.

LAKEWOOD, N. J., April 3, 1893.

[This supplement will properly form part of the main work, like the customary volume supplementary to encyclopædias, being continuous with the first publication. What we had in mind was the interval of time that must elapse before an independent extension and revision of the Dictionary would be undertaken by the Dr. Murray of the future.—ED. NATION.]

Notes.

DAVID MCKAY, Philadelphia, announces 'The Pursuit of Happiness: A Book of Studies and Strowings,' by Dr. Daniel G. Brinton.

The Geo. M. Allen Co., New York, are about to publish a book of sketches of travel by Walter Phelps Dodge, author of 'Three Greek Tales.'

The "Rulers of India" series of the Messrs. Macmillan draws towards its close with 'Aurangzib,' which will be from the pen of Stanley Lane-Poole. The same house has in press 'Annals of an Old Manor House [Sutton Place],' by Frederic Harrison.

Dr. Richard Muther, Privatdocent in the University of Munich and Director of the Cabinet of Engravings in the Old Pinakothek, has written a 'History of Painting in the Nineteenth Century,' which George Hirth of Munich will publish. A chapter is to be devoted to American painters.

Reprints multiply. That of the London *Times* biographies, called 'Eminent Persons' (Macmillan), covers the years 1882-1886 in its third volume, whose list of twenty names embraces "summits" like Darwin, Garibaldi, Gambetta, Gordon, Gortchakoff, Grant, and Victor Hugo, besides Sir Moses Montefiore, Dr. Pusey, W. E. Forster, Sir Bartle Frere, the Comte de Chambord, etc. The G's in this list are associated with the greatest political changes, in our day and generation, in both hemispheres and in the five continents. From the Harpers we have received three additions to their uniform series of William Black's novels, viz., 'The Beautiful Wretch,' 'Sunrise,' and 'White Wings.' Roberts Bros. send us two more volumes of Miss Ferrier, 'The Inheritance,' agreeable to the eye and light to the hand. Little, Brown & Co. have begun a library edition of Bulwer's novels with 'The Caxtons' in two volumes. The form is a convenient 16mo, the typography fair and open, the covers stamped in diaper with abundance of gilt; an etched frontispiece accompanies each volume. The University Press is not often to be charged with such a lapse as occurs in the repeated motto from Horace on the two title-pages, "Dî, pro*ves* mores," in vol. i., "Dî pro*vos* mores" in vol. ii., for "probos." From Macmillan we have in one volume Dickens's 'American Notes, and Pictures from Italy,' following the first editions, as heretofore. The younger Dickens's introductory remarks about the former work are brief and in excellent taste. The same publishers have issued, in the Messrs. Black's "Dryburgh Edition" of Scott's novels, 'Old Mortality,' with illustrations by Frank Dodd. Finally, the 'Waverley' of the large-paper "International Limited Edition" of Scott edited by Andrew Lang, and manufactured and published in this country by Estes & Lauriat, has reached our table. Of this edition we can now only particularize that it is to fill forty-eight octavo volumes and be illustrated by some 300 etchings and photo-etchings. It is very simply bound in blue cloth, with white title-label on the back, and gilt tops.

The long-awaited third edition of Bryce's 'American Commonwealth' appears in the first volume just brought out by Macmillan & Co. in advance of the second, owing to a healthy demand for it from colleges. We cannot attempt now to itemize the multiplicity of alterations not sensibly affecting the bulk of this volume, but insuring accuracy and freshness to date. On the appearance of the second volume there will probably be an opportunity for comment. To read "46th thousand" on the title-page of a work like this is most inspiriting.

Part i. of Mr. A. Growoll's 'The Profession of Bookselling: A Handbook of Practical Hints for the Apprentice and Bookseller' (*Publishers' Weekly*), is a thin volume, attractively printed, that deserves a place among reference books by reason of its bibliography. Here are lists of works fitted to impart to the bookseller (and to the common reader) a general knowledge of the field of English and American literature, of Continental literature, of the classical and Oriental, etc.; lists of trade catalogues, of library catalogues, of trade journals and literary journals; and a broad reference library, including a chapter on copyright. We have barely suggested the fulness and utility of this collection of titles, to a majority of which the bookseller must remain, we fear, a complete stranger. For its main purpose this is an excellent manual. Besides the complementary Part ii., Mr. Growoll contemplates handbooks for stationers and bookmakers.

M. Octave Uzanne's long-promised 'Physiologie des Quais de Paris du Pont Royal au Pont Sully' (Paris: Quantin; New York: F. W. Christern) is scarce the better for its deliberate gestation, as it now reveals that its author tired of his work before he had brought it to a conclusion. M. Uzanne, generally an easy and vivacious writer, has had to call in the aid of the easy vivacity of M. B. H. Gausseron to fill out his pages. Thus the volume has a flavor of book-making always unpleasant to the true book-lover, to whom the most of M. Uzanne's earlier writings have appealed. None the less the subject was excellent, and by this the book benefits; and to M. Uzanne and his assistant we owe an amusing sketch of the out-door book trade of Paris, now in the midst of a crisis. We are taken behind the scenes, as it were, and made to look at the second-hand book business from the second-hand book-dealer's point of view. The illustrations, by M. Émile Mas, are as slight as the text, but they will preserve to posterity many curious types characteristic of the quays of Paris in this last decade of the nineteenth century.

The tenth and eleventh volumes of Lafontaine's works in the "Grands Écrivains de la France" have just been published by Hachette. They complete the edition, and contain a Lafontaine lexicon and an essay on this author's grammar.

The most instructive paper in M. Georges Pelissier's 'Essais de Littérature Contemporaine' (Paris: Lecène, Oudin & Cie.; New York: F. W. Christern) is one on the evolution of the French Alexandrine verse, as it was used in Boileau's time, and as it has been modified by the Romanticists, the later Parnassians, and the latest Symbolists. Another noteworthy essay is that on the slow acclimatization of the Shaksperian drama in France.

'Suzanne Reichenberg' forms the subject of the first of a series of monographs on the actors of the Comédie-Française by Edmond Stoullig (Paris: Librairie de *l'Art*; New York: Macmillan). Fourteen pages are allotted to this favorite actress, of whom many slight character sketches are given, with no really good portrait among them.

La Grande Dame is the title of a monthly "revue mondaine cosmopolite" just started by Quantin in Paris. Its aim is the propaganda of "elegance." A portrait "de Grand Dame" will accompany each number; the Comtesse de Paris being the first to be thus honored, and being shown in her surroundings at Stowe House. Fashion plates after great ladies, designs of furniture and feminine bric-à-brac, scenes from the theatre, a *chronique*, and a *causerie littéraire* are among the other features of the new magazine.

The March number of the *Portfolio* (Macmillan) is noteworthy for a first article on English bookbindings illustrated not only in black

and white, but also finely in color. This paper stops at the reign of Queen Elizabeth.

A colored plate in the *American Journal of Archæology* for Jan.-March shows the pre-Persian Typhon pediment which emerged from the excavations on the Athenian Acropolis, and as to the class of which fragments and their relation to wooden temples and vase ornamentation there is an interesting paper by Mr. C. L. Brownson of the American School of Classical Studies. Another plate shows in its true sequence the commonly disarranged frieze of the choragic monument of Lysicrates, which is discussed by Mr. H. F. De Cou of the same School.

An interesting account of Madagascar is given by M. J. le Savoureux in the *Scottish Geographical Magazine* for March. He dwells especially upon native customs and beliefs, the most curious, perhaps, being that "the soul can be separated from the body during twelve or fifteen months before death." This can be accomplished by a sorcerer's placing his foot on a man's shadow. These sorcerers are often employed to recapture the soul, which resembles a bee and "has flown away to a neighboring mountain." M. Savoureux gives a discouraging account of the Hovas, with whose professed Christianity he believes to be mingled a faithful adherence to old idolatrous traditions and practices. Nearly half the population, he affirms, are slaves, "prisoners of war, insolvent debtors, victims of an intrigue or of political vengeance condemned as criminals," and the children of slaves, born in slavery. Their condition is comparatively easy, many preferring to remain in bondage to escape military service. They are of two classes, the State slaves, who may attain to the highest honors, and the slaves of private individuals, who may themselves become rich and own slaves.

The principal articles in the *Geographical Journal* for March are an account of a journey to the highlands of Borneo by Mr. C. Hose, during which some new and extraordinary forms of animal life were discovered, and a report of an adventurous expedition through Somali-land in East Africa by Commander Dundas. This officer, in making his way up the Jub River, found that for about a hundred miles of its course the country on either bank was inhabited by runaway slaves to the number of 30,000 or 40,000 souls. They were mostly employed in cultivating bananas and plantains, but in one village he saw cotton growing, "which was picked by girls, several twisting it on to improvised reels. A man was weaving with a wooden loom and shuttle, very primitive, but ingenious, of native make. The man sat in a hole, working a double treadle, and wove cloths of excellent texture, which were worn by the natives. On inquiry I learned that not one from the village had ever been to the coast or seen a white man." These people, who speak Swahili, placed themselves eagerly under the protection of the East Africa Company. Prof. Schoute gives a brief description of a "thoroughly practicable" scheme for the reclamation of the Zuiderzee. It is proposed to run a dam across the mouth of the sea, and to drain certain large tracts along its margin, "leaving in the centre a tract of fresh water, the Ysel Lake, from which wide, navigable channels will radiate to the important towns." By this means more than 500,000 acres of fertile land will be reclaimed at a total estimated cost of $80,000,000.

The Royal Geographical Society has published a Supplementary Paper containing a very elaborate Bibliography of Morocco, compiled by Sir Lambert Playfair and Dr. Robert Brown. It is the fourth part of the Bibliography of the Barbary States. There are more than two thousand references arranged chronologically, not only to books but to papers in public records, etc. The first entry is the work of Hecatæus in B. C. 520; the last is a speech by Lord Salisbury reported by a daily paper in 1891.

Prof. J. M. Hart writes encouragingly of the "Outlook for English in New York State," in the April number of the *School Review*, as a consequence of the recent agitation of the subject of English instruction in college and preparatory schools. On the one hand, the Faculty of Cornell have resolved that after June, 1894, certificates from schools on that branch shall not be accepted in lieu of entrance examinations, except in the case of schools under the Board of Regents; and as to these the Board ordered, six days later (February 9), that satisfactory teaching in the English language would be required for at least three hours a week during the academic course. Prof. Hart outlines the studies to be pursued in his own department at Cornell.

An Anglo-American correspondent writes:

"When last in England I turned over the sheets of a document in the Public Record office which ought to be better known to Americans than it would appear to be. It is the muster-roll of the regiment of foot under the command of Colonel Elisha Williams, raised for his Majesty's service, for an expedition against Canada, by order of the General Assembly of the Colony of Connecticut, pursuant to his Majesty's directions signified to the same by his Grace the Duke of Newcastle, dated April 9, 1746. The reference to it is, *Original Correspondence, North America, Various No. 1, 1746, No. 7.* Mr. Hubert Hall told me that it was not mentioned by Mr. Parkman. Of the personal history contained in these papers, no better illustration can be given than that which is to be found as to President Cleveland's forefathers. From New London went Edwin Grover and Ebenezer Grover, while Silas Cleveland and First Lieutenant Cleveland also bore their part. The last named was in the sixth company, of which Benjamin Lee was captain, Asa Lothrop second lieutenant, and Nathaniel Ripley ensign. Of the first company, Timothy Bigelow was second lieutenant. The chaplain to the regiment was Parson Woodbridge. Full of the names of Old England settlers, the document in question is a roll-call which has a personal interest for many an American of to-day. Is it really the case that it has never been published?"

—The dangers attending autograph collecting have been recently illustrated in the Washington "Prayers" and the Lenox Library Burns manuscripts. Another instance is the Duché MS. recently offered at auction in Philadelphia, and bid in by the owner for $650. The catalogue described it as the "autograph draft of the original [letter], signed and addressed, and is consequently the one from which he [Duché] copied that which was received by Gen. Washington." This MS. was said to have been found in the "Duché papers," and the cataloguer asserts the non-existence of the MS. letter actually received by Washington. After a page and a half of description characteristic of the school of catalogue-stuffers, the compiler expresses the wish that the letter may be incorporated in school histories. Before this is done, we can cordially recommend a school history to the catalogue-maker, for a little study and comparison would have saved him from offering a manuscript that has not a stroke of Duché's pen in it. Furthermore, *the* original, the very MS. sent to Washington, is in the Department of State, where it ought to be, with Washington's letter transmitting it to Congress. Here it was discovered by Mr. Ford some years ago, and was printed in a pamphlet. We have thus a definite basis for judging the Philadelphia MS.

—Hopkinson, whose sister was Duché's wife, states that the original lay on the table of Congress, and "many copies" were taken by the members of that body. Some of these copies found their way to gazettes, and, among others, to Rivington's *Gazette*, from which Sparks took his version, printed in his 'Correspondence of the Revolution.' Sparks gives no notice of the original MS., and there are many variations between the real Duché and Sparks's version. The Philadelphia MS. is, almost word for word and spelling for spelling, identical with Sparks. These variations are serious obstacles to the genuineness of the so-called "draft." Duché always wrote *favour* and *favourable;* but the draft has *favor* and *favorable*. Duché freely used the sign &; the writer of the draft rarely. Duché capitalizes his nouns, and the exceptions are very few; the draft rarely capitalizes them. Duché wrote: "Negotiate for America at the Head of your Army." The "draft" and Sparks say: "Negotiate for your country," etc. The script of the draft has a different slant from the Duché script, and contains fewer corrections than the original, making it improper to describe it as a "draft." The inevitable conclusion is, that, however similar the MS. may on a superficial examination appear to the real Duché, the internal evidence is overwhelmingly against the Philadelphia MS. It is one of the "many copies" made at the time.

—The articles on the servant question which at brief intervals have lately been coming out in the English reviews, seem to emphasize the belief that, sooner or later, some modification will have to be made in conditions of domestic service that are unsatisfactory to employers and employed alike. As a rule, the most suggestive of the papers, though not inconsiderate of the needs of the servant, have been written from the point of view of the householder. Now, however, in the March number of the *Nineteenth Century*, Miss Clementina Black—who, from her position among the working people, as organizer of various of their guilds and associations, is eminently well qualified to speak for them—comes forward on behalf of the young women of the industrial classes to explain why it is that they prefer to domestic service any other occupation, even when more poorly paid and uncomfortably surrounded. It is not because there is anything inherently unpleasant to the damsel of the present age in such service. The gist of the objection to it seems to be (in addition to the low social estimation it involves) the lack of complete personal freedom, at the end of stipulated hours of work—"when all relation ceases between employed and employer"—and the consequent lack of time for friendly companionship. Miss Black's solution of the difficulty is in the line of the coöperative plans proposed by others, although with a difference. Servants must, in her opinion, "cease to be domiciled under the employer's roof, and must, instead, come to work for a specified number of hours, as dressmakers and charwomen already do." For the first woman who will "organize a brigade of really good outdoor servants," a profitable career is waiting. The danger in the plan of the central supply kitchen, advocated by Miss Black's predecessors in the reviews, is the extinction it threatens to the finer culinary instincts which, in spite of modern evolution, still survive in some mistresses of kitchens. Similarly, it is probable that the loss of individuality in the home that is likely to ensue, if

its care is relegated to hands not solely and directly responsible to its feminine head, will for some time to come be an obstacle to the "outdoor brigade" plan. Whatever the future may have in store in the way of domestic socialism, much improvement might in the meantime be made by putting domestic service on the footing of skilled labor, for which preliminary training is a necessity. The revolution made by training in the social standing of an occupation is amply illustrated by the rapid rise of nursing within the past few years to the rank of a profession. If cooks and housemaids were required to present themselves with certificates of character and efficiency from their training-schools, housekeepers would be relieved of a heavy burden, while a large measure of the freedom and independence insisted on by the noble army of irresponsible and unreliable "help" might safely be granted to them when they could prove the best claim to liberty—the ability to make a proper use of it.

—An interesting contribution to our knowledge of Taine's religious views and practices is made in *Le Protestant* of March 18. The serious way in which he settled the question of the religious education of his children, as compared with Daudet's easy-going fashion, to which attention was recently called in these columns, is shown in the following account of the matter reported in his own language:

"I treat everything in a serious spirit," he said, "and I desired, before intrusting my children to a priest, to find out what he would teach them. I consequently inquired after the catechism most in use in the diocese of Paris, and found it to be that of the Abbé Gaume. At once I bought a copy, and my wife and I read it together from one end to the other. But there were there affirmations so opposed to the spirit and essentials of modern culture that we judged it impossible to subject the minds of our children to such instruction. We therefore decided to put them under the care of a Protestant pastor. For a long time I had been accustomed to read Reuss's Bible in my family, and that had made me respect Protestantism."

This, of course, is far from saying that Taine would have called himself a Protestant, or even a Christian; and Pastor Holland, who preached the funeral discourse, was careful not to claim him as a convert. Yet he was able to say, standing in a Protestant pulpit:

"That we are here is due not only to the desire of the widow and children, but to the wish of the deceased, clearly expressed in the will which he made before the fatal turn of his illness. . . . Though M. Taine did not explicitly accept Christian belief, yet, among all the forces which sway the soul, Christianity was more and more in his eyes the greatest. 'It is that,' he wrote, 'which still furnishes four hundred millions of creatures with wings to bear them beyond their narrow horizons, to carry them, by means of purity and goodness, beyond the pain of self-sacrifice.'"

—In the Magazine of the Historical Society of the Imperial University of Tokio for January, 1893, there is a very interesting article on the seals used by Japanese in Roman Catholic times, A. D. 1542–1637. Among Japanese the seal is as much used for signature as the autograph with pen and ink is in Western countries. Far beyond the usage of those who were really Christians or missionary converts, Roman letters were employed as sword ornaments, seals, and shop signs. The researches that are now being made by Japanese scholars in the papers of the old military families and local seats of authority show this clearly. One such seal, much used by one Otomo in the Fukuoka prefecture, who was baptized in 1579, shows an oval a little over an inch in the longer diameter, with floral decoration in the border, and with Roman letters in the centre quite worn by use. Of the second seal figured by the writer, belonging to one Kuroda Norétaka, baptized and called Simeon, there is a cross significant of his belief. Whether "Simeon," who was a daimio, was a genuine convert or not we do not know, for no impression of this seal appears among his own miscellaneous papers. In 1589 he gave his fief to his son Nagamasa, and in 1593 shaved his head in token of renunciation of the world, or of active life, and took the name of Joshi, meaning "like water." His son, Nagamasa, on the 7th of February, 1613, signed his name and used this seal. This use of the seal was probably because it was a curious thing. The third seal figured by the Japanese antiquarian is that of Hosokawa Tadaoki, whose name is spelt with Roman characters, and is found in a letter to one Kodama, August, 1614. The wife of the owner of this seal was a devout Roman Catholic, but her husband, who used the seal, was not; and so she is praised in the edifying letters of the Fathers, while he is not. The use and owner of the fourth seal are not clearly known. It is found on a receipt used in December, 1556. Now Francis Xavier was in Kioto in 1551, but after fifteen days of ill success returned to Yamaguchi. Vila, however, came to Kioto later and organized a church. This last seal seems to prove that some seeds sown by Xavier in and around Kioto soon came to fruitage, and that Roman letters got into restricted use quite early. Here is a clear case of one instance of a seal twenty-four years before the baptism of the first prominent man of official rank, Otomo. The Japanese writer also mentions a number of other seals which he has discovered in the papers of the sixteenth century; but the use, ownership, and graphic designs not being clear, he does not speak at length of them. These relics of Portuguese Christianity are but a few of the remarkable number that have been accumulated by the researches of Japanese at home, in Mexico, and in Europe. Already the materials of an interesting volume on Japano-Roman Christianity are at hand and await the literary artist.

—The same magazine contains a translation into Japanese of a most interesting letter, found in the French archives, of the date of our Revolutionary war. It was discovered by the French Minister in London, who presented a copy to the Japanese Legation, and the translation has been made by Dr. Mitsukuri, a graduate of Johns Hopkins University. It is to the effect that England and Russia would make alliance to invade Japan. Capt. Cook is to land in Kamtchatka, collect information about navigation, ports, and harbors; inspect the ships necessary for the invasion; give all necessary information to Russia; take out a large company of English ship and other carpenters, and also carry Russian artisans to England to be trained in shipbuilding. If successful, Russia is to help England with vessels to open Japanese harbors, to develop trade, etc. England is to make alliance with Russia, and if necessary assist her in war with Germany. Many facts were furnished by Mr. Scherer, then in the educational department of Russia. It is further stated that the Emperor then ruling Japan had pacified the troubles between the Buddhist priests and his statesmen, and to show his power had built large palaces and enlarged fortifications. The Russian Government was educating students at Irkutsk for her navy, and these cadets were to be utilized in the invasion of Kamtchatka. Fourteen thousand Cossacks had been within a few years sent into Siberia, and many Russian sailors and naval men were available for the proposed invasion. Russian ships which had recently been sent into Japanese waters had picked up foundered Japanese sailors, seized others near the shore, and had sent them to Irkutsk to teach the Japanese language to Russian naval cadets, and to become Russian officers. Various other historical details are given, while the comments of Dr. Mitsukuri show a close knowledge of European history.

—As matter of fact, he says, through the English papers, we know that in 1776, July 12th, Capt. Cook was sailing from Plymouth for Otaheite, California, and the North, which would mean also navigation to Kamtchatka. The Russians at this time seemed to have a purpose of occupying California and also certain Japanese islands. The French plan was to head off this scheme by sending the Japanese Shogun a letter, with a present of timber, iron, and arms, and to notify the Japanese to guard against the Russians. One Russian gentleman who was thoroughly in favor of opening Russian trade with Japan, believed that the Japanese would not be refractory, and, having received a pass from the Russian Emperor, he felt sure that it could be used in Corea and Japan. It is Dr. Mitsukuri's opinion that it was Russia's purpose to make those descents upon Japan which only a generation or so later were made, but which, on account of the Japanese being on their guard and prepared, ended disastrously for the Russians. The alleged alliances between Great Britain and Russia, and the plans of conquest, were wrecked first by the outburst of war between Turkey and Russia, but still more by the revolt of the United States. When Great Britain attempted to hire 20,000 Russian soldiers to fight against the Americans, it is probable that this plan of campaign against Japan was even more fully elaborated. But this plan became known to the Spanish Minister, then in London, who told it to the French Minister, who, on the 15th of September, 1776, sent notice of the threatened alliance to the Minister of Foreign Affairs. On August 14 the French Minister at Moscow wrote that the English Minister was to depart from the Russian capital some time before, but his departure had been postponed for some special reason, and that he was daily in consultation with the Russian office on some important matter. Writing to the French Minister in London, he said: "The alliance seems incredible, but it is possible." The subject, which has an interesting touch with American history, is to be continued in the next number.

—The occurrence of diamonds in the meteoric iron of Cañon Diablo, Arizona, which was announced by Dr. Foote of Philadelphia a few months ago, and concerning which considerable doubt was expressed by scientists the world over, seems to be confirmed through the minute researches of Friedel of Paris, to whom specimens were submitted for examination. The foreign bodies contained in the iron, to which a hardness of diamond had been ascribed, were determined chemically, optically, and by burning to be virtual "carbonados." This discovery sustains the earlier announcements of Yerofeieff and Latchinoff and of Weinschenk regarding the association of diamonds with the meteorites of Novo-Urei and Arva. No satisfactory explanation of the association is as yet possible, but it seems indubitable that the diamond particles were formed coincidently with the solidification of the enclosing magma. The doubt may, however,

suggest itself to some that not all so-called meteorites are truly such, and that more than ordinary caution for a proper discrimination is now necessary, since it has been shown, as in the case of the famous Ovifak and basaltic irons of Greenland, that the presence of the Widmannstättian figures is not an absolute criterion of meteoritic structure. The specimens of the Ovifak iron brought back by the late expedition of the Philadelphia Academy of Natural Sciences, in their intimate association with an adhering basalt, practically place beyond question their telluric origin, and give to them the position to which they were doubtfully assigned by Steenstrup. A nearly similar position seems to be held by the recently discovered "meteoritic" stones of the São Francisco district, Brazil, and possibly a critical investigation of surroundings may throw doubt upon the genuineness of other meteorites, especially when these are associated with a region of volcanic activity, past or present.

THE MOTHER OF THE SALVATION ARMY.

The Life of Catherine Booth, the Mother of the Salvation Army. By F. de L. Booth-Tucker. 2 vols. Fleming H. Revell Co.

MOST of the thirteen hundred pages contained in these bulky volumes are indistinguishable from the vast mass of memorial literature in which the piety of the commonplace living has pathetically sought to canonize the commonplace dead. There is the same unctuous effusiveness, struggling, by means of vehement iteration and exaggerated emphasis, to produce effects attainable only by the skill of the trained artist. There is the same commingling of the sacred and the profane, the holy and the vulgar; the same wearisome use of worn-out religious metaphor and trite religious hyperbole; the same straining to force the reluctant spirit up to an unnaturally high pitch of religious emotion. The theme is of intense and eternal sadness, but it is only on special occasions and by special hands that it can be appropriately treated. For most of us, outside of immediate acquaintances, a speedy and complete oblivion is the natural due, and a printed memoir avails no more to secure the dead a place among the living than the spices and cerements of the ancient Egyptians.

But while this book as the memoir of an individual has the defects of its class, the connection of its subject with the "Salvation Army" gives it a general interest. *Humani nil alienum* is the motto of the student of mankind. As physiology finds no appreciable difference between the bone and flesh, the muscles and nerves, of human beings, no matter what their rank, so all scientific anthropology implies the doctrine of human equality. For its purposes the exhibition of emotion or volition among the poor is of coördinate importance with their display among the rich. Such a movement as that resulting in the Salvation Army may be ridiculous to the "respectable" and disgusting to the refined; but it is a display of human nature upon so large a scale as to command attentive scrutiny. In many obvious respects it resembles the well-known phenomenon, the "revival of religion"; but its magnitude and its duration, its methods and its organization, indicate the presence of special causes.

"We have seen," says Macaulay, "an old woman, with no talents beyond the cunning of a fortune-teller, and with the education of a scullion, exalted into a prophetess and surrounded by tens of thousands of devoted followers, many of whom were, in station and knowledge, immeasurably her superiors; and all this in the nineteenth century; and all this in London." The example is employed to illustrate the truth that in knowledge of the supernatural no progress is possible. In every age there will be sceptics insisting with more or less earnestness that, since God and a future state are either non-existent or unknowable, it is folly to speculate about them; and in every age there will be fierce rebellions against this constraint upon the human spirit, and vehement assertions of an intuitive capability in faith that transcends all experience. We confess that Macaulay seems to us to press his case somewhat too hard. In so far as particular impositions have been detected and exposed, the field of credulity and superstition has been narrowed. But in the capacity and disposition to believe without scientific proof, it may be doubted if mankind has greatly changed under civilization; and a very pretty argument might be constructed demonstrating that where scepticism becomes prevalent among a people, that people is doomed by natural selection to decay. When danger ceases to fascinate and adventure to attract mankind; when no one cares to explore Africa or to seek the North Pole; when we have dismissed all ill-founded hopes and unreasonable fears—then, perhaps, but not till then, shall we see human feeling and human thought and human life ordered without reference to the possibility of a hereafter or the existence of a deity.

If, then, religion be in its essence of the emotions rather than of the reason, the rise of the great mendicant orders, with which the Salvation Army is to be classed, is not strange. Granting the position of the Church that eternal woe awaits every mortal who does not accept the atonement of the Saviour, the placid demeanor of the beneficed clergy and their disciples necessarily forces the enthusiastic believer to protest. Propositions that should affect the hearer with the most dreadful apprehensions or arouse in him the liveliest joy and gratitude, are read in tranquil tones and with unimpassioned manner to a tranquil and impassive audience. It is a commonplace of psychology that emotions are aroused by their physical accompaniments and extinguished by the suppression of these external manifestations. But a preacher who sheds tears over the condition of lost souls, or a congregation that groans with contrition or shouts with joy over redeeming grace, is looked upon askance in all established churches. *Pas de zèle* might be taken as their maxim. It is said that a century ago Crabbe, the poet, was actually remonstrated with for introducing heaven and hell into his sermons. "Sir," said Butler to Wesley, "this pretending to extraordinary revelations and gifts of the Holy Spirit is a horrid thing—a very horrid thing!" Whatsoever things are decorous, whatsoever things are proper, whatsoever things are in good taste—these are the essentials of established religion.

It was the deadening effect of this formalism that roused the wrath of Luther and caused Loyola to institute the Society of Jesus. It was the spiritual sloth of the English parochial clergy that led to the practical secession of Wesley and the organization of the Methodist sect; and it was the development of formalism in this sect that led to the Salvation Army. Mrs. Booth was not an educated woman, but she had more than the education of a scullion, while her talents were evidently of a high order. She had no literary gift—it is impossible to read through the reports of her addresses; but she had the power of plain and forcible speech, she must have had an attractive presence and a moving voice, and she was a religious enthusiast. Her father was a Methodist preacher, her mother was a convert to Methodism, and she was brought up in a very hotbed of fanaticism. Her mother lost three of her five children—fine, promising boys. So intense was her faith that this loss was to her a positive joy, and Mrs. Booth declared that "she never heard her thank the Lord for anything so fervently as for this." "Ah, Kate," she used to say, "I would not have them back for anything." But she was not invulnerable. What to ordinary mortals were the most appalling of bereavements did not afflict her, but she was broken down with sorrow over the spiritual torpor of her husband. It does not appear that he in any way neglected his family or lost his affection for his wife, but he neglected the prayer-meeting and became indifferent to the welfare of his soul; and grief over his backsliding—happily not of life-long duration—darkened her whole existence.

Such a mother as this of course prohibited to her daughter the reading of fiction, and banned the French language as the vehicle of infidelity and impurity. Catherine was brought up upon religious books, and read the Bible through eight times before she was twelve years old. At that age she was actively interested in the cause of total abstinence, and felt a heavy responsibility for the manifold wickedness of this world. She looked with profound pity upon all who were outside the pale of Methodism, and rejected her first lover because of his worldliness; but it was not until after a six-weeks' struggle at the age of sixteen that she became positively assured of her own salvation, concerning which she seems to have had no subsequent doubts. It was after this that her eyes became opened to the spiritual deadness of the Methodist Church, and it is evident that she was destined to assert herself as a leader as soon as the opportunity came. In consequence of her sympathy with the schismatics of 1850, she was "cast out of the synagogue," and for a while rejoiced in her supposed escape from an atmosphere of "formality and worldliness" to one of intense spirituality. It was at this juncture that she met her future husband, whose history closely resembled her own. He had formerly quitted the Church of England for the Methodists, and now, finding that his talents as an exhorter were hampered in this Laodicean organization, he joined the seceders. A marked agreement in opinion and congeniality of disposition quickly led to a union, which seems to have but increased the fervor of both these enthusiastic natures, although the dominating influence was apparently that of the wife.

The seceders from Methodism not turning out to be congenial, and a contemplated connection with the Congregationalists proving abortive, the Booths decided to cast in their lot with the Methodist New Connexion, a sect of some antiquity but of youthful fervor. Here for a season Mr. Booth was in his element. His ideal was a life

> "Where congregations ne'er break up
> And Sabbaths have no end";

and so long as he was allowed to roam from place to place, and to conduct one revival after another, he was contented. Not so, however, with his brethren of the New Connexion. A distinguished American professor of theology, who judiciously hardened his callow pupils to the irreverence which they were sure to encounter in the world by the propædeutical narration of various well-chosen anecdotes, oc-

casionally referred to an incident assigned, we believe, to the camp-meeting at Martha's Vineyard. The managers applied to a "revivalist" of some renown for the terms upon which he would come and labor with them during the camp-meeting season, and got the business-like answer, "I will come for two hundred and fifty dollars for the first hundred converts, and a dollar a head for all beyond that." But the managers refused these terms. "They were afraid," said the professor, "that they might all be converted." So the number of Mr. Booth's converts startled his fellow-ministers, and when the number was computed to average twenty-three a day, they felt towards him as some of the Apostles did towards Paul, that he labored too abundantly. He was required to confine himself to the work of a pastorate, and, with the hearty support of his wife, he refused to be so limited. She had herself become an active evangelist, and the twain started upon the independent mission that was to extend so widely. It was not till 1878, however, that the title of The Salvation Army was adopted by the order. For a time there was a show of maintaining a republican form of government, but even these slight constitutional trammels were found inconvenient, and eventually, by a kind of peaceable *coup d'état*, a despotism was publicly declared. So far as is known, the sovereign power resides in the Booth family and is to be transmitted by descent. At present all of the offspring of Mr. and Mrs. Booth, with their husbands and wives, appear to be associated in the government; and portraits of them all adorn this volume.

As we have said, we have here the genesis of a mendicant order. The condition of the poor has generally furnished the stimulus to the founders of these orders, and it was so in this case. Religion, to adapt Coleridge's apothegm, was to be not only popularized but plebificated. It was not the righteous but sinners that were to be called to repentance, and the call must be of a nature to be obeyed. If ordinary music does not prevail, let the fife and the bass-drum be tried. If a single preacher is disregarded, let processions go forth. If men will not do, try women also. If ordinary speech and garb and demeanor are of no effect, let there be shouting and dancing, with some semblance of military costume. The attention must at all events be roused and the emotions excited, and the preacher can then move his audience as he wills. There is no reply to be made to Mrs. Booth when she contends that strong feeling cannot be maintained without external manifestation.

"How utterly unphilosophical," she exclaims, "is the prevailing notion that persons can be deeply moved on religious subjects, any more than on worldly ones, without manifesting their emotions! This insane idea has done more, I doubt not, to grieve the spirit of God and discourage and extinguish vital religion than almost anything else. . . . The cold, formal services of the Protestant Church have done more to shut out from it the sympathy and adhesion of the masses than any other cause, or, indeed, than all other causes put together. . . . Why not allow a manifestation of feeling? . . . When the Lord comes to His Temple and fills it with His glory, you won't know what to do. You must find vent somewhere, or you will be as the poor old negro said he was, 'ready to burst his waistcoat.'"

It is to a certain extent true that Englishmen pride themselves upon controlling their feelings, and look down upon races that display emotional excitement and indulge in violent gesticulation. But this impassive demeanor is, perhaps, rather an ideal of the upper classes than a racial characteristic. It is a mark of good breeding, but conformity to such standards does not appeal to the common people, and the regulation of religious earnestness according to the canons of polite society has produced schism after schism in the Protestant Church. Quakers, Methodists, Hardshell Baptists, Salvationists—all owe their origin to the same impulse. The latest movement has undoubtedly been helped in England by the wave of sentimentalism that has attended the advent of democracy, and that will scarcely spend itself without thoroughly pauperizing the substratum of society. But what has helped the Salvation Army by furnishing the sinews of war will eventually retard its progress. The judicious investment and expenditure of great sums of money requires different gifts from those of the revivalist, and in its turn the Salvation Army, like other great orders, will stiffen into formalism as inevitably as the most fiery lava, when its course is run, stiffens into stone.

We are tempted to point out certain other similarities in this religious movement to those that have preceded it, but we shall only remark that its leaders display the qualities that belong, perhaps of necessity, to religious autocrats. Tolerance is not to be expected of prophets. He that is assured of divine guidance and inspiration will not submit to be thwarted by human folly. Those who criticise the methods of the Salvation Army meet in this book with the apostolic imprecation upon Alexander the coppersmith. It was envy and the narrowest bigotry on the part of the New Connexion that drove the Booths to secede; but seceders from the Salvation Army are denounced as Judases, and the quick judgments that have overtaken them are exultantly chronicled. Rival organizations are viewed with jealousy and disfavor, and the patronage of the Church of England is declined. Such displays of the baser emotions are not agreeable, but little success in ruling human beings is to be had by any one without pushing others aside; and the creation of the Salvation Army is as much an achievement in the art of governing mankind as is the establishment of an empire.

"PHILANTHROPY" ON HORSEBACK.

On Sledge and Horseback to Outcast Siberian Lepers. By Kate Marsden. Cassell Publishing Co.

ANYTHING more absolutely devoid of literary merit, grammar, or claim to attention from the intelligent public than this volume, it would be hard to find. The slender story is told twice, in some cases three times, and consists chiefly in the narration of such petty details of travel as would be likely to impress a dull person unacquainted with even the rudiments of life in the country traversed. The interstices are filled up with piety as little interesting as the "adventures." These need to be scrutinized in the light of an article published in the St. Petersburg *Grazhdanin* (Nos. 92-96, April 1-5, 1892), from the pen of Special Commissioner Sergius M. Petroff, the official who accompanied Miss Marsden on the trip from Yakutsk to Viluisk and back, commanded the expedition, translated every word she heard, took all the measurements (inside and out) of the leper huts, made the drawings, etc., and saw more lepers than she did. That Miss Marsden is acquainted with Mr. Petroff's refutation of nearly every one of her statements is inferrible from the fact that she has omitted one or two of the most imaginative, which have appeared in Russian and English versions of her tale, preliminary to the issue of her book.

We pass over the bid for the sympathy of teetotalers, in the preface, with the remark that Miss Marsden's memory seems not to serve her with regard to the bottle of champagne she shared with Bishop Miletie in Yakutsk. If she would but tell us the full story of the peculiar way in which Prince Dolgorukoff was "working among his friends" in Moscow for her; of the affair with Dr. Streltzeff; of the way in which her folding-bed was set up for her every night, and the single room at the posting-stations all the way across Siberia reserved for her exclusive use, instead of her being obliged to sleep on the "hard, dirty floor and dirty sheepskins," as she states, her narrative of travel before she reached Yakutsk would gain in piquancy. That she did give tea and sugar to persons on the way is a fact. There are witnesses to prove that she gave two lumps of sugar and a little screw of tea to each of the well-fed inmates of a certain asylum, and one dollar to a large party of prisoners encountered on the road. Whether she carried in her sledge and distributed the many thousand copies of the Gospel which she mentions (she puts the number at exactly nine thousand in one of her Russian stories), those can judge who know the space occupied by cheap Testaments.

In Irkutsk Miss Marsden was provided with all the information about the lepers and the plans for the leper colonies which she now conveys to the public as the result of her journey. It had been sent to the Governor-General of Irkutsk and by him forwarded to St. Petersburg a year and a half before her journey, having been collected by the Yakutsk officials, approved by the Provincial Sanitary Committee, and even published in the Government journal months before her arrival. The boat on the Lena, on which she suffered more "hardships," was of the sort which all officials and merchants prefer to all other modes of conveyance to Yakutsk, owing to its cheapness ($15–$25 for 1,700 miles) and the comfortable accommodations provided under the waterproof deck. In Yakutsk she was shown specimens of the "herb" which she adopted as the plausible excuse for her trip, and was told (what had been known all over Europe long before) that it was worthless as a cure for leprosy. She says that she could gain "no definite information as to the curative or alleviating properties" of the root. Nevertheless, she continued to court "hardships" with the assiduity of a commercial traveller with a keen eye to business, and persisted in going on to Viluisk. She complains of the wretched yourts where they occasionally passed the night on their way thither, and of being compelled to sleep in the open air. To this, Mr. Petroff replies, that, as Miss Marsden was accustomed to the comfort of the best hotels, she was naturally surprised at these yourts, though the Russians preferred them when good, and that this remark of hers, unexplained, would lead to false conclusions among the Russian reading public, who are well acquainted with the life of the Russian peasant, which Miss Marsden is not. Miss Marsden had a tent to herself all the way, and, from Viluisk on, it was the magnificently constructed tent of the *ispravnik*, three-ply, impervious to rain and heat. When the party camped, it was surrounded by a thick screen of young, freshly-cut fir-trees, within ten minutes of their arrival, by the Yakuts who accompanied them, and by those who had assembled out of curiosity, on the news of their coming, at the previously appointed halting-

places, though Miss Marsden would have us believe that the road was unknown. Miss Marsden complains that she could never undress herself during the two months of her journey. Mr. Petroff replies that her folding-bed, mattress, coverlet always sewed in clean sheets, pitcher, basin, brushes, combs, sponges, bags of clothes and other necessaries, were carried into her tent every day; that she had full opportunity to undress and rest; that she did, as a matter of fact, put on her best gown on several occasions, which he specifies; that she could have done so every day; and that the linen of the expedition, including Miss Marsden's, was washed four times during the two months at specified places.

Again, Miss Marsden complains of the food; in several Russian and English accounts she went so far as to state that she had eaten nothing but tea and a sort of hard toast of sour black bread (*tcherniya sukhari*) during the whole two months. Mr. Petroff declares that Miss Marsden brought from Irkutsk bouillon, potted roast beef, reindeer tongues, dried vegetables for soup, prepared coffee, condensed milk, etc. In Yakutsk he bought raisins by the box, prunes, and seedless grapes in sufficient quantities. They had also buckwheat, wheat, and manna groats, pearl barley, prepared mustard, spirits, and cognac. "She never put a bit of black *sukhar* in her mouth," could not even eat the ordinary wheaten *sukhar*, and accordingly dainty ones were prepared for her alone at the best confectioners' in Yakutsk from extra imported flour. As some of these acquired the taste of the leather bags in which they were carried, and Miss Marsden could not eat them, a fresh supply of her delicate bread was made for her in Viluisk. Moreover, in regard to the complaint of lack of meat, Mr. Petroff says that they bought fresh meat and game wherever possible until they arrived at Viluisk. After leaving Viluisk, until their return, the Cossacks, Yakuts, and medical man killed such an abundance of ducks and black cock that their stomachs eventually revolted at "toujours perdrix," and they had fresh meat at every halt in abundance. It is not surprising that Mr. Petroff should exclaim: "Does she really believe what she has written of this journey?" We may join in his wonder. She had pacing horses provided for her—and pacers are rare—since she could not have ridden a dozen fathoms on an ordinary horse.

Mr. Petroff denies most positively that they ever found a dead leper in any house among the sick, or even one near to death; that any lepers ever offered Miss Marsden their repulsive food, or that she controlled herself to the extent of eating it. On the contrary, he states plainly that she was so overcome by the sight of the first leper that he and the medical man begged her not to remain with the invalids more than half an hour at each spot. Mr. Petroff, however, after enforcing this rule, for her health, rode ahead on each occasion and remained two or three hours behind—easily catching up afterwards—to make the detailed examination for her. The lepers told him that they lacked nothing. Their friends and the communities supply them with the same food which they use themselves, and in proper quantities. When there is no leper sufficiently strong to nurse the helpless, the community hires one from another district, paying him up to seven rubles a month, so that they are not neglected, as Miss Marsden states. (The "boots" in a St. Petersburg hotel, by the way, gets four rubles a month, out of which he clothes himself and furnishes his brushes and blacking.) In one place twenty-two lepers own twenty cows and a bull. Other settlements are equally well off. Contrary to Miss Marsden's assertion, the Yakuts of this region are great cattle breeders, the arable land and fodder grasses being absolutely phenomenal. This is of a piece with her more general information. "But you could never reckon up all her misstatements!" exclaims Mr. Petroff at last, in despair.

The common sense of the matter is this: Russia is amply able and willing to take care of the sixty-six lepers over whom this disproportionate fuss and self-advertisement has been wasted, in a manner thoroughly insulting to Russia. Enough money has been collected already to do all or nearly all that is required, according to a recent statement of Bishop Miletie of Yakutsk, who also announces that three of the nuns who went from Moscow, lavishly provided with money, clothing, and materials in the piece, are quite sufficient for the dirty work of tending the lepers, which it forms no part of Miss Marsden's own programme to undertake in person. The proportions in which the sums collected are expended may be judged from one instance. Mr. Sievers of Irkutsk gave 2,000 rubles. Miss Marsden spent nearly one-third (600 r.) on her own journey and 1,400 on supplies for the sixty-six lepers. (See *Siberian Messenger*, *Eastern Review* of Irkutsk, and the *Day*, St. Petersburg, July 24, 1892.) What, then, is the motive of Miss Marsden's contemplated trip to America, and of her book? Ready answer could be found in a mass of articles about her published during the past three years by the press of New Zealand, where Miss Marsden spent a number of years previous to 1889, when this Siberian leper hunt was planned, and where she is thoroughly understood. To be precise we will name, among many, the *New Zealand Mail* of December 9 and December 16, 1892; the Wellington *Evening Post*, July 17, 1890; February 20, 1891; December 10, 1892; the Wanganui *Chronicle*, December 19, 1892; the Christchurch *Weekly Press*, September 24, 1891; the Oamaru *Mail*, November 26, 1892.

The "A. L. A." Index: An Index to General Literature—Biographical, Historical, and Literary Essays and Sketches, Reports and Publications of Boards and Societies dealing with Education, Health, Labor, Charities and Correction, etc., etc. By Wm. I. Fletcher, A.M., Librarian of Amherst College, with the coöperation of many Librarians. Boston: Houghton, Mifflin & Co.

Mr. Fletcher and his disinterested colleagues in a work which it was worth while to begin in some fashion, must have prepared themselves for fault-finding proportionate to the diversity of the field covered or within the scope of the Index. No one critic could point out all the deficiencies and inconsistencies, and each would bring to bear examples drawn from his special knowledge. If we perforce join the ranks of those who dwell more on the shortcomings of the undertaking than on the merit of those engaged in it, it is from a simple desire to repair the former in future supplements.

We begin, then, with the fundamental test of selection, and remark that Col. Malleson's 'Ambushes,' which is technical in character, is taken, while his more general treatises 'Battles of India,' 'Battlefields of Germany,' and 'Studies from Genoese History' are omitted. In general literature, we miss the works of J. M. Robertson, 'Modern Humanists' and 'Essays toward a Critical Method'; Henley's 'Essays'; George Moore's 'Impressions and Opinions'; George Barnett Smith's 'Poets and Novelists.' One is glad to have Morley's 'Critical Miscellanies,' but regrets the loss of his other collective works, 'Studies in Literature' and 'Diderot and the Encyclopædists.' If Donald G. Mitchell's 'Wet Days' provides food for the zealous inquirer, why do not his 'English Lands, Letters, and Kings,' 'Seven Stories,' 'About Old Story-Tellers'? Why should Stebbing's 'Verdicts of History' find a place in the Index and not his equally worthy 'Some Reviewers Reviewed'? Plutarch's 'Lives' should not have been discriminated against in favor of Diogenes Laertius's 'Lives of the Greek Philosophers'; nor De Morgan's 'Paradoxes' in favor of Paget's.

A work intended to aid serious students or others besides Chautauquans and small libraries should take account of Abel's 'Linguistic Essays,' Benn's 'Greek Philosophers,' Blackie's 'Horæ Hellenicæ,' Gardner's 'New Chapters in Greek History,' Jebb's 'Attic Orators,' Nettleship's 'Essays in Latin Literature,' and Sellar's 'Roman Poets of the Augustan Age,' among writings upon classical literature. Scientific literature is but scantily represented. Perhaps the Index could not be expected to embrace the very valuable series of monographs edited by J. Borden Saunderson under the title, 'Foreign Biological Memoirs,' but Tait's 'Recent Advances in Physical Sciences' would seem to fall within its scope. In the line of more popular reading we should have looked for Johnson's 'Lives of the Poets,' Piper's 'Lives of the Leaders of the Church Universal,' Cesaresco's 'Italian Characters,' Ward's 'Reign of Victoria,' Gilbert Scott's 'Lectures on Architecture.'

The poverty of good sources of information is shown by the references under Amerigo Vespucci. All that the indexers have found concerning the discoverer are: Frost's 'Half Hours with Early Explorers,' O'Murray's 'Catholic Pioneers,' Vogel's 'Century of Discovery'—of which we may say that not one is of value to anybody studiously minded. Again, too many antiquated authorities are used. If Belknap's 'American Biography' is worth indexing, then Eliot, Knapp, and certainly Sparks's 'Library of American Biography' should appear. Levi Woodbury's writings are hardly of living importance. It would have been more to the purpose to have Gallatin's, or even George Washington's.

The subject-references in many cases fail to convey much meaning, and some of them may almost be classed among the humors of indexing. Under "Honor" is a reference to "Honor due to all men" (apparently a sermon), while the entry, "Invalid," in Payne's 'Private Views,' proves to be a trifle on Invalid Literature. The compilers have in many instances lost sight of their proper function. Many works are analyzed which might properly be called non-indexable; for example: Adams's 'New Departure' and 'Chapters of Erie,' Cozzens's 'Dr. Bushwhacker,' Lady Barker's 'Travelling Abroad,' Dilke's 'Greater Britain,' Brooke's 'Seven Months' Run,' Fairbanks's 'Aguecheek,' John Fiske's 'Tobacco and Alcohol,' and George Augustus Sala's 'America Revisited.' We should have just as much right to expect Bonvalot's 'Across Asia,' or Cooke's 'Old Touraine' and a thousand others, to be indexed as Lady Barker's or Sala's travels.

The abbreviations used are not irreproachable. Some of the more objectionable are Bunce, Bach. bluff.; Boyd, Aut. holid.; Dodge, 12 miles; Fliedner, Praying and w.; Gilfillan, 1st gall.; Gladden, Appl. x'ty (for Applied Christianity); Gurney, Tertium; Mitchell, Bound

toge.; Oxford move.; Trench, Lec. medieval; Whittier, Lit. recre. When we add that in our opinion the next edition of the A. L. A. Index should take cognizance of the United States census reports as well as the Labor and Charity reports of the several States incorporated in the present edition, we conclude our ungracious task, and place the volume on the shelf beside Poole's Index—the latter a more successful, but also, let us freely admit, a far less difficult, enterprise.

A Guide to the Paintings of Florence, being a complete historical and critical account of all the Pictures and Frescoes in Florence, etc., etc. By Karl Karoly. George Bell & Sons.

How far cramming, beyond the degree allowed by Murray and Baedeker, will help the tourist to understand the Italian Renaissance, can only be ascertained by experiment, but Karl Karoly's experiment does not contribute to the solution of the problem. To succeed in such an undertaking, one might go to work in two different methods, viz., to study art and the opinions of the most thoughtful critics until one had acquired that comparative breadth of judgment which is the result only of large culture, and then venture to speak *ex cathedra*, taking the risks of it; or to collate all the authoritative opinions and let the reader weigh them together before the work of art, and be responsible for the conclusion. Karl Karoly adopts neither, and falls absurdly between the two stools. His own study of either the pictures or the critics is utterly superficial, and while his judgment of the former is crudely dogmatic, his collation of the latter is absurd. The instruction given on his own account may be fairly judged from a quotation from the description of the well-known "Calumny" of Botticelli. "The female heads are all from the same model, but are painted with variety of expression. The figures are rather too vehement in action. The high finish of every detail, the brilliancy of the light, and accurate distances are especially to be remarked." Discussing the "Fornarina," he says:

"Erroneously ascribed to Raphael. Attributed by all connoisseurs to Sebastiano del Piambo [the form of Piombo to which he adheres throughout, perhaps not knowing that the sobriquet was derived from the piombo, or leaden seal, on his certificate of appointment as painter to the Pope]. . . . The name of Fornarina, as applied to Raphael's mistress, does not occur before the middle of the last century. The history of this person [?] to whom Raphael was attached even to his death is obscure, nor are we *very clear as to her likeness.* This picture, inscribed with the date 1512, is said to represent her; but it bears no resemblance *to the authentic picture* by Raphael, inscribed with his name, and called the Fornarina in the Barbarini Palace in Rome."

Of Verocchio we have in No. 1267 *bis*, "Verocchio, Madonna. The only other painting by him is his Baptism of Christ in the Academy," but in the reference to that picture we are told that it is "his only authentic picture in existence." In reference to this picture the author quotes Richter to the effect that "not merely the angel ascribed to him [Leonardo] by tradition, but also the figures of Christ and of the second angel, as well as the landscape background, are obviously painted in oil, a medium which Leonardo always employed, whereas Verocchio never abandoned his tempera groundwork." It would be impossible to concentrate more inaccuracy regarding the particular picture than is here given, without the least apparent discrimination or disapprobation by the author of the book. The entire picture is painted, so far as it was finished, in the same manner, being laid in in tempera, and finished in transparent oils, as was the custom of most of the painters of that day. The author says that the Gozzoli fresco in the Riccardi palace was painted by lamp-light, the tolerable certainty being that the painting was done before the ceiling was put on, as the room in which the chapel was built is well lighted and the only use of the ceiling was to complete the seclusion of the chapel.

The "quotations from the best authorities" are pitchforked in with more regard for variety than for authority—Horner by the side of Ruskin; Richter and Morelli sometimes and then Crowe and Cavalcaselle—in utter ignorance that "all the connoisseurs" give neither Richter nor Morelli any technical authority whatever, and none of any kind to Horner; that Morelli, while he discredits all the Giorgiones which are accepted by the highest authorities, is always finding new pictures by the master which no one else accepts, and that, in fact, his individual identifications have no weight whatever with those who understand the technics of the Italian schools. Crowe and Cavalcaselle are on the whole the highest authorities we have thus far named, and where they err there is little probability of more secure judgment from other critics, as to questions of authenticity or technics.

The use of any catalogue of this nature is always doubtful, as the changes in the arrangement of the pictures and their numbering throw it quickly out of use. But in any case Karl Karoly's attempt to occupy the place of cicerone is a complete failure, except so far as it indicates the whereabouts of all the pictures in Florence and its immediate vicinity.

Hereditary Genius: An Inquiry into Its Laws and Consequences. By Francis Galton, F.R.S., etc. Second edition. Macmillan & Co. 1892. 8vo, pp. xxvii., 379.

Hereditary Ability is the title Mr. Galton would now prefer to that originally given to his book. When he wrote, it was commonly believed that the human mind had something supernatural in it; that proper directing was what was necessary to make the power of the mind almost unlimited, and that children were born similar in mental ability, subsequent differences being due to surroundings and training. The purpose of the work was the establishment of the fact that individuals inherit different intellectual capacities, and that, no matter what the influences, opportunities, and struggles, nature limits the powers of the mind as definitely as those of the body. On these points, among thinkers everywhere, the author's opinions have prevailed. His book is reprinted much as written more than twenty years ago. To have incorporated a mass of new statistical evidence now available would have necessitated recasting tables and comparisons to such an extent as practically to compel rewriting the whole; this the author would not undertake. Had it been written anew, according to the later preface, some portions should have been greatly changed—for instance, that based on the theory of pangenesis, now set aside, or that relating to variations.

The latter are not here defined as we are used to see them. Two fundamentally distinct conceptions are said to be included in the ordinary use of the word variation: sports and variations properly so called.

"The filial centre falls back further towards mediocrity in a constant proportion to the distance to which the parental centre has deviated from it, whether the direction of the deviation be in excess or in deficiency. All true variations are (as I maintain) of this kind, and it is in consequence impossible that the natural qualities of a race may be permanently changed through the action of selection upon mere variations. The selection of the most serviceable *variations* cannot even produce any great degree of artificial and temporary improvement, because an equilibrium between deviation and regression will soon be reached, whereby the best of the offspring will cease to be better than their own sires and dams.

"The case is quite different in respect to what are technically known as 'sports.' In these, a new character suddenly makes its appearance in a particular individual, causing him to differ distinctly from his parents and from others of his race. Such new characters are also found to be transmitted to descendants. Here there has been a change of typical centre; a new point of departure has somehow come into existence, towards which regression has henceforth to be measured, and consequently a real step forward has been made in the course of evolution. When natural selection favors a particular sport, it works effectively towards the formation of a new species, but the favor that it simultaneously shows to mere variations seems to be thrown away, so far as that end is concerned."

The above brings natural selection more nearly in line with the procedure in artificial selection. It makes evolutionary progress in any direction to depend entirely on the advent of sports, of which the originating causes are still in question. We cannot agree, however, in treating the racial centre, mediocrity, as a fixture so far as all influences other than selection are concerned; or, to put it differently, we cannot admit that all evolution is due to selection.

The views of Lombroso and others in respect to the close relationship between genius in its technical sense and insanity are not fully concurred in by Mr. Galton; yet he admits that his later observations have led in the same direction so much as to surprise him by the frequency of mentally unbalanced relatives among the offspring of the exceptionally able. Persons of extreme mental activity, he says, must often possess brains more excitable and peculiar than is consistent with soundness. Such persons may be crazed at times or may give way completely. Their progeny may be reduced to the irresponsible by inheriting their excitability or other peculiarities with a still smaller proportion of what is more needed in a proper mental balance. Hope for the elevation and improvement of mankind rests on that race in which the natural gifts, bodily, intellectual, and moral, of the most prolific class are above the line of mediocrity. In the history of evolution Mr. Galton finds no reason for doubting that from such a centre another race may be developed as far above the highest now existing as the latter is above the lowest.

The Tuscan Republics (Florence, Siena, Pisa, and Lucca), with Genoa. By Bella Duffy. [Story of the Nations.] G. P. Putnam's Sons.

This book is a disappointment. There are few subjects in the whole range of history more interesting than the Tuscan republics, and the interest is due not only to swift and startling outward events, but to the significance of the political and social evolution of which those events were the symptoms. Nevertheless, with such a theme Miss Duffy has failed to make either an interesting "popular" book or a useful historical manual. We are quite unacquainted with any previous work of hers, so that we can but wonder what qualifications she possessed to justify the editor of this series in raising her into the companionship of Freeman, Vámbéry, George Rawlinson, Mahaffy, Thorold Rogers, Baring-Gould, and other compe-

tent historical writers who have contributed to the series. Her book, both in style and matter, reminds us of those historical theses prepared by college students who, with a certain aptitude for research and no experience in composition, grind out an unsymmetrical summary of the authorities they have consulted. We have observed no single thought in this volume which disclosed any power on the part of Miss Duffy to think for herself; on the contrary (and this is more serious), she seems not to realize that history is valuable exactly in proportion as it establishes just relations between persons and events, and reveals the fatal evolution of character in peoples as in individuals.

This very history of Florence, for instance, seems but a register of murders and banishments as chaotic as a madman's delirium, unless it be shown what produced them and what they resulted in. Most readers of Miss Duffy's book would fail to see the meaning of each revolution, or how, under different names, Florence gradually passed through all stages of popular government, to sink at last, exhausted, into the power of an acknowledged tyrant. It is because she tried now nobles, and now bourgeois, and now artisans as her rulers that her experience has been so precious to posterity. To maintain an equilibrium among the various elements of a State may be defined as the aim of an ideal government; to show how one element or another encroached and usurped is certainly one of the chief purposes of history. For example, the historian of the United States since the rebellion ought to show how the manufacturing class has really controlled the Government, with the efforts of the other classes to counteract this undue influence. So at Florence, from the twelfth to the sixteenth century, there was a perpetual conflict of classes, and Miss Duffy should have interpreted, point by point, the variations in that conflict. Each of the great Italian communes of the middle age might have taken Dante's line "Libertà va cercando, che è si cara" as its motto, and any adequate account of those communes ought to explain how it was that they fell short of liberty, whether by the greed of one class or the truculence of another, whether by the corrupting influence of a family or by the "personal magnetism" of a demagogue. Merely to relate that in a certain year priors were chosen, and in another year a Council of Nine or of Twenty rose or fell, and that there were so many score of broken heads on each occasion, seems hardly more worthy of serious attention than are the reports of contemporary murders or of "holocausts" in the daily press. The experiment in government of Florence, Pisa, Siena, Genoa, and their sister republics must be treated in the way we have suggested in order to have its true significance appear; treated after Miss Duffy's fashion, the careers of those republics seem as unrelated to the great development of human progress as are the fitful homicidal outbursts in some South American capital.

We regret to have to say this of a book from which we had expected much; but mere study, mere exploration of historical documents, cannot make an historian. We can commend Miss Duff's conscientiousness in both these respects. She is modest, and never puts forth an opinion of her own. Often we can almost hear the French or German writer whom she has consulted speak through her lines. Nevertheless, her book cannot rank with the earlier epitomes of Sismondi and Balbo, or with the recent manual of Hunt. The proof-reading is so bad that we infer that the author could not have seen the proofs. Many excellent views of Italy, with portraits and process reproductions of works of art, serve to remind the reader of a glory and a charm which he might not derive from the text.

Studies in the Civil, Social, and Ecclesiastical History of Early Maryland. By the Rev. Theodore C. Gambrall, A.M., D.D. New York: T. Whittaker. 1893.

UNTIL very recent times, no one of the original thirteen States has been so culpably indifferent to its history as Maryland. McMahon's work, from both the historical and legal points of view one of the ablest books ever produced in this country, was so coldly received that the second volume never saw the light. In the school-books of the last generation, the Boston tea-party was dwelt on with the most circumstantial minuteness, while slight notice or none was taken of the Maryland tea-burning; and the present writer well remembers his earliest historical studies in a book that gave more space to the destruction of the Willey house than to the whole colonial history of Maryland.

Happily, of late years this state of things has changed. The ancient archives of the State, by the wise liberality of the Legislature, are now accessible to students and in process of publication; popular histories have been written, and many special monographs and studies have thrown light upon the most instructive features of a past that was in many respects unique. A pleasant evidence of this historical awakening is given by the book before us, a series of studies of the social and political conditions of the colonial period, originally delivered as lectures before the students of the Maryland Agricultural College.

For such a work Dr. Gambrall is well fitted, not only by his familiarity with the subject, but by the breadth and fairness of his views. A German philosopher has noted the fact that it is impossible for a human being to watch two sparrows fighting in a gutter without taking sides with one or the other sparrow; and, *à fortiori*, that no one can read, much less write, history without becoming to some extent a partisan. In Maryland history we have had too much of this, and too many of the writers on the subject have seemed to hold a brief on one side or the other. This one-sidedness Dr. Gambrall has endeavored to avoid; and even if he has not absolutely divested himself of bias—a state of mind probably impossible, and perhaps undesirable—he certainly shows a fairness which is altogether exemplary. This is well shown in his account of the acts and policy of the founder of the colony, in whom some have seen a man of almost quixotic benevolence and liberality, others a wise and prudent statesman, and others a selfish bigot kept in check only by the force of circumstances. The facts that Cecilius pursued exactly the course that a good and wise man would pursue, that he was firm in his general policy while ready to yield such of his rights as were plainly contrary to the public good, and that his province steadily grew and prospered under his rule, are undisputed; the only question being that of ulterior motives, which is much like disputing about the chorography of the distal surface of the moon.

As the title indicates, these lectures do not undertake to tell the story of Maryland, but discuss consecutive phases of that story. After a general view of English colonization, we have the peculiar constitution of Maryland explained, that colony being made by the charter a small independent kingdom, exempt from the control of King or Parliament, and ruled by the Proprietary and freemen alone. The first foundation, the early legislation, the revolution which took the government from the Proprietary's hands, the changed conditions after its restoration to his grandson, the events which led to the American Revolution, and Maryland's share in that great struggle, all receive due attention.

One or two unimportant oversights we have noticed, as on p. 61, where, misled by Chalmers, Dr. Gambrall states that Maryland was the first colony erected into a province, forgetting the charter of Avalon. Again, on p. 107, he says that it is not known whether Thomas Cornwaleys was Protestant or Catholic, overlooking his remonstrance to the Proprietary on his dealings with the Jesuits, which shows the Captain to have been a zealous Catholic.

A more serious error occurs on p. 35, where the author states that by the charter of Avalon "the freeholders were to be assembled for the making of laws for the province," that the same clause was inserted in the charter of Maryland, and that in the latter colony Cecilius, "on whom the world has been delighted to lavish its praise, attempted so far to limit the privilege of the assembly as to claim the sole initiative in the making of laws." The natural inference is that Cecilius attempted an arbitrary violation of the rights of his colonists, and therefore does not deserve the praise of posterity. Now this is a question of fact, and the facts are that, by the charters of both Avalon and Maryland, the initiative in legislation was given to the Proprietary alone, the freemen having only an advisory and dissentient voice. It was easy to see that this would not work well, and, after brief trial, in which each party rejected the laws of the other, Cecilius conceded the initiative to the people, reserving the veto power to himself. So far from attempting any invasion of the people's rights, he promptly relinquished an important part of his own.

One very surprising statement we find on p. 203, where the author speaks of Maryland's treatment of the Indians as a blot on her fair fame. Certainly we should have thought that if her record were clear on any point, it is that of her dealings with the Indians; and as Dr. Gambrall gives no particulars, we cannot conceive what he has in mind. With all the Southern Indians the colonists lived in unbroken friendship from the very first purchase of land from the "Emperor" of Pascataway and the werowance of Yoacomico: they were taken under the protection of the English, and their safety stipulated for in all treaties. With the more warlike Susquehannoughs there was almost unbroken peace, and treaties ever renewed: the colonists declared them "a bulwark of the northern parts of the province," and built them a fort for their security against the Senecas and Oneidas. The Eastern Shore Indians sometimes gave a little trouble, but nothing of a serious character, and we cannot think what incident in all her dealings with the Indians Maryland has cause to be ashamed of, unless it be the humiliation of the King of Chaptico, who was fined by a manorial court for pig-stealing.

Memorial of Nathaniel Holmes Morison (1815–1890), First Provost of the Peabody Institute (1867-1890). Baltimore. 1892.

Catalogue of the Library of the Peabody Institute of the City of Baltimore. Part V. S–Z. 1892.

THE privately printed Memorial, by a member

of Dr. Morison's immediate family, is an admirable tribute. Dr. Morison died in November, 1890, a month before reaching his seventy-fifth birthday. To the last he maintained his interest in and relations with the Peabody Institute, with which he had been wholly identified for over twenty years, officially as Provost and practically as Librarian-in-Chief. He did not live to see the appearance in type of the fifth volume of the printed Catalogue of the Institute Library issued during the past year, and completing what is probably the most generally useful and, typographically, the most intelligently displayed index to general literature thus far compiled in this country. The severe discipline of his early years, and his arduous struggle for education at Exeter and Harvard, gave much additional robustness to the natural strength of his New Hampshire inheritance of Scotch-Irish Presbyterian stock. For twenty years he successfully managed a girls' school of no little repute in Baltimore, during which time he had published a few educational works, and had devoted himself to serious studies and to the requirements of a home life rather than to the amenities and exactions of society. He was, therefore, in 1867, when he accepted, at some personal sacrifice, the office of Provost, fully equipped in many ways for the large duties before him, and it is at this time that Dr. Morison's public life properly begins.

The two great services performed by Dr. Morison for the Peabody Institute, although he was active in all things pertaining to his charge, were his energetic and scholarly direction of the purchase of the foundation books of the Library, and his supervision over and large share in the construction of the now-finished Catalogue. The collocation of a large library and the making of an adequate catalogue cannot, in the nature of things, be the achievement of any single person; but, in the case of Provost Morison, so completely did the Library reflect the fineness and firmness of his judgment and his persistent adherence to the high standards established in the selection and purchase of books, that it seems to have absorbed his personality into every working method and policy. Although at first beset with problems of unusual difficulty, chief among them being a continual demand to "popularize" the institution, Dr. Morison seems to have carried his points with almost unvarying success, and the result at the time of his death was a collection of books of permanent value, which have added largely to the intellectual wealth and reputation of the city in which they have found abode. He was singularly fortunate in having the cordial coöperation of the Trustees of the institution.

Of the printed Catalogue we have already once spoken in commendation, and it only remains to say, on the completion of the immense task, that, judged as a whole, it is perhaps the most useful performance of its kind in existence. Careful analysis and indexing have given more practical worth and availability to these 100,000 books than a catalogue constructed upon a pinched and falsely economical plan could possibly give to a library of four times that number. This and Dr. Billings's great Catalogue of the Library of the Surgeon-General's Office, much resembling each other in scope and in the striking merits of certain typographical felicities, are worthy monuments of American scholarship as applied to the craft of bibliography.

To able and sympathetic coadjutors in his difficult tasks belongs a generous share of praise, and to them, with characteristic probity, Dr. Morison would be first to make acknowledgments; but to him alone belongs the substantial glory of giving vitality and continuing force to a great institution. It was his constant wish that his deeds should be his fitting monument, and his ambition, perhaps chiefly because it was not a personal one, has been amply realized.

Fratris Iohannis de Serravalle, Ord. Min., Episcopi et Principis Firmani Translatio et Comentum totius Libri Dantis, cum textu italico Fratis Bartholomæi a Colle, ejusdem Ordinis. Prato.

THE student who feels impelled to acquaint himself with John of Serravalle's Latin commentary on the 'Divine Comedy,' recently published at Prato by the order and at the expense of the Pope, will wish that either the Pontiff's munificence or the zeal of the Franciscan editors had been limited. What would have made several volumes of a convenient size is put into the form of a ponderous folio, padded by the addition of the unimportant Italian text of a Fra Bartolomeo da Colle, and by the insertion at the end of each canto of divers edifying essays by the editors on current and other topics, until the whole takes up 1,233 pages. The task of examining the commentary is, however, a pleasant one, both on account of the novelty of the circumstances under which it was written, and because it is almost the last of its kind published or to be published. Only one other of importance, that of Guido da Pisa, still remains in manuscript. When that sees the light, and when the work of sifting and comparing—begun in 1878 by Hegel's concise essay, 'Ueber den historischen Werth der älteren Dante-Commentare,' and greatly advanced by Rocca's recent 'Di alcuni Commenti della Divina Commedia composti nei primi vent' anni dopo la morte di Dante'—is complete, we may at last hope to know what to disregard and what to keep from the enormous mass of partly valueless, partly valuable comment which has been handed down to us from the thirteenth and fourteenth centuries.

The work of John of Serravalle ranks about twelfth in the list by order of chronology, and may be regarded as a granddaughter of Boccaccio's comment, for Benvenuto da Imola was among Boccaccio's audience at Florence in 1373, and John of Serravalle among Da Imola's in Bologna a little later. The writer, Giovanni dei Bertoldi (better known as Giovanni da Serravalle, from his birthplace, a little parish which appertains ecclesiastically to the diocese of Rimini, but forms part of the Republic of San Marino), was a noted Franciscan scholar, preacher, lecturer, and ecclesiastical agent, resident for various terms of years at Bologna, Florence, Rome, at one time Provincial of his order in the Marches, finally Bishop of Fermo, and a not unimportant member of the Council of Constance. In 1416, while the Council was awaiting the result of negotiations with the Anti-Pope, John of Serravalle, whose alert intelligence and good humor seem to have made him popular everywhere, was begged by Cardinal Amidei of Saluzzo, and more especially by two English prelates, Nicholas Bubwith, Bishop of Bath and Wells, and Robert Hallam, Bishop of Salisbury, to translate Dante's great poem into Latin, and to write on it a commentary in the same tongue, for the instruction and entertainment of those of the Council who were not Italians. This great task, begun and completed within a twelvemonth, is a fitting type of the eager ambition and incessant activity of men's minds in the early fifteenth century; and though the Bishop of Fermo's translation is by no means extraordinary, and his commentary the simplest sort of exposition, the reader can scarcely help noticing in them both a freshness and breadth of mind distinctly unmediæval. Throughout, too, one finds with pleasure traces of Serravalle's good humor and popularity. Florence, for instance, he declares, is by no means as bad as Dante painted it (pp. 176, 58), nor are the Bolognese by nature avaricious (p. 231).

But the chief interest in the commentary for English readers is that in it is the only bit of evidence that can possibly be cited for what Englishmen sometimes try hard to believe—that Dante studied at Oxford, or at least visited it. That such was the case was maintained by Dean Plumptre some years ago, with Mr. Gladstone's recent approval, in an article in the *Nineteenth Century* for last June, in which, assuming that Dante visited every place he spoke of, he endeavored to show that those places in Northern Europe which Dante mentioned were the necessary stages in a journey to England. Once in England, says Mr. Gladstone, his destination could have been none other than Oxford, whither he went "to refresh his thirst by a fast-swelling fountain-head of knowledge, and to imp the wings by which he was to mount, and mount so high that few have ever soared above him into the empyrean of celestial wisdom." Aside from this alleged antecedent probability, the testimony for Dante's visit to Oxford reduces itself to a single remark of Serravalle's in his fifth preamble:

"Modo, notandum, quod Dante dilexit hanc puellam Beatricem hystorice et litteraliter; sed allegorice et anagogice dilexit Theologiam sacram, in qua diu studuit tam in Oxoniis in regno Anglie, quam in Parisiis in regno Frantie, et fuit Bachallarius in Universitate Parisiensi, in qua legit Sententias pro forma Magisterii. Legit Bibliam, respondit omnibus Doctoribus, ut moris est, et fecit omnes actus, qui fieri debent per doctorandum in Sacra Theologia. Nihil restabat fieri, nisi inceptio, seu conventus; et ad incipiendum, seu faciendum conventum, deerat sibi pecunia: pro qua acquirenda rediit Florentiam. Optimus artista, perfectus theologus, erat nobilis prosapia, prudens in sensu naturali; propter que, factus fuit Prior in palatio populi Florentini, et sic cepit sequi officia palatii et neglexit studium, nec rediit Parisios."

This passage, it should be noted, occurs in a commentary written in hot haste in 1416—one hundred and twenty-five years after Dante is said to have studied at Oxford—at the request of two English prelates, one of whom had just been Chancellor of the University of Oxford, by an urbane and obliging Churchman, who had himself been the recipient of English courtesies (p. 259), and whose account of Dante's life is in other respects inexact, both in substance and in form. Under these circumstances, how much weight can we attach to this casual mention of Dante's visit to Oxford?

A Diary of the Salisbury Parliament, 1886–1890. By Henry W. Lucy. Illustrated by Harry Furniss. Cassell & Co. 1892.

THE unusual charm of Mr. Lucy's two former volumes, 'The Diary of Two Parliaments,' gave a corresponding interest to the announcement of this new one. The first impression produced by it is that the writer has grown older, and, with the lapse of years, has lost something of the elasticity which could mingle exuberant fun with serious narration. The volume is tinged with the sort of regret with which one looks back to bygone days, dwelling

upon the changes that have taken place and the faces that have gone—Mr. Disraeli and John Bright, Mr. Bradlaugh and Major O'Gorman. In fact, a considerable part consists of obituaries. But out of all the wrecks of time still stands forth, furnishing, besides all else, full inspiration to Mr. Lucy's pen, the figure of the marvellous old man who, while nearing eighty-four years, can still, with undiminished energy and power of voice, hold the House of Commons for two hours and a quarter in an exposition of the Home-Rule Bill, extorting admiration almost equally from friends and foes. Mr. Lucy's power of description, however, remains undiminished, whether exercised in praise, as of Lord Granville, in chaffing, as of Mr. Goschen, or in fierce sarcasm, as against the Duke of Argyll. One can well believe that the author of 'Toby in Parliament,' as reported in *Punch*, is treated with consideration even by the higher dignitaries, in view of the public portraiture to which they may be subjected by his graphic pen.

It is a wonderful picture of the inner life of that assemblage, which, combining its actual condition with its past history, may be called the most remarkable public body that ever existed. What would not be the value of a similar account from 1750 through the struggle with France and our war of Independence, from the outbreak of the French Revolution to the overthrow of Napoleon; or again from the agitation of the first Reform Bill to the repeal of the Corn Laws and the establishment of free trade! What a nursery of men that House of Commons has been! Generation after generation has produced its fruit, more or less eminent, no doubt, but standing forth in all the sharpness and strength of individual character. Take, for instance, Mr. Lucy's account of Mr. Balfour: first, "a fair-faced languid youth, too indolent to stand upright; with pleasant voice, polished manner, and picturesque appearance"; next, as Chief Secretary for Ireland, developing into "a civil Cromwell, the most unbending thorough administrator of iron rule Ireland has known since '98"; again when, in the House of Commons, facing questions by the Irish members, he "stood at bay with his back to the wall parrying with light rapier the bludgeon blows rained upon him, now and then stepping forward and pinking an adversary with sharp, clear thrusts"; and then his comparative failure as leader of the House from the want of those conciliatory qualities which made of plain Mr. W. H. Smith, dealer in newspapers, the most successful leader since Lord Palmerston. It is at once as a training and a testing ground for individuals that the House of Commons has a large part of its value. Turning the view, almost in despair, towards our Congress, we yet cannot resist the conviction that, with a proper organization, our House of Representatives might surpass the House of Commons even in this respect.

Of the illustrations in the book it may be said, that while not wanting in force and skill, and possessing much merit as likenesses, they partake too much of caricature, and so fall below the dignity of the text. If we may exaggerate in both directions, it is like placing the cartoons of *Puck* in a collection of portraits by Vandyke and Velasquez.

Frederic Chopin. By Charles Willeby. Scribners. Pp. 316.

CHOPIN has been unfortunate in his biographers. Karasowski, although interesting, is incomplete; Liszt's book, though poetic and suggestive, is a rhapsody rather than a biography; Mr. Bennett's book is a mere compilation, while Niecks's two volumes, a monument of industry and extremely valuable for reference, are hardly adapted for consecutive reading, not to speak of the fact that his opinions are extremely erratic and untrustworthy. There was room, therefore, for another work, combining biography with criticism, and not too elaborate for the general reader, and this room Mr. Willeby has endeavored to occupy. He has not entirely succeeded. The biographic parts of the book are readable, even if they do not include much that is new, but the critical portions emphasize the fact that England is hardly the land in which to look for a just appreciation of Chopin's genius. As a rule it is the less inspired and more popular of his pieces that are lavishly praised here; while those whose originality and poetic individuality are most pronounced are dismissed as "morbid"—a word which seems to be a great favorite with people of robust nerves when they come across the gossamer emotions of an artist's dream-life. Even the Preludes, the most marvellous pieces ever written for piano, are described as "morbid." When the reader meets with the statement that the glorious C sharp minor nocturne — which is a perfect little music-drama in four pages—is "labored and sickly"; or the assertion that the middle movement of the B minor scherzo "is inexpressibly sweet for a few bars, but after that one experiences a sickly sensation"—whereas in truth it is the most heavenly melody ever written—one may resist the temptation to close Mr. Willeby's book and cast it into the fire, but one loses all confidence in him as a guide, and feels like advising him to stick to Handel, and Hummel, and Sir Arthur Sullivan, whose music is not "morbid" and "sickly," but has the true flavor of British roast-beef and plum-pudding, with no "made-dishes" nonsense about it. What a pity that the best a man of genius gives to the world should always be appreciated by only a select few!

Foil and Sabre: A Grammar of Fencing, in detailed lessons for professor and pupil. By Louis Rondelle, maître d'armes at the Boston Athletic Association and the Harvard University Fencing Club. Illustrated. Boston: Estes & Lauriat. 8vo, pp. xxiv, 218.

MR. RONDELLE'S book is offered as a guide in the systematic teaching of fencing according to the standard of the French Military School of Joinville-le-Pont, from which the author received his diploma. The very fact that he seeks to bring all practitioners of the art to the test of methods solidly established by experience precludes the idea of novelty in the elements. He seeks to commend himself rather by a faithful adherence to his standard, while he gives a series of systematically progressive lessons in which the pupil's knowledge and skill are steadily built up. Beginning with a clear analysis of the positions and movements in each of the simple parries and thrusts, the lessons pass on to various combinations of these, leading up to the most complicated. The knowledge gained at each step is kept in full exercise to the end, the later lessons involving the earlier ones with constantly new variations, until the pupil may be allowed to use his own judgment in combining the elements of attack and defence. The method is a sound one, and is well and clearly presented.

The French terms of art are rendered into English with a purpose not so much to translate exactly as to give terse and easily remembered and distinguished phrases and words that may be practically well adapted to use. It is no objection to these that they are sometimes imitations of the French rather than translations. The word and the thing are meant to be inseparably associated in the pupil's mind, and remarkably good judgment has been shown in adapting the whole to the uses of English-speaking men. The illustrations are reproduced photographs from living persons, and both in beauty and in interest have a great advantage over outline drawings and mere diagrams. The aim of the author to present a sound and trustworthy scheme of instruction in his art, and one that may fairly be accepted as a standard, has been satisfactorily accomplished. The publishers have coöperated with him in making the book a handsome one without and within.

BOOKS OF THE WEEK.

Abbott, Evelyn. Herodotus, Books V. and VI. Oxford. Clarendon Press; New York: Macmillan. $2.75.
Alexander, Rev. William. Primary Convictions. Harpers. $2.50.
Argyll, Duke of. The Highland Nurse: A Tale. Tait, Sons & Co. 25 cents.

HENRY HOLT & CO., N. Y.

NORTHAMPTON, MASS.

TO LET—Furnished, the new cottage of the late Mrs. Harrison O. Apthorp; contains nine rooms, is fully and tastefully furnished and beautifully situated on high land, with broad view of the Connecticut Valley and Mts. Tom and Holyoke; has all modern conveniences and is within a short distance of railroad station; rent low to a careful tenant for two or three years. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ASHFIELD, MASS.

TO LET—Furnished, for the summer, a very attractive old-fashioned house in the beautiful hill township of Ashfield, Mass., near the summer home of the late George William Curtis. House contains 12 rooms; ample land, stable, etc.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

BEVERLY SHORE, MASS.

FOR SALE OR TO LET—An estate of 20 acres of very high land, directly on the water. Large house, fully furnished, stable, gardener's cottage, gardens, and beautiful trees. Will be sold at a low price to settle an estate. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

PENINSULA.

FOR SALE—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and comprises 100 acres of land. Controls on its inner side a landlocked harbor with deep water for its whole length, has fine views of the mountains, and the land is wonderfully diversified, comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.
It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.
Price, $3,500.
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

FOX ISLANDS.

TO LET—for the summer—Two very charmingly situated cottages, directly upon the water; grounds occupying exclusively a peninsula of 50 acres on Fox Island Thoroughfare, Maine, in the large island township of Vinal Haven. Each house is fully furnished—has a boat harbor, barn, etc., and boat houses, half-a-mile from village and steamboat landing; houses contain 7 and 10 rooms; rents $175 and $225; exceptional chance for two families wishing to be near together; will be let together or separately.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

Dyspepsia

Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of

Horsford's Acid Phosphate,

"A wonderful remedy, which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other Medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

YALE MIXTURE

The choicest Smoking Tobacco experience can produce or that money can buy. MARBURG BROS.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free. Druggists, or by mail, $1. Manufactured only by the *F. Crosby Co.*, Accept no substitute. *56 West 25th St., New York.*

Recent and Forthcoming Publications.

Venice:

An Historical Sketch of the Republic.

By Horatio F. Brown, author of "The Venetian Printing-Press," "Life on the Lagoons," etc. With maps and plan. 8vo, $4.50.

"Mr. Brown has covered a period of almost twenty centuries, in a volume of 400 pages, and the result is extremely satisfactory. Everywhere he has seized the main and significant facts of an era or of an event."—*New York Times.*

The Empire of the Tsars and the Russians.

By Anatole Leroy-Beaulieu. Translated, with annotations, from the third French edition, by Z. A. Ragozin.

Part I. (Complete in itself.) The Country and Its Inhabitants. 8vo, with maps printed in colors, $3.00.

Outlines of Roman History.

By Henry F. Pelham, Professor of Ancient History in the University of Oxford. 12mo, $1.75.

This work has been planned more particularly to meet the requirements of higher grade students and reading classes.

Three Generations of English Women.

Being the Memoirs and Correspondence of Susannah Taylor, Sarah Austin, and Lady Duff Gordon. By Janet Ross, author of "Italian Sketches," etc. With Portraits. New, Revised, and Enlarged Edition. 8vo, $2.00.

"We take pleasure in noting a new edition of Janet Ross's delightful book; a storehouse of anecdotes, letters, and bits of portraiture and description, before which the quoter stands embarrassed, like the proverbial animal between the bundles of hay."—*Chicago Dial.*

The Genesis of Art-Form

An Essay in Comparative Æsthetics.

By George L. Raymond, Author of "Poetry as a Representative Art," etc., Professor of Oratory and Æsthetic Criticism, Princeton College. Fully illustrated, $2.25.

"In a spirit at once scientific, and that of the true artist, he pierces through the manifestations of art to their sources, and shows the relations, intimate and essential, between painting, sculpture, poetry, music, and architecture. A book that possesses not only singular value, but singular charm."—*New York Times.*

"It is impossible to withhold one's admiration of a treatise which exhibits in such a rare degree the qualities of philosophical criticism."—*Philadelphia Press.*

An Agnostic's Apology,

And Other Essays.

By Leslie Stephen, author of "Hours in a Library," "The Science of Ethics," etc. 8vo, $2.50.

"Marked by the highest qualities of thought and literary expression, the volume as a whole is well worth the attention of those who would know what a singularly fair and frank and acute thinker has to say on the most important subjects of human thought."—*N. Y. Evening Post.*

The Works of Thomas Jefferson.

Edited by Paul Leicester Ford. Limited letter-press edition, printed for subscribers, to be complete in ten vols., 8vo, uniform in size and style with the editions already issued of the writings of "Hamilton," "Franklin," and "Washington." The edition is, like these, printed from type, and is limited to 750 copies. Vol. I. now ready. Per vol., $5.00.

The Meaning and the Method of Life.

A Search for Religion in Biology. By Geo. M. Gould, A.M., M.D. 8vo, $1.75.

Nullification and Secession.

Webster's Argument, and the Kentucky and Virginia Resolutions. Considered in reference to the Constitution and Historically.

By Caleb William Loring. 8vo. $1.00.

"It is emphatically a book which students of Political History will welcome."—*N. Y. Recorder.*

The Wilderness Hunter.

With an Account of the Big Game of the United States, and its Chase with Horse, Hound, and Rifle.

By Theodore Roosevelt, author of "Hunting Trips of a Ranchman," "History of the Naval War of 1812," etc., etc. With illustrations by Remington, Frost, Sandham, and others. 8vo, $4.00.

Studies of Travel.

By Edward A. Freeman, author of "History of Sicily, Methods of Historical Study," etc. Two volumes, with portrait of the author. I.—Greece. II.—Italy. 16mo, each 75 cents.

The papers in these volumes are devoted to historical and archæological studies and will be found of special interest to the thoughtful and scholarly class of travellers.

Voodoo Tales

As Told Among the Negroes of the Southwest.

Collected from original sources by Mary Alicia Owen. With an Introduction by Charles Godfrey Leland. Illustrated by Juliette A. Owen and Louis Wain. 8vo, $1.75.

"As regards novelty and originality of subject it ranks among the most important contributions to Folk-Lore."—*From Introduction by Chas. G. Leland.*

The Iliads of Homer.

(*Knickerbocker Nuggets Series, No. 41.*)

Translated from the Greek by George Chapman. With a full series of illustrations from Flaxman's designs and from Greek vases. 3 vols., uniform with the "Ballad" volumes of the Nuggets. $3.75.

Prisoners and Paupers.

A study of the Abnormal Increase of Criminals and the Public Burden of Pauperism in the United States; with a Consideration of the Causes and the Remedies. By Henry M. Boies, M.A. 8vo, illustrated, $1.50.

"The writer of this book has had much and long experience in the administration of penal laws—he has carefully studied the statistics of crime in the country at large, and none who read his book can doubt either his earnestness or the general fulness of his information."—*New York Tribune.*

"The book raises questions of the utmost importance—questions constantly growing in urgency, and which will not down—and the discussion of them must ultimately result in public enlightenment and political reform."—*Baltimore Sun.*

Marked "Personal."

By Anna Katharine Green, author of "The Leavenworth Case," "Cynthia Wakeham's Money," etc. 16mo, paper, 50 cents; cloth, $1.00.

The Silver Situation in the United States.

By Prof. F. W. Taussig of Harvard, author of "The Tariff History of the United States," etc. (Questions of the Day Series, No. 74.) Cloth, 8vo, 75 cents.

This monograph, which contains chapters on the history of silver from the Bland Bill to the opening of the present year, will be found invaluable to the student and to the general reader.

A Literary Courtship.

By Anna Fuller, author of "Pratt Portraits." 12mo, illustrated, $1.00.

Pratt Portraits:

Sketched in a New England Suburb.

By Anna Fuller. Third edition. 16mo, $1.00.

"One of the richest and most worthy contributions to American literature of the past decade. With a pen positively photographic this skilful writer has limned the portraits of this New England family, Pratt by name, and so thoroughly New England by nature."—*Rochester Herald.*

Leaders in Science Series.

II. Louis Agassiz.

His Life and Work. By Charles F. Holder. 12mo, illustrated, $1.50.

Partial Contents: The Boyhood of Agassiz—His Life at Heidelberg—His Friendship with Humboldt—His Career at Harvard—His Travels—His Religious Belief—His Works—Etc.

"Taken as a whole, no more useful Life of Agassiz has ever been prepared, and this volume can be warmly recommended to all who wish to gain familiarity with one whose name and fame will live always. The illustrations are excellent."—*Boston Times.*

I. Charles Darwin.

His Life and Work. By Charles F. Holder. 12mo, illustrated, $1.50.

"Mr. Holder is one of the American savants who have made Darwin and his system of philosophy a subject of profound study, and his book relating to him is one of the best that have been produced for popular use."—*Philadelphia Bulletin.*

Heroes of the Nations Series.

VIII. Napoleon,

Warrior and Ruler, and the Military Supremacy of Revolutionary France.

By W. O'Connor Morris. One volume, with maps and illustrations. 12mo, cloth, $1.50. Half leather, gilt top, $1.75.

VII. John Wyclif.

Last of the Schoolmen and First of the English Reformers.

By Lewis Sergeant. Fully illustrated, 12mo, each, cloth, $1.50; half leather, gilt top, $1.75.

"Mr. Sergeant has grasped the great truth of a public book. He has seldom distracted his reader's attention by any parade of pedantry or erudition, or by the fatal mistake of heaping his facts too closely together. The book is adorned with numerous decidedly good pictures."—*London Athenæum.*

Story of the Nations Series.

No. 36.

The Story of Poland.

By W. R. Morfill, author of "The Story of Russia." 12mo, illustrated, cloth, $1.50; half leather, gilt top, $1.75.

No. 35.

The Story of the Tuscan Republics.

(Florence, Siena, Pisa, Lucca, and Genoa.) By Bella Duffy. 12mo, illustrated, cloth, $1.50; half leather, gilt top, $1.75.

"The history herewith presented by Miss Duffy is one that gives real pleasure to the reader and affords the requisite guidance through the mazes of mediæval Italian history. The volume is packed with information and is thoroughly deserving of commendation."—*London Athenæum.*

Les Prosateurs Francais du XIXe Siecle

By C. FONTAINE, B.L.L.D. 12mo, half Roan, 378 Pages, $1.25. Introduction price, $1.00.

This volume is a collection of prose writings selected from the works of the French authors, beginning with *Xavier de Maistre*, who was born in 1764, and ending with *Jean Rameau*, born in 1858, arranged by authors chronologically. Prof. FONTAINE, who is also the author of "Les Poetes Francais du XIXe Siecle," has been careful to make such selections as should be representative in character. Each selection is complete in itself, and the volume may be used not only as a literature of the nineteenth century, but as an advanced Reader, and therefore is fitted not only for school, but for college use as well. It has biographical notices of the writers, and explanatory, grammatical, and historical notes.

OTHER NEW PUBLICATIONS:

DES KINDES ERSTES BUCH. Nach PAUL BERCY'S "*Le Livre des Enfants*," von WILHELM RIPPE. 12mo, boards, 40 illustrations. 40 cents.

CAMILLA. By EDMONDO DE AMICIS. 16mo, paper, 35 cents.

Marriage. The Inheritance. Destiny.

By SUSAN EDMONSTONE FERRIER.

With Photogravures by Merrill. Half Russia, uniform with our 'Jane Austen.' Each novel in two volumes, $2.50.

ROBERTS BROTHERS,

Publishers, Boston.

Charles Scribner's Sons'

NEW PUBLICATIONS.

Stories of a Western Town.

By OCTAVE THANET. Illustrated by A. B. Frost. 12mo, $1.25.

Octave Thanet has in this book a completely fresh field, in which she has done her finest work. These stories portray the types and conditions of life in the thriving, pushing towns of the great Central Western States with knowledge, sympathy, and a fine literary art.

Life of Michel Angelo.

By JOHN ADDINGTON SYMONDS. With 50 illustrations. New and cheaper edition. 2 vols., 8vo, $7.50.

"Mr. Symonds's knowledge of Renaissance history and literature is vast, and his competence as critic and investigator is undoubted. His 'Life' is an admirable and solid work."—*The Nation.*

The Real Japan.

By HENRY NORMAN. With 70 illustrations. Cheaper edition. 12mo, $1.50.

"He has given his readers what no other work on Japan affords, namely, a series of clearly drawn pictures of the country and people as they appear to-day, and as they are affected by the changes which have been occurring with bewildering rapidity of late years."

—*New York Tribune,*

Island Nights' Entertainments.

"The Beach of Falesa," "The Bottle Imp," and "The Isle of Voices." By R. L. STEVENSON. Illustrated. 12mo, $1.25.

These stories reveal anew some of Mr. Stevenson's most admirable qualities as a story-teller—his gift of fiery narrative of adventure and fight and his fantastic imagination and grim humor. They are valuable, too, as studies of South Sea Island character.

Christ in Modern Theology.

By A. B. FAIRBAIRN, D.D., Mansfield College, Oxford. 8vo, $2.50.

Mr. Fairbairn's book presents the new view of Christ due to the growth of the historical and scientific spirit of inquiry, and discusses the important effect of this new view upon Christian theology.

The French Revolution.

By CHARLES E. MALLET, Balliol College, Oxford. 12mo, $1.00 *net.*

A new University Manual, bringing into compact compass the information, suggestions, and ideas contained in the larger and more important works, inaccessible to most readers, on this great historical epoch.

NEW IMPORTATIONS:

Handbook to Japan.

A Handbook for Travellers in Japan. Third edition. Revised and rewritten by BASIL H. CHAMBERLAIN of the Imperial University of Japan and W. B. MASON. With 15 maps. 12mo, $5.00 *net.*

Full, exact, and down to date, this handbook will prove indispensable for all travellers to Japan. Its value is attested by the fact that although printed in Japan it is included in Murray's list of standard guide-books. This special edition, however, was prepared in Japan for the American market.

Modern Meteorology.

An Outline of the Growth and Present Condition of Some of its Phases. By FRANK WALDO, Ph.D., Late Junior Professor Signal Service, U. S. A. With 112 illustrations. Cr. 8vo, $1.25.

This new volume in the Contemporary Science Series gives in a compact, popular form the results of the progress that has been made in this science in recent years, with other information from original sources.

Japanese Jingles.

By MAE ST. JOHN BRAMHALL. Second edition. Sq. 12mo, $1.50.

Many new color blocks, artistically painted in Japan, give a special beauty to the second edition of this popular book, of which nearly 4,000 copies have been sold.

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York

"Nantucket Gray."

Many years' exposure to the salt air and quick climatic changes of this quaint old port has given its shingles a beautiful silvery-gray tone, much admired by people of keen artistic taste.

What nature has here taken years to accomplish can be got at once by the use of the special silver-gray numbers of

Cabot's Creosote Shingle Stains.

Scott's Waverley Novels

Edited by ANDREW LANG.

New Limited Edition of 1,000 Copies.

Scott has stamped his genius on an entire country and language, and the Waverley Novels are read by millions, and in every civilized country in the world. These great novels have never before been properly illustrated.

This edition is enriched, at a cost of over forty thousand dollars, with proof impressions on Imperial Japanese paper of three hundred original etchings, from paintings by celebrated artists of France and England, among whom are **Sir J. E. Millais, R.A., R. W. Macbeth, Gordon Browne, Pettie, Lefort, Lalauze, Teyssonnieres, etc.**

Andrew Lang, *the greatest English critic, as editor, will furnish critical introductions, glossaries, and notes to each novel, supplementing Scott's own notes.*

This is the most magnificent edition ever made of the works of any novelist.

The type will be large and new, set in a fine open page. The margins ample and the paper a beautiful natural tint. The volume a small 8vo, easy to handle, and the binding vellum cloth, gilt tops, slightly trimmed. Complete in 48 vols., issued 2 vols. per month, at **$2.50 per volume.** *Also 500 copies printed on Holland hand-made paper, with fifty additional illustrations, and bound in half leather, at $5.00 per volume.*

Prospectus and specimen pages showing type, page, and paper, with sample illustration, sent on application.

INDEX OMNIUM.

By T. E. SHIELDS.

A REFERENCE BOOK designed for the use of STUDENTS AND PROFESSIONAL MEN, on a plan intended to save time and facilitate access to knowledge acquired by reading and study.

☞ No title can completely convey to the reader an idea of the value of this book. By a simple and ingenious method of indexing, the results of wide reading and study can be recorded and made available for future use. Todd's Index Rerum and other books have attempted this, but the outlay of time and labor has been so great that few persons have ever persevered in their use. By an insignificant outlay of labor the student can secure any item of knowledge he may wish to preserve. If properly used it will prove to be a key that will unlock the secrets of every library.

One vol., quarto, about 400 pages, made from the best ledger paper and bound in substantial half leather binding and cloth sides, net, $4.50. Specimen pages and descriptive sheet sent on application. Will be sent by mail or express, paid, to any address on receipt of the price.

NEW BOOKS.

The Victorian Age of English Literature.

By Mrs. OLIPHANT, author of "The Makers of Florence," "The Makers of Venice," "Laurence Oliphant's Life," etc., etc. In two volumes. 12mo, cloth, gilt top, $3.00.

This work contains an accurate and comprehensive survey of English literature during the past fifty years—the Victorian Age—which is undoubtedly one of the most active, most prolific, and richest literary periods in the history of the globe. The lives and writings of five hundred literary celebrities are passed under the author's discerning review in these volumes, which likewise contain the history of the inception and development of innumerable magazines, newspapers, etc., more or less known to fame.

The Drama.

Addresses by HENRY IRVING. With frontispiece by Whistler. 16mo, cloth, gilt top, $1.25. Edition de Luxe (*in press*), large-paper, limited to 300 copies, signed by Henry Irving. One volume, 8vo, cloth, gilt top, $5.00 net. *Subscriptions invited.*

This dainty little volume comprises four interesting addresses by Mr. Irving, dealing with the annals of acting and with the art as well as with the traditions of the stage. It is full at once of the enthusiasms and the professional culture which mark everything said or done by the chief figure on the modern stage. The addresses, delivered at Oxford University, will, we are sure, be read and reread by all lovers of the higher drama and by every one in sympathy with the actor's art. The work is enriched by an excellent character portrait of Mr. Henry Irving.

The Parsifal of Richard Wagner.

Translated from the French of MAURICE KUFFERATH. Exquisitely illustrated. 12mo, cloth, gilt, $1.25.

"Prof. Kufferath's writings should be in the library of every collector of Wagner books."—*The Nation.*

"The book will be particularly acceptable to the devotees of the Master of Bayreuth."—*Boston Literary World.*

"The translation is thoroughly efficient throughout, and the work is a significant and welcome contribution to the critical literature of a period rich in musical interest."—*Brooklyn Times.*

Loaded Dice.

By EDGAR FAWCETT, author of "An Ambitious Woman," "The House at High Bridge," etc. 12mo, cloth, gilt, $1.25.

"In 'Loaded Dice' we have a novel of the most brilliant and fascinating type, aglow with all the gleam and glitter of Paris, in which city the scene is laid."—*Boston Budget.*

"'Loaded Dice' is a story which points lessons while it entertains."—*Boston Times.*

Christine.

By ADELINE SERGEANT, author of "Beyond Recall," "A Life Sentence," etc. 12mo, cloth, ornamental, $1.00; paper, 50 cents. *Holyrood Series.*

"A healthful, kindly story."—*Christian Union.*

"'Christine' has a finished quality that in the artistic sense is exceedingly agreeable. The narrative has plenty of effective contrasts, and the descriptive passages are admirable in suggestiveness."—*Boston Beacon.*

AUTHORIZED EDITION.

Cosmopolis.

By PAUL BOURGET. A masterly and unabridged translation. Large 12mo, cloth, gilt, $1.50; paper, 50 cents.

"A work of extraordinary power and deep interest."—*Philadelphia Bulletin.*

"Bourget has given us a series of portraits which are elaborated and refined. . . . 'Cosmopolis' is an admirable piece of portraiture in all ways."—*New York Tribune.*

Sold by all booksellers, or sent, postpaid, on receipt of price by the Publishers.

LEISURELY CARRIA[illegible]RIVES FOR *PRIVATE PAR[illegible]*

The cities, towns, and villages of E[illegible]are connected by roads so good that driving [illegible]them is a luxury. They lead through scenes of ru[illegible] life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,

Cambridge Place, Paddington, London.

GEN. SHERMAN.

Mr. Kruell announces the publication of his new Portrait of GEN. SHERMAN. Size of block, 11x8.7 inches. Proof impressions on Japan paper, signed by the Artist. Price, $20.00, carriage free.

"SENATE CHAMBER, March 27, 1893.
"I think it a very good likeness of the General in his later years. JOHN SHERMAN."

Nation, March 30, 1893:
"The grand manner of the engraving of Sherman, and the stamp of the great captain in the man himself, entitle the portrait to a place in the choicest gallery of art or fame."

N. Y. *Times*, April 2, 1893:
"Wood engraving, as Mr. Kruell understands the art, is no slavish copying, but an independent branch calling for artistic power in the engraver."

Also Portraits of GRANT, LINCOLN, WEBSTER, LOWELL, HARRIET BEECHER STOWE.

Address G. KRUELL, 42 Maple Ave.,
EAST ORANGE, NEW JERSEY.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

SPRING NO. 2.

Buffalo Lithia Water

Certainly acts better than any extemporaneous solution of the Lithia Salts.

The efficacy of this water in affections of the nervous system, complicated with Bright's disease of the kidneys or with a gouty diathesis, nervous dyspepsia, nervous prostration, stone in the bladder, etc., etc., etc.

WILLIAM A. HAMMOND, M.D., *Washington, D. C., Surgeon-General U. S. Army (retired), formerly Professor of Diseases of the Mind and Nervous System in the University of New York, etc.:* "There is a point in relation to the therapeutical efficacy of the BUFFALO LITHIA WATER which has not as yet, I think, received sufficient attention. It is well known that many cases of DISEASES OF THE NERVOUS SYSTEM are complicated with lithæmia, and that unless this condition is removed a cure is very often retarded and not infrequently entirely prevented. It is quite commonly the case that in CEREBRAL CONGESTION PRODUCING INSOMNIA, NERVOUS PROSTRATION, resulting from overmental work or much emotional disturbance, and in Epilepsy (to say nothing of many cases of insanity) an excess of uric acid in the blood is often observed. This state appears to be altogether independent of the character of the food, for no matter how careful the physician may be in regard to the diet of his patient, the lithæmic condition continues. I have tried to overcome this persistence by the use of phosphate of ammonia AND OTHER SO-CALLED SOLVENTS FOR URIC ACID, BUT WITHOUT NOTABLE EFFECT.

"Several years ago, however, I began to treat such cases with BUFFALO LITHIA WATER, with a result that was as astonishing to me as it was beneficial to the patient, so that now in all cases of NERVOUS DISEASES UNDER MY CHARGE IN WHICH THERE IS AN EXCESS OF URIC ACID IN THE BLOOD, I USE THE BUFFALO LITHIA WATER IN LARGE QUANTITIES. By this I mean that I do not have the patient drink merely a tumbler or two in the course of the day, but that I flood him, so to speak, with the Water, making him drink a gallon or even more in the twenty-four hours. By this course the urine after a few days ceases to deposit uric acid crystals on standing, the morbid irritability of the patient disappears, the tongue becomes clean, the wandering pains in the head are abolished, and the system is rendered much more amenable to the special treatment which may be necessary for the cure of the disease from which the patient suffers.

"I HAVE TRIED CARBONATE OF LITHIA DISSOLVED IN WATER IN VARIOUS PROPORTIONS, BUT IT CERTAINLY DOES NOT, IN CASES TO WHICH I REFER, HAVE THE SAME EFFECT AS BUFFALO LITHIA WATER."

And as a matter of prime importance it is not to be forgotten that the composition of the Buffalo Lithia Water is such, and the experience of its use so complete, that no doubt exists of its great power not only as a solvent for calculi already in the bladder, but for the elements of such calculi existing in the blood.

Water in cases of 1 Doz. Half-Gallon Bottles, $5 f. o. b. here.

Special Terms to Schools.

Most publications—the leading newspapers, the religious papers, the magazines—make a reduction from their regular advertising rates to educational institutions. We are prepared to give our school customers the advantage of these concessions, as well as other special discounts. We prepare the advertisements, if desired, and set them up attractively in type, submitting proofs. We take entire charge of the order, and see that every paper inserts the advertisement as per contract and for the full time, and yet it would cost you less to place your work in our hands than to send it to the papers yourself. Send for estimates and particulars to

DAUCHY & CO.,
Newspaper Advertisement Agents,
27 Park Place and 24-26 Murray St., New York.

Association of Collegiate Alumnæ Bureau of Occupations.
If you wish to employ college women as teachers, secretaries, librarians, etc., address Miss EVA MARCH TAPPAN, Hotel Plunkett, Philadelphia, Pa.

FOR SALE.
A well-established Preparatory School in a Western city of 200,000. Principal desires to retire from school work. Address WESTERN, care of *Nation*.

Educational.

For information apply to the SECRETARY, No. 32 East 33d Street.

DE pluribus unum. It is a curious paradox that the more candidates an Agency has, the fewer it will recommend for a particular place. The Irish steward apologized for writing so long a letter because he had not time to write a shorter one. So some Agencies have to send notices to every Tom, Dick, and Harry on their list, because they have not a large enough registration to pick out just *the* man. Here are a few places filled by us in 1892, where (1) application was made to us, (2) we recommended a candidate as *the one*, and (3) he was elected. MEN.—(1) Ass't Sup't, Cleveland, O., $2,700; Principals of Academies, (2) Factoryville, Pa., $1,800; (3) Hiawatha, Ks., $1,300. Principals of High Schools, (4) PLURIBUS N. Y., $1,300; (6) Onondaga Valley, N. Y., Pueblo, Col., $1,800; (5) Suspension Bridge, $1,100; (7) Granville, N. Y., $1,100. Assistant Teachers, (8) Winona Normal, $1,500; (9) Omaha, Neb., $1,500; (10) Pueblo, Col., $1,200. WOMEN.—Teachers of Methods. (11) Davenport, Ia., $1,200; (12) Utica, N. Y., $1,000; (13) Cedar Falls, Ia., $1,000; (14) Grand Forks, No. Dak., $1,000; (15) Winona, Minn., $900; (16) Emporia, Ks., $900. Other Assistant Teachers, Baton Rouge, La., $900; (17) St. Cloud, Minn., $750: (18) Salt Lake City, Utah, $600. In many places where salary was not fixed we named three candidates at different salaries, and one was selected, usually at the highest. We seldom name more than three candidates, and if sufficient details are given can usually fix on just one. UNUM.
THE SCHOOL BULLETIN AGENCY, C. W. BARDEEN, SYRACUSE, N. Y.

KINDERGARTEN AND SCHOOL SUPPLIES, J. W. Schermerhorn & Co. 3 East 14th Street, New York.

President, Edmund J. James. Corresponding Sec'y, Roland P. Falkner. Treasurer, Stuart Wood.

THE
AMERICAN ACADEMY
Of Political and Social Science.

STATION B, PHILADELPHIA,
Organized Dec. 14, 1889. Incorporated Feb. 14, 1891.

☞ *For additional information in regard to the Academy see the corresponding column of* THE NATION *of April 6th.*

The Academy holds regular scientific sessions at which papers are read and discussed. The proceedings are published in the form of a bi-monthly journal (*The Annals of the Academy*), which is sent to all members, together with such Supplements as may be issued from time to time.

Besides the papers submitted to the Academy, the *Annals* contains a Book Department in which the more important works in Politics, Economics, and Statistics are reviewed. The Academy also collects and publishes in the *Annals*, under the head of Personal Notes, late and accurate information relating to the life and work of authors and scholars in its appropriate field.

The Academy is publishing a Series of Constitutions of leading modern countries edited by competent experts. The following have already appeared:

MEXICO. *Prof. Moses*, University of California.
COLOMBIA. *Prof. Moses*, University of California.
FRANCE. *Dr. Currier*, Mass. Institute of Technology.

The following are in preparation:

PRUSSIA. *Prof. Robinson*, University of Pennsylvania.
BELGIUM. *Dr. Vincent*, Johns Hopkins University.

Others will be announced later.

The Academy has published nearly one hundred scientific papers by distinguished scholars of the United States and foreign countries. Persons interested in the promotion of the Political and Social Sciences, whether as experts or laymen, are invited to become members.

By assisting in the work of the Academy one may aid in a very immediate way the progress of scientific economics and politics.

Applications for membership and all other communications should be sent to the address above.

PUBLICATIONS OF THE ACADEMY:
Separate Editions.

Important to Publishers.

ADVERTISE IN

Publishers of books and periodicals should bear it in mind that the THE WEEKLY REVIEW teems with information on all contemporaneous literature and events, that it contains each week a classified catalogue (12 pp.) of books, and of the contents of newspapers and periodicals; that the REVIEW's readers are exceptionally progressive people, who seek only the best literature, and who regard the REVIEW (with its invaluable system of supplying the very articles and books it talks about) as their Purchasing Guide. Every publisher of first-class periodicals or of good books should try THE WEEKLY REVIEW.

THE WEEKLY REVIEW

J. MORRISON-FULLER, Publisher,
5 SOMERSET ST., BOSTON.

RECENT IMPORTANT BOOKS.

Wanderings by Southern Waters.

By EDWARD HARRISON BARKER, author of "Wayfaring in France." Illustrated. 8vo. Cloth. $4.50.

"The name of the book conveys no idea of the freshness, the originality, and the romance of its pages. The region in which the author has lived, sharing the existence of the peasants, and tramping over its byways, is a district rarely traversed by English people even on the railway. Visitors to the Puy de Dôme stop short a hundred kilometres north of it. Travellers to eastern Spain by way of Toulouse cross the Dordogne at a most picturesque point but never alight there."—*London Athenæum.*

"None tell more pleasantly or more truthfully the story of their wanderings. It is long since we have read a book so thoroughly honest."—*London Academy.*

An Atlas of Astronomy.

By Sir ROBERT S. BALL, F.R.S., Professor of Astronomy and Geometry at the University of Cambridge; author of "Starland," "The Cause of an Ice Age," etc. With 72 Plates, Explanatory Text, and Complete Index. Small 4to. Cloth, $4.00.

"The high reputation of Sir Robert S. Ball as a writer on astronomy at once popular and scientific, is in itself a more than sufficient recommendation of his newly published 'Atlas of Astronomy.' The plates are clear and well arranged, and those of them which represent the more striking aspects of the more important heavenly bodies are very beautifully executed. The introduction is written with Sir Robert S. Ball's well-known lucidity and simplicity of exposition, and altogether the Atlas is admirably adapted to meet the needs and smooth the difficulties of young and inexperienced students of astronomy, as well as materially to assist the researches of those that are more advanced."—*London Times.*

The Laws and Properties of Matter.

By R. T. GLAZEBROOK, F.R.S., Fellow of Trinity College, Cambridge. A new volume in the Modern Science Series, edited by Sir JOHN LUBBOCK. 12mo. Cloth, $1.00.

This book, while not pretending to be a complete treatise, aims at making clear to one who wishes to understand something of physics the meaning of the terms applied to matter, and the principal properties it possesses.

Charles Darwin:

HIS LIFE TOLD IN AN AUTOBIOGRAPHICAL CHAPTER, AND IN SELECTIONS FROM HIS LETTERS. By his Son, FRANCIS DARWIN, F.R.S., Fellow of Christ's College, Cambridge. With Portrait. 12mo, cloth, $1.50.

"Certainly every incident in the life of Charles Darwin is of interest to the reading public. When the incident is related by himself the interest becomes special. . . . It is intensely interesting to watch events as they gradually closed in about Darwin and actually forced him to choose the career which has made the whole world shake at the thunder of its facts and the lightning of its logic."—*New York Herald.*

The Political Value of History.

By WILLIAM E. H. LECKY, author of "History of England in the Eighteenth Century," etc. A Presidential Address, delivered before the Birmingham and Midland Institute, in Birmingham, October 10, 1892. Reprinted, with Additions. 12mo, 57 pages. Cloth, 75 cents.

New Popular Edition of Lecky's England and Ireland.

A History of England in the Eighteenth Century.

By WILLIAM E. H. LECKY. Cabinet Edition, seven vols., 12mo. Cloth, $7.00.

A History of Ireland in the Eighteenth Century.

By WILLIAM E. H. LECKY. Cabinet Edition, five vols., 12mo. Cloth. $5.00.

The "History of Ireland" was formerly included in the eight-volume edition of the "History of England." By a rearrangement of the contents the two Histories now appear separately as above, each complete in itself, but bound uniformly. Important revisions have been made, and the work is in some respects practically new.

The well-known high character of this standard work needs no fresh commendation.

Great Commanders Series.

Edited by Gen. JAMES GRANT WILSON.

Admiral Farragut.

By Captain A. T. MAHAN, U.S.N., author of "The Gulf and Inland Waters," etc. With Portrait and Maps. 12mo. Cloth, $1.50.

General Taylor.

By Major-General O. O. HOWARD, U.S.A. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

General Jackson.

By JAMES PARTON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

Send for Appleton's List of Latest Publications, containing descriptions of numerous important books of the past three months. Mailed free on request.

1, 3, & 5 BOND STREET, NEW YORK.

THE ROLFE EDITION OF SHAKESPEARE.

COMPLETE IN 40 VOLUMES. ONE PLAY COMPLETE IN EACH VOLUME.

Illustrated. 16mo, Cloth, 56 cents, plus 6 cents for postage, per vol.; Paper, 40 cents, plus 4 cents for postage, per vol.
With Notes by Dr. WILLIAM J. ROLFE of Harvard University.

The Tempest. . . .	King Henry IV. Part I.	Cymbeline	Henry VI. Part II . .
Merchant of Venice . .	King Henry IV. Part II.	The Comedy of Errors .	Henry VI. Part III .
King Henry the Eighth .	Hamlet	Antony and Cleopatra .	Pericles, Prince of Tyre .
Julius Cæsar . . .	Much Ado About Nothing	Measure for Measure .	Tha Two Noble Kinsmen
Richard the Second . .	Romeo and Juliet . .	Merry Wives of Windsor .	The Winter's Tale . .
Macbeth	Othello	Love's Labour Lost . .	Richard the Third . .
Midsummer-Night's Dream	Twelfth Night . . .	Timon of Athens . .	King Lear . . . .
King Henry the Fifth .	All's Well that Ends Well	Two Gentlemen of Verona	Venus and Adonis, etc .
King John	Coriolanus	Troilus and Cressida. .	Sonnets . . . . .
As You Like It . . .	Taming of the Shrew .	Henry VI. Part I. . .	Titus Andronicus . .

Each of Shakespeare's plays is preceded by an introduction containing the "History of the Play," the "Sources of the Plot," and "Critical Comments on the Play." This is the only illustrated school edition of Shakespeare.

No one can examine these volumes and fail to be impressed with the conscientious accuracy and scholarly completeness with which they are edited. The educational purposes, for which the notes are written, Mr. Rolfe never loses sight of, but like "a well-experienced archer, hits the mark his eye doth level at." HORACE HOWARD FURNESS, Ph.D., LL.D.,
Editor of the "New Variorum Shakespeare."

I have greatly enjoyed your work on "Hamlet." It is certainly the most satisfactory edition we have.
Rev. J. H. SEELYE, D.D., LL.D., *President of Amherst College.*

In the way of annotated editions of separate plays of Shakespeare, for educational purposes, I know of none quite up to Rolfe's.
HIRAM CORSON, M.A.,
Prof. of Anglo-Saxon and English Literature, Cornell University, Ithaca, N. Y.

I have not seen any edition that compresses so much necessary information into so small a space, nor any that so completely avoids the common faults of commentaries on Shakespeare—needless repetition, superfluous explanation, and unscholar-like ignoring of difficulties. EDWIN A. ABBOTT, M.A.,
Author of "Shakesperian Grammar."

Instructors are invited to send for Illustrated Bulletin giving fuller information regarding the above and others of Dr. Rolfe's annotated works. Special terms will be made to teachers. Address

HARPER & BROTHERS, Publishers, Franklin Square, New York.

D. C. Heath & Company, Boston, Publish the Following Texts:

German.

Joynes-Meissner German Grammar, $1.12; Joynes' German Reader, 90 cents; Harris' German Composition, 50 cents; Thomas' Goethe's Faust, $1.12; *and over sixty other first-class and new German texts.*

French.

Edgren's French Grammar, $1.12; Super's French Reader, 80 cents; Matzke's Victor Hugo's Hernani, 70 cents; Bowen's French Lyrics, 60 cents; Fontaine's Mérimée's Colomba, 35 cents; *and over seventy other first-class and new French texts.*

Italian.

Grandgent's Italian Grammar, 80 cents, *and other Italian texts.*

Spanish.

Edgren's Spanish Grammar, 80 cents; Ybarra's Practical Spanish Method, $1.20; *and other Spanish texts.*

English.

Corson's Introduction to the study of Browning. Retail price $1.50; Scudder's Shelley's Prometheus Unbound, 60 cents; Hawthorne's American Literature, $1.12; Williams' Composition and Rhetoric, 90 cents; Meiklejohn's English Grammar, 80 cents; Strang's Exercises in English, 45 cents, etc., etc.

Mathematics.

Bowser's Mathematical Series; Hopkins' Plane Geometry, on the Henristic Plan, 75 cents; The New Arithmetic, 75 cents; etc., etc.

History.

Sheldon's General History, $1.60, and Sheldon-Barnes' American History, $1.12. The only histories published that are not on the narrative plan, but on the laboratory plan advocated by all leading teachers.

Civics.

Dale's American Citzen, 90 cents; "One of the best books published in 1891"; Woodrow Wilson's The State, retail price $2.00; Gide's Political Economy, retail price $2.00, etc., etc.

Science.

Shepard's Inorganic Chemistry, $1.12; Remsen's Organic Chemistry, $1.20; Shaler's First Book in Geology, $1.00; Colton's Practical Zoology, 80 cents; Guides for Science Teaching, from 10 cents to $1.00 each.

Education.

Compayre's Lectures on Teaching, retail price $1.75; History of Pedagogy, retail price $1.75; Psychology Applied to Education, retail price 90 cents, etc., etc.

Catalogue of all our Publications in these and other departments sent on application.

SOME FORTHCOMING PUBLICATIONS
OF

GINN & COMPANY.

ENGLISH.

A Practical Course in English Composition.
By Professor Alphonso G. Newcomer of Leland Stanford Junior University.
In this book the art of composition will be given the distinct treatment which its importance warrants. (*June.*

Practical Elocution.
By Professor Robert I. Fulton of Ohio Wesleyan University, and Professor Thos. C. Trueblood of University of Michigan.
This is the outgrowth of the class room as well as the study, and contains the latest and best thought on the subject. (*May.*

The Classic Myths in English Literature.
By Professor Charles Mills Gayley, University of California. Based chiefly on Bulfinch's Age of Fable and adapted to school use and to the needs of beginners in English literature and in the classics. (*May.*

The Thoughts of Marcus Aurelius Antoninus.
Long's Translation. Edited by Edwin Ginn.
In the series of Classics for Children. (*May.*

The Life and Writings of George Gascoigne.
INCLUDING AN APPENDIX IN WHICH WILL APPEAR SEVERAL POEMS FROM THE FIRST EDITION OF 1572. By Professor Felix E. Schelling of the University of Pennsylvania.
This work forms Number 4 in Volume II. of the Publications of the University of Pennsylvania. (*April.*

Leigh Hunt's An Answer to the Question "What is Poetry?"
INCLUDING REMARKS ON VERSIFICATION. Edited by Professor Albert S. Cook of Yale University.
One of the most delightful short papers on the subject of poetry. (*April.*

LATIN.

P. Cornelii Taciti, Dialogus de Oratoribus.
Edited with Prolegomena, critical and exegetical commentary, indexes and a bibliography, by Alfred Gudeman, Johns Hopkins University.
The first edition of the Dialogus in an English dress. (*September.*

Catullus.
Edited, with Introduction and Notes, by Professor Elmer T. Merrill of Wesleyan University.
In the College Series of Latin Authors. (*June* 1.

Livy, Books XXI.-XXII.
Edited, with an Introduction and Notes, by Prof. J. B. Greenough of Harvard University. In the College Series of Latin Authors. (*June.*

Harvard Studies in Classical Philology. Volume IV.
Edited by a Committee of the Classical Instructors of Harvard University.
CONTENTS: The Αὐλός or Tibia. By Albert A. Howard.—The Tragedy Rhesus. By John C. Rolfe.—The Use of Hercle (Mehercle), Edepol (Pol), Ecastor (Mecastor), by Plautus and Terence. By Frank W. Nicolson.—Accentual Rythm in Latin. By J. B. Greenough.—On the Omission of the Subject-Accusative of the Infinitive in Ovid. By Richard C. Manning.—Latin Etymologies. By J. B. Greenough.—On πεῖραρ ἐλέσθαι (Iliad Σ 501). By Frederic D. Allen.—Herondea. By John Henry Wright.—Notes. (*May.*

Cornell Studies in Classical Philology, No. IV.
Edited by Professors Charles E. Bennett and Benjamin Ide Wheeler.
This number is a treatise on the Development of the Earlier Athenian Constitution, by Dr. George W. Botsford. (*June.*

GREEK.

First Four Books of Xenophon's Anabasis.
Revised by the editors, Professors W. W. Goodwin and John Williams White of Harvard University.
The notes, as well as the text, are being revised and in great part rewritten. (*September.*

Thucydides, Book III.
Edited, with an Introduction and Notes, by Professor Charles Forster Smith, Vanderbilt University.
In the College Series of Greek Authors. (*September.*

MODERN LANGUAGES.

An Introduction to the French Language.
By Professor Alphonse N. van Daell, Massachusetts Institute of Technology.
A practical grammar with exercises. (*July.*

Von Sybel's Die Erhebung Europas Gegen Napoleon I.
Edited, with Introduction and Notes, by A. B. Nichols, Instructor in German at Harvard University.
In the International Modern Language Series. (*June.*

Studies and Notes in Philology and Literature. Volume II.
Published under the direction of the Modern Language Departments of Harvard University. (*June.*

NATURAL SCIENCE.

A Student's Manual of a Laboratory Course in Physical Measurements.
By W. C. Sabine, M.A., Instructor in Harvard University.
Intended for supplementing college courses in physics. (*April.*

A Reader in Botany. Part II.
Flower and Fruit. Compiled by Jane H. Newell.
Supplies a course of reading in Botany for pupils in the higher grades. (*May.*

HISTORY.

The Principles of History.
The Historik of the late Professor Johann Gustav Droysen of Berlin. Translated by President E. Benj. Andrews, Brown University.
This little work will appeal powerfully to all readers possessing a philosophic cast of mind. (*April.*

POLITICAL SCIENCE.

The Psychic Factors of Civilization.
By Lester F. Ward.
A new presentation of the whole subject of social progress, past, present, and future, written from a scientific standpoint, but in a popular style. (*July.*

GINN & COMPANY, Publishers,

Boston, New York, Chicago, London.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

PENINSULA.

FOR SALE.—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and comprises 100 acres of land. Controls on its inner side a landlocked harbor with deep water for its whole length, has fine views of the mountains, and the land is wonderfully diversified, comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.

It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.

Price, $3,500.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

FOX ISLANDS.

TO LET—for the summer—Two very charmingly situated cottages, directly upon the water; grounds occupying exclusively a peninsula of 50 acres on Fox Island Thoroughfare, Maine, in the large island township of Vinal Haven. Each house is fully furnished-has a boat harbor, barn, etc., and boat houses, half-a-mile from village and steamboat landing; houses contain 7 and 10 rooms; rents $175 and $225; exceptional chance for two families wishing to be near together; will be let together or separately.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

NORTHAMPTON, MASS.

TO LET—Furnished, the new cottage of the late Mrs. Harrison O. Apthorp; contains nine rooms, is fully and tastefully furnished and beautifully situated on high land, with broad view of the Connecticut Valley and Mts. Tom and Holyoke; has all modern conveniences and is within a short distance of railroad station; rent low to a careful tenant for two or three years. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ASHFIELD, MASS.

TO LET—Furnished, for the summer, a very attractive old-fashioned house in the beautiful hill township of Ashfield, Mass., near the summer home of the late George William Curtis. House contains 12 rooms; ample land, stable, etc.

J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

BEVERLY SHORE, MASS.

FOR SALE OR TO LET—An estate of 20 acres of very high land, directly on the water. Large house, fully furnished, stable, gardener's cottage, gardens, and beautiful trees. Will be sold at a low price to settle an estate. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ADIRONDACKS.

TO LET, furnished, at Lake Placid, a most beautifully situated cottage of 8 rooms, commanding an extended view of mountains and lakes, with grounds running to the water. Rent low.

J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

The Nation.

NEW YORK, THURSDAY, APRIL 13, 1893.

The Week.

It is hardly too much to say that President Cleveland had no more important appointment to make than that of Commissioner of Pensions. Originally a mere subordinate of the Secretary of the Interior, who controlled the expenditure of but a small portion of the Government's revenues, the head of this Bureau has come to have in his hands the distribution of more than $150,000,000 a year, with a prospect that the outgo from his office may reach the enormous total of $200,000,000 annually before the steady and rapid increase is checked. The most reckless profligacy has long characterized the action of Congress in voting money for this branch of the Government service, and equal recklessness has characterized the distribution of the money by the Bureau. The result has been the building up of a pension roll which is a disgrace to the nation. What was needed was the selection of a man of high character, judicial training, and established reputation, who was a Union soldier himself, and who could be trusted to administer the office with due regard to the interests both of his deserving comrades in the army and of the taxpayers of the nation. Such a man seems to have been secured in the choice for the Commissionership of Judge William Lochren of Minnesota, a brilliant soldier during the civil war, and since then a distinguished judge in his own State. While a Democrat in his sympathies, he is so little of a partisan that he was originally appointed to the bench by a Republican Governor and elected by a Republican district, and he is so highly esteemed by his fellow-citizens that the State Legislature, which has a Republican majority, recently passed by a unanimous vote a resolution declaring that he was eminently well qualified for the office of Pension Commissioner, and that his appointment would receive the approbation of the country at large.

Nobody questions the need of a radical overhauling of pension methods, yet how difficult the work is going to be, how few are the convenient and effective points of attack, may be seen from the discussion of the question in the current *North American*. All of the writers admit the urgency of reform, but all are barren of actual suggestions of the way to go about it. The Chairman of the House Committee on Pensions thinks that something might be gained by a stricter interpretation of the Disability Act of 1890, and by a return to the system of biennial medical examinations, and advocates taking the whole system out of politics by transferring it to the War Department and putting it under the care of an officer of the army. A past-commander of the Grand Army of the Republic shows how the spirit of self-help and brotherly charity which marked the first years of that organization has passed into the blind appeal to the Government. He thinks, however, that "the scythe of the great reaper" will soon come to the relief of the taxpayer. "A little patience and the account will be closed." This is ludicrous enough in view of the facts. Father Time's swath has been getting wider and wider, not among the pensioners, but in the Treasury, as the years have gone by.

The Post-office Department, so far from concealing information about its doings, as was threatened one day last week, is now more frank and explicit than ever. The daily reports of appointments now made include an analysis of the total, which shows how many are to fill vacancies caused by resignation or death, and how many of the removals are of incumbents who had served four years or more. Thus on Monday 119 fourth-class postmasters were appointed, of whom 99 were to fill vacancies, while seventeen of the twenty removed had served four years or more. A statement has been given out which shows that during the month beginning with March 4 the appointments of fourth-class postmasters numbered 878, of which 508 were to fill vacancies caused by resignation or death, and 370 in place of men removed, 90 of whom had served four years or more. In the first month of the Harrison Administration the appointments to fill vacancies were almost exactly the same—503; but the removals were 825, or more than twice as many.

Senator Gorman got together in Washington last week "sixty active Democrats" from among the oilers and stokers of his Maryland Machine, and poured a tale of woe into their sympathetic ears They were men after his own heart, he assured them, whom it was his purpose to serve; and as far as he had anything to do with the offices, "none others need apply." But "a condition [not a theory] confronts us in the matter of appointments." Horrible to relate, "many suggestions that have been made to the appointing power have been ignored." What effect this had upon the active Democrats does not appear, but from what we know of them it is safe to infer that the Senator's announcement struck them like an abrogation of all the laws of nature. As he pointed out, under the ordinary workings of nature and Providence, "the offices should go to our friends." But by some diabolical interference, some monstrous perversion of "the appointing power," the thing that should be was not. Hence these tears. But Mr. Gorman will get no sympathy from a heartless public. In fact, the open exhibition of his grief will be the signal for rejoicing among those who wish the Administration well. He was the most malign influence that beset Mr. Cleveland during his first term, and this early display of his nose out of joint is among the cheering auguries of better things for the four years to come. He and Hill and Murphy will, in truth, make an excellent set of signals by which to judge of the political weather: things must be going fairly well when they despond.

What has become of that tremendous enthusiasm for the annexation of Hawaii which two months ago was inundating the country? Commissioner Blount's arrival at the Islands is telegraphed, with the consequent depression of the annexationists and joy of the royalists, but none of the editors who were so impassioned about the "key of the Pacific" in February now stops to do as much as shed a silent and bitter tear at the spectacle. Perhaps they see how difficult it will be to keep up the required tension for the length of time Mr. Blount means to spend in his inquiries. He actually plans to visit all the islands and employ several weeks in finding out the real sentiments of the people. It was evidently a great mistake to send a man of such plodding methods, when there were available as commissioners men of lightning-like minds, such as that of the ex-officer of the navy who told a reporter that the "nine hours" he spent in Honolulu thoroughly convinced him that the Hawaiians to a man were in favor of annexation.

A letter from Honolulu to the *Evening Post* only confirms the impression which almost all the later news gives, that the sentiment of the native Hawaiians is overwhelmingly against annexation to the United States. There seems to be no mistaking the genuineness of the relief which they experienced on learning that they were not to lose their country, and the unexampled outpouring of the natives, and the signs of popular rejoicing, are just such things as we should expect among men who felt that their political independence had escaped a great peril. President Cleveland's summary withdrawal of the treaty is thus fully justified. It is interesting to note the "slight seismic disturbances," as the *Tribune's* correspondent elegantly terms them, among the annexationists themselves. They are fast getting into trouble on their own account, and the Provisional Government itself is coming in for sharp criticism. Great offence is given, in particular, by the continued payment of a salary to the Queen and Princess Kaiulani, at

the rate of $25,000 a year. The noble republicans who got up the revolution know of many deserving fellows who could make use of that money, and are "at a loss" to explain its payment to an overthrown ruler. But the *Tribune* correspondent significantly writes:

"I have learned that it is due to the diplomacy of the Harrison Administration, which advised President Dole that so much sympathy for the Queen had been raised in the United States by the refusal of the Thurston embassy to let her envoy go to America in the *Claudine*, and by the segregation of the crown lands, that it would involve the annexation issue in extreme peril if further humiliations should be put upon the deposed sovereign."

The immediate collapse of the strike at the World's Fair grounds is a thing good both in itself and in the manner of it. The directors have escaped the peril of a delayed opening of the Exposition and the greater peril of knuckling down to labor tyranny. If they had given in to the demand that all non-union men must be at once discharged, they would have furnished the world quite the most striking exhibition of the fruits of our civilization to be seen at Chicago. Men who rail at laws and judges that would make "serfs" of workingmen and "czars" of employers, ought to explain who are the serfs and czars in the case of a labor union denying to thousands of laboring men the right to work for their daily bread. The incident has closed happily, but not without suggesting the real beauties of State employment. The Chicago Fair is a semi-national business, and the readiness of the labor agitators to bring political pressure to bear on the managers indicates pretty ominously what would be the course of things in a great established State industry. We should see, in fact, what was seen in Paris just before the fall of the Ribot Ministry. There was a strike in the national match-factories, and various demands were made on the Government relating to wages and superintendence They were at first roundly refused, but the strike spread, the strikers scurried around and got deputies and other mighty men in politics to wait upon the Ministry and threaten loss of votes on critical divisions, and finally the Government took fright and made an unconditional surrender. Two days later the Ministry fell, in spite of the few extra votes it had from the Radicals.

In 1890 Congress passed "An Act to Protect Trade and Commerce against Unlawful Restraints and Monopolies," which provided that "every contract or combination in the form of Trust or otherwise in restraint of trade or commerce among the several States or with foreign nations is hereby declared to be illegal" and punishable by fine and imprisonment. Provision was made for an injunction on behalf of the United States. In November last, trade and commerce and comfortable living in New Orleans were brought to a dead standstill by the concerted action of the labor unions, represented by the officers of their Amalgamated Council. James E. Porter, the colored member of the Council, is reported to have said, and the report has not been denied: "We propose to win by peace if we can, but if we are pushed to the wall, force will be employed." For several days the whole city was without means of transportation, without even hearses for the burial of the dead, and without gas or electric lights. In this emergency, Judge William Wirt Howe, the counsel for the Board of Trade, suggested that this action of organized labor was an unlawful restraint directed against trade and commerce by an unlawful combination. The United States Attorney, Mr. Earhart, was appealed to, and, with the permission of the Department of Justice, he filed a bill on behalf of the Government in the United States Circuit Court against the Amalgamated Council and all the societies behind it, including the Society of Musicians which had "tied up" the French opera. The service of process was immediately followed by a cessation of the strike, without, however, an abandonment of the combination and its perpetual menace.

Judge Billings of the Circuit Court has recently rendered his decision in the case—a decision which must, in the estimation of labor, mark as a bungler or an enemy every man in Congress who voted for the bill. It was decided substantially (1) that the cessation of the strike and of active violence was of no avail so long as the combination existed and the right to restrain trade was not disclaimed; (2) that the statute of Congress interdicted combinations of labor as well as of capital; (3) that the defendants' general denials did not rebut the case; (4) that the proofs of the Government fully sustained the charges of combination and violence and a complete paralysis of inter-State and international commerce in New Orleans; (5) that the defendant societies, while innocent and lawful in their origin, had no more right to make unlawful combinations than had individuals of equally worthy character; (6) that a combination to secure the employment of none but Union men by concerted acts of intimidation and violence, when directed against inter-State and international commerce, is an unlawful restraint of trade, against which the statute is aimed. It marks a curious continuity in social history that the one decision cited by the Court was that of Chief Justice Savage (The People vs. Fisher, 14 Wendell, 1), rendered half a century ago, in which it was set forth that a mechanic "may say that he will not make coarse boots for less than one dollar per pair, but he has no right to say that no other mechanic shall make them for less."

The April elections for municipal officers, held in scores of places all over the State of Kansas, have given the people the first chance to express their opinion upon the performances of the past winter, and they have everywhere availed themselves of it. The Populists put forward their candidates in every case, and did their utmost to win. The vote was unusually heavy, for the women, who have for several years enjoyed the right to vote in municipal elections, availed themselves of it far more generally than ever before, their registration being half as large as that of the men in Leavenworth and Wichita, and two-thirds as large in Topeka. The weather seems to have been favorable throughout the State, and both sexes turned out to the polls in force. Attempts were generally made by the politicians in both parties to continue the fusion between the Democrats and the Populists, but many of the Democrats refused longer to be bound by it, and voted for the Republican candidates. In Wichita, Gov. Lewelling's own home, the rebuke of the Populists was most emphatic, the entire Republican city ticket being elected by majorities almost double the highest ever before known, despite the most strenuous efforts on the part of the fusionists to secure an endorsement of his course. In Topeka and a number of other cities, the defeat of the Populists by the Republicans was hardly less pronounced. The prosperity of the State has been threatened by the extraordinary developments of the past winter, and the success of the Populists this month would have frightened away both capital and the most desirable class of inhabitants. But the material aspect of the case was the least important. The deliberate endorsement of Populist principles and methods would have meant that the people of a great commonwealth were unfit for self-government.

The difficulties of serving as chaplain of a legislative body appear to be on the increase. We commented some weeks ago upon the dissatisfaction caused in both Kansas and Nebraska the past winter by the display of partisanship in the prayers of the clergymen employed. There has been even more serious trouble in Texas. A bill was recently defeated in the House of Representatives which proposed to make an appropriation from the State Treasury for the establishment of a home for fallen women. Next day the chaplain besought the Deity to "open the eyes of those who have allowed the love of money to be balanced against virtue, that they may see that purity is above rubies, and that in their hands is placed the power to save those against whom the false standard of society has closed the churches and all avenues of reformation." One of the members who had voted against the bill offered a resolution reciting that "the prayer which appears in the House journals this morning is an unjust and unwarrantable reflection on certain members," and ordering that the portion above quoted be ex-

punged from the journals. Another member supported the motion in a vigorous speech, declaring the prayer "an insult to the members," and an "attempt of the chaplain to dictate to the House." But the chaplain had his defenders also, one of whom insisted that he had not gone far enough; that "without prayer and much prayer you are gone for ever"; and that "there are members criticising this prayer who are steeped in vice and folly and need prayer." The clergyman himself was given the floor, and explained that he had no individual member in mind, and that they were "all patriotic, honest, and honorable gentlemen"—in short, that the objectionable passage was uttered in a Pickwickian sense. Thereupon the resolution was rejected and the matter was dropped. The incident shows very clearly what a farce the chaplain's prayer has become, and should hasten the day of its abolition.

The appointment of a new Forest Commission on Monday by Governor Flower, under the recently enacted law in relation to the Forest Preserve and Adirondack Park, marks the completion of the new system of forest preservation instituted in this State on the recommendation of the Governor. The new law is divided into two parts—the first covering the subject of the Forest Preserve and the second that of the Adirondack Park. The first sections make very minute and stringent provisions for the care of the Forest Preserve, especially as regards the prevention and extension of forest fires, and of trespasses upon the Preserve, and the cutting of trees and timber. The Adirondack Park, which includes the islands in Lake George, is to be "for ever reserved, maintained, and cared for as ground open for the free use of all the people for their health and pleasure, and as forest lands necessary to the preservation of the head-waters of the chief rivers of the State and a future timber supply." The Forest Commission has very extensive powers over this park, and among other things is allowed to lease, for a term not longer than five years, parcels of not more than five acres to any one person for the erection of camps. All the employees of the Commission are to have the powers conferred by law upon game protectors, and the Commission may provide for the enforcement of the game law within the park by means other than those laid down in the statute. If the Governor has made a wise selection of Commissioners, this law ought to protect the forest lands of the State effectually from further depredations.

The *Manufacturer* of Philadelphia sees an objection to the admission of Venezuelan coffee free of duty, because in that case Venezuela would obtain for nothing a favor for which Brazil pays a price. This would be alarming if only Venezuelan and Brazilian interests were to be considered. But since American interests are involved, we cannot afford to take the exclusively foreign view which the *Manufacturer* recommends. The consumers of coffee in the United States have some rights. There is neither reason nor sense in compelling our own people to pay $5,000,000 a year in a roundabout way as a tax on coffee, only a portion of which goes into the public treasury, in order to reconcile the ideas of McKinley with those of Blaine. The reciprocity dodge in the McKinley bill had no basis other than this. It served its purpose of carrying the Republican party through an election, but did not win the race. We see no reason why the public should pay the coffee tax any longer, or why the Republicans should desire it any longer. The protectionists have told us often enough that our laws are made for Americans, not for foreigners. Why, then, should the organ of the Manufacturers' Club be so solicitous for the interests of Brazil at the expense of the consumers of coffee in the United States?

The resolution passed by the British House of Commons affirming the principle of payment of members has made, coming as it does in company with the Parish Councils and other democratic measures, a good deal of sensation. The Tories hardly venture to oppose it squarely. They take a middle ground, and say, Let any constituency which chooses to pay its member do so by taxing itself for the purpose; but why tax the whole country in order to pay members who do not wish to be paid—a category which probably contains a majority of the present House? When members were paid, as was the case before the Revolution of 1688, this is the way in which it was done: Any constituency that pleased paid its members, and any member who pleased served without pay. To this the Liberals make answer that it would never do to have two classes of members, the paid and the unpaid, as this would be sure to put the former in a position of inferiority, and make them the butt of sneers, as the Irish members are actually at present, because they take pay from their constituents or from "the Parliamentary fund," in order to enable them to stay in London. But there is no doubt that the change derives its most powerful support from its democratic character. The argument in its favor which has most force is the democratic argument, that it will enable a number of poor men, especially representatives of Labor, to go into Parliament who now cannot afford it. Mr. Burt, one of the Labor members now in the House, made a powerful speech in its favor from this point of view, describing the insults to which he himself was exposed in the shape of attempts to bribe him, made in the belief that he must, because he is poor, be very hard up and therefore likely to yield easily. He laid much stress, as did others in the debate, on the fact that the Parliament which contained Hampden and Pym was a paid Parliament, and therefore payment could not be a very bad thing.

But the world outside Parliament has so changed since then that neither Hampden nor Pym would know it if he came back. It was impossible in England of that day for any but leading men—that is, local notables—to go to Parliament. Parliament, therefore, pay or no pay, was sure to contain the flower of the nation as regards character and capacity. The most marked political phenomenon of our day, on the other hand, is the eagerness of nobodies to get into the Legislature merely to make a living or to get a chance of perquisites. This is the root-evil of modern politics in all democratic countries. Its growth has unquestionably been retarded in England by the non-payment of members. That is, the English House of Commons owes part of its purity to the fact that few or none can sit in it who have not means of support through accumulations or some remunerative profession or calling. As the world goes, the best politicians are, and must always be, men who do not get a living out of politics. How long this class will hold its own in England after a seat in the House carries a salary with it, remains to be seen. To be sure, it is more logical and symmetrical to pay legislators, like other public officers, but the world does not live by logic any more than by bread alone.

A writer in a late number of the *Fortnightly* discussed the question of the importance of Gibraltar to England, and came to the conclusion that, except as against Spain in the almost impossible event of war, the fortress was of slight strategic value. He thought its further retention by Great Britain was only a piece of sentimentalism, like keeping Nelson's *Victory* still on exhibition. To Spain, however, Gibraltar would be of positive as well as sentimental value, and he thought she would be willing to pay well for its cession. He suggested that the Spanish Government be approached on the subject, to see if it would exchange some of the Spanish possessions in Africa for the famous fortress. Meanwhile the Spanish press has taken the matter up. Castelar's organ says that the Spaniards would have to lose all their shrewdness at a bargain before they would bid anything for a piece of property which the would-be seller had set out by declaring was worth nothing to himself. In a more truculent tone the leading Conservative organ declared that not a single Spaniard would ever consent to such an ignominious exchange. It added: "There may be some thought in this country that Gibraltar will be restored to us, or that we will win it back for ourselves by God's grace, but there is absolutely no thought of giving up any territory which we now possess."

THE BETTER AND THE BUMMER ELEMENT.

THE defeat of "the better element" in Chicago by the bummer and semi-criminal element under Mr. Carter Harrison—and in the Exposition year, too—has naturally excited much attention in this city. Some solve the problem by throwing doubt on the existence of a "better element" in Chicago, and others by attributing Harrison's victory to the absence of "organization" on the part of his opponents. The inquiry is a very interesting one for us, because the political condition of Chicago so strongly resembles that of New York. That there exists a "better element" in Chicago there is no question. It is to be found in the vote of about 100,000 against Harrison. It exists here and in every city in the Union, but somehow it is not ordinarily strong enough to carry municipal elections except by a special effort known as a "popular uprising," which is, however, never available except when the misconduct of the bummer and semi-criminal element has become extremely bad. The Government of Russia has been described as "despotism tempered by assassination." In like manner the government of large cities in America may be termed "bummer government tempered by uprisings." Nevertheless, we believe that both in Chicago and New York the Better Element is really in a majority, and could, if it chose, retain the government of the municipality permanently in its hands. This is certainly true of New York, for the Bummer Element here has never yet polled a majority of the registered vote. Take, by way of illustration, the important election of 1888, at which Tammany got possession of the city. Tammany polled in that year 114,000 out of a total registered vote of 286,000. In 1890 it polled 116,000, or only 2,000 more, which may be called the natural increase of the Bummer Element. We think it is quite fair to set down as Better Element all voters of every description who do not vote the Tammany ticket. This Better Element, then, in 1888 registered 172,000 votes; in 1890, after two years' experience of Bummer rule, 129,000 votes. If the full registered vote in either of these two years had been cast against Tammany, Tammany would have been defeated, and the Better Element would now be in possession of the city. But in 1890, after a full trial of the kind of government the new Bummer régime was prepared to furnish, 30,000 of the Better Element stayed away from the polls and allowed Tammany to retain the city. Why did they stay away? Any one who could answer this question would explain the failure of popular government in American cities.

We think it is quite fair to assume that these 30,000 did not abstain because they were ignorant, or corrupt, or foreign-born, for Tammany unquestionably gets hold of all that portion of the New York voting population which comes under any one of these three categories. Nor can we very well ascribe their abstention to lethargy or indifference, because they took the most troublesome step in the exercise of the suffrage by registering. The *Tribune's* explanation of the Chicago defeat, which would also probably be Croker's, that the Better Element does not "organize," does not help us very much. In fact, the "organization" solution has taken the place of that old-fashioned one which ascribed bad municipal government to the failure of the intelligent and respectable classes to attend the primaries, or, as it used to be called, "to attend to their political duties." This lasted until it became a joke. Of course, if the Better Element could vanquish the Bummer Element at the primaries, it could vanquish it at the polls. The fallacy of the expedient was the familiar one of the catching of birds by putting salt on their tails. Organization is undoubtedly necessary to win elections as well as to win battles. But organization in political, as in military, warfare is only the second step towards victory. Before organization can do you any good, you must have troops willing to fight and willing to be organized for the purpose of fighting.

Now, if it were possible to go around among these 30,000 and ask them severally why, having registered, they failed to vote, we should in all probability get a perfectly intelligent answer from nine out of every ten of them. Not one would say that he did not vote because he was not "organized"; that if anybody wanted him to vote, he must "organize" him. Nor probably would any of them say that they preferred Bummer Government to Citizens' Government. Some would have said, doubtless, that they did not think the election of Scott would be enough of an improvement on Grant to make it worth their while to go to the polls to bring it about; others, that Scott was "Grace's man," and they hated Grace; others, that they would never under any circumstances vote for a Democrat; others, that they hated Mugwumps, and that Scott was a Mugwump invention; others, that Scott's nomination was a contrivance for breaking up the Republican party in this city; others, that they wanted to keep Tammany in power as an example of Democratic rule.

Behind all answers, however, would appear the great fundamental fact that they were not deeply impressed with the importance of good city government, or sufficiently convinced of the possibility of attaining it by any political process. It would be found, in truth, that it was to a certain state of mind on the part of a large body of intelligent men that the triumph of the Bummer Element was due—not to want of organization, or to foreign birth, or to ignorance or venality, but to a certain way of looking at things, not more formidable or intractable than the state of mind which for fifty years kept the majority of the people of the North from seeing anything wrong in slavery, or at all events any way of getting rid of slavery good enough to make striving for it worth while.

If this be true—if it be merely a state of mind on the part of decent, rational people that makes Bummer Government in our cities possible—the remedy is the simple one by which all permanent improvements in government have been effected in modern times, viz, the persuasion of people into new ways of looking at the problems of daily life. This, too, cannot be accomplished by essays on municipal government or general denunciation of fraud and wrong. It has to be done by the steady and persistent exposure of the evils of Bummer Government as manifested by offences of commission and omission by particular men in particular places at specified times, and the consequences thereof to the public. All the great changes for the better in the administration of both States and cities have been made in this way. They could be made in no other way as long as human nature remains what it is All the important steps forward in politics in two hundred and fifty years have been due to exposure of particular abuses as practised by particular persons. We may denounce sin for a thousand years without reducing its volume perceptibly. But catch the sinners and lock them up, or put them to flight, and the effect on the quantity of sin in any particular locality is at once perceptible.

THE POST-OFFICES AND PUBLICITY.

THE Postmaster-General did a very wise thing in deciding to try his fourth-class postmaster case against the newspapers before finally announcing the decision. There is no mistake of which a high officer of the Government can be guilty which has more far-reaching possibilities of evil in it than the manifestation of a disposition to hide the affairs of his branch of the service behind barred doors. Almost any other offence against the assumed liberties of the press is more easily forgiven. The newspapers as a rule are represented in Washington by men who want to be fair. They have no artificial reverence for the dignities of office, however, and they have acquired a habit of thinking that the President, the Cabinet, and all the responsible functionaries are servants of the great American public in fact as well as in name. Sometimes they carry this idea a trifle beyond the legitimate extreme; but generally an officer who meets them half-way in their search for proper information suffers little annoyance from their desire for information which is not proper. A reasonable concession to the popular demand for knowledge as to what the Government is doing, is likely to blunt the edge of any offensive inquisitiveness.

Some of the worst mistakes made eight years ago, when the Democrats assumed the reins of power after a quarter of a century's disuse, were made in attempts at concealment. The Indian Bureau, where nobody except the politicians who had something substantial to give in exchange could get any information to speak of, was about as badly managed for a considerable share of the time from 1885 to 1888 as it ever has been in its history. It is probable that if Commissioner Atkins's record could be thoroughly overhauled, he would himself come out unsmirched; but the unfortunate atmosphere of secretiveness which pervaded the office, and which was doubtless due in a great measure to the fact that the head of it knew almost nothing of its affairs, gave every one who had business there a suspicion of the moral quality of its management. The proportion of newspaper correspondents in Washington who were willing to believe that everything was right in quarters where they were denied the privilege of personal scrutiny was very small indeed. Under the administration of Gen. Morgan, on the contrary, even the representatives of newspapers politically hostile, while they might criticise the policy and methods of the Commissioner, were ready for the most part to swear to the honesty of his motives and the uprightness of his conduct, because he never turned away an inquirer in good faith. The letter-books, the accounts, all the papers of the office, were open to the inspection of any person who came there, properly accredited, to get information for the public, or to investigate a charge of wrongdoing.

A similar change came over the Civil Service Commission in 1889, when Messrs. Roosevelt and Thompson were appointed by President Harrison to membership. There was nothing in their way of doing business to conceal, therefore they concealed nothing. They invited the closest scrutiny of their manner of conducting business, with the result that they made converts to the merit system on every hand of public men and journalists who for the first time had a chance to see for themselves how the machinery worked, and who enjoyed the novelty of being invited to criticise and ask questions to their heart's content.

It is such examples, chosen at random from among many, which give force to the general rule that light and air hurt no one who does not deserve to be hurt. The present Cleveland Administration will be judged by comparison with its latest predecessor more sharply than the former Cleveland Administration was; and one of the first things an intelligent observer will note in preparing his standards is that the good men whom President Harrison drew around him may be distinguished from the bad and the indifferent, in looking back now on the four years just ended, by the fact that they who had nothing to be ashamed of walked and worked in the broadest sunshine.

To apply the moral to the case of the Post-office Department, the poorest apology for a man whom Mr. Harrison invited into his council chamber was John Wanamaker. He was also the most secretive. When he was dealing with an ordinary visitor in search of information which he did not care to give, his method was to draw the inquirer off the main question and fall to talking about the greatness of the Wanamaker shop in Philadelphia and the dimensions of its business in the course of a year. When the Civil Service Reform League Committee to investigate the operations of the departments came to him, however, with a polite request for permission to look through the records and see how many changes had been made in the fourth-class offices within a certain period, he could not make such tactics work, and therefore fell back upon an absolute refusal. There was no reason in the world for his denying them the right to look over the books, for they were prepared to do so without interfering with the business of the Department, and wholly at their private expense; but he treated the Government records as his own property, and the Committee had to obtain their information from other sources. It would have been very unfortunate if Postmaster-General Bissell had been misled into following the bad example of his predecessor. If the present Administration will bear comparison with the Harrison Administration, what would it have to fear from having all the facts come out, even if in some quarters an unfair use were made of them? If the multitude of changes made is right, why make any fuss about letting the whole world know how the changes are going on? If all this is wrong, nothing would be gained by closing the door upon it and leaving the public to frame its own conjectures. On the contrary, the public would be almost certain to conclude that the facts are worse than they really are.

THE IRON TRADE.

STATISTICS gathered by the trade journals show great changes in the relative output of pig-iron on the part of England and the United States. In 1882 Great Britain produced 4,000,000 tons of pig iron more than this country, that year covering her largest output; but in 1892 the United States made 2,500,000 tons more than Great Britain, that country's production having declined while ours increased to over 9,000,000 tons per annum. This heavy increase has been accompanied by such low prices that none but a furnace exceptionally favored has made any money. Nevertheless it is undeniable that great advances have been made in all branches of manufacture in the effort to reduce cost. Thus, during the decade just mentioned, the annual production of pig-iron has doubled, while the number of active blast furnaces has declined one-fifth. Not long ago a furnace producing 50 tons or so of pig-iron daily was thought to be doing well, but now a production of 200 tons per day is not considered remarkable.

Not only has the average capacity of blast furnaces changed very much, but the other elements in the problem of iron and steel manufacture are also different. To establish an iron centre is not now so simple a matter. Other industries more or less directly connected with the production of pig-iron or with the manufacture of steel naturally and necessarily group themselves around the common centre, and in process of time come under a common management, thus greatly increasing the common efficiency, and at the same time rendering the whole plant so formidable as to defy a competitor perhaps better situated as to ore or coal. The collapse of a number of real-estate booms has clearly demonstrated that the growth of a "city" is not certain because a blast furnace has been built in the neighborhood. A hint as to this fact could have been drawn from the history of many older furnaces, which have not collected around them any settlements of consequence. Pittsburgh is at a distance from the ore-beds, and Chicago is not near the coal-fields. It will not do in these days of large output and low prices to count too confidently upon success because of nearness to particular mines. Then, again, the iron trade must turn towards specializing. Advances in knowledge of chemistry and in the demand for special kinds of iron composition compel the ironmaster to establish his plant where he can most readily avail himself of different kinds of material. Local iron-ore mines have thus lost their advantage. Lastly, the market must be considered. With the development of transportation and the art of adjusting railway rates to trade conditions, iron plants compete though widely separated. Yet the available markets for different qualities of metal must be studied as never before.

The iron ores of Lake Superior furnish the principal material for the Northern furnaces. It was at first supposed that the discovery of easily mined ores in the Mesabi region would much reduce the selling price for all the ranges, but further reflection shows another side to the question. Estimates of the growth of iron production in the United States made by Mr. A. S. Hewitt and others seem likely to be exceeded. The proportion of Bessemer pig-iron is now about 42 per cent. of the total. The estimates of output for 1900 are put at 15,000,000 tons, of which 6,300,000 tons will be Bessemer iron, requiring 10,500,000 tons of 60 per cent. ore annually, of which the Lake Superior mines should furnish 4,700,000. These few hypothetical figures show that the amounts of Bessemer ore now in sight in the Lake Superior ranges are to feel a serious drain before many years are over, and that

the prospective value of this ore is great enough to stop any important decline in present prices because of the Mesabi discovery; for the time seems approaching when lean ores now neglected will have to be utilized if we are to have the expected great annual output of pig-iron in the next century. In view of such broad facts, how petty becomes the tariff policy of the United States in putting a duty upon Cuban ore. Recent investigation shows that the Cuban output will not exceed a million tons a year. The expert's report upon them says: "Cuban ores can never come into competition with Lake Superior ores in their natural markets west of the Alleghanies. It is neither natural, reasonable, nor equitable that the seaboard furnaces should depend upon Lake Superior for supplies. If that were the case, the whole steel and iron industries of the seaboard would, in the course of a few years, become extinguished. Cuba pertains naturally to the North American Continent, and Cuban ores ought to be considered as domestic and not as foreign ores." Exports of iron goods may in a few years become as necessary for us as now are exports of wheat and cotton, and if so the lowest cost of production is an essential factor.

Mr. John Birkinbine, President of the American Institute of Mining Engineers and an authority on the iron problem, said in a recent article in the *Engineering Magazine:* "Each year shows an increase in the average percentage of iron in the ore mixtures used in American blast furnaces, and longer distances covered by the rich ores in reaching points of consumption. It is probable that future advances may be in the direction of conveying fuel to meet these ores, particularly if the meeting-points furnish good market facilities for the product." This is a valuable hint. The same idea was in the mind of a writer in the *Iron Trade Review*, who argues long and well in favor of Marquette, Mich., as an iron centre, though his arguments are equally applicable to other points in the Northwest. The great inland region which we know by that name shows an increase of 60 per cent. in population in 1890 over 1880. Its railroad growth has also been continuous, while geographical lines bring it as near the Atlantic seaboard as is the territory tributary to Chicago. This section of the United States, 2,000 miles long by 300 wide, seems certain in time to achieve industrial independence. Theoretically the *Review* seems to establish its case, and to show the possibility of the assembling of pig-iron materials somewhere along Lake Superior as cheaply as is now done at Chicago or Pittsburgh. The situation in the Northwest apparently meets Mr. Birkinbine's conditions, yet the effect of climate and other drawbacks can be determined only by experience, and perhaps only after some losses.

Such extensions of the iron and steel industries do not imply a decline at the existing centres. The purchase by the Carnegie Company of one machine costing $1,000,000 has lately been reported, and it is well known in the trade that this wealthy company has lately been spending large sums in perfecting the mechanical appliances used in its plant so as to produce and handle pig-iron and steel with the least amount of human labor and at lowest cost. Perhaps nowhere else in the world can the manufacture of iron and steel be carried on with such small cost for wages per ton. Against such a rival it must be difficult for any new trade centre to arise and to maintain itself; yet, unless all indications fail, such an iron centre there will be somewhere on Lake Superior, and probably another near the Rocky Mountains. It is also possible that the iron industry of the country, as a whole, will by that time have reached the stage prophesied by Mr. Atkinson and Mr. Wells, when America will, under free-trade conditions, not only lead the world in output, but will be the producer to whom the consuming nations will look for their supplies.

TOCQUEVILLE'S SOUVENIRS.—I.

PARIS, March 31, 1893.

"LES morts vont vite." How distant already seems the figure of Alexis de Tocqueville, author of 'Democracy in America,' of 'The Old Régime and the Revolution'! The new generation has read these important works not much, if at all; it has chiefly taken its ideas from Taine and from Renan. Tocqueville is already become an "ancient"; Taine and Renan will probably have the same fate. Our age is not dogmatic; it hates general theories, general considerations, systems. Tocqueville is essentially dogmatic, his mind is of the same family as that of the author of the 'Esprit des Lois.' In his 'Democracy in America,' in his 'Old Régime and the Revolution,' you will look in vain for anything personal, for a portrait, for an anecdote. Tocqueville was a political philosopher more than a public man; he sat in the French Chambers, but, owing to certain qualities as well as certain defects, he never had much personal influence. He did not understand, he despised, what we call the *cuisine* of parties—what is called in England and in America the lobby. He was lost among men, like some superior spirit. He was conscious of the inferiority, the meanness, of the men who fill parliaments, and who, from the mere fact that they are representative men, must be of the average standard. He knew that he was not understood by them, he saw higher and further. The delicacy of his health, the refinement of his manner, a certain sort of timidity which always accompanies pride—everything tended to make of him a sort of stranger among his contemporaries. To those who knew him well—and I had that privilege—he was far more interesting a man than the majority of those who walk noisily on the political stage, and who fill the world with the bustle and clatter of a vulgar egotism.

But even to those who knew him best, Tocqueville remained somewhat of a mystery. Though, as I have said, he was essentially dogmatic, he was enigmatical. His mind was independent, his views were original, he attached himself to no leader. He had a sort of intellectual courage under which, nevertheless, there was a substratum of weakness, an organic weakness, which was probably a consequence of his delicate nature and health. He was not a man of action, though he was ambitious of political power and influence. He entered political life in 1839, when he was in the full maturity of his talents; but he played no important part between 1839 and 1848, during those last years of the parliamentary régime which had been inaugurated by the Revolution of 1830. In the 'Souvenirs,' which are now published and which were written at various times after the coup d'état which put an end to the second Republic, Tocqueville has a most interesting chapter on the Revolution of 1848 and its causes. He is, on the whole, very severe upon those who were the victims of this Revolution.

"I don't know," he says, "if ever a Parliament contained more varied and brilliant talents than ours during the last years of the July Monarchy. Nevertheless, I can affirm that all these great orators bored each other, and, what was worse, the nation was bored with their talk. It had come insensibly to see in the struggles of the Chamber intellectual fence rather than serious discussion, and in all that divided the various parliamentary groups—Majority, Left Centre, Dynastic Opposition—domestic quarrels between children of the same family trying to cheat each other. Certain corrupt acts, discovered by chance, had led the country to think that many such acts were concealed, that the class which controlled the Government was corrupt; and it had conceived for it a quiet contempt, which was mistaken for a satisfied and confiding submission."

The effect of the restriction of electoral rights was to divide the country in two parts, called the *pays légal*, the stratum which absorbed all political life, and the *residuum*, which was agitated by democratic and socialistic passions. Few people saw at the time as clearly as Tocqueville the rising importance of the social question. In October, 1847, he wrote a sort of manifesto, in which, having first described the languor of parliamentary life, he added:

"The time will come when our country will be again divided into two parties. The French Revolution abolished all privileges and destroyed all exclusive rights, but it left one standing—the right of property. Let property-owners cherish no illusions as to the strength of their situation, nor imagine that the right of property is an invincible rampart because so far it has never been stormed; for our time is like no other time. When the right of property was but the origin and foundation of many other rights, it defended itself easily, because it was not attacked; it formed the outer wall of society, and the other rights were the advanced defences. The blows did not reach it, and nobody ever thought seriously of attacking it. But now the right of property appears only like the last remnant of an aristocratic world which is no more; it stands alone, erect, an isolated privilege in the midst of a levelling society; it is no longer shielded by other rights more contested, more hated. Hence the situation is changed, and it is this right of property which alone bears every day the direct and incessant shock of democracy."

These words were really prophetic; Tocqueville saw the time approaching when the great struggle would be between those who possess something and those who possess nothing. He told the Chamber of Deputies over and over again that they must not be deceived by the quietness of the streets, by material order; that they must look beneath the surface and see what was in the minds and the heads of the lower classes. The Revolution of 1848 justified him almost too well; the edifice of the constitutional monarchy, of the *pays légal*, was shaken in a few hours, and nothing can be more instructive than the account given by Tocque-

ville of this extraordinary revolution, which was not provoked by any act of tyranny, but was the spontaneous effervescence of the socialist passions of Paris.

M. Thiers and M. Barrot were at the head of the Opposition in 1848. They put the match to a fire which was to devour themselves. "M. Barrot, who mingles a little silliness (*niaiserie*) with his weaknesses as well as his virtues," had been canvassing France and talking much at public banquets in favor of electoral reform. Tocqueville did not join the campaign of the banquets. He told his friends that they were playing a dangerous game. "At the Turkish Ambassador's I met Duvergier de Hauranne. I had some esteem and friendship for him, though he had nearly all the defects which party spirit can give. . . . I told him that I was afraid." Duvergier de Hauranne reassured him. His answer "painted exactly this man, resolute and narrow-minded; narrow with much intelligence, but an intelligence which, seeing well all that is confined in a certain horizon, does not imagine that the horizon can change; learned, disinterested, ardent, vindictive; of a sectarian race which makes politics through imitation of foreign nations and through historical reminiscence, which shuts up its mind within a single idea and gets heated and blinded by it."

I translate some of these short portraits of Tocqueville's, as they are remarkable for their severity and their terseness. Of M. Duchâtel, for instance, who was one of M. Guizot's colleagues in the Government, he says that he was "without prejudices, without vindictiveness, of an easy temper, always ready to oblige you when his interest allowed it; full of contempt and of amiability towards all." Guizot was "sickly, angular, often bitter and cutting." M. Hébert, the Minister of Justice, was a man "who resembled, more than any man I ever saw, a carnivorous animal." M. Dufaure, one of the principal members of the Opposition, "had a *sournois* mind and a sort of natural rusticity, mixed with much honesty." M. Molé concealed his egotism and ingratitude under an apparent openness and amiability.

The Revolution was begun by the National Guard, which wished simply to upset the Ministry. It was ended by what is called the people, who invaded the Chamber of Deputies. A self-elected provisional government proclaimed the Republic in the Hôtel de Ville. Tocqueville gives hour by hour an account of what he himself saw in these terrible days. Molé, Dufaure, Thiers, who had hoped for a moment to form a new Cabinet, disappeared in the tempest. The Duchess of Orleans, who had taken her young son to the Chamber of Deputies, had to retire before the crowd of the invaders. "I confess," says Tocqueville, "that what moved me most that day was the sight of that woman and child on whom fell the weight of faults which they had not committed. I looked with compassion on this foreign princess thrown among our civil discords; and when she fled, the memory of the sorrowful, mild, and firm countenance which she had maintained during the long agony in the Assembly, came back vividly to my mind." M. Thiers, meanwhile, "did not dare to return to his house. He had been seen for a moment in the Assembly before the arrival of the Duchess of Orleans, and he had almost immediately disappeared, giving the signal to many others. I heard the next day the details of his flight from M. Talabot, who had helped him execute it. . . . M. Thiers had been insulted by some men of the people; he followed, with M. Talabot, the quays of the Seine for a great distance, entered the Bois de Boulogne, and reëntered Paris by the barrier of Clichy."

If the Revolution of 1848 was called a mere surprise by many, Tocqueville does not consider it an accident. It was, he says, born of general causes—the industrial revolution which had made of Paris the first manufacturing city in the kingdom; the progress of socialistic ideas; the contempt into which the governing class had fallen; the centralization which gave the whole of France to the chance ruler of Paris. There were also accidental causes, the most important being what Tocqueville severely calls the "sort of senile imbecility of the King, a weakness which nobody could have foreseen." "I have often," he says, "asked myself what could have produced in the soul of the King this sudden and extraordinary weakness. Louis Philippe had spent his life in the midst of revolutions; he was surely not wanting in experience, in courage, in mind. I think that on that day his weakness came from the excess of his surprise; he was upset before he understood. The February Revolution was a surprise for all, but for him more than for anybody else." His mind for several years had retired into a sort of proud solitude; he was, besides, under the spell of historical reminiscences. I can cite a word uttered by the King to some alarmist, who spoke a few days before the event of the danger of a revolution: "Be reassured," said the King; "they have no Duc d'Orléans." It seemed to him that a Duc d'Orléans was a necessary factor in a revolution and in a great change.

Tocqueville witnessed the February Revolution with much concern; it seemed to him that France was never going to stop on the road to revolution. To his friend Ampère, who was more hopeful, and who praised the people of Paris, he said:

"You do not understand what is going on; you judge it like a *badaud* of Paris and like a poet. You call this the triumph of liberty; it is its defeat. I tell you that this people, whom you so innocently admire, has just shown that it is incapable and unworthy of living free. . . . It is always the same—as impatient, as thoughtless, as lawless, as weak in presence of the warning and rash in presence of the danger as its forefathers were. Time has changed it in nothing, and has left it as light-headed in serious things as it used to be in futile things."

After much quarrelling, they appealed to the future.

VASARI IN THE LIGHT OF RECENT PUBLICATIONS.

FLORENCE, March 12, 1893.

"THE Florentine masters," it has been said, "are the Dr. Johnsons of Art: they are so much more fascinating in the pages of their Boswell than in their own works." This illuminating paradox would lose none of its lustre, and would gain in force, if it were limited to the painters. It is certainly true that many Florentine painters who enjoy a considerable reputation because they figure in Vasari, would scarcely have roused a moment's curiosity if it had been left to their pictures to awaken it. A suspicion of this is now entering many people's minds, and it will soon be questioned whether our interest in Vasari's 'Vite' be not, after all, quite independent of the scores of second and third-rate pictures it celebrates; and whether it is not, by itself, and on its own account, one of the very greatest products of Tuscan genius.

Some such view of Vasari would account for the hold he has not only upon people who read him as literature, but upon students of the history of art. They soon discover that he is not an historian of the late Prof. Freeman's kind—in fact, that he never in his life consulted a document; and, worse still, that he rarely made accurate use of the information he had gathered. He abounds in contradictions; he makes long excursions on loop-lines to kick an enemy or to puff a friend; a tenth-rate painter working under the shadow of Brunelleschi's dome is more interesting to him than a great master elsewhere—and yet one comes back to him with an ever-increasing sense of his charm and fascination. He has this charm and fascination because he wrote down with the naïveté of an Herodotus the folk-lore, romance, and gossip that had, in the course of two centuries, gathered in profusion about the artists, a class of people who in Florence formed a more prominent and more self-conscious part of the community than they did in any other Italian city. Their fellow-townsmen, therefore, took the keenest imaginable interest in them both as a class and as individuals, and heard and repeated stories about them with that delight in personal anecdote which was the distinguishing mark of the Florentine populace and of their literature. It was for such a public that Vasari wrote, and this accounts for his method and his success. He had to be personal, gossipy, and readable. His unerring sense of the readable made him arrange his material in a way that would catch the eye, no matter at what cost to mere veracity, and for that reason he succeeded where others failed.

The student of history soon learns to assume that every success in any definite line of achievement is preceded and surrounded by a great many attempts in the same direction. Even if we lacked positive information, we might be sure that Vasari was not the first nor the only Italian to write lives of painters. As a matter of fact, Vasari's publication stopped many who were at that very time occupied with the same task, as was the case, for instance, with the "Anonimo Morelliano" (probably the Venetian Michiel). In further proof of this we may cite Prof. Carl Frey's recent publication of the materials which an unknown Florentine contemporary of Vasari was preparing for a history of art.* The difference in spirit between this writer and Vasari appears, however, in an instant. The "Anonimo Magliabecchiano" is a scholarly compiler who gathers material from all the books and manuscripts he can lay hold of, not only about the artists of antiquity and of the recent past, but about living masters. It does not occur to him to criticise his material, nor does he seem to have taken the trouble to look at the works of art that he might have seen by sticking his head out of the window. In fact, he mentions their works merely as points connected with the lives of the artists, not as the primary cause of interest in them. Vasari, on the contrary, always describes a picture or a statue with the vividness of a man who saw the thing while he wrote about it, and saw it so vividly that he did not think of looking up his notes. Nor does Vasari ever forget that the capital fact in the artist's career is his work. But a still more striking difference between the "Anonimo" and Vasari is that the latter clearly realizes the difference between the ancient and the modern world—a division which scarcely exists for the "Anonimo." Indeed, Vasari was one of the first writers to feel that modern civilization was a thing by itself, and not merely the resuscitation of a glorious past. Hence, in his first edition, he began at once with Cimabue,

*'Il Codice Magliabecchiano.' Berlin: Grote'sche Verlag. 1892.

and only because he found that this shocked his contemporaries did he prefix, by way of introduction to his second edition, an essay on the art of the ancients.

The modern world begins for Vasari with Cimabue, and he has a complete scheme of the growth of the arts from Cimabue to their culmination in his worshipped master, Michelangelo. That this scheme was not Vasari's invention was clearly proved by the "Anonimo," who, after he once gets to Cimabue, follows out the later history of art on much the same plan. Prof. Frey prefaces his edition of the "Anonimo" with an essay on Vasari's predecessors, in which it is proved that, at the end of the fifteenth century, fifty years before Vasari wrote, the Florentines were already well aware who their great masters were. Even a generation earlier, Landino, in his Dante Commentary, gives the names of Cimabue, Giotto, Taddeo Gaddi, Masaccio, Fra Angelico, Fra Filippo, Paolo Uccello, and Andrea del Castagno, as the names of great painters no longer living; Brunelleschi, Ghiberti, Donatello, and Desiderio, as the great sculptors. Of Desiderio, Landino speaks in terms repeated not only by the "Anonimo," but, almost word for word, by Vasari himself: "And if an utterly untimely death had not snatched him away in his early years, he would have attained, as every one acquainted with the arts expected, to the utmost perfection."

A tradition of criticism can, however, be traced much farther back than Landino. In a certain sense Dante himself may be looked upon as having caused the first study of Italian art. Even in the fourteenth century, his commentators had already begun to explain his reference to Cimabue and Giotto, and, in the fifteenth, the commentary on the famous lines spoken by Oderisi expanded into a sketch of the history of art from Giotto downwards. Not only in this indirect way is Dante to be considered the founder of art study, but he actually started one of the most popular art legends by his phrases "Cimabue nella pintura tener lo campo" and "ora ha Giotto il grido," thus giving an importance to Cimabue which he otherwise certainly would not have had. It is clearly proved that this, and this alone, gave rise to the elaborate romance which has made Cimabue as familiar a name as Giotto.†

The Cimabue legend does not, however, appear to have been at all elaborated before the end of the fifteenth century. Simultaneously with the "Anonimo Magliabecchiano," Prof. Frey has published 'Il Libro di Antonio Billi,' a work of the same nature, but briefer, written at different times towards the end of the fifteenth century and the first quarter of the sixteenth.‡ This note-book is of great importance, both because it shows what point the study of art had reached by the end of the fifteenth century, and because it was the common source of Vasari and the "Anonimo." The latter, being merely the crude material for a book, although already arranged in order, embodies Billi's notes unchanged, while Vasari of course adapts Billi more to his own style. It is in Billi that the story first occurs about Cimabue's Madonna being carried to Santa Maria Novella amid great rejoicing and to the sound of trumpets. Giotto's personality, on the contrary, was already fixed in the fourteenth century, and his importance fully appreciated. Boccaccio, in the 'Decameron' (vi, 5), calls him "one of the glories of Florence, he who brought to light again an art buried for many centuries, and painted so wonderfully that his pictures cannot be called likenesses, for they are identical with the life, for which people mistook them." (Of course Boccaccio himself owes his æsthetics to Pliny, who in turn owes his to the Greeks; but it is curious to find him already making use of the phrase which occurs constantly in Vasari, "pare vivo"—"seems alive.") The same critique of Giotto is found, word for word, both in the "Anonimo" and in his source, Antonio Billi. The story, however, of Giotto being discovered by Cimabue drawing sheep on a stone occurs for the first time in Ghiberti, who wrote his commentaries about 1450.

In fact, not only did the legends about popular painters gather in volume with the lapse of time, but the list of their works shared the same tendency to expansion. Filippo Villani, for instance, speaks of Cimabue, but mentions none of his works, nor does Landino; F. Alberti, writing in 1510, mentions two or three; Billi and the "Anonimo" cite quite a number, while Vasari does not hesitate to attribute to him everything "nella maniera bizantina" he can find. It is the same with Giotto, only that in his case the growth of the legend is directly due to the Dante commentators. Basing themselves on the probable fact that Giotto and Dante were acquainted, they were on the lookout for signs of the influence of their master on his great painter-friend, and wherever they found a face supposed to be that of Dante, as in the Bargello Chapel, or a subject connected in the remotest way with Hell or Purgatory, they unhesitatingly ascribed the picture to Giotto. The attribution to him of the frescoes of the Bargello Chapel can be traced back to Ghiberti, whose commentaries had a great influence upon all later Florentine art-historians; but Billi is the first to attribute to Giotto the Apocalypse in the Incoronata at Naples, adding that it was painted, "it was said, with the help of Dante, who, being in exile, wandered thither unknown." The "Anonimo" goes so far as to attribute to Giotto the frescoes in the choir of Santa Croce, indisputably by Agnolo Gaddi, thus showing that Giotto had, in the middle of the sixteenth century, become almost as generic a name as Raphael was in the last century.

The "Anonimo" felt that he must, if possible, connect some anecdote or startling fact with every artist; in this, as in everything, following the lead of Pliny. The startling fact which he connects with Orcagna, for example, is that he was paid 86,000 ducats for his tabernacle in Or San Michele. This is the earliest indication of the spirit which leads the Italian sacristan of to-day to tell us, while he is unveiling a picture, that the Queen of England offered 500,000 francs for it.

The good stories about Brunelleschi, told by Vasari with sympathetic garrulity, can be traced through the "Anonimo" and through Billi, and are found fixed already in Manetti, who, about 1480, wrote a life of Brunelleschi. The farther back they are traced, however, the more do they approach the baldness of fact. Thus, Manetti has the story about Della Luna's spoiling the Innocenti, but not Brunelleschi's retort: "There was one error in the building of San Giovanni, and you have picked it out for a model." Even the "Anonimo," although he speaks of the crucifix Brunelleschi had made in rivalry with Donatello, knows nothing of Vasari's *novella*, ending with Donatello's ejaculation, "You were made to carve Christs, and I clodhoppers." Billi relates that "even a woman had dared" to offer a model for the lantern of the cupola, but Vasari, to make it more gossipy, adds that she belonged to the famous Gaddi family. In one or two instances, however, Vasari sacrifices the point of a story for ulterior purposes. Billi, for instance, relates that "Donatello was in Siena, making a door for the cathedral. One day a goldsmith, Bernardetto di Mona Papera, happened to be passing through on his way from Rome. He was a friend of Donatello, so he called on him, and, beholding the splendid work, he reproached him for giving the Sienese so fine a thing to boast of. His words had such an effect that on a feast-day, when the apprentices had gone out to make holiday, Donatello and Bernardetto ruined everything, and, leaving the house, took the road for Florence. The apprentices coming home at night found everything ruined, and no Donatello; and not a word did they hear of him until he was safe in Florence." It would be hard to find an anecdote in which was combined to such a degree the Florentine's hatred of the Sienese and his consciousness of the splendor and glory bestowed upon a town by the works of arts within its walls. But Vasari, wishing, perhaps, to reconcile the Sienese, who, while he was writing, were being annexed to Florence, does not tell what arguments Bernardetto used with Donatello.

Poor Vasari has been most unmercifully cuffed about of late for accusing Castagno of murdering Domenico Veneziano, when, as a matter of fact, Domenico outlived Castagno. But Vasari can no longer be blamed for inventing this calumny. Billi relates it, and as he notes down only what he finds, the tale must have been already current at the end of the fifteenth century. It is more than likely that the story-spinning mind of the Florentines cooked up this murder as a criticism on Castagno's works. His energetic, gruff, almost brutal apostles and saints led to the conclusion that their painter must have been a very wicked man, just as nowadays Perugino's sweet, dreamy, beatified faces and eternally peaceful landscapes make it next to impossible to doubt, in spite of positive information to the contrary, that Perugino had an angelic nature.

Accuracy was not in the historical spirit of the sixteenth century. The "Anonimo Magliabecchiano" is quite as inaccurate as Vasari himself. Had he succeeded in becoming our chief source of knowledge on Italian painting, we should have been no nearer to accuracy than we are now with Vasari as our guide. We should simply have had another set of grotesque theories to refute, and another set of false attributions to put straight. To make Perugino the pupil of Botticelli, as the "Anonimo" does, is no better than making Timoteo della Vite the pupil, instead of the master, of Raphael. Vasari, moreover, is not guilty of anything so gross as the "Anonimo's" attribution of Ghirlandaio's "Last Supper" in the Ognisanti to Botticelli. This proves what has already been said, that the "Anonimo" never looked at pictures. The personal anecdote is his real interest, although he has none of that narrative power and dramatic sense which put Vasari on a level with Boccaccio and with the best *raconteurs* of all times. Botticelli's "crankiness," for example, interests him more than his works, and he begins his account of Sandro with a story not reported by Vasari:

"Tommaso Soderini was persuading him to get married. 'I will tell you,' answered Sandro, 'what happened a few nights ago. I dreamt I was married, and it made me so wretched that, to avoid falling asleep and having the dream over again, I got up, and all night rushed about the streets of Florence as if I were mad.' Thereupon Messer Tommaso saw

†See F. Wickhoff, 'Die Zeit des Guido von Siena.' Mitteilungen des Instituts für oesterreichische Geschichtsforschung. Innsbruck. Vol. X.

‡ 'Il Libro di Antonio Billi.' Berlin: Grote'sche Verlag. 1892.

that Sandro was not the soil to plant a vineyard in."

In the same way, although the "Anonimo" devotes scant space to Leonardo and Michelangelo, he dwells at length upon Leonardo's beauty and personal qualities, and upon Michelangelo's bitter feeling towards his great rival. "Leonardo was passing where a number of well-to-do people were discussing a passage in Dante. They stopped him for his opinion. But Michelangelo happening to come along at that very moment, Leonardo answered: 'Michelangelo will explain it to you.' This put Michelangelo into a fury: 'Explain it yourself, you who made a model for a horse, to cast it in bronze, and could not cast it, and so let it go for shame.'" Another time he shouted to Leonardo: "So those capons of Milanese believed all you said, did they?" ("Et che t'era creduto da que caponj de Melanesj?") If the late Senator Morelli had known these documents, he would have found in them curious confirmation of his theory that any given old master always painted hands in the same way. "Filippino generally made one hand larger than another, and was aware of the fault but could not change it."

Neither Billi nor the "Anonimo" offers any fresh information. I believe the only fact of the least consequence to the history of art in either is the "Anonimo's" statement that Botticelli painted in January, 1473, a St. Sebastian that was in Santa Maria Maggiore. There is every reason to think that this St. Sebastian is the one now in Berlin, and the date is valuable as one of the few points in Sandro's career upon which to base a theory of his development.

Not only do these new documents furnish no useful supplementary information, but they are fearfully meagre as compared with Vasari, although, among modern artists, they deal with the Florentines only. They say, it is true, a few words about the Sienese *Trecentisti*, but that only because they had Ghiberti's appreciative account of the Sienese before their eyes. Otherwise, they seem utterly blind to the existence of painters outside of Florence. Signorelli and Perugino are barely mentioned, and Raphael's name does not so much as occur. How different this is from the comprehensive sweep Vasari had! To him Florence was, of course, the eye of the universe, the Florentine artists were the greatest of modern times. His 'Vite' is so full of this conviction, and he has so won over his readers to it, that even today it sounds almost blasphemous to demur to this towering preëminence of the Florentines. Yet Vasari was an Italian as well as a Tuscan, and every artist in Italy interested him. He was a very busy man, a practising architect and a prolific painter, so he was often forced to rely on correspondents who were no less inclined to overestimate their own local painters than Vasari himself was when he spoke of any one from Arezzo. But it is not hard to distinguish these interpolations. Wherever Vasari speaks of what he has seen—and he saw nearly all the best work in Italy—and where he is not led astray by what may be called Albert-Wolffism, he is a singularly warm, generous, and appreciative critic. He feels instinctively, too, that the first function of the popular writer on art is to be interpretative. Everything considered, his interpretation is still the best there is. He is not as penetrating as Mr. Pater, nor so fantastical and poetical as Mr. Ruskin, but he is broader than either, and in closer sympathy with actual humanity. Among Italians, Vasari simply has no rival at all. Billi and the "Anonimo" make no attempt whatever at interpretation, and later writers, like Ridolfi, Baldinucci, and even Boschini, were incapable of writing down their impressions if they had any.

The chief use of the "Anonimo" and Billi is, therefore, to turn our minds to a kindlier view of Messer Giorgio. He was, to be sure, a true son of his age, and had no sense of the document. Billi and the "Anonimo" appreciate the value of documents even less. For documents we must look elsewhere. But Vasari is still the unrivalled critic of Italian art, and, regarded as literature, he was one of the great prose-writers of Italy, and the last important product of the novelistic tendency in Tuscan genius.

Correspondence.

SUNDRY CONSIDERATIONS.

To the Editor of The Nation:

Sir: The *Evening Post* says that the pension business is the despair of everybody at Washington; that it is regarded as probable that the amount required may reach $200,000,000 in one year; that nobody knows what to do about it, and that Mr. Cleveland is giving it anxious thought as the most important item of his Administration. It seems as if the simplest logic would suggest that the first thing is to give the national Treasury a chance to be heard. There is not a single man in Congress who has any authority or responsibility for acting as guardian of the national finances. The Committee of Ways and Means represents so many 340ths of the nation, the Committee on Appropriations so many other 340ths, and both together but a small fraction of the 340ths who care very little for the national finances, and a very great deal for conciliating the most active of their constituents and the most powerful members of the lobby. What is wanted is to send a national watch-dog to sit on his haunches and howl in front of the Speaker's desk, and if need be teach members of Congress that he can bite—that is, place them in an attitude before their constituents which they would find exceedingly detrimental.

From your last number it appears that, notwithstanding twenty-five years of public agitation of civil-service reform, with its labor and expense, the spoils system is about as great a scandal and nuisance as ever, and there is much less prospect that Congress will extend the reform than that it will sweep away what has been already done. Now it is evident that no political appointments can be made except by the direct action of heads of departments, with the consent of the President. If those heads of departments could be placed in a position of public responsibility, so that any independent member of Congress could directly cross-examine them as to why they removed such a man, and why they appointed such another, and they could not evade an explicit answer, this simple expedient would do more for reform in a single session than has the Civil-Service Commission since it was created. That is precisely the way in which the English Civil-Service Act, established in 1852, has worked on steadily and quietly, without requiring any public agitation or intervention of any kind.

Your article on the Missing Link shows with great force how the voters do not see or understand anything of the proceedings of the Legislature or of its members; how they have no reason for voting for or against candidates except the party nominations in caucus; and that thus they get no political education and can neither form nor express political opinions. Your remedy is that the members should be required to meet their constituents and explain their political action. But the trouble is, that the members have nothing to explain. Under the system of doing all business in standing committees, and, whether it is good or evil, by means of underhand intrigue and wire-pulling, and then forcing it through the houses by party combinations, the members understand the real reasons as little as their constituents, and are just as purely voting automata. The fact is, that the guidance of legislation is just as much executive work as any other part of administration. If the business could be taken up with system and under official leaders, one thing being handled at a time, with public debate and immediate settlement by vote, the people would soon begin to take interest in and understand their members, with very powerful effect upon the result.

From all which it follows that the urgent need of our politics, whether national or State, is that public contact of executive and legislature which is implied in giving seats in the Legislature to the chief executive officials; and the only real obstacle is the jealousy of the Legislature, and the failure of the people to understand the importance of the subject. If Mr. Cleveland wishes to cover himself with immortal glory, he has only to send a message, nominally addressed to Congress, but really to the people of the United States, with a categorical demand for this very thing; and if the Democratic party wishes to seize its real opportunity, it will see to it that the issue is spread abroad through the whole country.

G. B.

Boston, April 8, 1893.

A SERVANT MISSION AMONG THE FREEDMEN.

To the Editor of The Nation:

Sir: As has often been said, the best gift to the children of the poor is the power to help themselves—to make it possible for them, by their own exertions, to escape from the thraldom of poverty. This best gift it is the object of the Mission School of Cookery and Housework of Washington to bestow upon the ignorant colored girls that swarm in this beautiful city. And by teaching those naturally untidy and shiftless girls habits of neatness and thrift, and how to cook wholesome and palatable food, the Mission School is making a practical contribution to the solution of the problem of a good domestic service for this city. Altogether about 130 girls are taught each year how to do housework and plain cooking, including the cooking of meats, vegetables, plain desserts, bread, rolls, and plain cake.

Mrs. Anna Lowell Woodbury, the founder, has given many years of her life and a large sum of money to this admirable charity. She began the work in 1879, and has carried it on quietly and unostentatiously, but with steady success, until it is now one of the oldest and most estimable private charities in the city. It is considered a model of its kind. The excellence and simplicity of its methods and the scrupulous neatness—which is the first thing that impresses one on entering the school—have attracted the attention of visitors not only from our own States but from foreign countries.

Such an institution cannot fail to have ramifying relations to the community also. Its civilizing and sanitary effects penetrate the

homes of the very poor and suggest more healthful ways of living. So the school often carries into those homes a new spirit and power of helpfulness to overworked mothers, or in filling their places, bringing rest and comfort where they are seldom known.

The officers of the school are: Mrs. A. L. Woodbury, President; Mrs. Hugh McCulloch, Vice-President; Miss Tuckerman and Miss Katherine Hosmer, Secretaries, and Mrs. S. C. Miller, Treasurer.

The school is supported entirely by private subscriptions, and teaches a large number of pupils free of charge. It has now reached a stage at which it is thought desirable to extend its operations and place it on a more permanent basis. But to do this it will need further contributions. Those who wish to aid in a most practical and beneficent (and, it may be said, national) work can hardly find one more deserving, and may be sure that any contributions sent to the Treasurer—Mrs. S. C. Miller, at the school building, No. 1228 N Street, N. W., Washington, D. C.—will be gratefully received and carefully expended. N. H. T.

WASHINGTON, April 6, 1893.

THE CLEFT INFINITIVE.

TO THE EDITOR OF THE NATION:

SIR: Somewhat parsimonious, it strikes me, is the justice which Prof. Adams Sherman Hill, in his book recently published, 'The Foundations of Rhetoric,' dispenses to my treatment of this subject, as I handled it in 1882.

As if I had labored to poor purpose in connection with it, he speaks of my having merely "adduced what, at first sight, seems to be a formidable array of citations" of phrases like *to publicly chastise*, "ranging from the time of Wickliffe to the present day." None but a most meagre account of my citations being given, however, the reader is tacitly asked to take it for granted, on the strength of what is little better than a bare assertion, that they are hardly more substantial than Falstaff's "rogues in buckram."

For, "on examination," Prof. Hill goes on to comment, "it turns out that the names of some of the highest authorities on a question of good use—Addison, Goldsmith, and Cardinal Newman, for instance—are conspicuous by their absence." This I quote in passing, and reply to it. If Prof. Hill had communicated with me, before going to press, he would have learned, inappreciably as the fact imports my contention, that neither Goldsmith nor Cardinal Newman, any more than Dr. Johnson, Lord Macaulay, or De Quincey, despised the cleft or divided infinitive altogether. I am now able to appeal to both of them for it. As regards Addison, whether he will not be found to keep them company may, moreover, be prudently queried. My notes on his English, made at least thirty years ago, are not much concerned with his constructions, but are confined pretty exclusively to his vocabulary. In presence of producible warrants for the cleft infinitive, his recognition of it would, I repeat, matter next to nothing.

Still digressing, I must confess to mild surprise that a "Professor of Rhetoric and Oratory," as Mr. Hill is, should include Addison and Goldsmith among "the highest authorities on a question of good use." Agreeable as they are, it may be doubted whether any two equally voluminous writers of the last century, or of the present, could be more abundantly quoted for "use" quite the contrary of "good." As to the former of these classics, no judge whose opinion is worth a hearing will now subscribe to the pronouncement of Dr. Johnson, that "whoever wishes to attain an English style, familiar but not coarse, and elegant but not ostentatious, must give his days and nights to the volumes of Addison." If "an elegant style" can consist with the frequent employment of words inexactly, marked slovenliness of idiom, and a negligence of grammar occasionally approaching the autocratic, then, and only then, is it allowable to describe the style of Addison, so nearly allied to that of Goldsmith, as elegant. One may, I think, rather characterize it as gracefully dishevelled. Such has long been my estimate of it, and, on turning over the *Spectator* anew for five or six hours, I see no occasion to alter that estimate. With the imitators of Addison and Goldsmith, moreover, it has seldom fared otherwise than with kindred imitators. To a sane taste their mimicry, for the most part, certainly ranks, for abortiveness, with the flatulent intumescence of Dr. Parr, or with Mr. Hepworth Dixon's "middle-class Macaulayese."

With reference to the interposal of a word or words between *to* and the infinitive, the Reverend John Earle, Professor of Anglo-Saxon in the University of Oxford, has lately written:

"It has been shewn, by Dr. Fitzedward Hall, that this usage has been continuous from the fourteenth century to the eighteenth; so that the strange thing is, how it came to be interrupted, as it has been, by Dr. Johnson, Macaulay, and De Quincey. It almost seems as if these influential writers had created a new custom, upon which the revival of a very old practice had returned like an innovation." *Philology of the English Tongue* (ed. 1892), p. 539.

My paper on the cleft infinitive, printed in the *American Journal of Philology*, is, thus, treated favorably by a learned and critical Englishman. But that paper, which I could now improve, appeared, as has been said, ten years ago; and I have been enabled, meantime, to add largely to the quotations there given. What offers itself in the way of farther argument being reserved for a little space, my new quotations, selected from the stock lying at my elbow, after the rejection of upwards of a hundred, here follow:

"*To neuer die* againe." Joshua Sylvester, *Eden* (1598), *Works* (1605-7), Vol. I., p. 297.

"*To once name.*" Richard Bernard, *Terence in English* (1598), p. 261 (ed. 1607).

"*To well discerne.*" Edward Grimstone, *Acosta* (1604), p. 97.

"*To quite rid* himselfe out of thraldome." G. Woodcocke, *Ivstine* (1606), fol. 23 *r.*

"*To punish'd be.*" Lady Mary Wroath, *Urania, Pamphilia to Amphilanthus* (1621), p. 33.

"*To truely judge.*" John Done, *Polydoron* (1631), p. 133. Similar phrases occur in pp. 63, 69, 72, 78, 102.

"*To both shine and burne.*" Rev. Richard Carpenter. *Experience*, etc. (1642), I., xvi., 115.

"*To not wonder.*" Robert Gentilis, *Considerations*, etc. (1650), p. 45. See also pp. 51, 95, 102, 137, 140, 163 (*ter*), 172, 189, 236.

"*To so habituate* Nature, that," etc. Edmund Gayton, *Pleasant Notes upon Don Quixot* (1654), p. 8.

"*To first lay . . .* means for that end." Rev. John Sergeant, *Schism Dispach't* (1657), p. 96.

"*To never let*," "*to either scare or incourage.*" Rev. Dr. Henry More, *A Brief Reply* (1672), pp. 208, 301.

"*To quite overflow them.*" *Id.*, *Exposition of Daniel* (1681), p. 161.

"*To more illustrate.*" Dr. R. Burthogge, *An Essay upon Reason*, etc. (1694), p. 135.

"*To exactly copy.*" Edward Ward, *Hudibras Redivivus* (1707), Preface. Twenty-three more like collocations are found in the book.

"*To rightly judge.*" *Id.*, *British Hudibras* (1710), p. 20. See also pp. 40, 119, 123, 151, 166.

"*To neither stick or boggle*," "*to so affront.*" Anon., *The Welsh-Monster* (about 1712), pp. 11, 18.

"*To wholly or compulsively extinguish.*" Rev. Myles Davies, *Athenae Britannicae* (1716), Vol. III., *A Critical History*, etc., p. 14.

"*To far out-weigh.*" Anon., *Letters from Mist's Journal* (1722), Vol. I., p. 304.

"*To further divide.*" Jethro Tull, *Horse-hoeing Husbandry* (1731-39), p. 61 (ed. 1822). See also pp. 96, 134.

"*To either animate or cool* the Feet." W. Horsley, *The Fool* (1746-47), Vol. I., p. 9 (1748). See also Vol. I., pp. 40, 270, 292, and Vol. II., p. 99.

"*To justly fright me.*" Anon., *The Female Foundling* (1751), Vol. II., p. 78.

"*To really value.*" Sarah Fielding, *The Adventures of David Simple*, Vol. III. (1752), p. 33 (ed. 1753).

"*To entirely destroy*," "*to even mention.*" William Toldervy, *The History of Two Orphans* (1756), Vol. I., p. 194; Vol. IV., p. 127.

"*To better inform it.*" Mrs. Elizabeth Griffith, *Letters between Henry and Frances* (1757), Vol. II., p. 90 (ed. 1767).

"*To industriously seek.*" Mrs. Charlotte Lennox, *Henrietta* (1758), Vol. II., p. 158 (ed. 1761).

"*To only touch the back*," etc. Goldsmith (1762), *Miscellaneous Works* (ed. 1837), Vol. III., p. 325.

"*To ruinously confound*," "*to essentially injure.*" Anon., *The Woman of Honor* (1768), Vol. I., p. 34; Vol. III., p. 103.

"*To seriously and impartially consider.*" Thomas Hull, *The History of Sir William Harrington* (1771), Vol. II., p. 135 (ed. 1797).

"*To quite subdue.*" Miss Frances Burney (1768), *Early Diary* (1889), Vol. I., p. 10. In the same work there are sixteen similar expressions.

"*To immediately take.*" *Id.*, *Evelina* (1778), Letter 16. See also Lett. 19, 51 (*bis*), 79.

"*To silently wish.*" Miss G. E. Burney (1779), in Miss Frances Burney's *Early Diary* (1889), Vol. II., p. 269.

"*To readily guess*," "*to positively oblige*," "*to generously declare.*" Anon., *Fashionable Follies* (1782), Vol. I., pp. 76, 187; Vol. II., p. 255.

"*To personally chastise*," "*to directly oppose*," "*to entirely drown.*" *The New Spectator* (1784), No. 6, p. 3; No. 17, p. 2; No. 21, p. 2.

"*To heartily forgive.*" Anon., *Letters to Honoria and Marianne* (1784), Vol. III., p. 29.

"*To further explain.*" Miss Ann Hilditch, *Rosa de Montmorien* (1787), Vol. I., p. 173.

"*To publicly chastise.*" Anon., *Generous Attachment* (1787), Vol. IV., p. 196.

"*To thoroughly comprehend.*" Jeremy Bentham (1790), *Works* (1838-43), Vol. X., p. 235.

"*To openly avow*," "*to even rest.*" Anon., *Cicely* (1795), Vol. IV., pp. 130, 141.

"*To entirely exclude.*" Sir Humphry Davy, in Beddoes's *Contributions to Physical and Medical Knowledge* (1799), p. 131.

"*To fashionably and carelessly look in* at Tattersall's." *Morning Post* (1799), in *Spirit of the Public Journals*, Vol. III. (1800), p. 121.

"*To entirely satisfy.*" London *Times* (1801), *ibid.*, Vol. V. (1802), p. 345.

"*To eagerly cram.*" *Morning Post* (1801), *ibid.*, Vol. V. (1802), p. 359.

"*To again postpone.*" Anon., *Lusignan* (1801), Vol. I., p. 86.

"*To particularly avoid*," "*to immediately adopt.*" Elizabeth Helme, *St. Margaret's Cave* (1801), Vol. III., p. 113; Vol. IV., p. 95.

"*To merely reply.*" Maria Vanzee, *Fate* (1803), p. 137.

"*To so misbehave.*" Lord Nelson (about 1803) in Southey's *Life of Nelson* (ed. 1813), Vol. II., p. 189.

"*To something like hate* them," "*to first begin*," "*to manifestly prove*," "*to eagerly acknowledge.*" Thomas Holcroft, *Bryan Perdue* (1805), Vol. I., pp. 167, 239; Vol. II., p. 13.

"*To ardently desire.*" Rev. Sydney Smith, *Sermons* (1809), Vol. II., p. 294.

"*To openly serve*," "*to kindly commiserate.*" Anon., *The Reformist* (1810), Vol. I., p. 186; Vol. II., p. 34.

"*To continually ask.*" Dr. Thomas Busby, *Lucretius* (1813), Preface. Eleven more like phrases occur in the same work.

"*To perfectly congeal.*" Mrs. Mary Pilkington, *Celebrity* (1815), Vol. II., p. 13.

"*To materially affect.*" H. T. Colebrooke, *On Import of Colonial Corn* (1818), p. 10.

"*To indignantly fling.*" Sir John Bowring, in the *Westminster Review* (1827), Vol. VII., p. 327.

"*To barely rise.*" Cardinal Newman (1833), *Letters* (1891), Vol. I., p. 381.

"*To much relish.*" William Beckford, *Recollections*, etc. (1835), p. 149.
"*To more than insinuate.*" London *Times*, Jan. 15, 1839, in *Spirit of the Metropol. Conserv. Press* (1840), Vol. I., p. 20.
"*To utterly extinguish.*" *Morning Herald*, Sept. 17, 1839, *ibid.*, Vol. II., p. 389.
"*To cheaply decorate.*" Rev. G. S. Faber, *Provincial Letters* (1842), Vol. II., p. 297 (ed. 1844).
"*To alone make.*" Caroline Fox (1846), *Memories of Old Friends* (1882), p. 206.
"*To either eat, drink, or smoke.*" Hon. and Rev. S. G. Osborne, in Lord Ingestre's *Meliora*, Vol. I., p. 8 (1852).
"*To extensively alter.*" *Saturday Review*, Vol. XI., p. 579 (1861).
"*To quite please.*" James Spedding (1861), *Reviews*, etc. (1879), p. 270.
"*To even contract.*" Sir W. R. Hamilton (1861), in the Rev. R. P. Graves's *Life*, etc. Vol. III., p. 567 (1889).
"*To fairly unite.*" Matthew Arnold, *On the Study of Celtic Literature* (1867), p. 22.
"*To first take.*" "George Eliot," *Daniel Deronda* (1876), Vol. II., p. 296.
"*To absolutely detest.*" Mr. Leslie Stephen, *Hours in a Library* (1876), Vol. II., p. 3.
"*To really raise.*" Mr. J. W. Sherer, *The Conjuror's Daughter* (1880), p. 30.
"*To personally conduct.*" Mr. P. S. Robinson, *Saints and Sinners* (1883), p. 324.
"*To immediately apologize.*" Laurence Oliphant, *Altiora Peto* (1883), Vol. I., p. 181.
"*To properly and safely affect,*" "*to successfully overcome.*" *Id.*, *Sympneumata* (1885), pp. 27, 47.
"*To really understand.*" *Id.*, *Haifa* (1887), p. 192.
"*To at least suggest.*" Rev. Professor John Earle, *English Prose*, etc. (1890), p. 377.
"*To more than hint* a suspicion." London *Times*, Oct. 3, 1892, leader on *Death of M. Renan*.

To return to Professor Hill, "some students of language," he observes, "insist that good use sanctions, or at least condones," the cleft infinitive, and, one is to infer, consequently accede to it. But, without specifying them, he names me immediately afterwards; and his readers will, doubtless, suppose that I am of the number. Yet I am not so. I have distinctly said, as he ought to have acknowledged, that, though the ambiguity of "honour teaches us *properly to respect ourselves*" is obviated by putting *to properly respect ourselves*, yet it is preferable to write *to respect ourselves properly*. As regards my own practice, if I may be excused for speaking of it, never once have I indulged in a construction like that which I thus proposed to reform, by doing away with *to properly respect*. It does not at all follow, because one discusses a contested locution historically, and consents to view it under divers aspects, that it has one's approval. There are those, obviously, to whom, from ignoring the personal equation, nothing but explicit praise or dispraise is clearly intelligible.

Though an observer of style may entertain little liking for the cleft infinitive, it is not laid on him, in view of relevant facts, to imitate Prof. Hill's unsparing reprobation of it. The English-speaking world in general is, to be sure, fast coming round to its free employment; but, haply, there is a certain Nemo whose fancy it does not hit. This aversion of His Insignificance is, however, an unobtruded and unobtrusible private peculiarity; and he has never so much as dreamed that he was authorized to fulminate an adverse judgment on humanity at large for not adopting it. Very far is it from him, accordingly, to pronounce, after the manner of Prof. Hill, that "writers who know their business" will be at the pains to shun the cleft infinitive absolutely; a deliverance which somehow carries a reminder of ukasing. But, while it is not given to Nemo to autocratize, still he is at liberty, like everybody else, to try his hand in the prophetic line. And his twopenny venture at forecast is, that, before very long, the use of the cleft infinitive, wherever it shall contribute to euphony, terseness, or avoidance of ambiguity, will be accounted not only permissible, but laudable. Its sporadic presence in English literature for more than four centuries is, undeniably, evidence of its not conflicting with the genius of our language, just as is the verb *to atone;* and the occasional acceptance of it by writers of the rank of Dr. Henry More, Sir Thomas Browne, Dr. Bentley, De Foe, Dr. Johnson, Burke, Bentham, Southey, Coleridge, Sydney Smith, Charles Lamb, Sir John Bowring, Cardinal Newman, Lord Macaulay, De Quincey, Mr. Herbert Spencer, Matthew Arnold, Mr. Ruskin, Bp. Samuel Wilberforce, "George Eliot," and Mr. Leslie Stephen, is not safely to be set to the account of oversight. Not seldom, especially when one is talking, it seems to offer itself spontaneously, as it were; and there are few but risk it once in a way. "No stronger case has been made" for it, says Prof. Hill, than could be made for a practice common with Miss Austen, which may be exemplified in "*No one* can ever be in love more than once in *their* life." Hitherto I have failed of convincing him to the contrary. Will he now, unlike Pontius Pilate, unwrite his ἐγραφα?

"Even if good use were divided," so as to allow an option between the uncleft infinitive and the cleft, Prof. Hill apprehends "danger that soon we may [*read* might] have expressions like Herrick's 'to incense burn,'" and outrageous sandwiching after the pattern of Bishop Pecock's. The objection is of the same stamp as that of Mr. G. P. Marsh, who contends that, if we tolerate *is being made*, we "must, in consistency," tolerate *would have been being made*, and so on. Similarly, Mr. R. G. White, who would banish the verb *experience* from our language, gives the advice: "Let us not *experience* either a hay-crop, or a cow, or *anything else*." Against use there is no conclusion from abuse.

Sober instances of the cleft infinitive, those, in kind, which are rapidly recommending themselves to many persons of good taste, may be seen in the quotations drawn from Dr. Henry More, Sir Thomas Browne, and the other authors whose names are grouped together just above.

Adverting to what I had shortly before published relative to the form of collocation here considered, an open-minded writer in the London *Academy*, No. 533, liberally adjudicates that "to make hard-and-fast rules in such matters is absurd." This is exactly my opinion. At the same time, a suggestion to those who will not dispense with the cleft infinitive altogether, may not be amiss. It is, that they draw the line, when employing it, so as not to parallel, in uncouthness or heaviness, say the poet Wordsworth's *to not unfrequently make* and *to still further limit*.

It is "naïvely," according to Prof. Hill, that I make a certain remark which he quotes. Of a child one may speak thus inoffensively; but, otherwise, the word implies, I take it, a degree of weakness approaching imbecility. Where I decline to see more than a fact, my censor is positive that he sees what accounts for it, namely, heedlessness or what not, and would discredit me for my supposed want of common sense or perspicacity. One of the useful lessons which he has still to learn is, to put it suitably to his importance, to forbear, in some measure, that plerophory of cocksureness with which he habitually dogmatizes.

But, before concluding, I must thank him for a valuable illustration of the difference between the speech of England and that of the United States. In *Our English*, p. 121, he writes: "America *does not have* a monopoly of bad English." So one who talks loftily of what we are to expect from "writers who know their business." *Does not have!* If, in a village school over here, a bumpkin of ten were to express himself in this low, unidiomatic fashion, and be let off without stripes, he might think himself fortunate. Whoever *does not be* sure of this should come and inquire.

F. H.

MARLESFORD, ENGLAND, December 10, 1892.

P. S.—In my paper on the cleft infinitive above referred to, the quotation dated 1642 should be expunged. There, as was long the case occasionally, *to* stands for *too*.

And here I laid my letter aside, until I could satisfy myself regarding the paternity of the five quotations which I formerly gave as from Dr. Donne. Him I now find that I should not have named in connexion with them, but John Done, possibly a pseudonym: at any rate, nothing is known of any person so called. For this information I am indebted to the courtesy of the Rev. Dr. Augustus Jessopp, Rector of Scarning, the learned writer of the Life of Donne in the *Dictionary of National Biography*.

While waiting to finish this postscript, I have read Mr. Albert Matthews's letter on the cleft infinitive in No. 1438 of your journal. As to Mr. Matthews's remark that none of the quotations which I first gave for the cleft infinitive are from American authors, I reply that, in 1882, I had by me, for it, from such writers, more than five times the number of his quotations from all sources, and, besides, many from Scotch writers, as Carlyle, etc., etc., but purposely passed them by. Except when dealing with dialect, I almost always restrict myself to the authority of Englishmen. To see that Mr. Matthews's quotations from Shakespeare, Washington, Keats's *Cap and Bells*, and Dr. Holmes's *Guardian Angel* are not at all in point, requires only a little study.

FEBRUARY 25, 1893.

Notes.

A NEW edition of their 'Pronouncing Gazetteer of the World' is announced for this year by J. B. Lippincott Co.

Houghton, Mifflin & Co. have in press a Life of Ruskin, in two volumes, by W. G. Collingwood.

Lowell's Letters, as edited by Prof. Norton, will fill two volumes. The Harpers will publish them, as well as the second volume of the illustrated edition of Green's 'Short History of the English People,' 'Botany as a Recreation,' by Caroline A. Creevey, 'Practical Lawn Tennis,' by Dr. James Dwight, and 'The Philosophy of Singing,' by Mrs. Clara K. Rogers.

Dr. Edward Everett Hale's 'A New England Boyhood' will be published, with illustrations by his son, by Cassell.

The Scribners announce 'Social Strugglers,' a novel by Prof. H. H. Boyesen.

D. Lothrop Co. will issue next month 'In the Wake of Columbus: The Adventures and Researches of a Columbian Commissioner following in the Track of the Great Admiral from Cordova,' by Frederick A. Ober. The work will be copiously illustrated.

The Baker & Taylor Co. promise a reprint, 'Greeley on Lincoln,' which is of itself worthy of a place beside Mr. Schurz's sketch; but the little volume, edited by Joel Benton, will also contain letters from Mr. Greeley to Charles A. Dana and a lady friend, and reminiscences of

the *Tribune's* founder. The same firm have in preparation 'The New Era,' by the Rev. Josiah Strong, and 'Amateur Photography,' by W. I. Lincoln Adams.

'The Confessions of a Convict,' edited by Julian Hawthorne, with illustrations by the criminal himself (a forger) and others, will be published by Rufus C. Hartranft, Philadelphia.

Knight, Leonard & Co., Chicago, have nearly ready 'Napoleon: A Drama,' illustrated from historic paintings, by Richard Sheffield Dement.

'Old English Ballads,' selected and edited, with notes and an introduction, by Prof. F. B. Gummere of Haverford College, is in the press of Ginn & Co.

A. C. McClurg & Co., Chicago, will add to their "Great French Writers" 'Bernardin de St. Pierre,' from the French of Arvède Barine; and to their "Elizabethan Library" 'A Bower of Delights,' interwoven verse and prose from the works of Nicholas Breton, and 'Selections from the Works of Lord Bacon.'

Mr. William C. Bamburgh, Plainfield, N. J., expects to be his own publisher for a volume, 'The Echo and the Poet, and Other Poems,' to appear about April 25 in a limited edition.

Ward, Lock, Bowden & Co. will bring out directly a new edition of George Borrow's 'Lavengro,' with an introduction and personal reminiscences by Theodore Watts. It will form part of the "Minerva Library."

'Many Inventions' (not "Intentions") appears to be the true title of Rudyard Kipling's new book to be published here by D. Appleton & Co., who also announce 'Wanderings by Southern Waters,' by Edward Harrison Barker.

During the present year T. Fisher Unwin, London, will publish the Autobiography of Theobald Wolfe Tone, edited by R. B. O'Brien, with a preface by Mr. Bryce and illustrations; 'Lord Tennyson and His Friends,' a series of twenty-five portraits in photogravure by Mr. and Mrs. Cameron, forming an *édition de luxe;* 'Napoleon at Elba and St. Helena,' an illustrated narrative by eye-witnesses; a translation of M. Tenger's 'Recollections of the Countess Theresa of Brunswick'; 'The Doge's Farm,' by Miss Margaret Symonds, with illustrations; 'The Tragedy of the Norse Gods,' by Mrs. Ruth Pitt; 'Old-World Scotland,' by T. F. Henderson; 'The Australian Commonwealth,' by G. Tregarthen; 'Greek Vase Painting,' by Miss Jane E. Harrison and D. S. MacColl, with fifty full-page plates; 'Stories from Garshine,' translated by Mrs. Alice Voynich; a new edition of 'The Best Plays of Christopher Marlowe,' edited by Havelock Ellis; a new "Reformers' Library," including 'The English Peasant,' by Richard Heath, and 'The Life of Samuel Bamford'; and a "New Irish Library," beginning with 'The Patriot Parliament of 1689,' by Thomas Davis.

Chapman's translation of the 'Iliad' fills three volumes of the dainty Nuggets Series of the Messrs. Putnam, and, being a companionable book for the pocket, has been well chosen for this series.

The sight of Walton's 'Complete Angler,' edited by Edward Gilpin Johnson (Chicago: A. C. McClurg & Co.), encourages us to hope that the time may come soon when Chicago will not mark the Western limit of Waltonian editions, as there is no surer sign of the extension of literary taste to any region than the appearance in it of a new edition of this pastoral classic. The book under notice is not a reprint of the first edition, which was greatly enlarged in the second issue published in 1655; nor does it contain the second part by Cotton, which is included in most of the other editions. Mr. Johnson, in his introduction, speaks of Cotton's part as being "Walton, in short, minus what is peculiarly Walton—salt without its savor." The justness of this criticism is hardly borne out, we think, by the verdict of two centuries on the question. The introduction shows a good appreciation of the fine character of Walton and the remarkable literary charm of the 'Angler.' Such a great number of introductions to the various editions have been contributed, and so many of them by able hands, that scarcely anything remains to be said, while at the same time there is the absolute necessity of saying something. The size of the book (12mo) is desirable, and the few notes are so excellent as to make the reader wish them more abundant.

To the two sets of pretty books known as the "Collection Guillaume"—one containing the original edition of M. Daudet's 'Tartarin sur les Alpes,' and the other containing most of M. Daudet's novels illustrated with the same fantasy and skill—is now added a third series to be known as the "Petite Collection Guillaume" and to be illustrated like its elder brothers. The volumes are even tinier than the pretty little books in Harper's "Black and White" series. They are intended to appear twice a month and to comprise most of the little classics of the world's literature. Indeed, the editor has a truly cosmopolitan taste, for among the first volumes to appear are the German 'Werther,' the French 'Paul and Virginia,' the British 'Corsair' (of Byron), and the American 'Gold Bug' (known by the British as the "Gold Beetle" and here magnificently transformed into the "Scarabée d'Or"). Among the promised volumes are Turgeneff's 'Spring Floods,' Ibsen's 'Ghosts,' Silvio Pellico's 'My Prisons,' the 'Golden Ass' of Apuleius, the 'Daphnis and Chloe' of Longus, the 'Fables' and the 'Contes' of La Fontaine.

Prof. Charles F. Kroeh of the Stevens Institute of Technology, at Hoboken, N. J., has published a little book on 'How to Think in French.' The plan he recommends, although tried before, is very good; it is, in the main, to say to one's self, in French, what one happens to be doing at the time. Given a sufficient amount of perseverance on the part of the learner—and the lack of it is the greatest obstacle—the book will certainly enable him to make considerable progress.

The little pamphlet, 'Notes on the Teaching of French,' by Prof. F. C. de Sumichrast of Harvard (Boston: D. C. Heath & Co.), will well repay the instructor who reads and masters it. It is sensible throughout, and contains useful hints for students who cannot enjoy the privilege of a teacher.

The Harvard report on English is the subject of a brief comment by Mr. Samuel Thurber, Principal of the Girls' High School, Boston, in the April number of the *Educational Review* (Henry Holt & Co.). Mr. Thurber impugns the validity of the facsimiles as evidence —*i. e.*, he regards the time and place of writing the originals, and the probable disparagement of the secondary schools to which the Harvard freshmen had been accustomed during their first year at college, and concludes that "the freak element is discernible in some of these papers," and that the writers wrote what would be pleasing to their new instructors. Mr. Thurber fears the dissemination of the report may lead to "the sudden and inconsiderate adoption of useless books relating to composition and rhetoric."

The acquisition of the late George Bancroft's library for the Lenox Library of this city after the Government had declined an offer at a lower figure, gives special force to a paper read before the American Historical Association in 1891 by Prof. J. F. Jameson of Brown University, and published last year by the Government Printing Office, on "The Expenditures of Foreign Governments on behalf of History." This paper was designed, in fact, to support by definite statistics the contention that "the American Government may properly be expected to do more in behalf of history than it has hitherto done." As the result of much difficult research, it shows that at present our Government compares with the foremost in total amount of expenditure, but is open to criticism for the narrowness of the field cultivated, when so much historical matter of the first importance entreats publication, and for the want of a permanent system or commission to that end.

The seventh annual report of the Reynolds Library of Rochester, N. Y., is remarkable for its minute exhibition of the plans of the trustees for developing the collection with strict reference to its environment—first, by avoiding duplication of the lines of other public libraries in that university city, and then by adjusting its resources in books and in rooms to the needs of a great variety of classes in the community, into whose life the Library will thus be made to enter most intimately and congenially.

We read in the seventeenth report of the trustees of the Boston Museum of Fine Arts that it has come into possession of two large solar prints of the 'Alexander" sarcophagus at Constantinople, showing two sides on a scale approaching that of the original, and permitting them to be studied as favorably as casts.

We take pleasure in calling the attention of librarians and students to the publication, just begun, of Prof. Lanciani's great archæological map of Rome, which promises to be the standard authority on the topography of the city for a long period. Prof. Lanciani has been occupied with the preparation of this map almost uninterruptedly for twenty-five years, and it is as offshoots from this labor that his numerous essays have appeared. He has published about three hundred papers on topics arising from the subject, and the erudition and observation of which these give evidence have been devoted primarily to this *magnum opus.* The map is to be published by the Reale Accademia dei Lincei, through Hoepli of Milan, and will be on a scale of 1:1000, divided into 46 sheets, each measuring 60x90 cm. It will be printed in five colors, by means of which the student will see at a glance the epoch to which any monument belongs. The publishers promise that not less than six sheets shall be published annually, beginning with a first instalment of six sheets at present. In the prospectus we have received, the price of the completed work is stated at eight pounds sterling, in annual payments of one pound, or with a discount of 10 per cent. to those who pay the whole amount at once.

We have received the first number of the *Sierra Club Bulletin,* which is to our Pacific Coast what *Appalachia* is to our Atlantic. It contains a map, two mountain views, three papers—"The Mt. Whitney Trail," by Hubert Dyer, "The Grand Cañon of the Tuolumne," by R. M. Price, and a "Description of a New Grove of Sequoia Gigantea," by W. W. Price —and the Proceedings of the Club, a San Francisco organization. The *Bulletin* is sold at twenty-five cents by the Secretary.

The March number of the *Vierteljahrschrift für Litteraturgeschichte* contains an interest-

ing study of Goethe's fragment 'Elpenor,' by Prof. Henry Wood of Johns Hopkins, a German translation of a paper of his which appeared in vol. 12 of the *American Journal of Philology*. Prof. Wood puts 'Elpenor' in the same category with 'Die Geschwister,' 'Iphigenie,' and 'Wilhelm Meister,' as reflecting problems and conflicts born out of Goethe's relation to Frau von Stein. Antiope, Elpenor's mother, has some traits of character which may have been suggested by Frau von Stein herself. Lykus, Elpenor's guardian, performs at least in part the rôle which Goethe maintained towards Fritz, the son of Frau von Stein. The central conception of the drama—the inner purification and final union of characters that had been estranged from each other through guilt and misunderstanding—finds its counterpart in many of Goethe's inner experiences during the first ten years of his Weimar life. So much, it seems, must be conceded to Prof. Wood. His conjectures about the way in which the solution of the conflict was to be brought about are, if not conclusive, at least very ingenious.

Some of our English cousins who are constantly occupied in organizing new "levelling up" agencies, have lately set in motion a sort of Annex to the University Extension movement, that opens a congenial field of work for educated English women, and suggests the possibility of a similar propaganda of culture among the countless rural centres of our own land, and the utilization of much unappropriated feminine capacity. The Association of Women Pioneer Lecturers provides lectures by women (who have passed examinations stringent enough to guarantee their efficiency) in districts not yet touched by the University Extension scheme or any other similar teaching. The lectures are on such subjects as literature, art, history, science, economics, etc., the object being to offer the means of a higher education than can be obtained at elementary schools by the average self-supporting man or woman, such as "dwellers in rural localities, ladies resident in suburban districts, the members of workingmen's and women's clubs, institutes, and night schools." At present the Association sends out thirty lecturers—many of whom have had University training—from their four centres of work, Hayward's Heath, Enfield, about ten miles from London, Luton, among the Chiltern Hills, and Chelmsford, the county seat of Essex.

The latest sign of the growth of English public feeling in regard to the extension of the Parliamentary franchise to women rate-payers was the presentation by Viscount Wolmer, in the House of Commons, on March 10, of a petition signed exclusively by members (634) of County Councils, from many different parts of England; the signatures from Northumberland numbering 67, out of a total of 80 County Councillors. The petition ran as follows: "The undersigned members of County Councils, having had experience of the effects of women's suffrage in County Council elections, consider that their enfranchisement has been of advantage to the community, and that the extension of the right to vote in Parliamentary elections to the same women would similarly be attended with beneficial results. Your petitioners, therefore, pray that your Honourable House will pass a measure to extend the Parliamentary franchise to such women." A correspondent writes that delayed signatures continue to come in to add emphasis to this comparatively novel endorsement of the old adage, "That the proof of the pudding is in the eating."

—The current number of the *New England Magazine* contains an interesting retrospective view of the increasingly serious domestic problem. Those who are inclined to agree with the writer, Prof. Lucy M. Salmon, that "any attempt made to secure a change for the better in the present condition of domestic service must meet with failure if it does not take into consideration its historical aspects," will find in her article an ample exposition of the different systems of service that have prevailed in this country, from the unsophisticated period when Samuel Breck at Philadelphia boarded the ship *John* from Amsterdam and purchased two French Swiss—one, a woman, for her passage-money, with a promise of $20 ("clothing and maintenance of course") at the end of three years, "if she serves me faithfully"; the other, a boy, on similarly primitive terms, with "six weeks' schooling each year" for two years—to the present era of crowded high schools and depopulated kitchens. Some statistics quoted to illustrate the present lack of stability in domestic labor point a timely moral. Of the nearly 700 servants questioned as to whether they had ever been engaged in any other occupation, 27 per cent. replied in the affirmative, while 68 per cent. did not live in their native State and country. This statement does not take into account the number of times the 700 have, in all probability, under the present system of "French leave" of an employer, changed situations. It remains to be seen how long the women of a new educational era will submit to conditions in the household that would not be tolerated in any well-ordered office where type-writers, stenographers, or female clerks of any description are employed. One of the "historical aspects of domestic service," the respect it formerly commanded, will without doubt have to be revived in the future. This can be done only by elevating housework to an industrial plane that is worthy of respect.

—Necrology must needs form a constant part of any record of a large body of alumni, and, in the case of Harvard and her *Graduates' Magazine*, not infrequently the dead will be eminent in a high degree. The April number, for instance, commemorates the late Phillips Brooks by a portrait by Kruell and an estimate by Prof. C. C. Everett, who analyzes his gifts as a preacher. Dr. Peabody's death could barely be mentioned in this number. Mr. C. J. Bonaparte has a too brief and indeterminate paper on a use for certain of the college societies in making good the loss of the old "class feeling" consequent upon the adoption of the elective system and the great increase in the number of students. This discussion has a general bearing, and so has Prof. Moore's article on "The Study of the Fine Arts in Universities and Colleges." The English question comes to the fore again in a "symposium" of headmasters on secondary education, in which is to be remarked the great diversity of opinion. Mr. John P. Hopkinson points to "the increasing immaturity of boys of ten years of age—an increase very perceptible during the last twenty years." "The modern theories of education applied to very young children," he says, "perhaps strengthen their powers of observation, but without a corresponding exercise of the faculties of judgment and reflection. This seems to me true of kindergarten methods when continued beyond the very first stage of education." But chiefly Mr. Hopkinson blames the home-training for this immaturity. "One demoralizing influence is the habit of reading aloud to children," he thinks. All will agree with him when he says: "Formerly boys of ten had a good knowledge of all the countries, with their divisions, rivers, mountains, and chief cities; now they seldom know more than the United States, if even so much." There are many just and forcible remarks also in the paper by Mr. John S. White. In the capital summary of the university life for the quarter, noteworthy are the accounts of the Graduate Club, founded in 1889, and the more recent Prospect Union, which endeavors "to bring together college men and wage-earners in active sympathy and mutual helpfulness," and to become "a thoroughly recognized centre of university extension."

—A large Japanese vase awaited the winner in a prize contest lately instituted by the *Evening Courier* of Milan. The task was a translation of Tennyson's posthumous poem "The Silent Voices." No fewer than 604 persons of all ranks and callings in society, of both sexes, and of all degrees of familiarity with English, submitted 717 translations, paraphrases, amplifications, or one-line quintessences. The seven versions between which the choice lay were sole efforts and not alternative in any case. Blank verse would have been eligible for the prize, but the rhymed offerings proved the best. The last line of the poem,

"On, and always on!"

gave much trouble, and so did the common idiom "beyond me" of the previous line,

"Glimmering up the heights beyond me."

Both were made the subjects of foot-notes by numerous anxious competitors. The winner omitted "beyond me" and translated "on" by "up" (*in alto*), connecting it with "heights" rather than with "starry track," and failing altogether to convey the peculiarly Tennysonian flavor of the second line quoted above. Nevertheless his version was commendable, being as follows:

"Quando l'ora silente in veste bruna
Intorno al mio guanciale i sogni aduna,
Deh! non mi richiamate,
Mute voci dei morti,
Si spesso indietro, verso l'ima valle
A cui volsi le spalle,
Nè verso il sole che non dà più luce!
Me chiamate piuttosto, o silenziose
Voci, oltre il mondo, nell'etereo smalto
Della stellata via
Che in alto splende—in alto sempre! in alto!"

This proved to be from the pen of a prolific writer, in his seventieth year, the Lombard ex patriot, ex-opera-singer, ex-journalist, ex-novelist, ex-librettist, Antonio Ghislanzoni, "simpatico eremita di Caprino," as the *Courier* calls him in his leisured retirement.

—The eleventh volume of the Archives of Maryland, edited by Mr. William Hand Browne, covers the period from July 26, 1775, to July 6, 1776, in which the dependence of the province upon Great Britain was completely terminated. The editor characterizes what took place as "Maryland's transformation from a dependent Province to a sovereign State"; and again, "to an independent, self-governed State." Self-government had, in fact, set in before this volume opens, the Convention of county delegates which met at Annapolis on July 26, 1775, having first convened on June 22, 1774. This revolutionary act was one of independence so far as the mother country was concerned, but not absolutely and peremptorily. The Convention's permanent executive creation, the Council of Safety, whose proceedings fill the greater part of the volume, assured the royal Governor Eden at once that "Independence of G. Britain is not the Aim, or wish of the people of this Province," who acknowledged still a proper subordination and the authority of the laws of

Parliament when not oppressive. The Convention's delegates to the Congress at Philadelphia originally maintained this attitude. On March 10, 1776, the Council was still hoping for a restoration of constitutional dependence on the mother country. All this time, too, the Governor, an amiable, much respected man, had been unmolested in the presence of this revolutionary body, and when he agreed not to quit the country without leave, the Council expressed its satisfaction, and wished again that a reconciliation might ensue. It refused to depose him, as Gen. Charles Lee of Virginia urged and got Congress to urge, on the ground that it would "dissolve the Government and subvert the Constitution," inasmuch as the Convention would have to be assembled to renew the expired commissions of the magistrates, sheriffs, and other officers "flowing from" the Governor. In his person it deliberately kept up "the ostensible form of our Chartered Constitution," and averted the "horrors of anarchy," until it should be convinced of the improbability of reconciliation. It accompanied him respectfully to the man-of-war which called for him towards the end of June, and when he had sailed, Maryland was wholly self-governing, but was implicated in a dependency on the other colonies incompatible with sovereignty. It is true that the Council had resented the interference of Congress on the one hand and of Gen. Lee on the other with Maryland's "internal Polity," as a State may do now in the Federal Union, while nevertheless "considering the Congress as having the supreme Authority over the Continent." But Lee's excuse, that "the safety or very being of the whole community appeared at stake"—meaning the "whole community" of the people of the several provinces—pointed to the only real sovereignty that had a chance of emerging from the struggle for independence.

—The proceedings of the Council of Safety are interesting if not enlivening reading. They are largely concerned with military organization, supplies, and defence. Tories were leniently dealt with as the times went, one being made to deposit £500 as his share of the defence of America, with a humorous stipulation to restore to him the unexpended balance after peace had been secured. For the engraving of currency, Franklin was resorted to. A few unconventional letters have slipped into the Archives, like that of John to Capt. Richard Chew, whose "mother has sent a boy with six blancoats," or like those from the sprightly pen of William to Gov. Bob Eden. Admirers of Mr. Richard Harding Davis's hero will be pleased, up and down these records, to meet numerous representatives of the Vanbebber family. We observe, too, that Thomas Edison figures on p. 526 as adjutant to Col. James Johnson's battalion for the five months previous to June 30, 1776. He should also, according to the index, appear on p. 543, but this seems to be an error for Thomas Ennalls. The innate propensity of slaves to be fugitives is shown in an entry of June 24, 1776, when a company was ordered to guard the shores "to prevent any servants or negroes or others from going on board the *Fowey* ship-of-war" along with Gov. Eden. The Governor obtained Capt. Montagu's assurance that he would take no runaway slaves, though he could not refuse to receive loyalists.

—The approach of another total eclipse of the sun on April 16 occasions renewed interest in these impressive phenomena. Its track strikes the South American Continent considerably north of Valparaiso; and near its beginning or western end are stationed Prof. Schaeberle of the Lick Observatory, Mr. Lawrence Rotch of Boston, and Prof. W. H. Pickering of the Harvard Observatory, occupying stations in Chili. To the northeast, in Argentina, two expeditions will watch for the darkening of the sun, the one in charge of M. Beuf, Director of the Observatory of La Plata, and the other under Prof. Thome, Director of the National Observatory at Cordoba. Still further northeast, and near Ceará, in the Brazilian region where the path of totality leaves the American Continent, not only is there a company of Brazilian observers trained by M. Cruls, Director of the Observatory at Rio de Janeiro, but the French astronomers have also a well-equipped expedition to this locality, near Para Curú, and the English also one, in charge of Mr. A. Taylor, who served in like capacity in West Africa during the second eclipse of 1889. As Ceará is not in the line of regular steamship communication, a man-of-war of the Brazilian Navy has been placed at the disposal of the observers, who may need transport from Rio. On crossing the Atlantic Ocean to North Africa, in the region of Bathurst and Senegal, the moon's shadow will be met by still other expeditions, two under French auspices, MM. Bigourdan and Deslandres of the Paris Observatory situate at Joal, and M. de la Baume Pluvinel in another. In a third region of the African belt, and at Fundium, a short distance up the Salum River, Prof. Thorpe will lead an English expedition, with apparatus entirely similar to that which Mr. Taylor will employ on the Brazilian coast. Rapid variations in coronal light and streamers may thus be detected. But, in addition to this, the other problems presented by the corona will not be neglected, and the customary observations will be made with spectroscope and photometer at several places along the line.

—The conditions of cloudiness or otherwise at all these stations have been under investigation by Prof. David P. Todd for the last three years, in order to enable the selection of the best observing sites. In a late number of the *American Meteorological Journal*, he presents the first investigation of this kind ever made, and with as near approach to comprehensiveness as the limited time since the African expedition would permit. The aim was to secure, so far as possible, cloud observations at or near all advantageous observing points, throughout the month of April, 1890, 1891, and 1892, at or near the particular time of day when the eclipse is to take place at each station. At some regions it has, of course, been impossible to do this; for these the best available data are presented. That this eclipse is unusual in point of totality-duration is apparent on reference to 'The American Ephemeris.' In Chili the central-line duration is 2m. 56s., Argentina 3m. 5s., on the east coast of Brazil 4m. 40s., and in Senegal, on the west coast of Africa, 4m. 10s. The result of the whole inquiry is that the Desert of Atacama, Chili, is by far the best station if clear skies alone are to be regarded. On passing to the east of the Andes, the meteorological conditions are rather less favorable, even on the great mountain elevations which lie in the path of totality. Still further to the northeast, and in the very accessible region of Tucuman, reached by rail from Buenos Ayres, the chances of a cloudy sky approach the maximum. Coming next to northeastern Brazil, in the neighborhood of Ceará, a locality easy to reach, and with all the astronomical conditions most favorable (the sun being near the zenith and the total eclipse approaching five minutes in duration), clouds are unfortunately next to certain. In Africa the chances are greatly improved, and the eclipse is likely to be seen in cloudless skies, though the indications regarding haze (a great foe to observations of the corona) are not comforting.

AN HISTORIAN'S FACTS.

Division and Reunion, 1829–1889. By Woodrow Wilson, Ph.D., LL.D. With five maps. Longmans, Green & Co. 1893. [Epochs of American History.]

WE have here what the author calls "a sketch in broad outline—not so much a compact narrative as a rapid synopsis—of the larger features of public affairs in the crowded space of sixty years that stretches from the election of Andrew Jackson to the end of the first century of the Constitution." As might be expected from the learning and literary skill of the writer, he holds his subject well in hand, and, after a liberal allowance made for his point of view, he divides what seems to him the word of truth with a candor and a discrimination that are worthy of praise. In reviewing a period of "misunderstanding and of passion" he does not claim to have judged rightly in all cases as between parties. He claims only to have practised that impartiality of judgment which is a matter of the heart. This latter claim may be frankly conceded by those who feel constrained to dissent, as we do, from many of his historical appreciations. Where impartiality of judgment was difficult, he often holds the scales of justice with a steady hand. Where impartiality of judgment was easy, he seems to us to have sometimes been much less happy in summing up the judicial verdicts of history; and this because his point of view, as we conceive, sometimes subjects his observations to a species of obvious historical parallax, only the more misleading for being entirely unconscious. There must necessarily be a large angular variation in the position of events in American history, according as they are viewed from the South Carolina theory of the Constitution or the theory expounded by Madison and Webster. Mr. Wilson holds that the South Carolina theory of the Constitution was the only true theory, because it was the original theory that dated from the formation of the instrument.

The editor of this series informs us, we presume by way of explanation, that each author of the successive volumes "has kept his own point of view, and no pains have been taken to harmonize divergencies of judgment." This course undoubtedly has its advantages, and guarantees to each author that intellectual integrity which it is his right to assert and maintain, but it is a course which may easily lend itself to much confusion of ideas so far as the average reader is concerned. In a synopsis like this he naturally looks for some similarity of historical perspective where the larger features of our public affairs are delineated.

To such a reader it may easily seem that the *Proteus historicorum* has slightly abused his privileges when Mr. Wilson is allowed to teach in this volume that we must wholly discard the constitutional theory which Prof. Hart inculcated in the preceding volume of the series. Prof. Hart had told us, what we were quite ready to believe for reasons other than he gives, that the Constitution, at the time of its formation, was understood to be not a mere

compact, but a permanent instrument of government for the whole people. He affirmed that the defects of the Confederation "had educated the American people to the point where they were willing to accept a permanent federal union." A nation without a national government seemed to him, as to the authors of the 'Federalist,' "an awful spectacle."

Mr. Wilson assumes in the volume before us that this whole *manière de voir* is entirely unhistorical and false. Mr. Hart had told us that a clear statement of the "compact" theory of government was put forward for the first time in the Kentucky and Virginia "Resolutions of '98." Mr. Wilson, on the contrary, holds that the "compact" theory was congenital with the Constitution, and that the famous reply of Webster to Hayne struck the chords of national sympathy with might in 1830, only because "the North was now beginning to insist on a national government," whereas the South, he adds, "was continuing to insist on the original understanding of the Constitution: that was all." He asserts that "it was for long found difficult to deny that a State could withdraw from the Federal arrangement, as she might have declined to enter it"; that Webster's epoch-marking speech, considered as an interpretation of the Constitution, "had been a prophecy rather than a statement of accomplished fact"; that it is because the Constitution was "the skeleton frame of a living organism" that the course of events in that organism came in the end "to nationalize the government once deemed confederate"; that while this process of change was going on in the social tissue and economic forces of both the North and the West, the South "had stood still," and, "standing still, she retained the old principles which had once been universal." And these, we are told, "are not lawyer's facts: they are historian's facts."

Our readers are well aware that at this late date in our annals we resolutely decline to discuss "lawyer's facts" concerning the true intendment of the Constitution, as ascertained by "construction construed" in the matter at issue. Not that we are quite prepared to say, with John Taylor of Caroline, that when "construction" gives right answers, "it ought to be laughed at for playing the fool," and that when it gives wrong answers, "it ought to be suspected of playing the knave." This compendious contempt of the Virginian exegete seems a little too insulting to deductive logic considered as an organon of discussion. It is enough for us that there is no end to the mere processes of legal dialectic, and that a few cold facts of history are often conclusive against a logomachy which has embroiled whole generations of men.

It is no more certain, it seems to us, that the Constitution was adopted than that it was adopted as the bond of a permanent Union. The idea that the Constitution could be adopted with a reservation of the right to withdraw from the Union, in case certain amendments were not secured, appears to have been started in the Massachusetts Convention of 1788, but it was speedily abandoned. The same idea was championed by a powerful minority in the Virginia Convention, but was formally voted down. Alexander Hamilton, in his despair of securing a majority for the pure and simple ratification of the Constitution by the New York Convention, wrote to ask Madison in 1788 if a State could ratify the instrument conditionally on the adoption of certain amendments, and therefore with a reserved right to withdraw in case those amendments were not adopted. Madison, as we all know, replied that "a conditional ratification did not make a State a member of the Union"; that "the Constitution required an adoption *in toto* and for ever"; and that "it had been so adopted by the other States." Notwithstanding this explicit statement of Madison, a whole host of amendments, some conditional, some explanatory, and some recommendatory, were submitted to the New York Convention for discussion in its Committee of the Whole, but all conditional amendments, and the words "on condition" in the form of the ratification, were rejected. The Convention then resolved unanimously that a circular-letter should be sent to all the States as expressive of the views of New York. That circular-letter contains the following passage: "Our attachment to our sister States, and the confidence we repose in them, cannot be more forcibly demonstrated than by acceding to a government which many of us think very imperfect, *and devolving the power of determining whether that government shall be rendered perpetual in its present form*, or altered agreeably to our wishes and a minority of the States with whom we unite."

These "historian's facts" (we apologize to our readers for rehearsing them) would seem to be tolerably conclusive, unless they can be traversed by some "historian's facts" equally clear in an opposite direction and of even date with them. We have not been able to find any such, and, until they are pointed out, we purpose to persist in our repugnance to "lawyer's facts," whether based on the "Resolutions of '98," the South Carolina "Exposition" of 1828, the Nullification Ordinance of 1832, or the Secession Ordinance of 1860.

Coming to matters of opinion, we venture to express the conviction that Mr. Wilson has looked at his "historian's facts" through the wrong end of the telescope, and so has fallen into an inversion of ideas when he argues that it was the growing power and the altered social tissue of the North and the West which incubated and energized at the North and at the West a sense of nationalism never quickened at the South, because "the South had stood still while the rest of the country had undergone profound changes," and, standing still, had retained, as Mr. Wilson says, "the old principles which had once been universal." It would have been better to say that it was the waning power and social insulation of the South which incited her to invent and to energize in the interest of slavery the whole latter-day theory of "Separate State Sovereignty." It is undoubtedly true that in the course of events the South was left in a painful state of political and economic isolation by reason of her adherence to slavery—the "peculiar institution" which generated in the bosom of Southern society the fact and the sense of "separateness" to which the author refers again and again. But so far is it from being true that there had been "nothing active on the part of the South" in sectionalizing the Union, it would rather seem more correct to say that she had the larger share in this process. "A mild anti-slavery sentiment, born of the philanthropic spirit, had existed in all parts of the country from the first," says Mr. Wilson. Elsewhere he comments on the effect of slavery in generating "a stubborn pride of class privilege, and a watchful jealousy of interference from any quarter, either with that privilege itself, or with any part of the life which environs and supports it." He shows how slavery, after the invention of the cotton-gin, came to seem "nothing less than the indispensable economic instrument of Southern society." He shows how the South "grew more and more self-conscious as the anti-slavery agitation proceeded" at the North; and that this self-consciousness acted both as cause and as effect, he admits when he says that the ruling class at the South had "more political power, and clearer notions of how it meant to use that power, than any other class in the country."

Now, it is to be observed, we think, that in proportion as this feeling of "separateness" from other sections of the country grew more and more intense at the South; in proportion as "its sense of dependence for the preservation of its character upon a single fateful institution grew more and more keen and apprehensive" (these words are Mr. Wilson's), precisely in that proportion did the Southern politicians proceed to generate novel pseudo-theories of constitutional construction, by way of a State-rights prophylaxis for the defence of their "peculiar institution." Hence their successive shifts in manœuvring for a defensive position according to the South Carolina tactics: first, that a State may provisionally nullify an act of Congress till its constitutionality shall be affirmed by three-fourths of the States; then, that each State may separately and alone nullify an act of Congress, in the exercise of its separate reserved rights; then, the theory of nullification as rendered express and organic in Calhoun's scheme of a Dual Executive, with a veto power vested in each head for the mutual countercheck of all legislation deemed by either inimical to the respective sections comprised in the political equilibrium; and, finally, the theory of separate State secession which was reduced to practice in 1860 and 1861. To speak of the South as "standing still" on such a *glissade*, or to speak of the South as having retained "the old principles which had once been universal," is to baffle criticism by dealing in contradictions which are self-destructive.

The style of Mr. Wilson's narrative, though sometimes careless, is always easy and flowing, but occasionally there are strange slips of the historian's pen, as when we read that Delaware cast eight electoral votes for Fillmore in the Presidential election of 1856, where of course Maryland was meant.

LINTON'S EUROPEAN REPUBLICANS.

European Republicans: Recollections of Mazzini and his Friends. By W. J. Linton. London: Lawrence & Bullen. 1892.

We welcome this book; it is sincere; it deals with memorable men and important events. If it did no more than bring to the attention of a new generation the personality of Joseph Mazzini, it would do much; but it must inevitably do more than that—it must remind older readers and inform new ones of that great movement towards republicanism in Europe which, beginning in 1789, and seeming about to prevail in 1848, still goes on, despite many checks, though less boisterously than of yore. Of that movement Mazzini was, as all now can plainly see, the incomparable leader for well-nigh forty years; but in saying this we by no means imply that many of his fellow-republicans are not worthy of admiration. Every oppressed people has had its especial heroes and guides: it is Mazzini's distinction that he, while working most ardently for Italy, was recognized as the Cosmopolitan Conspirator. While Herzen represented Russia and Worcell Poland, while Kossuth stood for Hungary's national aims, and Ledru Rollin, or Victor Hugo, or Louis Blanc represented the irreconcilable republi-

cans of France, Mazzini was the confidant of them all.

In the comparatively brief span between the present and the days when Mazzini and his friends were actively propagating their principles, time has in large measure justified them. There is not a country in Europe whose political condition has not advanced along the line they laid down. The verdict of history has already pronounced for Hugo and Ledru Rollin, and against the refined villain who consented to and profited by the massacre of December 2, 1851. The abominations of Papal misrule have been swept away. No apologist has ever arisen to whitewash the memory of King Bomba of Naples. Hungary, though not yet independent of Austria, has a recognized national existence. Austria herself is governed constitutionally. Germany is still despotic, but no longer in the irritating, petty way of fifty years ago. Russia has freed her serfs. Even in Spain and Turkey there is more intelligence, which must be the forerunner of political progress. How much the republican advocates of Europe have contributed to bring to pass these changes can never be computed, but without question their influence has been enormous. That they should have been proscribed and persecuted for advocating such patent benefits would astonish us, did we not know that from the dawn of history down to the present time mankind have greeted their benefactors with derision, and, failing by derision to silence them, by imprisonment, exile, or death.

The doctrines preached by Mazzini, Lamennais, and their friends could be satisfied by no partial reform, no makeshift, no compromise; their fulfilment presupposes the complete remodelling of society. Stated briefly, Mazzini held that the French Revolution marked the end of an epoch in the development of the human race—the epoch of arbitrary authority in religion and in government. Men no longer believed in the divine right of kings, nor in the supernatural origin and continued sanction of the Church; nevertheless, they did not cease to uphold the old monarchical and ecclesiastical symbols. As an inevitable result, society was half-hearted, inconsistent, insincere, proclaiming on the one hand the rights of man and civic and legal equality, while maintaining, on the other hand, a monarchical government and a State Church. Democracy was everywhere transforming the old régime—except on the surface: there, titles, offices, and privileges seemed immutably attached to one class. Europe being thus organized on a sham, it was the duty of every honest man to hasten her reorganization on a reality, to secure for her a government which should as faithfully represent her modern ideals as feudalism in its purity represented mediæval ideals. The new government must, in a word, be a republic.

But the republic which Mazzini had in mind was not at all like that form of so-called republican government of which France had given an example. France, he reiterated, set up the Rights of Man, and made individualism, egotism, her model; the true gospel will preach the Duties of Man. Hitherto, individualism has been the highest product of political systems; in the new era, of which the nineteenth century is the threshold, association will be the prevailing principle, and the People, that is, all the members of the State, shall have common privileges, in contrast to the past, in which only a fragment of the State, a special class of nobles or clergy, or an individual monarch, has been supreme at the expense of all the other classes. Nevertheless, Mazzini's reforms did not stop here; to him, the civic or political life could not be divorced from the moral life. Our republican party, he said, is essentially religious. To discover and promulgate religious truths which should take the place of decaying dogmas was the deepest purpose of his life. As early as 1832 he summed up, in the following noteworthy paragraphs, tenets which he held to the end of his life:

"Catholicism is extinct; but you who watch over its bier remember that Catholicism is only a sect, an erroneous application, the *materialism* of Christianity. Remember that Christianity is a revelation and a statement of *principles*, of certain relations of man with that which is beyond himself, which were unknown to paganism. . . . Remember, in short, that a religious principle has always presided over two-thirds of the revolutions of single peoples, and all the great revolutions of humanity; and that to desire to abolish it where you have no other to substitute, where there is neither education, nor any profound conviction of general duties, nor a uniform conscience, nor the habit of high social virtue, is the same thing as to create a void, to open an abyss, which you yourselves will perhaps be the first to fill.

"Perhaps in religion, as in politics, the age of the *symbol* is passing away, and a solemn manifestation may be approaching of the Idea as yet hidden in that symbol. Perhaps the discovery of a new relation—that of the individual to humanity—may lay the foundation of a new religious bond, as the relation of the individual with nature was the soul of paganism; as the relation of the individual with God has been the soul of Christianity. But whatever may be in store for the future, whatever new revelation of our destinies awaits us, it behooves us meanwhile not to forget that Christianity was the first to put forward the word *equality*, parent of liberty—that it was the first to deduce the rights of man from the inviolability of his human nature—that it was the first to open a path to the relationship of the *individual* with *humanity*, containing in its doctrine of human *brotherhood* the germ of a principle, of a law of *association*."

We have wished, before passing to review Mr. Linton's book, to recall, even thus briefly, some of the cardinal principles of European republicanism, because at the present time the purposes of that movement are somewhat obscured by more purely economic questions. These principles, it will be seen, are not like those catch-vote planks of our contemporary political platforms, which are shouted for in October and repudiated or forgotten in December; they are convictions for which some of the noblest men of the century lived in exile or died on the scaffold—convictions rooted in the very nature of things, so far as those men could penetrate into it.

Mr. Linton's book serves a twofold purpose: it presents the doctrines of the leaders of European republicanism, and it outlines the careers of several typical republicans. This is a good method, because it enables us readily to compare words with deeds; and surely, criticise as we will the words, we cannot fail to admire the fortitude of Mr. Linton's heroes. "History pardons everything to those who know how to die," says Castelar; in this book another generation of readers can learn how young Ruffini and the Bandieras, how Pestel and Ryléieff and Konarski sealed their principles with their blood. Heroism like theirs transcends the heroism which is displayed in battle: they died for a cause which had not yet a recognized existence; they died as common outlaws. Particularly noteworthy is the immutable courage of the early Russian martyrs to liberty. The five leaders of the insurrection in December, 1825, were all hanged together. "But," says Linton, "the ropes broke or slipped with three of them, Ryléieff, Mouravieff, and Bestoujeff, who fell, breaking the scaffolding beneath them. Mouravieff was nearly dead, and had to be carried up; the other two coolly reascended the fatal ladder. Ryléieff merely observed that he had been exposed to a double agony; and Bestoujeff exclaimed: 'Nothing succeeds with me; even here I meet with disappointment.'" This remark deserves to be recorded along with that of Sir Thomas More to his executioner. Not less brave was Konarski, who was executed in midwinter. "They had left him in his summer clothes; and he asked to be allowed a warmer dress. 'My shivering limbs may tremble, and I would not seem to fear death,'" he said to his jailer.

But however interesting and touching are Mr. Linton's sketches of these too little known heroes, it is his accounts of Mazzini, Lamennais, and Herzen which possess the greatest value. Reading these sketches, we learn the principles which caused thousands of brave men to dare everything and to sacrifice everything. The account of Mazzini, which fills nearly half the volume, is largely compiled from his autobiography and political pamphlets. We need not warn the reader that Mr. Linton is partisan—that is so evident that the partisanship does no harm; indeed, the final worth of this book consists in the utter and uncompromising sincerity with which it states only one side of many of the debatable events in which Mazzini had a share. To Mr. Linton things were exactly as he describes them, they could not be different, and he cannot admit that any one else could honestly see them differently; so we who read are spared the tedium of argument and apology and evasion. We know what Mazzinians aspired to, we know what they did and what construction they put on the deeds of others. If each party would leave so frank a record, the task of the historian would be easier.

Much as we respect Mazzini's general doctrines, and highly as we revere his personal character, we cannot, for instance, admit that his policy of "action" in Italy after 1849 was either wise or calculated to further the cause which he cherished most. Nothing is clearer than that Italy had to be made independent and united before she could definitely choose her form of government. Unity was the first step, independence was the second; but Mazzini, from the moment when monarchical Piedmont began to be regarded as the exponent of the unifying principle, worked unceasingly to prevent the unification of Italy as a constitutional monarchy. The republic or nothing, was his motto. He persisted in creating all possible embarrassments for Victor Emanuel's Government, but from high motives. "For me the moral question is everything," he wrote to Daniel Stern in 1864. "It matters very little to me that Italy, a territory of so many square leagues, eats its corn or cabbages at a little cheaper price. It matters to me that Italy be great, good, moral, virtuous; it matters that she come to fulfil a mission in the world. But to-day our doctrinaires in 32mo inoculate the new-born babe with the conception of *opportunism*, of trimming, of lying, of baseness, of hypocrisy." To an idealist of this purity any tinge of compromise seemed pollution, and a statesman like Cavour little better than a sly rogue and a traitor. Yet had Cavour set himself to dream, he could doubtless have beheld as fair a vision, in which perfect citizens should administer perfect laws, as any other Utopian. The conflict between What-ought-to-be and What-can-be is eternal; while, therefore, we reverence those apostles of the former who chide our present imperfectness, let us not do injustice to the indomitable benefactors who

have not disdained to grapple with the sordid Actual, and to reclaim it inch by inch.

Mr. Linton's sketch of Lamennais, more than half of which is a skilful condensation of Mazzini's article in the *Monthly Chronicle* for April, 1839, is surpassed in literary symmetry only by his brief account of Konarski. We have no space for criticising Lamennais, except to say that he seems to us the most notable French religious force of the century. Herzen, the Russian aristocrat, the exile, the publisher (in London) of the *Kolokol*—the first free Russian newspaper—the father of contemporary Nihilism, deserves more than passing mention, because he is but little known on this side of the Atlantic. Americans ought to know by what principles the chief assailants of Romanoff autocracy have been impelled, and this knowledge cannot be come at more easily than in Herzen's works. His faith in the destiny of his race, his belief that Russia need not pass through all the stages which other races have slowly passed through in order to arrive at civilization, his shrewd diagnosis of the gangrene of the Russian Church, his paradoxical enthusiasm for the Russian commune—these are matters full of interest, as is the narrative of his early career. Of Worcell, too—Stanislas Worcell, the Nestor of the Polish refugees, who would have been called "our best had there not been Mazzini to stand beside him"—much might be said, although he was not, like Mazzini, Lamennais, and Herzen, important as a thinker. His power lay in his character, which endured extremest destitution without a murmur, and combined great gentleness with an inflexible will. Stolzman, who starved rather than be a burden to his needy companions in exile, and Darasz, another Pole, complete the portraits which Mr. Linton has here sketched. Several of these sketches are amplified from an article contributed by him to the *Century* magazine eight years ago. All are vigorous, and those which refer to his personal friends are transfused with manly affection. Merely from the literary standpoint the style has rare distinction, being individual but not mannered, terse but nervous and alive.

The Realm of Music. By Louis C. Elson. Boston: New England Conservatory. Pp. 314.

Mr. Elson's latest contribution to the literature of music combines entertainment with instruction in his usual pleasant manner. It is a collection of forty-one essays, of unequal length, that have appeared during the last ten years as editorial articles in the *Musical Herald* and other periodicals, and they are well worth preserving in book-form. The first essay, entitled "Reformers in Music," is really a luminous sketch, in forty pages, of the development of music, and it illustrates Mr. Elson's method, which is to take some special topic and consider it in its various bearings in the light of historic research and comparison. Thus, in "Law and Music" we have a discussion of legislative action on musical matters from the times of the ancient Egyptians and Greeks to the present day. The "Caste of the Musician" considers the great changes which have taken place in his social position. Haydn and Mozart were still treated like upper servants in Austria, and Weber suffered similarly in England. Beethoven asserted the musician's independence, but it remained for Liszt and Wagner to proclaim the royalty of genius. Pages 67 and 68 are an eloquent indictment of Germany for her treatment of the great composers. The royal composers have a chapter to themselves.

A few other titles may be cited to give an idea of the wide range of Mr. Elson's topics: "Wives of the Great Composers," "Composers at Play," "Old English Ballads," "The Legends of Music," "Music and Medicine," "Musicians' Fortunes," "Musical Novels," "Wagner and his Enemies," "The Size of the Modern Orchestra," "The Technique of Composition," etc. In all of these papers Mr. Elson exhibits his thorough knowledge of historic facts without making a pedantic parade of it. He is always entertaining, never obscure, even to lay readers. The only errors we have noticed are in the chapter on Wagner. It is not true that Wagner ever sneered at Liszt; he adored him as a man, and expressed great admiration of his compositions in a score of essays and letters. Nor is it true that the Paris "Tannhäuser" promised to be the greatest performance that the world had ever seen; on the contrary, Wagner's one consolation, as he himself tells us, at the brutal conduct of the Jockey Club, was that it prevented the Parisians from discovering the great shortcomings of that performance. Nor can we share the author's admiration for the sonata form, but agree rather with Wagner, who, in his essay on Beethoven (ix. 104), happily compares it to the "classical" French poetry, "in the soul-killing laws of which we find an eloquent analogy to the laws of construction of the operatic aria and the sonata." Mr. Elson should have added to his chapter on "The Rise of the Sonata" one on its Fall, somewhat in the vein of Dr. Parry, who, in a recent lecture, as summarized by the London *Musical Times*, made the following remarks:

"Before he [Beethoven] was fifty years old, Berlioz, Mendelssohn, Chopin, Schumann, Liszt, and Wagner had all arrived, whose very names suggested a different kind of art to that of Beethoven—a kind of art in which the sonata was neglected. Berlioz, with his impetuous striving after intense and definite expression, could scarcely be thought of in connection with sonatas. Chopin, it was true, wrote sonatas, but, inasmuch as they were sonatas, they were not Chopin, and when they were Chopin they were not sonatas. The field in which Schumann was truly characteristic was quite independent of sonata influence. Even Mendelssohn, the classicist, was least known by his sonatas; while Liszt deliberately attempted to replace the sonata type by programme music. In our own day Brahms had written a fine sonata and was great enough to do so again, but he was best known by 'Rhapsodies,' etc., and Dvorák, with his unsophisticated, half-savage spirit, was not a sonata-writer. This showed that the day of sonatas had passed; they were not the suitable type of the instrumental music of our age."

Etruscan Roman Remains in Popular Tradition. By Charles Godfrey Leland. Charles Scribner's Sons. 1892. 8vo, pp. viii, 385.

The value of popular traditions as a witness to the earlier beliefs of a nation has been recognized but a few years, and already this new method of prehistoric investigation has been elevated into a science and its rules formulated in the work by Mr. G. L. Gomme ('Ethnology in Folklore') reviewed some time ago in this journal. Thus far the most brilliant applications of the method have been those made by Mannhardt and Frazer, who have been enabled by it to fill lacunæ and solve problems which had resisted every other method. Mr. Leland, well known for his researches in so many outlying fields of folk-lore, has attempted to apply this method to one of the most perplexing subjects of investigation, the beliefs of the ancient Etruscans. The difficulties of the method have been pointed out many times, and these difficulties are enormously increased in the present case by the complicated character of the subject. That Etruscan beliefs should have survived in the traditions of the modern Italian people is likely enough; but it is very difficult in a country like Italy, where the past still lives in tomb and ruin and museum, to be sure that any given modern tradition is of ancient origin. However, many such have undoubtedly survived, and only the other day traditions of Ovid, like Vergil transformed into a sorcerer, were collected at Sulmona.

The field from which, if we understand Mr. Leland aright, most of the traditions in the present volume have been collected is the Romagna Toscana, between Forlì and Ravenna, and quite outside of Etruria proper. This, however, Mr. Leland thinks of no consequence, "as the Etruscans at one time held all Italy, and it is very likely that they left in remote districts those traces of their culture to which this book refers." Among the people of this region the author has found a great mass of beliefs and customs which he refers partly to a survival of Etruscan and partly to a survival of Roman beliefs. The specific Etruscan element is not very large or very important—that is, it does not throw any new light on Etruscan beliefs, but simply shows that a well-known Etruscan divinity is still vaguely remembered by the people. Whether this tradition is a constant one or of modern origin it is impossible to say with certainty. For example, we know that the Etruscan Jupiter was denominated Tina or Tinia, and Mr. Leland's "witch authority," on being questioned, replied: "Tinia is the spirit of thunder and lightning and hail," and proceeded to give a charm to appease the god. It is interesting to note that the saint who, in Christian Italy, is supposed to protect against the lightning, Santa Barbara, shares this prerogative with Tinia in the district in question. In like manner Mr. Leland has found reminiscences of a large number of Etruscan deities, such as Téramó (Hermes), Turan (Venus), Flaflon (Bacchus), etc. These reminiscences are rarely unmixed with elements belonging to general folk-lore, as for instance in the case of Patána (Ceres), p. 230, who appears as the heroine of a well-known fairy tale.

Of less value but of greater interest is the second part of the work devoted to incantations, divination, medicine, and amulets. Here again it is impossible to say what belongs to specific Etruscan or Roman origin, or to what may be called universal folk-lore. Indeed, Mr. Leland gives many parallels from our own negro folk-lore. With all possible reservations, however, there still remains a large body of folk-lore which here appears for the first time, and which is peculiarly interesting as showing the survival of pagan beliefs in a country so thoroughly Christianized as is Italy. In all previous collections there has been comparatively little of this, and it reveals the existence of what may some day throw much light on the early beliefs of Italy. It is to be regretted that Mr. Leland has disfigured his work by the offensive tone he always assumes in speaking of the Christian religion. Such a tone is entirely out of place in a scientific work, and still more in a book intended for the general reader. We are sorry that we must add that there is something else but little less offensive than irreverence towards sacred things, and that is downright coarseness, not to say vulgarity, in many places.

Alcuin and the Rise of the Christian Schools. By Andrew Fleming West. Scribners. 1892.

The story of Alcuin in the series of "Great Educators" is told by Prof. West in a little

volume of two hundred pages. The author has done his best with a material limited, to say the least, and in great part difficult to manage. There is no room for doubt that Alcuin was called to help in the revival of letters and of religious organization in general, which was unquestionably one of the objects most clearly before the mind of Charles the Great. He doubtless did some service in this direction, and left his mark upon his generation as the central figure in that phase of this revival which proceeded from the court. He wrote a few treatises on the subject of education, full of the curious jumble of ideas and tricks of dialectic skill which passed for learning in his day; but beyond this there is very little of solid ground on which to base a study of his influence.

Like most of his predecessors in the field, Mr. West has magnified his office, and given to the vague tradition about the man as much solidity as possible. He has taken up the very pretty picture of the "palace school" and invested it with as much life as it will bear. In fact, it is an open question whether this gathering of ladies and gentlemen was a school at all in any effective sense, and not rather something more nearly resembling a dilettante audience listening to popular lectures, with an occasional "quiz." Mr. West goes so far as to think of it as a sort of university, to which resort was had after the training of a cathedral school. He quotes a letter of Archbishop Leidrad of Lyons in support of this notion, but in the text of the letter itself, as published in the new edition of the 'Gallia Christiana,' there is no indication whatever of any such relation, and the statement of the Archbishop's own foundations is of the vaguest.

Again, we are told that Charlemagne introduced the idea of universal free education. This statement rests mainly upon an alleged capitulary of Charlemagne, quoted by the author from the old edition of Pertz, but, in the new edition of Boretius, distinctly declared to be the work of some private person of a later date. Even if it be genuine, the wording is such that it cannot be taken as proving that Charlemagne had any vision of universal education as we understand it. The gratuitous nature of instruction is inferred from a pastoral admonition of the Bishop of Orleans, addressed to the clergy of his diocese, and instructing them not to take any fees from their pupils except such as the parents might offer voluntarily. Now, the idea of regular payment for service rendered was almost unknown to the Middle Ages. All payments were thought of either as fulfilment of contract or as "benefits" in some form or other; so that this provision is not a very striking one, and will hardly bear the strain put upon it by the author. The conclusion that we find during the time of Charles the Great a regular working system of education in three pretty well defined stages, is, to say the least, bold. It would probably be nearer the truth to say that here, as elsewhere in the work of the great King, we have a very large programme which it was to take at least three hundred years to fill out.

We have called attention to these points because they are the heart of the book. In his estimate of Alcuin's personal character and the extent and accuracy of his learning, the author is on firmer ground and seems to have come to very judicious conclusions.

John G. Paton, Missionary to the New Hebrides. An Autobiography, edited by his brother. F. H. Revell Co. 2 vols., 8vo.

The Story of John G. Paton Told for Young Folks; or, Thirty Years among South Sea Cannibals. With forty-five illustrations. A. C. Armstrong & Son. 1892. 8vo, 397 pp.

It would be hard to find in missionary annals a story more full of mingled light and shadow, of thrilling incident, or of steadfast persistence in an apparently hopeless work, than this which Mr. Paton tells with such simple force. Born in the humble cottage of a Scotch weaver, his training was singularly well adapted to call into activity the qualities most essential to a pioneer missionary. In the poverty of his home he early learned to endure hardships, while his struggle for an education taught him perseverance, and his ten years' youthful labors as a city missionary in the slums of Glasgow gave him patience, tact, self-control, insight into character, and capacity to influence the lowest of men. His courage was doubtless born in him, though it was due in large measure, also, to his confident faith in the Divine protection, which naturally grew stronger with every new escape from death. The autobiography opens with a striking picture of his home and his God-fearing parents, descendants of the Covenanters, a brief sketch of his early life, and an interesting account of his successful work in Glasgow. In the remainder of the first part he describes his life on Tanna, one of the New Hebrides Islands in the Southern Pacific. The inhabitants were cannibals of the most savage and degraded type, and all his efforts to make an abiding impression upon them during three years and a half of uninterrupted labor were apparently fruitless. His life from the first was constantly in danger, but at length the natives were so infuriated by the wanton introduction among them of the measles by the white traders that he was obliged to flee. He occupied his enforced leisure in making an appeal throughout Australia for aid for his mission field. In this he was so successful that he was employed later to go to New Zealand and Great Britain on the same errand. The second part of his autobiography contains an animated account of these tours, but more especially of his labors on the island of Aniwa. Here he lived for more than twenty years, with some interruptions, and had the satisfaction of seeing it become completely Christianized. The idols have been burned; churches have been built and schools established; all the institutions, in a word, of a Christian land are maintained, though for some time there has been no resident missionary.

Mr. Paton's style is marked by great simplicity and vivacity, and also by the constant use of Biblical language and metaphors, due to his Scotch training. His book reads like, what it in fact is, a long and enthusiastic missionary address. Though it makes no pretence of giving any special account of the islands and their inhabitants, it is full of graphic pictures of the natives, their manner of life, their superstitions, their oratory, and finally of their simple and childlike obedience to their new faith. The narrative, slightly abridged and in some ways made more attractive to young readers, has been published with a different title, as above.

Laws Regulating the Manufacture and Sale of Intoxicating Liquors. By Henry Campbell Black, M.A. St. Paul: The West Publishing Company.

A more interesting branch of the law to the publicist than the regulation of the liquor traffic, affecting, as it does, the widest range of legal questions—the control of personal habits, the restraint of personal liberty, and the confiscation of private property—it would be difficult to find. The growth of this branch of statute law has been almost wholly within the last ten years, during which period statutes the most diverse in purpose and nature have been enacted in the various States—the rural communities tending to an extremely strict enforcement of high license or local option, and the large cities to extremely lax enforcement of laws continually made more liberal in order to conform to the wishes of a large foreign element accustomed to beer and wine-drinking. No statutes have suffered severer scrutiny than these liquor laws, against which every ingenuity of the pleader has been directed and almost every guarantee of State and national Constitutions invoked, until, as Mr. Black justly says, "a summary of the decisions would almost amount to a commentary on American constitutional jurisprudence." Indeed, the liquor traffic has given rise to some of the most searching discussions of the constitutional power of Congress to regulate inter-State commerce and the scope of the "police power" of the States; and the so-called "License Cases" decided under Taney, and the more recent cases of Bowman vs. the Railway, Leisy vs. Hardin, and Mugler vs. Kansas, are among the most far-reaching and important of the decisions of the Supreme Bench. The effects of the opinion in Leisy vs. Hardin (the "Original-Package Case"), and the subsequent legislation and litigation compelled by it, as revealed by Mr. Black's very careful compilation, make one wonder whether the encroachment of the States upon the Federal prerogative had been or threatened to be so great as to warrant such an apparently unnecessary overthrow of existing law and custom.

The constitutional questions are treated by Mr. Black fully and dispassionately, and are of real value apart from the mere question of the liquor laws. The rest of the book is more useful to the specialist, particularly to prosecuting officers, who cannot fail to be aided by it, though it is to be presumed that the minute marshalling of the wonderful subtleties of the special pleader in behalf of the criminal, which are most instructive as to the stubbornness with which the liquor-dealer has contested every point in existing laws, will give corresponding aid and comfort to the law-breaker. A second edition, if it appears, will no doubt contain the new and interesting decision recently handed down from the Court of Appeals in the case of The People vs. Meakim et al., New York's recalcitrant Excise Commissioners, who seemed certain, under its terms, of going to jail had not the Legislature intervened to save them.

BOOKS OF THE WEEK.

Appleton, Robert. Mr. Philip St. Clare. G. W. Dillingham.
Armatage, George. The Horse: Its Varieties and Management in Health and Disease. F. Warne & Co. $1.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

The cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,
Cambridge Place, Paddington, London.

EUROPEAN WINTER AND SUMMER Resort, University Town of Innsbruck, Tirol, Austria; 1,900 feet above the sea, with dry, bracing climate. Hotel Tirol, open all the year. Carl Landsee, Proprietor. Large, airy, sunny rooms, well furnished. Elevator. Superior cuisine (table d'hôte or à la carte). Reduced rates in winter. Carriages and sleighs at low rates. Charming excursions made from the hotel at all seasons. Unusual advantages for securing teachers of the languages, history, science, art, music, etc., at very moderate terms. Eminent medical care and skilled nurses if desired. Best English and American references. Illustrated pamphlets sent on application.

To Travellers Visiting Japan.

To rent, for four or six months from August 15, 1893, the finest portion of the year in Japan, one of the best houses in Yokohama, completely furnished and equipped. Address "TRUSTA," P. O. Box 259, Yokohama. Information, ROBERT BLUM, 80 East Washington Square, New York City.

WORLD'S FAIR.

First-class accommodations for individuals and large parties. House in perfect sanitary condition.
For further particulars, address
P. C. HAY,
2535 Prairie Ave., Chicago, Ill.

Germany, Hanover.

For a family abroad to study. Modern American house, furnished, for rent in the most refined city of Germany. Apply

A PARTIAL LIST

OF THE

Educational Publications

OF

HOUGHTON, MIFFLIN & CO.

Riverside Primer and Reader.

A stepping stone to good literature. In strong paper covers, with cloth back, 25 cents; in strong cloth binding, 30 cents.

Riverside Literature Series.

Sixty-eight numbers already published, containing *complete* masterpieces from the writings of LONGFELLOW, BRYANT, HOLMES, IRVING, WHITTIER, LOWELL, HAWTHORNE, and other eminent authors. With Introductions, Portraits, Biographical and Historical Sketches and Notes. Adapted for use in Primary, Grammar, and High Schools. Regular single numbers, 15 cents each.

Masterpieces of American Literature.

Complete Prose and Poetical Selections from the Works of IRVING, BRYANT, FRANKLIN, HOLMES, HAWTHORNE, WHITTIER, THOREAU, O'REILLY, LOWELL, EMERSON, WEBSTER, EVERETT, and LONGFELLOW. With a Portrait and Biographical Sketch of each Author. Adapted for use in Grammar Schools, High Schools, and Academies as a Reading Book and as a Text-book in American Literature. Price $1.00.

American Prose.

Selections from the writings of HAWTHORNE, IRVING, LONGFELLOW, WHITTIER, HOLMES, LOWELL, and EMERSON. Arranged by H. E. Scudder. $1.00.

American Poems.

Selections from the writings of LONGFELLOW, WHITTIER, BRYANT, HOLMES, LOWELL, and EMERSON. Arranged by H. E. Scudder. $1.00.

Modern Classics.

A SCHOOL LIBRARY of the choicest quality for $11.56. 34 volumes, neatly bound in cloth. Each volume, 40 cents.

Primer of American Literature.

By C. F. RICHARDSON. Revised edition. 30 cents.

Rolfe's Student's Series

OF STANDARD ENGLISH POEMS FOR SCHOOLS AND COLLEGES. Copious explanatory and critical notes, numerous illustrations.

1. SCOTT'S LADY OF THE LAKE, and 8 other volumes.

Price to teachers for examination, 47 cents each.

Arithmetic in Two Books.

BASED ON THE INDUCTIVE METHOD OF INSTRUCTION. Warren Colburn's First Lessons, 16mo, 35 cents; H. N. Wheeler's Second Lessons, 16mo, 60 cents; Answers to the Second Lessons, 16mo, paper, 20 cents.

Latin Lessons.

Designed to prepare for the intelligent reading of classic Latin. By HENRY PREBLE and L. C. HULL. (In press.)

Andrews & Stoddard's Latin Grammar.

Thoroughly revised by HENRY PREBLE. $1.12.

Riverside Song Book.

Containing classic American Poems set to standard music. Paper, 30 cents; boards, 40 cents. (In press.)

Our Next Books.

READY APRIL 20.

Completion of Pierce's Life of Sumner.

Memoir and Letters of Charles Sumner.

Volumes III. (1845-1860) and IV. (1860 1874). By EDWARD L. PIERCE. 8vo. Cloth. Uniform with Volumes I. and II. With two portraits. $6.00.

The entire manuscript of the work was read by George William Curtis some months before he died. Mr. Curtis took a deep interest in the book, and in criticism of it wrote to Mr. Pierce the following appreciative words: "In commenting upon your work I have spoken plainly of any suggestions that occurred to me, but I am afraid that I have uot taken care to express my admiration of it as the most thorough and conscientious biography of a public man that we have. Your patient diligence and complete research are without example in such work, and I think often of your remark to me that it had taken your life to write Sumner's."

Mr. Pierce, as is well known, was designated in Mr. Sumner's will as one of his literary executors, but he desired having Motley or Curtis or Dana prepare the biography. They turned the request, however, back to Mr. Pierce, and so in 1877 he began that work which he has now completed. As Mr. Pierce is an extremely conscientious writer and an ardent admirer of Mr. Sumner, he spared no pains in preparing the book, and read nearly all the 40,000 letters which Mr. Sumner left in his library—the sum total of nearly all that statesman's correspondence.

Complete sets of the MEMOIR AND LETTERS OF CHARLES SUMNER, 4 vols., cloth, boxed, are now ready. Price, $12.00.

A Great Man of the Provinces in Paris.

By HONORÉ DE BALZAC. Being the second part of "Lost Illusions." Translated by Katharine Prescott Wormeley. 12mo, half Russia, $1.50.

Destiny.

By SUSAN EDMONSTONE FERRIER. 2 vo's. 16mo. Half Russia. With photogravures from designs by T. Merrill. Uniform with our edition of "Jane Austen." $2.50.

Sets of Miss Ferrier's Novels, containing "Marriage," "The Inheritance," and "Destiny," 6 vols., half Russia, boxed, are now ready. $7.50.

Patriotism and Science.

Some Studies in Historic Psychology By WILLIAM MORTON FULLERTON. 16mo, cloth, $1.00.

FOUR RECENT BOOKS.

Some Passages in the Practice of Dr. Martha Scarborough.

By HELEN CAMPBELL. 16mo, cloth, $1.

It is strikingly original in presenting the ethics of the body.

The Man With Seven Hearts

And Other Stories. By ARTHUR BURRELL. 16mo, cloth, $1 00.

The book bears the stamp of solid, shrewd intellect.

Guide to the Knowledge of God.

A Study of the Chief Theodicies. By A. GRATRY, Professor of Moral Theology at the Sorbonne. 8vo, cloth, $3.00.

"The most brilliant contribution of the last half-century to theological thought."—*Beacon.*

Lost Illusions: The Two Poets and Eve and David.

By HONORE DE BALZAC. Translated by Miss K. P. Wormeley. 12mo, half Russia, $1.50.

"One of the master's great books."—*Tribune.*

ROBERTS BROTHERS,
Publishers, Boston.

Charles L. Webster & Co.

PUBLISH TO-DAY:

Elizabeth: Christian Scientist.

By MATT CRIM, author of "Adventures of a Fair Rebel," "In Beaver Cove," etc. 12mo, cloth, $1.00; paper, 50 cents.

The story deals with the career of a refined and deeply religious girl, who leaves her home in the Georgia mountains with the object of converting the world to Christian Science. The true aims and spirit of Christian Science are set forth by Miss Crim in a manner calculated to do away with many false impressions.

Stories from the Rabbis.

By ABRAM S. ISAACS, Ph.D., professor of German and Hebrew in the University of the City of New York. 12mo, cloth, $1.25.

Dr. Isaacs has gathered from the Talmud and Midrash a most entertaining collection of non-sectarian stories, and has retold them in genial prose. This book is a capital companion for an hour's relaxation, and is also suited for reading purposes in schools and colleges.

The Art of Sketching.

By G. FRAIPONT, with fifty illustrations from drawings by the author. Translated from the French by Clara Bell. With preface by Edwin Bale, R. I. 12mo, cloth, $1.00.

This little book will be found invaluable to amateurs in Black and White, and of great service and interest to artists and those desiring a text-book on this branch of art.

LATEST ISSUES:

The £1,000,000 Bank-Note

And Other New Sketches.

By MARK TWAIN. With frontispiece. Small 8vo, cloth, $1.00; stamped leather, $1.50.

This volume contains Mark Twain's new story of 'The £1,000,000 Bank-Note,' together with several other stories by the same author, which have never before appeared in book form. They include: 'Mental Telegraphy,' 'Playing Courier,' 'A Letter to Queen Victoria,' 'About Ships,' 'The German Chicago,' and 'A Majestic Literary Fossil.'

Tenting on the Plains.

By ELIZABETH B. CUSTER, author of 'Boots and Saddles.' New cheap edition. Illustrated by Frederic Remington. 12mo, cloth, $1.00.

The edition is printed from new plates, with the original illustrations, and bound in a handsome and appropriate cover. It is one of Mrs. Custer's best books, and can be very favorably compared with her 'Boots and Saddles.'

The Legends and Myths of Hawaii:

The Fables and Folk-Lore of a Strange People.

Edited, with an Introduction, by the Hon. R. M. DAGGETT, late U. S. Minister to the Hawaiian Islands. Two steel portraits, and twenty-five other illustrations. Cloth, 8vo, 530 pages, $3.00.

The present interest felt in Hawaiirn matters makes this a very timely volume. Scholars will read this book with interest, and the general reader will find in these weird legends a charm lacking in modern romances.

*** *Our publications are for sale by all booksellers, or are mailed postpaid on receipt of price.*

Charles L. Webster & Co.,
67 Fifth Avenue, N. Y. City.

Cassell Publishing Co.

HAVE JUST ISSUED:

By B. L. FARJEON.

THE LAST TENANT.

A Novel. By B. L. FARJEON; author of "Bread-and-Cheese and Kisses," "Great Porter Square," "Griff," "Blade-o'-Grass," "The Sacred Nugget," etc. 1 vol., 12mo, cloth, $1.00.

This is the best thing Mr. Farjeon has written in many a day:—The story of a haunted house, told with such matter-of-fact detail, that, once begun, it must be read to the end.

By MRS. ALEXANDER.

THE SNARE OF THE FOWLER.

By MRS. ALEXANDER, author of "The Wooing O't," "Which Shall it Be?" etc., etc. 1 vol., 12mo' *Cassell's Sunshine Series*; paper, 50 cents; extra cloth, $1.00.

"The different characters are outlined with that art of brilliant contrasts which the author employs with unfailing felicity."—*Boston Beacon.*

By MARK RUTHERFORD.

THE REVOLUTION IN TANNERS' LANE.

Edited by REUBEN SHAPCOTT. 1 vol., 12mo, cloth, $1.00. Uniform with "The Autobiography of Mark Rutherford," by the same author.

"His men and women are alive and real, and we follow his analysis of their motives with the same sort of interest with which we read Balzac or Charlotte Brontë."—*St. James's Gazette.*

By JOHN OLIVER HOBBES.

A STUDY IN TEMPTATIONS.

A Novelette. By JOHN OLIVER HOBBES, author of "Some Emotions and a Moral," etc. 1 vol., 16mo, cloth, unique, 50 cents, *Cassell's "Unknown" Library.*

The author of "Some Emotions and a Moral" needs no introduction to readers of the "Unknown" Library. It is sufficient to say that his present well-earned popularity will be increased by this new story.

By MRS. W. K. CLIFFORD.

A WILD PROXY.

A Tragic Comedy of To-Day. By Mrs. W. K. CLIFFORD, author of "Mrs. Keith's Crime," "Aunt Anne," etc. 1 vol., 12mo, cloth, $1.00.

Mrs. W. K. Clifford is one of the most popular novelists of the day, possessing a style of her own, which is at once bright and entertaining.

By E. W. HORNUNG.

TINY LUTTRELL.

A Novel. By E. W. HORNUNG. 1 vol., 12mo, cloth, $1.00.

A Story of Australian life, with a turn at England to give it contrast. The book promises to be a favorite.

BY A. H. PETISCUS.

THE GODS OF OLYMPOS;

Or, Mythology of the Greeks and Romans. Translated and edited from the twentieth edition of A. H. PETISCUS, by KATHERINE A. RALEIGH, with a Preface by JANE E. HARRISON. 1 vol., 8vo, extra cloth, $2.00.

Illustrated Catalogue.

Containing 44 Full-page Portraits of Prominent American and European Authors, is now ready, and will be forwarded to any address on receipt of two 2-cent stamps.

THIS PORTRAIT CATALOGUE comprises New and Forthcoming Books, and a selection from our complete descriptive catalogue of publications; is elegantly printed on a paper made specially for the purpose, and is a valuable guide to some of the best literature of the day. Send for a copy.

Cassell Publishing Company,

104 and 106 Fourth Ave., N. Y.

BOOKS

***The Diary of the author of "Evelina" contains most sprightly and entertaining anecdotes of fashionable and Court society of the Reign of George III., as well as the literary circles of the latter portion of the eighteenth century, Dr. Johnson, Mrs. Thrale, etc., etc.

Horace: the Odes, Epodes, Satires, and Epistles.

Translated by the eminent English scholars and poets, including Ben Jonson, Milton, Dryden, Lytton, Conington, Sir Theodore Martin, and others. 1 vol., 12mo, 75 cts. or $1.00.

Christian Lyrics: Sacred Poetry,

Chiefly selected from modern authors. With upwards of two hundred illustrations. Price 75 cents, or gilt top $1.00.

The Poems of Elizabeth Barrett Browning.

With memoir, etc., price 75 cts., or gilt top, $1.00.

In square 16mo, cloth, design in black and gold, $1.25.

Lear's Nonsense Birthday-Book.

Compiled from the Nonsense Books of Edward Lear. With comical illustrations, and spaces for autographs, daily, for a year.

New Volume in the "Handy Information Series." 12mo, cloth, $1.00.

Daily Dinners.

366 Menus in English and French. By NANCY LAKE. Author of "Menus Made Easy."

Intended for the mistress, not for the cook. The idea of this little book is to save thought and trouble by *suggesting* entire dinners for the ordinary use of *people* with *moderate means*; also, the utilizing of cold meats for made-up dishes, and various little economies whereby the table may be improved and refined, and made pleasing to taste and eye.

Of all booksellers, or mailed free, on receipt of price, by the publishers,

HAVE JUST READY

NEW VOLUME "BOOK-LOVERS' LIBRARY."

LITERARY BLUNDERS.

A CHAPTER IN THE HISTORY OF HUMAN ERROR. By HENRY B. WHEATLEY, the Editor of the Series. Cloth, uncut edges, $1.25.

The history of "Literary Blunders" is a wide subject, and necessarily covers many centuries and countries. Mr. Wheatley has brought together an interesting collection of instances of literary blundering, gleaned from many fields and different times. These are classified under various appropriate subjects, interesting to the bibliophile, and connected by a running thread of comment and explanation.

II.

The Expositor's Bible

(COMPLETION OF THE 5TH SERIES).

IV. Ezra, Nehemiah and Esther

Rev. Prof. W. F. ADENEY.

This series contains Expository Lectures on ALL THE BOOKS OF THE BIBLE by the foremost Preachers and Theologians of the day. While regard will be had up to the latest results of Scholarship, the volumes are essentially popular and *adapted to the general reader* quite as much as to the clergy. *6 volumes published yearly.*

Crown octavo, about 400 pages each, strongly bound. Price to *subscribers, cash in advance*, for *either series of* 6 vols., $6.
Separate vols., $1.50, postpaid.
Full list of the complete series with particulars of Subscriptions, etc., will be sent on application

III.

NEW VOLUME (BEING THE 5TH SERIES) OF

THE BOOK WORM.

AN ILLUSTRATED TREASURY OF OLD-TIME LITERATURE. 1 Vol., Octavo, Uncut Edges, $3

In the pages of *THE BOOK WORM* will be found abundance of lore for all those who are interested in the books of by gone days. The Collector here finds papers and jottings on his own specialty. Articles on Scarce Books, the works of Special Presses, First Editions, and Unique Copies, and their former and present value. The early BOOK AUCTIONS and old Book Catalogues claim occasional attention. BOOKBINDING takes a prominent place, with illustrations of fine examples, by the greatest masters.

5 VOLUMES ARE NOW READY. PRICE $3 EACH.
Sold separately or in sets.

IV.

5TH THOUSAND—NOW READY.

Thirty Years Among South Sea Cannibals.

The Story of John G. Paton,

TOLD FOR YOUNG FOLKS.

By JAMES PATON. With 45 Full-Page Illustrations from Original Designs. Large 12mo, 400 Pages. Handsomely Bound in Illuminated Cloth, $1.50.

THE NEW VOL. 10TH OF THE

SERMON BIBLE,

Containing 2d Corinthians to Philippians inclusive. Crown octavo, cloth, $1.50.

"We do not hesitate to pronounce this the most practically useful work of its kind at present extant. It is not a Commentary, but a Thesaurus of sermons on texts arranged consecutively, chapter after chapter, and book after book."—*London Churchman.*

Copies sent postpaid on receipt of price.

A. C. ARMSTRONG & SON,

51 East 10th St., New York.

NEW BOOKS.

A New Novel by Henryk Sienkiewicz, the great Polish Author.

WITHOUT DOGMA. A Novel of Modern Poland. Translated by IZA YOUNG. Crown 8vo, cloth, $1.50.

A psychological novel of modern thought and of great power. Its utter contrast to the author's historical romances exhibits in a most striking manner the remarkable variety of his genius.

BY THE SAME AUTHOR.

WITH FIRE AND SWORD. An Historical Novel of Poland and Russia. Now first translated into English from the Polish of HENRYK SIENKIEWICZ, by JEREMIAH CURTIN, author of "Myths and Folk Lore of Ireland," "Myths and Folk-Tales of the Russians, Western Slavs and Magyars," etc. Fourth edition. Crown 8vo, cloth, 795 pages, $2.00.

Also a Library Edition. 2 vols., crown 8vo, cloth, gilt top, $3.00.

The only modern romance with which it can be compared—for fire, sprightliness, rapidity of action, swift changes, and absorbing interest—is the "Three Musketeers" of Dumas."—*New York Tribune.*

One of the most brilliant historical novels ever written.—*Christian Union.*

THE DELUGE. An Historical Novel of Poland, Sweden, and Russia. A Sequel to "With Fire and Sword." Translated from the Polish of HENRYK SIENKIEWICZ by Jeremiah Curtin. With photogravure portrait of the author and map of the country at the period at which the events of "The Deluge" and "With Fire and Sword" take place. 2 vols., crown 8vo, cloth, $3.00.

A New Book by St. George Mivart.

AMERICAN TYPES OF ANIMAL LIFE. With 106 illustrations. 12mo, cloth, $2.00.

CONTENTS.—I. Monkeys; II. The Opossum; III. The Turkey; IV. The Bullfrog; V. The Rattlesnake; VI. The Serotine or Carolina Bat; VII. The American Bison; VIII. The Raccoon; IX. The Sloth; X. The Sea Lion; XI. Whales and Mermaids; XII. The Other Beasts.

By the Same Author.

ESSAYS AND CRITICISMS. 2 vols., 8vo, cloth. $8.00.

HOUGHTON, MIFFLIN & CO.'S
NEW BOOKS.

Abraham Lincoln.

In the Series of American Statesmen. By JOHN T. MORSE, JR. With a portrait and map. 2 vols. 16mo, $2.50. The same, in Library style, bound in smooth red cloth, $2.50. An excellent work devoted chiefly to the political portion of Lincoln's career, the various important questions that engaged his attention before and during the war; and illustrating his marvelous wisdom, good sense, sagacity, freedom from passion, comprehensive patriotism, all dominated by a lofty moral purpose.

Dr. Latimer.

A Story of Casco Bay, told with characteristic vivacity and freshness. By CLARA LOUISE BURNHAM, author of "Miss Bagg's Secretary," "Next Door," etc. $1.25.

The Divinity of Jesus Christ.

By the Editors of the *Andover Review.* A series of noteworthy papers contributed to that Review, and forming a symmetrical and very interesting treatment of the great topic they discuss. 16mo, $1.00.

Greek Poets in English Verse.

Edited by WM. H. APPLETON, Professor in Swarthmore College. 12mo, $1.50. An admirable collection of the best Greek poems from Homer, Hesiod, Æschylus, Sophocles, Euripides, Theocritus, Aristophanes, Anacreon, Sappho, and others. These are presented in the best translations, and prefaced with an Essay by the Editor.

Horatian Echoes.

By JOHN O. SARGENT. With a Biographical Sketch of Mr. Sargent, and an Introduction by Dr. HOLMES. 12mo, $1.50. Excellent translations of eighty-seven of the Odes of Horace, preserving his shrewdness, culture, blitheness of spirit and modernness, as well as the more distinctively poetical qualities of his genius.

Poole's Index to Periodical Literature.

Vol. III. Second Supplement (January, 1887–January, 1892). Royal 8vo, cloth, $8.00; sheep, $10.00; half-morocco, gilt top, $12.00.

LONGMANS, GREEN, & CO.'S
NEW BOOKS.

Just published, crown 8vo, $2.50,

HOMER AND THE EPIC.

By ANDREW LANG, M.A.,

Hon. LL.D. St. Andrews, Honorary Fellow of Merton College, Oxford.

"Besides scholarship, extraordinary critical ability, and special knowledge of early epic poetry in many languages, Mr. Lang brings to the task of Homeric criticism something, perhaps, even rarer—breadth of view and keen sense of what is ridiculous in criticism."—*Times.*

"The book is delightful throughout. The survey covers the whole field, and will be found both helpful and interesting by all who care for Homer, on whichever side they are inclined to range themselves."—*St. James's Gazette.*

"Mr. Lang has put the case for Homer with energy, humor, and breadth. The book is free from pedantry and direct in its appeal to reason. It may be read and understood by such as have little Greek, and should prove a worthy companion to the author's admirable translations."—*National Observer.*

"It is delightful to follow Mr. Lang in this inquiry. . . . The whole book is a most interesting account of the present state of the controversy, and a powerful argument for the view which it upholds. Whether a reader turns to it for solid instruction or to enjoy the gentle, graceful ridicule with which Mr. Lang demolishes the sober-sided German philologers, the work will prove equally satisfactory."—*Scotsman.*

NEW and CHEAPER EDITION.

THE MEMOIRS OF BARON DE MARBOT.

Translated from the French. New and Cheaper Edition. 1 vol. crown 8vo, cloth, gilt top, $2.50.

PEOPLE'S BANKS.

A Record of Social and Economic Success. By HENRY W. WOLFF. 8vo, $2.50.

"Mr. Wolff has carefully studied the subject, and writes about it so admirably that his volume should be in the hands of every one interested in the study of methods by which the lot of those who labor may be improved."—*Observer.*

KEITH DERAMORE.

A Novel. By the Author of "Miss Molly." Crown 8vo, $1.00.

"The author of 'Miss Molly' is always to be relied on for some of the best qualities of the novelist of real life, and she displays her usual ability in 'Keith Deramore.'"—*World.*

"One of the strongest novels for the year. . . . A book of absorbing and sustained interest, full of those touches of pathos, gusts of passion, and quick glimpses into the very hearts of men and women which are a necessary equipment of any great writer of fiction."—*Star.*

Les Prosateurs Francais du XIXe Siecle

By C. FONTAINE, B.L.L.D. 12mo, half Roan, 378 Pages, $1.25. Introduction price, $1.00.

This volume is a collection of prose writings selected from the works of the French authors, beginning with *Xavier de Maistre*, who was born in 1764, and ending with *Jean Rameau*, born in 1858, arranged by authors chronologically. Prof. FONTAINE, who is also the author of "Les Poetes Francais du XIXe Siecle," has been careful to make such selections as should be representative in character. Each selection is complete in itself, and the volume may be used not only as a literature of the nineteenth century, but as an advanced Reader, and therefore is fitted not only for school, but for college use as well. It has biographical notices of the writers, and explanatory, grammatical, and historical notes.

GEN. SHERMAN.

Mr. Kruell announces the publication of his new Portrait of GEN. SHERMAN. Size of block, 11x8.7 inches. Proof impressions on Japan paper, signed by the Artist. Price, $20.00, carriage free.

"SENATE CHAMBER, March 27, 1893.
"I think it a very good likeness of the General in his later years. JOHN SHERMAN."

Nation, March 30, 1893:
"The grand manner of the engraving of Sherman, and the stamp of the great captain in the man himself, entitle the portrait to a place in the choicest gallery of art or fame."

N. Y. *Times,* April 2, 1893:
"Wood engraving, as Mr. Kruell understands the art, is no slavish copying, but an independent branch calling for artistic power in the engraver."

Also Portraits of GRANT, LINCOLN, WEBSTER, LOWELL, HARRIET BEECHER STOWE.

THE SULLIVAN CO. CLUB

Themistocles, that shrewd old Greek, so Plutarch relates, when he had a plot of land to sell, soon secured a buyer by announcing that there were Good Neighbors near by.

Every one would like to own a simple summer home in a healthful, picturesque, accessible region, with congenial neighbors, good roads, water supply, drainage, and other essentials.

You can buy an abandoned farm for a trifle and have a good time there, if your family will be content with quiet, isolation and keeping house with the inconveniences and common sanitary deficiencies of the average country dwelling, with no doctor, church, store, or railway station near by. Sidney Smith enjoyed living "ten miles from a lemon," but is it sufficient change from the winter's restless whirl of the average city resident?

In a cottage community the essentials of living are carefully regarded; meals are furnished at nominal cost in a central Club House or Inn, and one can have all the comforts and privacy of the HOME without the bother of cooking, while there is cheerful social life without too much excitement. It is the most rational, wholesome, and inexpensive mode of summering, especially for children, costing no more than ordinary country board, without the risks of contact with undesirable associates and with a chance of profit from the steady rise in value as population grows. Land at Twilight Park has jumped from $10 to $2,000 an acre in five years, and more than one cottage has paid for itself in rentals.

Hitherto women have objected to Park and Club schemes because they were "stag" affairs which fostered dissipation. But now that they are started on the Family plan, their success is assured.

The Sullivan County Club owns free and clear a tract of 4,600 acres, on high ground, with numerous lakes, in the healthiest section of the Empire State, with fishing and hunting privileges. ONE HUNDRED DOLLARS will pay for an original, FULL PAID, NON-ASSESSABLE MEMBERSHIP SHARE, with a half-acre building site and an interest in the ENTIRE TRACT as well.

Five shares were taken in one day in my office alone, and four others during the week. This makes a total of over TWO HUNDRED SHARES SOLD SINCE JANUARY 1, and the boom has only just begun. As soon as another hundred shares are taken the price will be raised to $125.

NO MORTGAGE. **NO MALARIA.** **NO PERSONAL LIABILITY.**

Send for Circular.

Consulting Sanitary Engineer,
119 Pearl St. (Hanover Square).

Sullivan County Club,

No. 203 BROADWAY,
NEW YORK CITY.

To the American People.

The Colorado Desert in Southern California is about to be watered.

A man of experience says: "Take no man's word on a matter of irrigation; there is too much money involved." On the other hand, men of the East do not know and cannot believe what wealth irrigation creates, and how quick it creates it, where all outdoors is a hotbed.

Between the two doubts, it takes some courage to speak of the profits about to be made. And yet you can see, from the yield of one acre, what a million acres is worth.

A thousand-million dollars is going to be created by the Colorado Desert Canal within ten years, if all goes well—most of it [illegible] settlers; a hundred-millio[illegible] our stockholders.

Public Library F

You can take part [illegible] us in the general work imm[illegible]ately; or, later, buy ten acre[illegible] of land and grow oranges lemons figs etc. The largest and quickest returns will come from fruit-growing. Settlers will get their money out of the ground before they pay us much for land and water.

We have a pamphlet to send you; free. Our immediate object is to sell shares. We shall sell shares slowly till ready for settlers, then turn to water and land. The price, to begin with, is $50; but at this price our whole stock would bring only $7,500,000. We shall sell no faster than money is needed to pay for the work, and no more than enough to take the canal to where we begin to irrigate; keeping sales back by raising the price. We suppose a $50 share will be worth $1,000, when half the desert is irrigated; $100 this year.

Within three months from receiving water, the settlers will be sending to New York and Chicago car-loads of vegetables at $50 to $150 an acre a year. In two or three years the fruit-trees bear. In fifteen years they yield $500 to $2,500 an acre a year, and are worth $2,000 to $10,000 an acre.

You think these figures too big. They are not; you shall see they are not. If it takes you a year to see it, you lose by your slowness. We shall do our part.

There is a million acres of Mediterranean fruit and nut land under our levels; barren now, because dry; but, with water, quick; and the lay of the land is such that the water will run all over it naturally.

The combination of climate, soil, transportation to market, water, and other favoring circumstances, exists in no other place in the world. Our settlers will have a monopoly of it. Name one other place—it does not exist. We own 1,500,000 acres outside of this—no railroad, no market.

The best measure of what will be done in the Colorado Desert is what is done in the adjoining valley 150 miles beyond; but our climate is warmer and dryer, our season four to six weeks earlier, soil as good, situation better, all the circumstances so favorable that we shall excel and surpass what is done in any other part of Southern California.

Everything else but water is there already. Water we take, without dam, from the Colorado River. The water is muddy, and soil improves under cultivation with it, without any other fertilizer; no other will ever be used apparently.

If water turns desert to garden, producing $50 to $150 an acre immediately, and ten times more when trees are half-grown, is it strange that the business of bringing water is profitable?

But the business is new to you in the East. We look to you for money to make the canal; we must make you acquainted with what is going on in a dozen valleys in Southern California. Farming is, almost everywhere, hard and slow; but fruit-growing there is easy, and vegetables provide the trees. We shall have no land or water to sell for a year. Meantime, get ready by reading about irrigation.

To save money, we shall make our advertisements short. In a month you will see what we mean; in a year we hope to be acquainted with you.

Write for the pamphlet.

THE COLORADO RIVER IRRIGATION CO
65 Broad Street, New York.

"Nantucket Gray."

Many years' exposure to the salt air and quick climatic changes of this quaint old port has given its shingles a beautiful silvery-gray tone, much admired by people of keen artistic taste.

What nature has here taken years to accomplish can be got at once by the use of the special silver-gray numbers of

Cabot's Creosote Shingle Stains.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

THIRTY-TWO portraits and sketches of eminent teachers form the literary part of the manual of the School Bulletin Agency this year, and the little book will be sent *free to any teacher or school officer* on receipt of postage stamp. The portraits are of Pythagoras, Socrates, Plato, Aristotle, Epicurus, Seneca, Erasmus, Melancthon, Sturm, Montaigne, Comenius, Locke, Rousseau, Basedow, Richter (Jean Paul), Mrs. Schimmelpennick, Pestalozzi, Froebel, Jacotot, Hannah More, Thomas Arnold, "Uncle Sam" Taylor, Sir William Hamilton, Hugh Miller, Horace Mann, PORTRAITS George B. Emerson, Warren Colburn, Emma Willard, Francis Dwight, Henry Barnard, David P. Page, and Wm. T. Harris. This little book is got up as an advertisement of this Agency, but it by no means follows that it is without value. The portraits and sketches have cost a good deal of time and money, and are worth keeping; indeed this is the first of what may prove quite a series of such collections. We send to all who write in good faith, and trust they will find it valuable, as well as FREE.

THE SCHOOL BULLETIN AGENCY,
C. W. BARDEEN, Syracuse, N. Y.

Educational.

Association of Collegiate Alumnæ Bureau of Occupations.

If you wish to employ college women as teachers, secretaries, librarians, etc., address Miss EVA MARCH TAPPAN, Hotel Plunkett, Philadelphia, Pa.

FOR SALE.

A well-established Preparatory School in a Western city of 200,000. Principal desires to retire from school work. Address WESTERN, care of *Nation*.

Perhaps Your School is Filled

for the coming year, or you already have more applications than you can accommodate, and therefore it may seem unnecessary to advertise. Yet many of the best schools, who turn away applicants every year, continue their advertising. They find it advantageous to keep themselves before the reading-public. An excess of applications is desirable, as it gives an opportunity for selection, and then to have it known that a school is always filled and turning away applicants is the surest way to keep it so. Hence, advertise your school in the best magazines and newspapers to insure success, and keep on advertising to make that success permanent. Estimates and particulars on application to

DAUCHY & CO.,
Newspaper Advertisement Agents,
27 Park Place and 24-26 Murray St., New York.

THE BAKER & TAYLOR CO., 740 Broadway, N. Y.

can completely fill at the lowest rates all orders for School and Miscellaneous Books wherever published, and promptly forward same in a single shipment. Supplying schools with books a specialty. Catalogues of and estimates for School and Library Books on application.

President, Edmund J. James. Corresponding Sec'y, Roland P. Falkner. Treasurer, Stuart Wood.

THE
AMERICAN ACADEMY
OF
Political and Social Science.

STATION B, PHILADELPHIA,

Organized Dec. 14, 1889. Incorporated Feb. 14, 1891.

☞ *For additional information in regard to the Academy see the corresponding column of* THE NATION *of April 6th and of April 13th.*

The Academy holds regular scientific sessions at which papers are read and discussed. The proceedings are published in the form of a bi-monthly journal (*The Annals of the Academy*), which is sent to all members, together with such Supplements as may be issued from time to time.

Besides the papers submitted to the Academy, the *Annals* contains a Book Department in which the more important works in Politics, Economics, and Statistics are reviewed. The Academy also collects and publishes in the *Annals*, under the head of Personal Notes, late and accurate information relating to the life and work of authors and scholars in its appropriate field.

Among the eighty-six scientific papers thus far published by the Academy is a series of most interesting presentations of various phases of

THE NEW POLITICAL ECONOMY,

which every one interested in the progress of scientific economics should read. It includes papers by

		No.
Professor GIDDINGS,	*Bryn Mawr*,	4
Professor CLARK,	*Amherst*,	3, 85
Professor BOEHM-BAWERK,	*Vienna*,	10, 12

AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE,
STATION B, PHILADELPHIA, PA.

LITERATURE AND READING.

Swinton's Studies in English Literature.

Being Typical Selections of British and American Authorship, from Shakespeare to the Present Time; together with Definitions, Notes, Analyses, and Glossary, as an aid to Systematic Literary Study. By Prof. WILLIAM SWINTON. 670 pages. With Portraits. Crown, 8vo, Cloth, $1.20.

I have looked over the field of text-books similar to this, and find none so satisfactory at such a reasonable price.—R. P. HALLECK, Instructor in English Literature, Male High-school, Louisville, Ky.

Collections of typical passages from the writings of the masters in English literature are many, but we have seen none which seemed to us to be so judiciously made or so well adapted to the use of high-schools as the work prepared by Mr. William Swinton. . . . The selections are well chosen, the notes are judicious and helpful.—*N. Y. Evening Post.*

Miss M. G. Phillips's Manual of English Literature.

A Popular Manual of English Literature. Containing Outlines of the Literature of France, Germany, Italy, Spain, and the United States of America. With Historical, Scientific, and Art Notes. By MAUDE GILLETTE PHILLIPS. Illustrated. Vol. I., 600 pages. Vol. II., 575 pages. Index to each volume. Crown 8vo, Cloth, $2.00 per volume. *The volumes sold separately.*

"There certainly can be little doubt as to the value of the two volumes. . . . It is a most exhaustive compilation of all that is fitted to throw into relief, or to give light, shade, or color to the life and works of writers who have had a marked influence upon English thought."—*Boston Daily Advertiser.*

Quackenbos's Ancient Literature.

Illustrated History of Ancient Literature, Oriental and Classical. By JOHN D. QUACKENBOS, A.M., M.D. With Engravings and Colored Maps. New Edition, Revised and Enlarged. 432 pages. 12mo, Cloth, $1.50.

This is just the book for busy people who wish to get an intelligent and comprehensive view of ancient literature, but who have not the time to study it in detail, nor the familiarity with ancient languages to read the authors referred to in the original. As a text-book, too, it must prove invaluable. . . . It contains the most material in the least space of any work of the sort that has been published.—*Epoch, N. Y.*

Manual of Reading.

In four Parts: Orthophony, Class Methods, Gesture, and Elocution. For Teachers and Students. By H. L. D. POTTER. 420 pages. 12mo, Cloth, $1.00.

Miss Potter states that her work is prepared with three objects in view: completeness, that nothing be wanted to assist the teacher or student of reading; correctness, that nothing erroneous be learned; and brevity, that its price be within the means of every person desiring it.

Her book is intended to combine all the essential qualities of—first, a work on Calisthenics, or chest development; second, Orthophony, or voice-training; third, Elocution, as a science; fourth, Gesture, or action; and, fifth, Rhetoric, in order to review the selections which are read in class from time to time.

Special rates for introduction will be quoted for above books on request. Correspondence solicited.

HARPER & BROTHERS,

FRANKLIN SQUARE, NEW YORK.

Les Prosateurs Francais du XIXe Siecle

By C. FONTAINE, B.L.L.D. 12mo, half Roan, 378 Pages, $1.25. Introduction price, $1.00.

This volume is a collection of prose writings selected from the works of the French authors, beginning with *Xavier de Maistre*, who was born in 1764, and ending with *Jean Rameau*, born in 1858, arranged by authors chronologically. Prof. FONTAINE, who is also the author of "Les Poetes Francais du XIXe Siecle," has been careful to make such selections as should be representative in character. Each selection is complete in itself, and the volume may be used not only as a literature of the nineteenth century, but as an advanced Reader, and therefore is fitted not only for school, but for college use as well. It has biographical notices of the writers, and explanatory, grammatical, and historical notes.

OTHER NEW PUBLICATIONS:

DES KINDES ERSTES BUCH. Nach PAUL BERCY'S "*Le Livre des Enfants*," von WILHELM RIPPE. 12mo, boards, 40 illustrations. 40 cents.

Heroes of the Nations Series.

A series of biographical studies of certain representative historical characters, about whom have gathered National traditions.

Cloth extra.....$1 50
Half morocco, uncut edges, gilt top..... 1 75

Eight volumes now ready; each volume is fully illustrated, with maps and plans.

VIII.—**Napoleon, Warrior and Ruler, and the Military Supremacy of Revolutionary France.** By W. O'CONNOR MORRIS.

VII.—**John Wyclif. Last of the Schoolmen and First of the English Reformers.** By LEWIS SERGEANT.

"It is unusually closely packed with scholarly information. Its analysis of Wyclif's character, its portrayal of his age and its estimate of his influence and of the outcome of his labors are at once so acute, comprehensive, and candid as to give the work a high place in its class."—*Boston Congregationalist.*

VI.—**Julius Cæsar, and the Organization of the Roman Empire.** By W. WARDE FOWLER, M.A.

"It gives an account of a critical period in the world's history, which is at once vivid and trustworthy, and the greater the reader's familiarity with the times of which it treats, the more he will admire the competence and the sagacity of his guide."—*London Academy.*

V.—**Sir Philip Sidney, Type of English Chivalry.** By H. R. FOX BOURNE.

"Of the men already commemorated in the fascinating series of 'Heroes of the Nations,' no one is more worthy of a place in the honorable category than Philip Sidney, the most heroic heart of an heroic age."—*Literary World, Boston.*

IV.—**Theodoric the Goth, the Barbarian Champion of Civilization.** By THOMAS HODGKIN, D.C.L.

"A highly important and valuable contribution to historical literature, more especially such of this literature as concerns this obscure period in Europe."—*Chicago Standard.*

III.—**Pericles, and the Golden Age of Athens.** By EVELYN ABBOTT, M.A.

"A book of the utmost importance to thoughtful readers who would have a just comprehension of what Athens really was, and of a personality which well deserves to be classed with the world's heroes."—*The Beacon, Boston.*

II.—**Gustavus Adolphus, and the Struggle of Protestantism for Existence.** By C. R. L. FLETCHER, M.A.

"We know of no book which so clearly and satisfactorily covers this confused but deeply significant period of European history."—*Christian Union.*

I.—**Nelson and the Naval Supremacy of England.** By W. CLARK RUSSELL.

"The spirit and tone of the book are alike good. Mr. Russell writes with admirable good sense, discretion, and taste."—*London World.*

Any of the above volumes sent prepaid, on receipt of price, by the publishers.
*** Notes on New Books, a quarterly bulletin, prospectus of the Knickerbocker Nuggets, Heroes and Story of the Nations Series sent on application.*

G.P.Putnam's Sons

NEW YORK: 27 and 29 W. 23d St. LONDON: 24 Bedford St., Strand.

The Gospel of Matthew in Greek. With special vocabulary and other helps to study. Edited by ALEXANDER KERR and HERBERT CUSHING TOLMAN, Professors in the University of Wisconsin. Cloth, 12mo, 143 pages, $1.00; paper, 50 cents.

"Carefully edited and beautifully printed. . . . There is a cleanness and clearness about the whole work that is exceedingly gratifying."—*Herald and Presbyter.*

**** Mailed on receipt of price or for sale by leading booksellers. Catalogue of religious, economic, scientific, and miscellaneous books on application.*

MR. WILLIAM WINTER'S WORKS.

Just Published. 18mo, 75 cents.

Shadows of the Stage.

SECOND SERIES.

BY WILLIAM WINTER. 18mo, cloth, 75 cents.

By the same Author.

George William Curtis.

BY WILLIAM WINTER. With Portrait. 18mo, cloth, 75 cents.

"Mr. Winter's tribute to the memory of his life-long friend is not a task done perfunctorily. Manifestly his heart inspired the words that he spoke. The verdict of the future respecting Curtis's rank as an author, as a man of letters, as an orator, and as a citizen, can hardly be made up without a reference to this tiny volume. For it embodies from the experience and observation of a clear-sighted contemporary a summary of the moral and intellectual forces that environed Curtis from his youth up. It shows that a thorough-going biography of the man would mean a history of the literature and politics of the nation during a most important period."—*Tribune.*

Shakespeare's England.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Gray Days and Gold.

New Edition. 18mo, cloth gilt, gilt top, 75 cents.

Old Shrines and Ivy.

18mo, cloth gilt, 75 cents.

Shadows of the Stage.

18mo, cloth gilt, 75 cents.

"Mr. Winter has long been known as the foremost of American dramatic critics, as a writer of very charming verse, and as a master in the lighter veins of English prose."—*Chicago Herald.*

The above four volumes, uniformly bound in half calf or half morocco, in a box, $8.00.

*** Also a limited edition, printed on laid paper with ample margins, four volumes, in a box.

Wanderers.

Being a Collection of the Poems of William Winter.

New Edition, Revised and Enlarged. With a Portrait of the author. 18mo, cloth, 75 cents.

*** Also a limited large-paper edition, printed on English hand-made paper. Price, $2.50.

"Free from cant and rant—clear-cut as a cameo, pellucid as a mountain brook. It may be derided as a trite, *borné*, unimpassioned; but in its own modest sphere it is, to our thinking, extraordinarily successful, and satisfies us far more than the pretentious mouthing which receives the seal of over-hasty approbation."—*Athenæum.*

A New Book by Mr. William Watson.

Excursions in Criticisms.

Being some prose recreations of a rhymer. By WILLIAM WATSON. 16mo. Bound in buckram, $2.00.

By the same Author.

The Eloping Angels.

16mo, Cloth, 75 cents.

"Mr. Watson calls his poem a caprice. It has serious places, and it contains some admirable lines."—*Spectator.*

Second Edition Now Ready.

Collected Edition of Poems.

16mo, Cloth, $1.25.

*** In addition to Mr. Watson's latest poems, this volume contains all the poems included in the volume entitled "The Princes' Quest, and Other Tales," a small edition of which was published in 1884.

"Surely this is poetry, and poetry of a high order; of such are these poems by William Watson. We advise all who love the best in new poetic literature to possess themselves of this volume."—*The Critic.*

The Stickit Minister

And Some Common Men.

By the Right. Hon. JAMES BRYCE, D.C.L., author of "The Holy Roman Empire," M. P. for Aberdeen. New, Revised, and Enlarged Edition, with Additional Chapters. In 2 volumes, large 12mo. Third Edition, revised throughout.

Vol. I. *Now Ready.* $1.75 net.
Vol. II. *In the Press.*

"His work rises at once to an eminent place among studies of great nations and their institutions. It is, so far as America goes, a work unique in scope, spirit, and knowledge. There is nothing like it anywhere extant, nothing that approaches it. . . . Without exaggeration, it may be called the most considerable and gratifying tribute that has yet been bestowed upon us by an Englishman, and, perhaps, by even England herself. . . . One despairs in an attempt to give, in a single newspaper article, an adequate account of a work so infused with knowledge and sparkling with suggestion. . . . Every thoughtful American will read it, and will long hold in grateful remembrance its author's name."—*New York Times.*

The Nation.

NEW YORK, THURSDAY, APRIL 20, 1893.

The Week.

THE order sent out by Secretary Carlisle to the several sub-treasuries to issue no more gold certificates for the present is in strict compliance with the law of 1882, which says that the issue of such certificates shall be suspended whenever the amount of gold coin and gold bullion belonging to the Treasury shall fall below $100,000,000. The only significance of this order is that it makes public advertisement of the fact that the amount of gold owned by the Treasury is down to that limit. The object of the act of 1882, as declared at the time when it was passed, was to prevent persons from drawing gold from the Treasury by presenting greenbacks for redemption, and then redepositing the same gold and taking certificates therefor, thus using the Government vaults as a free safe deposit. At the time when the law was passed, there was neither statute nor custom which required the Secretary to redeem any paper issues in gold, except greenbacks and the gold certificates themselves. It was thought that some people might consider themselves in a better position if they held gold certificates than if they held greenbacks, and since the latter could be converted into the former by a simple act of volition, it would be best not to offer unlimited facilities for such conversion. Consequently a limit was put to the issue in the manner indicated. Anybody who wishes to draw gold and cart it away can do so by presenting either greenbacks or Treasury notes—probably, also, by presenting silver certificates, since the act of 1890 provides for keeping the "metals," not the different kinds of paper, at par with each other.

The question of immediate concern is, What effect will the Secretary's order have on the public mind? Will it cause private persons to draw gold out of the Treasury and hoard it? This question cannot be answered except by experience. It is pretty certain that the banks will not draw any. They will not even draw the gold that they lent to the Treasury while Mr. Foster was Secretary. There may be individuals who will consider the Secretary's order as an announcement that the silver crisis is imminent, and that a gold premium is in sight, and who will accordingly anticipate such an event by taking gold now. Yet such a movement is not likely to be large or disturbing unless the outflow of gold to Europe should be protracted. If this should assume the dimensions of 1891, it would almost certainly be accompanied by a local run, which could be checked only by an issue of bonds. One thing is certain: the outflow cannot be stopped as long as we have debts to pay abroad. Even a suspension by the Treasury would not stop it, except, perhaps, by creating a panic in the produce markets and putting the prices of exportable commodities so low that foreigners would take goods instead of money for what we owe them.

The Bering Sea arbitrators are now fairly at work in Paris, as the despatches show, after a preliminary "spat" over the British supplemental report on the condition of the seal fisheries, which the arbitrators refuse to receive *en bloc*, but permit counsel to refer to orally in their arguments. The reason of this decision appears to be simply a desire for peace, inasmuch as the offer of the report developed a good deal of acerbity, and even drew forth charges of sharp practice against the British; so the arbitrators have split the difference. Counsel may cite it, but must not submit it bodily. The next point in dispute arises out of the British desire to take up the case in detail, beginning with the question of right and ending with the question of regulation. The Americans appear to have opposed any division of the question and to have contended for the examination of the controversy as a whole—on the theory, probably, that if the judgment went against them on the question of legal right by itself, it would be more of a moral defeat than if it were blended with the decision touching the regulation of the fisheries, in which the British are bound to acquiesce; that is, they are bound to concede, and in fact have conceded, that the American demand for regulation is reasonable. It will be easily seen that this concession is, *pro tanto*, an admission that there is something peculiar about seals as wild animals which takes them out of the ordinary fish category.

The probabilities are, as seen from this distance, that the judgment of the arbitrators will depend largely on the weight which they will attach to the argument which Mr. Carter has injected into the case, and which is original with him. This argument assumes the existence of "a general standard of justice upon which civilized nations are agreed." This standard of justice is evolved from the law of nature, or rather from the nature of man as a social being, and constitutes a fountain of unwritten law for the government of international relations. When a case arises which is not provided for by precedent or by established international usage, the rule for its decision can therefore be drawn from this source. All existing international law has, in fact, been drawn from this source. Consequently, when a novel question of right arises, the means of answering it must be sought here. Therefore, although the seals may have been in former times wild animals, nevertheless, having been converted into "property *per industriam*"—that is, by the discovery that their skins furnished a useful and profitable raw material of manufacture—the principles of natural justice at once come into force for their protection at the hands of the nation whose shores they frequent, and which alone can capture them without diminution of their powers of increase. Mr. Phelps came near this in his article in *Harper's Monthly*, but he insisted on the existence already of something in the nature of an ocean game law which all were bound to respect. Mr. Carter has thrown this aside and taken the bolder and probably stronger position—for it cannot be attacked historically—that the Commission is called to deal with a state of facts admittedly novel, by the application of the old principles from which all existing rules of international law were in like manner originally drawn. But there is, of course, a chasm to be bridged over between this and the right of one nation to apply the new rule without notice to the rest of the world; general consensus being the usual channel by which international right emerges into law. That Mr. Carter will do whatever mortal man can do for this purpose, we may be well assured.

The text of two sections of the Extradition Treaty with Russia is published at Washington, for the purpose, it is said, of eliciting expressions of public opinion. The second article of the treaty, which defines the crimes to which extradition shall be applied, contains this definition of the crime of forgery:

> "The crime of forgery, by which is understood the utterance of forged papers, and also the counterfeiting of public, sovereign, or governmental acts."

The baneful significance of this clause is that the granting of a passport is a governmental act, and that the making of a false passport thus becomes an extraditable offence. Every political offender who escapes uses a false passport, or has one in readiness to be used. A passport is a part of every traveller's equipment. Without it he cannot go into or out of the country, or from one part of the country to another. To provide that persons who have made or used false passports shall be delivered up as for the crime of forgery, is equivalent to saying that any person who has left the country without permission shall be delivered up on demand of the Czar. That this was the intention of the negotiators of the treaty on our side, or of the Senate, is scarcely credible, yet it is a fact which cannot be overlooked that, in all our later treaties of extradition, the

crime of forging governmental acts is restricted to the obtaining of money unlawfully.

The statistics of immigration into this country for the first quarter of 1893 show a falling off of more than one-quarter from the record for the same period of 1882, the totals being 98,004 last year and 70,038 this. The falling-off is most marked from those nations which furnish the least desirable contributions, Russia sending only 3,663, against 15,509; Hungary 3,097, against 10,410, and Poland but 939, against 6,246. Sweden and Norway, England and Wales show scarcely any change, but Ireland has increased her contingent from 3,805 to 6,929. Germany is nearly a quarter behind her record a year ago, while Italy shows a slight increase. The outcry against immigration, which was so strong a year ago, has pretty much died away of late, having made but slight impression upon the legislation of the last Congress. It became very evident that there was not much sympathy with the demand for severe measures of repression in the great States of the West, and their influence in Congress is now so great that it turns the scales on any such question. The excitement which prevailed among some people in the East has also much diminished. Nobody anywhere makes any serious objections to English, Welsh, Scotch, French, Germans, Danes, Norwegians, or Swedes, and the total Irish immigration in any recent year has been comparatively small. The chief basis for complaint has been the swarms of Italians, Hungarians, Russians, and Poles, that swept across the Atlantic for a while, and this wave has now almost subsided.

Col. Morrison has earned a right to speak on the tariff question with the authority of one who has borne the heat and burden of the day in the cause of tariff reform. No one knows better than he from actual experience the immense difficulties in the way of any revision in our revenue laws, and his remarks at New Orleans on Tuesday week, reminding the Democratic party that it has a tough job on hand, are very much in point at the present time. The overwhelming nature of the popular verdict against protection is itself a temptation to the party in favor of which it was given to think that the battle is already won, when, in fact, it is only begun. Like the first successful charge of an army, it needs to be followed up by the most rigid discipline and watchfulness, or else the breaking of the ranks for purposes of plundering and the mixing up of camp-followers with the regular troops will invite a return charge of the enemy, and it will be Sheridan and Early at Winchester over again. There can be no doubt of the earnest purpose of the Administration to execute the declared wishes of the people, but it ought not to delude itself or the party into thinking that the difficulties in the way will diminish with the passing of time. On the contrary, they will pile up with every day's delay, and on all sides, and nothing but the most strenuous and single-eyed effort can prevent the lobby, and interested manufacturers, and half-hearted Democrats, and the play of one set of interests against another, and the intrigues and piques of disappointed office-seekers, from interposing an insurmountable barrier between the popular will and the laws necessary to execute it. Col. Morrison has done well to speak out and remind his party of all this.

The Saxton Pool Bill now needs only Gov. Flower's signature to become a law, and must be accounted a great gain for public morality. It makes the selling of pools and bookmaking in all forms, outside of race-tracks, a felony punishable by imprisonment in the State prison for a period of from one to five years. This will shut up at once all those back-stair "commission rooms," as well as the less concealed death-traps, which have infested this and other cities of the State, and which have been to the infatuated young men and boys who frequent them so many standing invitations to theft and embezzlement. It is not a valid objection to the law that it will tend to increase the profits of the race-track managers. It is enough to know that the bill was heartily supported by those who know most about the evils which it will undoubtedly suppress, and is regarded by them and by the police authorities as a measure which is certain to lead to a great diminution of crime.

It so rarely happens that a Legislature receives praise from its constituents nowadays that any such case merits general attention. The Nebraska lawmakers have just adjourned, after a session of thirteen weeks, and their doings are highly commended by many of the leading newspapers of the State. The body was composed of Republicans, Independents (or Populists), and Democrats, in such proportions that no party had a majority, and the Omaha *Bee* pronounces it "in many respects the most remarkable body of lawmakers that ever convened in this State." The first four weeks were consumed in a triangular contest over the United States Senatorship, during which, the *Bee* says, "the Legislature exhibited an extraordinary tenacity of purpose and a creditable amount of integrity," and which resulted in the election of a poor man without spending a dollar. A searching investigation was made into the management of State institutions, which brought to light a mass of corruption and led to the impeachment of the offending officials. Taxation was reduced to the extent of fully half a million dollars by the cutting down and pruning out of extravagant appropriations. A railroad law was passed which is much more moderate than such measures are apt to be in States where the Populists are strong, and no very bad legislation is complained of. "Taken as a whole," says the *Bee*, "the work of the Legislature cannot fail to meet popular approval, and its magnitude will be appreciated more as the years go by."

Gov. Russell of Massachusetts has had more or less trouble during each of his three terms with the strongly Republican Executive Council, which has the power of confirming or blocking his nominations for office, as the United States Senate has in the case of the President. One bone of contention has been the place as one of the three Boston Police Commissioners held by one Osborne, a Republican politician. Gov. Russell became convinced long ago that Osborne was unfit to fill the office, and abundant evidence of the fact was adduced. But the Republican Councillors refused their consent to Osborne's removal by declining to confirm the Governor's nomination of a new man. Osborne's term recently expired, and the Governor made another nomination for the place, selecting a man of the highest character and standing. Some of the Republican politicians advised keeping up the fight by the Council's refusal to confirm the new nomination, but it had become evident that the people sympathized with the Governor, and his partisan opponents finally decided to surrender, the Council on Thursday giving its consent to his action with but one dissenting vote.

A tabular display of the scope and working of the German laws to insure workingmen against sickness, accident, and old age, is to be a part of the German exhibit at the World's Fair. It has been prepared by a member of the Imperial Insurance Department, and in the guide accompanying it the sentiment is expressed: "Since the conditions which disturb the harmony between employer and employed are everywhere practically the same, it is a natural expectation that the advantages which German workingmen owe to the beneficent initiative of the Emperor and to the self-sacrifice of the employers should find a response in other civilized countries for the welfare of the race and the peace of society." This is dutiful and loyal enough on the part of the compiler, Dr. Zacher. He ought, however, to include in his exhibit some of the damaging criticisms which have been directed against the whole system in Germany itself, and to explain why it has not prevented the disturbance of the conditions of harmony between employer and employed. Nor do we believe that the workingman of Chicago will see any remarkable welfare of the race in a scheme which holds out to a laboring man the

prospect, after he has made his annual payments up to the completion of his seventieth year, of the great pension of thirty five dollars a year. Employers, on the other hand, will see the need of a new definition of contributory negligence if it is to be possible for a laborer in this country, as it is in Germany, to go two miles out of his way by an unaccustomed road and meet with an accident in a swamp in trying to jump across a bog, and then get his accident insurance on the ground that his misfortune befell him as a necessary result of his employment.

The Belgian riots were the not unnatural consequence of the way in which the Chambers have dealt with the question of revising the Constitution. The extension of the electoral franchise has been before the country for several years. It is now limited, and during the agitation for its extension the Belgians have seen universal suffrage established all around them, notably in France and Germany, and have seen the qualification reduced in Great Britain to a point little short of universal suffrage. The strain imposed on the Constitution by the persistent dilatoriness of the Chambers and the indecision of successive Ministries, has been aggravated by the fact that Belgium is the most densely populated country in Europe or, except China, in the world, and has the most rampant and turbulent laboring population except perhaps that of Paris. Striking is one of their favorite pastimes, and they strike as freely in declining and unprofitable as in flourishing industries. To make the political confusion worse confounded, the clergy retain a stronger hold on the peasantry than in any other Catholic country except perhaps the Austrian Tyrol, and are in politics up to their necks in defence of the Church. But during the ten years of growing agitation for a wider "pays légal," the Chambers have simply quarrelled over different plans for making a slight extension. The President of the Council, M. Bernaert, had to confess the other day, at the close of long debates, that they had not made the smallest advance. The politicians of all parties now in office are afraid of universal suffrage in a country in which the masses are either priest-ridden or socialistic to an extraordinary degree; but the period when it was possible to set up or keep up a qualification is now past. Though the Chambers have yielded to the popular menace, the majority may, after all these disorders, come into power in a state of exasperation and with its head full of the millennium. It is a mistake to suppose that any other Power has anything to say in the matter. The neutrality of Belgium as a monarchy has been guaranteed by the five great Powers, but no one of them could interfere with its internal affairs without a mandate from all the others. It is, moreover, doubtful now, whatever it may have been before 1848, whether any interference in favor of any particular form of government would be attempted or permitted. Certainly neither Germany nor France would long allow the existence of anarchy or civil war on its own frontier, but there is no reason why Belgium should not set up a republic as well as Switzerland.

The *coup d'état* in Servia is well calculated to cause a shiver in all the capitals and bourses of Europe. Servia is a part of the Eastern Question, and when that question is opened anything may happen. It is supposed that Russia has had a hand in this otherwise inexplicable movement. It is impossible to suppose that the boy Alexander, only seventeen years of age, could have taken the initiative in such a step. Servia is a country with a strongly developed public opinion, and with more than her fair allotment of *amour propre*. Therefore a mere palace intrigue would be impossible. There must be a strong party in the nation to sustain what looks like an act of gross usurpation and abuse of power. The Regency which was established for the young King has evidently outlived its popularity, and it is not unlikely that Queen Natalie has had her full share in the influences which have overthrown it. Two years ago the Queen returned to Servia in order to be near her son, and perhaps to take a hand in politics, to which she has become addicted since her marital infelicities became insupportable, and perhaps in consequence of them. The Regents caused her to be arrested and sent out of the country. Such action on their part was justified and even required by the terms of the abdication of King Milan, who had expressly stipulated that his wife should not reside in the country. This was an essential part of the settlement. Nevertheless the action of the Regents was very obnoxious to public sentiment, which always takes sides with a yearning mother. Riots took place at Belgrade. The students of the University intercepted the carriage that was conveying the ex-Queen to the railway station, overpowered the guards, and bore her back to the palace in triumph. A second attempt to send her away was more successful, but was not accomplished without bloodshed. No mother would submit to such treatment with anything like cheerfulness, whatever the law might say. She would consider the law the chief part of the offence. Probably she has used the intervening time in plots to "get even" with the Regents, and probably she has found countenance and support in Russia, to which any disturbance of the *status quo* on the lower Danube is supposed to be welcome.

A note of alarm in regard to the financial situation of France is sounded by Paul Leroy-Beaulieu in a long article in the *Journal des Débats*. In it he dissects the budget offered in the Chamber by the Minister of Finance, and shows it to be thoroughly misleading. He characterizes as "laborious artifices" the efforts of the Minister to show a surplus, which, strive as he might, he could not estimate as above $140,000, and enumerates millions and millions of francs due on various obligations of the Government which the budget does not take into account at all. M. Leroy-Beaulieu concludes:

> "When one examines the situation of the Treasury and all the obligations weighing upon it, one sees that there is but a single frank and honorable course open—a great public loan of 1,000,000,000 francs, if not 1,200,000,000, by 1894 at the latest."

No shifts of bookkeeping or schemes of temporary borrowing from the banks can obscure the fact, says M. Leroy-Beaulieu, that at the rate things are going in France there will be a regular annual deficit of from $40,000,000 to $60,000,000, and the need of a loan of $200,000,000 every three or four years. He thinks the Government ought courageously to face the situation and make the loan, as the best means of instructing, "if not the Chamber, at least the country." We may add that his resolute analysis of the country's finances will give little encouragement to those Panama Canal gentry who are for having the enterprise get $30,000,000 a year out of the National Treasury.

It was fully a year ago that the colony of Victoria, in Australia, found itself face to face with a very grave financial crisis. The causes were such as usually bring about the bankruptcy of young communities—primarily, a reckless and extravagant land speculation. For these excesses, as for those of the still more unlucky Argentine Republic, the responsibility rests chiefly with the London capitalists. The appetite for distant speculation which, in the four years preceding the Baring crash, seized upon the whole moneyed class of England, stopped at no geographical line. London "promoters" were as busy in Asia as in North America; in South Africa as in Australia. "Preference shares" in Burmese ruby mines and "cédulas" of Buenos Ayres commanded equally ready sale in London. The mere issue of a full-page "prospectus" in the newspapers would draw subscriptions as quickly for Kaffir gold shares as for unknown land and mortgage companies chartered in Melbourne. It is not to be wondered at that the Australian financiers caught the infection. Local capitalists and local banks plunged into speculation. Some of the procedures were amazingly reckless. The London *Economist*, a few months ago, referred to a specimen instance where one banking company, undertaking a large purchase of land, allowed an intervening company, presumably backed by its own directors, to make the purchase at the market price, and then at once to turn it over to the larger concern, the real purchaser, at an advance of 40 per cent. For such purchases the money of depositors was used.

"OUR FLAG HAULED DOWN."

THE earliest positive action which Mr. Cleveland's commissioner to Honolulu has taken is to order the American flag removed from the national building of the Hawaiian people. It will be remembered that the original action of Minister Stevens in hoisting the flag of the United States over the Hawaiian national building was an act of invasion, so far as he was concerned, and a betrayal of trust on the part of the members of the Provisional Government, so far as they had a hand in it. They had no authority to ask for a United States protectorate. Granting their claim to be the proper representatives of the Hawaiian people, their only business was to administer the Government which had been set up, and to conduct negotiations for coming under American protection or for outright annexation, in an orderly and legal way, as they had, in fact, set out to do. To break in with a sudden and illegal transfer of the sovereignty of the islands to the United States showed either that they were unfit for their office, or that they really doubted their popular backing, and were anxious to take a desperate and irrevocable step before a change in the general sentiment could make itself manifest.

As for Minister Stevens, his action was properly denounced by Senator Vest, at the time it was first heard of in this country, as no better than piracy. From what we know of the character of this filibustering diplomat, as revealed in his official correspondence, it is altogether likely that he himself suggested the running up of our flag. But whether so or not, and even if all he did was to accede to the request of the Provisional Government, his action was one of gross impropriety and illegality. If there was doubt of this in any man's mind, it must have been dispelled by the fact that even a Jingo Administration could not stomach such proceedings. Even while the treaty was still pending, and President Harrison was straining every nerve to secure its ratification, he was obliged to send the following despatch to Minister Stevens:

> "So far as your action may appear to overstep that limit, by setting the authority and power of the United States above that of the Government of the Hawaiian Islands in the capacity of protector, or to impair in any way the independent sovereignty of the Hawaiian Government by substituting the flag and the power of the United States as the symbol and manifestation of paramount authority, it is disavowed."

When a Minister's action is "disavowed" by his Government, he usually feels called upon to resign in disgrace, and always feels bound to undo the disavowed deed as speedily as possible. Therefore the only mystery in the case is, why all these weeks have been allowed to elapse before hauling down the American flag from a place where it had no right to be, except the right of the black flag. We suppose the truth is, that Minister Stevens did not receive Secretary Foster's disavowing despatch until after the Harrison Administration had gone to the tomb of the Capulets, and so concluded to let the flag wave and take his chances with Mr. Cleveland. That gentleman's disavowal of international piracy has now come with emphasis, and the Hawaiian flag is again floating over Hawaiian property, while the Provisional Government is left to play at government without the support of United States marines. Provisional President Dole seems to have put the best face possible on the matter, saying that he "was satisfied Mr. Blount was proceeding in a proper manner." His knowledge of human nature, however, cannot be regarded as great when he "hoped the newspaper correspondents would not make too much of the lowering of the American flag incident." He doesn't know the breed.

It appears, then, that Mr. Cleveland has simply carried out the Harrison policy as far as taking our flag off other people's property is concerned. What his intentions are for the future are not revealed explicitly in the letter which he sent to President Dole, and which is now made public. He speaks of his "sincere desire to cultivate and maintain to the fullest extent the friendship which has so long existed between the two countries." Every American has such a desire, and every American ought to wish to treat the Hawaiians with the same consideration and deference that we would show to the most powerful country in the world. Feeble as is their nation and their independence, there is every reason to believe that their autonomy is as dear to the Hawaiians as to any people. In 1843, Lord George Paulet tried to play the pirate and ran up the English flag over the Islands. His action was disavowed as soon as the Home Government heard of it, and the English flag was hauled down, while the Hawaiians, according to the account of an eye-witness, wept for joy at the recovery of their independence. It is safe to say that the hauling down of the American flag on April 1 was as great a source of satisfaction to them, and was taken by them as a conclusive proof that President Cleveland meant what he said when he wrote to them of his friendly feeling for their nation.

As for its effect on public opinion here, it has not caused so much buckling on of editorial armor as might have been expected. The newspaper swords are only half out of the sheath, in fact, and the Administration is notified, with much subterraneous rumbling, that this time it will be forgiven, but that it will be a clear *casus belli* if in any way the Provisional Government at the Islands shall be overthrown. As the *Sun* puts it: "When the power of this republic is exerted to crush out republican self-government in another land, and to put back a humbug queen upon a humbug throne, it will be time for popular indignation to make itself heard." Humbug for humbug, there are people who would as soon see a humbug queen as a humbug republic. How truly the latter term fits the nondescript Government at present in control is shown in a despatch of the veteran Charles Nordhoff, printed in Monday's *Herald*, in which he says:

> "I wish to emphasize this fact—confessed by all the annexationists I have seen—that the natives are solidly opposed to annexation. There are against these 40,000 natives 1,928 Americans—men, women, and children—most, though by no means all, of whom want and cry out for annexation. The leaders of these are heads of the fading Provisional Government."

And President Dole himself, only a few weeks ago, told the *Tribune* correspondent that a republic in Hawaii would "necessarily be a government by force," which it would take "resolute men to manage." To lend these resolute men the aid of United States troops for the purpose of coercing the vast majority of the people, would be a glorious triumph for "self-government."

CLUB CANDIDATES.

WHEN the press and the pulpit both take hold of a sensational topic, human reason is apt to be in danger of dethronement. The Seligman incident, as it may be called, at the Union League Club, is an illustration of this. A candidate in the person of Mr. Theodore Seligman, a son of Mr. Jesse Seligman, one of the Vice-Presidents of the Club, has been considerably blackballed by a number of members, in the plain exercise of their rights under the club rules. It is surmised, and it is probably true, that Mr. Seligman was thus treated because he is a Jew, there being no other visible objection to him—that is to say, he has been sacrificed to a prejudice which, in the main, keeps Jews and Christians socially apart in nearly every city in the country, which excludes Jews more or less from all the leading summer hotels, and would probably prevent Mr. Seligman's entrance into any other non-Jewish club in New York. In fact, there is no social phenomenon of the day more familiar to all New Yorkers, and particularly to the philosophers of journalism, than this prejudice. It may be as sad and reprehensible as you please, but it is as notorious as the sun at noonday, and is of long standing. That the newspapers should make a good thing out of it in the way of sensation is not surprising, but here comes the Rev. Merle St. Croix Wright of the Lenox Avenue Unitarian Church, saying on Sunday in his pulpit that when a club blackballs a Jew simply because he is a Jew, the members who cast the blackballs prove themselves not only "outside humanity," but "below rationality," "unintelligent and ignorant," and "irreligious and immoral without doubt." Moreover, the exclusion is "godless, devilish, and doomed." Nor is this all. In trying to get into the Club, Mr. Seligman was "asserting the rights of common humanity," and the Club was bound to let him in, "even at the sacrifice of undoubted privileges and legitimate pleasures," "in order to

give him his birthright and title" as "a normal man."

It would hardly be worth while commenting on ravings of this kind if they were not copied verbatim and at considerable length by leading morning newspapers as an important contribution to the discussion of the case. This requires something to be said in behalf of the common sense of the community now when the city is so full of strangers.

We do not mean to go into a discussion of the anti-Jewish prejudice apropos of this incident. It would be as useless to do so apropos of Mr. Seligman's being blackballed as apropos of the general failure of Christians in New York to associate more freely with well-bred, attractive Jewish ladies and gentlemen, of whom there are large numbers. What we are now about to say, we say in behalf of private life and private tastes, and not in behalf of either the Union League Club or Christian bigots in general. A club is simply an extension of a private dwelling, in which men of similar tastes, and it may be general agreement on a certain class of social and political questions, may meet in comfort, with certain guarantees that they will not be incommoded by bad manners, by disagreeable personal habits, by the proclamation of offensive opinions by others, or by the presence of persons who for *any reason* may interfere with their enjoyment of the club-rooms. To insure this, the power of selection is left with a committee, and, in some cases, as that of the Union League Club, an absolute veto is given to a minority large enough to prevent a candidate's being victimized by one individual or a small clique. That is to say, it is required that a certain reasonable number shall declare that his presence would render the Club less agreeable to them. But to insist on their giving their reasons, or to blackguard them because the reasons do not seem good to outsiders, is just as "irrational and inhuman" as to berate a man for the principle on which he selects the guests at his own dinner table. This principle may be base, or mean, or cruel, or show a bad heart or an ill instructed mind, but to interfere with it would make him a slave; and any one who suspected that the motives which prevented a host from asking him were unworthy, and should write to the newspapers to claim an occasional dinner of him as the natural right of "a normal man," would make himself ridiculous. This right to select his guests and associates for reasons best known to himself is one which every man carries to his club, if it be a social club, and he exercises it under such restrictions only as the association of a large body of men under one roof may make necessary.

It is said, of course, that the Union League Club has some sort of public functions, including the care of the Republican party, which make it rather a political association than a social club. But it was a social club from the very beginning. It was intended to be a club composed of men reasonably agreeable to each other, who held the same political opinions on the great questions of the day in 1862, and to exert a social influence in favor of the Union in this city. It has been since then converted into a club composed of men who approve of a high tariff; but this, though in our view a perversion of the original aim, does not deprive it of the right to select its members on grounds of social taste, and does not make the social tastes of club members, any more than the social tastes of individuals, proper matter for journalistic and pulpit denunciation. The exclusion of a man because he disapproves of the McKinley Bill, or did not vote for James G. Blaine, is in our minds as irrational and indefensible as the exclusion of a man on account of his race; but the tariff-reformer or Mugwump who tried to force his way into the Club in spite of this objection, as a natural right, would make a great blunder. The part of good taste and good manners is to avoid fighting one's way into clubs, private houses, or society of any description in which one's presence would be for any reason objectionable to any portion of the company. If a man finds that his admission to a club is likely to meet with formidable opposition, dignity and good sense and respect for club life prescribe his withdrawal of his name without a contest. The large number of clubs now existing for men of different tastes or pursuits shows that social clubs are organized on the basis of taste simply, and that if people could get into them by the aid of the Declaration of Independence, or by mandamus or injunction, they would all soon come to an end. No gentleman tries to impose his presence on a circle of people who do not want him, and no sensible man makes their failure to appreciate his society a ground of public complaint, much less of uproar.

THE LANCASHIRE STRIKE.

It is generally believed that trade-unionism is a stage further advanced in England than in the United States. Those who hold this view point to the greater respect which public opinion has in Great Britain for the older combinations among employees, to the more conservative policy which in general governs labor organizations there, and to the relief, as compared with our own country, from unnecessary and unjust strikes, which age and a greater sense of responsibility have secured from English trade unions. Certainly, if the labor strikes with which the United States has been cursed for a year past are specimens of unionism as it will continue to be, we may well hope for such radical defeat as will suppress combinations of employees for a long time to come. But, if we assume that such combinations have a right to exist for good purposes, and will continue to exist and must be reckoned with, then our hope lies in the probability that defeat will bring about wisdom and a better understanding of the proper limitations of labor organizations.

Because of the light which it throws upon our own labor problem, the last word has not been said concerning the Lancashire strike which ended a fortnight ago. Cotton-spinning had suffered, as had every other branch of trade and manufacture in Great Britain, in 1892. The manufacturers decided that some measures must be taken to reconcile cost and selling prices. They therefore proposed to their operatives a reduction of 10 per cent. in wages, changed soon to 5 per cent. The masters' argument was a simple one: in view of the depression in the cotton trade, the ruling wages could no longer be paid. It was charged that the manufacturers were willing to force a strike so that stocks of yarns and cloth on hand could be worked off. There seems no justification for this insinuation, since the mills, it is admitted, lost more money by stopping than they would have done if they had continued running at the old wages. On the other hand, the Operators' Union (or rather unions combined), while acknowledging the depression and the willingness of the men to contribute their share of loss during the hard times, opposed a downright reduction in wages as an inadequate remedy for a commercial crisis, and proposed instead a reduction to eight hours' work a day, with a proportionate cut in the pay-rolls. The manufacturers resisted this proposition on the ground that the real cost of running the mill would not be reduced in proportion to the shortened hours, and that the general outlook for the trade, in the face of increased spinning in India, demanded a more radical solution. The compromise finally reached, after a costly strike, was a reduction in pay of 3 per cent. with the old number of hours per day.

The London *Economist* states the real object of the strike to have been the desire on the part of the Spinners' Union to pave the way for an eight-hour day in the future. While willing to accept eight hours now, with a corresponding reduction in wages, the spinners would have been in a position, when trade revived, to demand their old daily wages without any increase in hours of work. Though both sides yielded something in the compromise, the operators practically lost their case; for the slightly better outlook allowed the masters without too much loss to reduce their demand from a 5 per cent. decrease in wages to 3 per cent., while the effort toward an eight hour day at old wages some time in the future has failed. The terms of the compromise, outside the reduction, were to the general effect that wages once fixed are not to be changed for a twelvemonth; that wages shall be put back when equitable; that neither side shall ask for any change or institute a strike or a lockout without giving due notice and

explanation to the other, and that the general condition of the trade involving questions of profit and wages shall be considered from time to time by a committee composed of three members from the masters and three from the spinners.

The impression left on the mind by a survey of the whole strike is that it was unnecessary; that the money lost (estimated at $15,000,000, taking all England into account) was wasted, and that the machinery devised to prevent a future strike or lockout ought to have stopped the one in question. The right of the workingmen to know about trade conditions and profits, and to sit in judgment upon such matters, seems to be acknowledged, in theory at least, together with the fact that there is a relationship of some sort between profits and wages. Clearly enough, the acknowledgment of such theoretic rights would not have been made had not the masters believed the trade union to be strong enough to enforce its side of the contract upon the operatives, and able to understand business points when brought before it by the mill-owners. While, therefore, the fact that so disastrous a strike should have been undertaken at all argues ill for the judgment of labor leaders in England, the terms of the compromise are such as to lead to hopes of avoiding affairs of the kind for the future.

In the case of the Central Railroad of Georgia, Judge Speer expressed the hope that the engineers would, when necessary, come before the Court asking for their legal rights as a body, just as their employers had been doing. Evidently the thought in the Judge's mind was that of a responsible and compact body of employees asking for justice as they conceived it, law-abiding, and capable of fulfilling all contracts entered into as railway men. We assumed at the beginning of this article that trade-unionism was certain to flourish and must be taken into account. It is indeed a force in our commercial life which is to be considered good or bad according as it is well or ill directed. Hitherto in the United States its government has not been of the right sort. The greatest need of labor organizations to-day is good leadership. Railway men, cotton operatives, switchmen, and artisans have alike been inclined to follow demagogues, mouth workers, alleged laborers, who subsist by strikes, and whose personal profit has lain in encouraging disputes. The walking delegate has become a by-word. The leaders in England—some of them are in Parliament—are of a better class. If our American laborers would seek the advice of competent men, would cease to take mean advantages (as by strikes during the World's Fair, for example), would pay some regard to the capitalist and his right to a profit, and in general would act like sensible men in demanding only what on examination should prove to be just, they would turn public opinion a long way in their favor. We might then in time cease to regard a labor union as a terror and menace to all business.

THE SECRET OF GLADSTONE.

THE ascendency over his party and over the middle and working classes in England which Mr. Gladstone continues to hold, and indeed seems to have strengthened considerably since the opening of the present session of Parliament, is exciting more and more bewilderment among his opponents, and this bewilderment is of course much increased by his marvellous mental and physical activity. *Punch*, in its "Essence of Parliament," the clever *jeu d'esprit* contributed weekly during the session by Mr. H. W. Lucy, gives the following sketch of one of the old gentleman's recent days, which, though humorous, is strictly accurate:

"Earned a night's rest and a longer Easter holiday than he has allotted to himself and us. His work to-day should make the eight-hours man blush. At bay in Downing Street since twelve o'clock with two hostile deputations. Came from Ulster and the City, resolved to beard home-rule lion in his den. Alone he met them; one down, the other come on; no interval of rest. Picked men from Ulster, selected captains from the City, surged around table at which he sat. Hardly left him time to reply. Having politely conducted Ulster to door, enter the City Fathers, fresh and eager for the fray. Told him over again, in varied phrase, how he was bringing country to verge of ruin; listened with perfect courtesy, as if they'd been discussing some one else—say, his next-door neighbor, Squire of Malwood and Junior Lord of Downing Street. Up again when last in list of City speakers had concluded. Almost persuaded John Lubbock to be Home-Ruler; then down to House, dealing with mass of correspondence littering his table in room behind Speaker's chair; alert on sound of division-bell; comes in to move closure; remembers that in long list of speeches never made this particular one before; looks up Palgrave's 'Handbook'; cons his lesson and declaims brief formula in deep rich voice that lends touch of eloquence to its unadorned, remorseless demand. All this, too, following on a day like yesterday, when two other deputations stormed Downing Street; drew from him weighty reply; followed, after hasty dinner, by a speech in the House on the eternal Irish question, which Grandolph rightly termed 'entrancing.'"

To this almost preternatural activity and endurance must be added the fact that he not only has held together the very fragile-looking majority with which he took office, but seems to have increased it, and given it a solidity which grows stronger under every attack of the Opposition. Indeed, he told his supporters, with much gayety of manner, at the recent meeting in the Foreign Office, that the majority he had not only was enough for him, but ought to be enough for any reasonable man, for he reminded them that one of the longest Ministries England has ever had, Lord Melbourne's, which lasted six years and a half, never had more than thirty majority, and Lord John Russell's had not so many. In fact, he intimated that a small majority was on the whole better than a large one, because it held together better, and that there must be no more anxiety in the Liberal ranks on that score.

The effect of all this on the Conservative mind is, as we have said, so bewildering that the philosophic observers of the party have begun to study Gladstone as an abnormal political growth, on which no previous experience of English public life throws much if any light. The last number of the *Economist* makes an elaborate study of the causes of his ascendency from the standpoint of the "historian of the future." It makes this personage admit that Gladstone's position in 1893 was an amazing one, almost, if not quite, without precedent in English history, but it makes him "hesitate in describing its final causes." "The historian's" attempt at the solution of the problem, however, cannot be considered satisfactory, and indeed is in the main self-contradictory. No amount of popularity among the workingmen, for instance, and no democratic or friendly tone about "the intelligence of the people," could possibly enable Mr. Gladstone to "dominate the great men in his own party," or relieve him of the necessity of even consulting them, or "make him supreme in his own Cabinet," so that his colleagues not only did not consider themselves his equals, but did not even venture to remonstrate with him. His colleagues, it must be remembered, number such men as Sir William Harcourt, Lord Rosebery, Lord Spencer, Lord Acton, Lord Herschel, Lord Kimberley, Mr. Mundella, Mr. Campbell-Bannerman, Mr. Fowler, Mr. John Morley, Mr. James Bryce, and several others of long and good standing in public life, of great weight with the country, and of remarkable intellectual acumen. They could not be reduced to this tame acquiescence in all the dicta of their chief by the mere fact that he was very popular with the working classes, and flattered these classes by his deferential treatment of their opinions.

During the past fortnight there have been two remarkable illustrations of the impression he makes as a debater, not on his colleagues, but on opponents who look on him as a dangerous politician, and who absolutely refuse to follow his lead on the Irish question. One of these is Lord Randolph Churchill, not perhaps a very weighty personage, but weighty enough to have been Chancellor of the Exchequer under Lord Salisbury. Lord Randolph, after hearing Mr. Gladstone's speech in the debate on that motion of censure on the Irish policy of the Ministry made by Mr. Balfour a fortnight ago, which collapsed so completely, declared, on rising to follow him, that it was an "entrancing speech," and confessed in advance his inability to meet it. More striking testimony by far to Mr. Gladstone's powers of exposition and persuasion is to be found in the article by Mr. Leonard Courtney on bimetallism in the last number of the *Nineteenth Century*. Mr. Courtney is well known as an economist, and as Chairman of Committees in the last Parliament, a place which he was universally acknowledged to have filled better than it had ever been filled before. He

was one of the members of the late Monetary Commission, which reported against bimetallism. He is a Liberal-Unionist who deserted Mr. Gladstone on the home-rule question, and is undoubtedly the clearest and perhaps coldest thinker of the lot, and the least likely to be led astray or charmed by mere rhetoric. He opens his article in the *Nineteenth Century* by saying:

"Those who were privileged to hear Mr. Gladstone's speech three weeks since on the subject of the resumption of the Brussels Conference, must have been charmed with its play and power. As a debating achievement it was miraculous. The youngest might have envied its vivacity, and those who were subjected to its badinage might have forgiven its satire in their admiration of the skill of the artist. The form of the speech was well-nigh perfect."

Mr. Courtney then goes on to combat some of its conclusions. An orator who produces effects of this sort on minds like Mr. Courtney does not need to have his ascendency explained by any device so cheap as friendliness of manner with workingmen. Oratory must be an instrument of tremendous force to make the impression which Mr. Gladstone makes on an audience on the whole so critical and unimpressionable as what is called "the educated" class in England, which Mr. Gladstone invariably addresses and largely dominates, for even his opponents have to resist violently and call for help in order not to be carried off captive by him.

But it must also be said that no man in public life in England secures a powerful following through mere oratory. The orator, the man who talks easily and talks well, does not by any means hold the commanding position in England that he holds here. In fact, the English are a little suspicious of the orator who has not a large mass of property behind him, or has not transacted great affairs. Gladstone could not rule England as he now rules it as a mere debater. When the *Economist* remarks, as if *en passant*, "that he carried out with singular ability the work of free trade initiated through Sir Robert Peel," it virtually calls attention to the fact that Mr. Gladstone framed and carried through the most important series of legislative acts in English history, which have literally resulted in the transformation of the country and the creation of a new England which Peel himself would hardly recognize. In other words, he has been the author of the most beneficent and in its effects most far-reaching of modern revolutions. Not less remarkable was his abolition of those two most flagrant abuses, the Irish Church establishment and the system of purchase in the army. The monstrosity of both of them had been since Pitt's day freely acknowledged by every Liberal statesman. They were rooted in some of the deepest and oldest prejudices of English society, and had grown into vested interests of immense size and strength. But when the time came, he tackled them with remorseless courage, energy, and skill. Nothing, in fact, could be more futile than the attempts to ascribe Mr. Gladstone's influence wholly to the charms of his speech. It has behind it forty years of achievement in legislation such as no other English statesman has to show.

FRENCH PUBLISHERS AT CHICAGO.

PARIS, April 1, 1893.

VISITORS to the last Paris Exposition may recall the collection of books sent by the American publishers. Not only was it very meagre, but several of our best-known book-manufacturers shone only by their absence. This portion of the United States section occupied scarcely twelve square yards of flooring. When, therefore, I started in the other day to glance at the preparations made for Chicago by the French publishers, I did not expect to see anything of much importance. If, in 1889, we had at Paris fewer volumes than would be found in an ordinary district-school library, there was no reason to expect the French to do better by us this year. Imagine my happy surprise, then, at finding the leading publishers of Paris—the Firmin-Didots, Hachettes, Plons, Hetzels, etc.—and several, like Mame of Tours and Storck of Lyons, from the provinces, participating so generously in the Columbian Exposition that Class 34 (bookbinding, typography, cartography, etc.) will require for its installation some fifty by sixteen yards of space, more than one-third of which will be given up exclusively to the publishers, who have taxed themselves, on this occasion, about 90,000 francs, not less than 40,000 francs of which sum is borne by the members of the Paris Publishers' Club (Cercle de la Librairie de Paris) alone. At least 2,000 volumes, the cream of the output of the French presses during the last few years, will soon be seen tastefully displayed on the second floor of the gigantic building of Manufactures and Liberal Arts. Some one hundred and thirty large boxes of books have reached Chicago by this time. One of these boxes—that of Gruel, the famous binder of the Rue St. Honoré—is alone insured for 75,000 francs.

A catalogue, which forms a part of the Club's special exhibit, gives a list of the volumes sent by French publishers to the World's Fairs held in London in 1864, in Vienna, Philadelphia, New Orleans, Melbourne, Barcelona, Antwerp, and Amsterdam. A glance at this catalogue shows that the present Exhibition seems to be held in the highest esteem by this association of patriotic publishers bent on carrying to every quarter of the globe the fame of their trade, for at none of the above-mentioned international fairs has the Club made such a large display as it will make this summer on the shores of Lake Michigan. It will be six times larger than that made at Philadelphia in 1876. Many of these volumes are to be in open shelves so that they can be easily taken down and examined by the public. It may be safely predicted, therefore, that one of the most delightful spots in Jackson Park this summer will be the cosey room, whose windows look out on Lake Michigan, containing the exhibit brought together by the intelligent and indefatigable efforts of M. Émile Terquem, who has been delegated to represent at Chicago his fellow-members of the Paris Publishers' Club.

A word about the Cercle de la Librairie de Paris, whose collective exhibit will be the most interesting feature of Class 34. The Club, or Society, was founded in 1847, on the eve of the Revolution, and it has now a membership of over three hundred, with nearly one hundred corresponding members, pertaining to every branch of the business which has to do with the fabrication of books and to the diffusion of thought and art. One of the corners of the Boulevard St. Germain is adorned with the Club's handsome little hôtel, a creation of Charles Garnier, architect of the Opera-house. Here, during the Exposition season of 1889, more than one American publisher was agreeably entertained, and here is the official headquarters of the French League for the Protection of Literary and Artistic Property, which, in the person of its delegate, Count de Kératry, who, by the way, has just sailed for New York, so ably seconded Mr. Johnson and the American friends of international copyright in the recent struggle at Washington. The special exhibit of the Club contains, among other volumes, an illustrated historic and descriptive account of this excellent institution, to which publication I refer those who wish to know more about the Club.

Leaving the special exhibit of the Club, and turning our attention to the general exhibit, we find a number of historical works. Thus, Félix Alcan sends his 'Recueil des Instructions données aux Ambassadeurs et Ministres de France,' issued under the auspices of the Committee on Diplomatic Archives of the Ministry of Foreign Affairs. This is a fine edition on Holland paper, and among the editors of the nine volumes are Albert Sorel, Alfred Rambaud, and Joseph Reinach. The house of Plon, Nourrit & Co., well known for its collection of memoirs and histories, is fully represented in these departments. The memoirs of Marbot, the Duchess of Gontaut, Gen. Jarras, Marshal Macdonald, etc., and Thureau-Dangin's 'Histoire de la Monarchie de Juillet,' Albert Sorel's 'L'Europe et la Révolution Française,' Camille Rousset's 'La Conquête de l'Algérie,' etc , most of which works have been reviewed in the *Nation*, will all be found on M. Terquem's shelves. Messrs. Jouvet & Co. contribute a number of standard Histories of France, the late Henri Martin's being of the number.

The collection is particularly rich in *ouvrages de luxe*. Among these are, from the Plons, 'Les Maîtres Florentins du XV^e^ Siècle,' containing thirty drawings by Count Delaborde and W. Haussoullier, after original paintings and sculptures in Thiers's collection, a folio volume costing 300 francs; from Édouard Rouveyre, the first of two volumes devoted to the manuscripts of Leonardo da Vinci, with facsimiles or reproductions of the originals; a dozen notable works from the press of Thézard, the architectural publisher of Dourdan, near Paris, devoted to the subject of art as applied to decoration and house-furnishing; another dozen of magnificent volumes bearing the imprint of the Hachettes; from Laurens a number of costly publications, including the late Charles Blanc's 'Histoire des Peintres,' sold at 300 francs; and from Le Vasseur & Co. superb editions of Buffon and La Fontaine.

The large place which Victor Hugo still fills in French literature is strikingly shown in the Chicago exhibit. Hébert sends a collection of one hundred engravings to accompany the Hetzel-Quantin "Ne-Varietur" editions of Hugo's works, one being in forty-eight and the other in seventy volumes. These same editions are also exhibited by the printers of them—the Librairies-Imprimeries Réunies. Conquet, the *de luxe* publisher of the Rue Drouot, offers a fine edition of 'Ruy Blas,' illustrated with a portrait of the poet and fifteen drawings by Adrien Moreau, engraved by Champollion. Then there is Émile Testard's great "édition

nationale," of which thirty-four volumes have already appeared and which will be completed next year. So far, one hundred and seventy-five large *hors texte* etchings and about sixteen hundred *taille douce* vignettes, the work of the leading artists of France, have appeared in this edition, which, it will be remembered, was inaugurated by a grand banquet, the last ever attended by the poet, given a few months before his death.

The catalogue, prepared for the Exhibition under the auspices of the Cercle de la Librairie, contains considerable information of interest. Scattered through its pages are facts which illustrate the well-known custom in France of keeping a business for several generations in the same family. Two of the exhibiting printing establishments offer notable examples of this. Thus, the Crétés at Corbeil, near Paris, founded their office in 1808, and it has been managed successively by the grandfather and the father of the present director. The Danel printing-house at Lille is still more remarkable in this respect, as it has been in the same family since 1697. Among the publishers of whom the same thing may be said are the Delalains, who have been the great school-book printers of France since 1808; the Hachettes, the Firmin-Didots, and the Massons. The last-mentioned house was established by the father of the present head, and the son of the latter is now an active member of the firm, and will probably visit Chicago this summer in an official capacity. But the picture-publishing house of Hautecœur affords perhaps the best instance of this habit. It was founded in 1796 by M. Martinet. In 1820 Honorat Hautecœur married Mlle. Martinet, and in 1844 the two sons, issue of this union, took control of the business. In 1868, the younger of these two brothers, Alfred Hautecœur, became sole proprietor, and in 1879 he associated with him his only son, Jules Hautecœur, who, by the death of the father in November, 1882, came to be the head of the firm.

The house of Mame might also be cited in this connection, for, established in 1796, it is now managed by the son,* grandson, and the two great-grandsons of its founder. But it is interesting in other respects too. It puts into practice certain benevolent ideas by which the 800 men, women, and children employed in the establishment share in the profits of the business and find relief in sickness and old age. This great publishing-house occupies an area of six acres in the centre of Tours, and produces about 6,000,000 volumes a year. The printing department can turn out 15,000 volumes per day, and the binding department can do the same for 8,000 volumes. It sends to Chicago a number of remarkable *ouvrages de luxe*, and many specimens of its specialty, viz., Catholic publications and prayer-books.

The only French binder who goes to Chicago is Gruel, but his exhibit will be exceedingly rich. He has issued a special catalogue for this occasion, in which each of his two score of volumes is described in print on one page with a full-page illustration opposite showing the front cover. The price asked for some of these volumes will give an idea of the material value at least of the whole collection. Thus De Lamennais's 'Imitation de Jésus-Christ,' a rare edition beautifully bound in *cuirs ciselés*, is marked 4,780 francs. Another copy of the same work, in brown morocco in the style of Maïoli of the sixteenth century, is valued at 3,500 francs. A manuscript 'Livre de Mariage,' with a delicately carved Louis XIV. ivory bas-relief on the cover, is to be sold for 2,800 francs. Nearly the same sum is asked for 'La Légende Dorée en Francoys,' Lyons, 1484, "wide margins, first edition, excessively rare," says the catalogue, bound in morocco and having silver clasps. The most costly volume in the lot—20,000 francs is the price asked for it—is the original manuscript of De Lamennais's 'Imitation,' one hundred pages on vellum, "four large compositions and a number of miniatures inspired by some of the finest manuscripts of the Middle Ages and the Renaissance, with varied borders, executed by two miniaturists of great talent—MM. Moreau and Ledroux."

A few words in closing about the exhibit of the National Printing Office, which will be found in the French Government Building. This establishment is much more than its name would indicate to Americans. In the first place, its director, M. Henri Doniol, member of the Institute, is a scholar and an author, his history of the part taken by France in our war for Independence having attracted considerable attention. Again, the building in the quaint Rue Vieille du Temple, where the office is situated, is in itself a most curious specimen of ancient Paris. M. Doniol's drawing-room, with its artistic and whimsical mural paintings, in which monkeys cut a prominent figure, is a fine specimen of this seventeenth-century style of decoration. And the exhibit, composed of nearly a hundred volumes, shows that M. Doniol's work as a publisher is not limited to the turning out of prosaic official documents, ministerial proclamations, revenue stamps, and the like, but that he finds time to give to the world carefully printed tomes devoted to art and learning, some of which appear in the odd dress of the languages of Corea, Abyssinia, Annam, Syria, etc. THEODORE STANTON.

*Since this letter was written M. Alfred Mame has died at an advanced age. He was a quiet, genial gentleman, who has not been seen much in Paris since the summer of 1889, when he served on the Book Jury of the International Exposition of that year.

IN THE BALEARIC ISLES.—I.

PALMA, March, 1893.

TRAVELLERS by the Mediterranean route from New York to Genoa enjoy towards the end of their voyage, provided they are blessed with fair weather, three days of exceptional beauty and interest. When approaching the coast of Spain in the early morning, its arid mountain tops, its richly colored rocks and soil, and its ancient and memorable towns, with their glittering white walls, come slowly into view. Jutting out into the sea and claiming special notice, Trafalgar reminds us that these tranquil waters have felt the stir of heroic deeds. Across the straits the shores of Africa rise ghost-like in the early light, a dreamy calm resting on her lofty mountains. The Pillars of Hercules, monuments of nature's early struggles, loom up grandly before us. Drawing near Gibraltar, the great fortress-rock looks harmless enough, clothed with olives and blossoming almond trees, and with tall palms clustering at its feet. As our ship drops anchor in front of the smiling hillside, a number of small boats come alongside, and palm baskets filled with figs, dates, and oranges, and gorgeous Eastern handiwork are lifted up the ship's side for our inspection; but trade is not very brisk, for the prospective hour on shore is all-engrossing. In that brief space a vivid picture is etched on the memory of steep and narrow streets up which strange figures are climbing: of tall, white-turbaned Arabs and mendicant monks and jaunty English soldiers; of dark-eyed little boys with bunches of great fragrant violets; of heavily laden donkeys brushing the walls of the houses with their burdens; of Moors and Turks clothed in richly dyed stuffs sitting impassive in the marketplace; of brilliant sunshine everywhere—and then the hour is up.

Rounding Gibraltar, its other side, we find, wears quite a different aspect. Rugged, naked, and rising almost perpendicularly to a height of over fourteen hundred feet, Hercules himself would think twice before attempting to assault it, and fortification on that side would seem to be a work of supererogation. Now losing sight of land altogether, again catching glimpses of bold headlands, the second morning brings a surprise. No coast line in sight, but before us, on our right, a great mass of jagged, red-brown rock rises out of the sea, with pinnacled towers and deep buttresses, like some vast cathedral of singular beauty and grand proportions. This is Formentera, the southernmost of that group of islands lying about half way between the coasts of Spain and Africa, known geographically as the Balearic Isles, but so little visited that a recent French writer calls them "Les Îles Oubliées." Maintaining its impressiveness to the last, Formentera gradually disappears, and meanwhile Ibiza has come into view, showing a fringe of umbrella pines along the tops of its rounded hills. There are what seem to be forests of cork trees and a few cultivated fields, with one or two white farmhouses in sheltered nooks, but these are the only evidences of human life visible, for we keep at a respectful distance—the white spray dashing on those rocks warning off intruders. Ibiza remains long in sight, then slowly sinks into the sea. A period of monotony, and then a bold range of mountains, rising sheer up at one point until lost in the clouds, announces, while at the same time it jealously hides, Mallorca, the largest of the three principal islands. We sail for hours in front of those mountains, noting the great furrows worn in their sides, the cavernous depths at their bases, and the snow gleaming on their topmost peak, and then, as the sun goes down, they glow for a little space with wonderful beauty, and we are left to dream of what lies behind their rocky walls. It is said that travellers sailing between these islands, when darkness covers the sea, have had such fragrant and spicy odors wafted to them as to lead the fancy to paint these invisible regions as the veritable gardens of the Hesperides. These sea tales of Elysian Fields, those forbidding mountains, have roused the spirit of desire, and although the third morning brings the beautiful Riviera into view, those "golden islands" glow with ever-increasing brightness as distance widens between us and them.

The Maritime Alps were white with snow, and the air blew keen across the sea, as we stood on the hurricane-deck on the last day of our journey and watched the Riviera open before us. With its beautiful towns spreading along the shore or climbing up the green hill-slopes, and its background of snowy mountains, such a panorama alone is worth a winter trip across the Atlantic. Nightfall brought us to Genoa, and morning offered fresh delights; but a certain subtle flavor was lacking, and so we took counsel as to the practical measures necessary to reach our promised land. Inquiry brought little information, and polite surprise was manifested at our persistence. With Nice and Cannes, to say nothing of Rome and Florence, within easy reach, why go so far out of the way for the unknown? We did not care to mention Elsyian Fields to a ticket agent, so we held our peace and quietly took passage on a ship bound for Buenos Ayres,

which would touch at Barcelona, feeling sure of our ground, once on Spanish soil, for was not Spain mother, or at least stepmother, to our islands? And, sure enough, arrived at Barcelona, it seemed quite a matter of course that they should be our destination, for Mallorca's bountiful groves and orchards refresh the busy Barcelonians with fruit of exquisite quality, and make a semi-weekly run between the mainland and the islands a necessity.

With the Mediterranean temper a little ruffled, our twelve hours' sail was not one of unalloyed pleasure, but sunrise brought more than compensation. As we entered the beautiful bay of Palma, the capital of Mallorca, a rosy glow spread over the eastern hills, touching with pink a white village with terraced gardens of palm and orange sloping to the sea. Above it rose a dark growth of pine, with a fortress-castle crowning the height. In front of us lay the city, rising on gentle slopes towards mountains of much more friendly aspect than those that guard the northwestern coast. A line of busy windmills stretched out along a sandy beach to the right, with almond orchards, white with promise, in the background. Almost at the water's edge rose a building of simple and beautiful proportions, the Lonja, or Exchange, rivalling in interest the magnificent cathedral crowning the old ramparts and dominating the city. The inner harbor gave lively evidence of not forgetting or being by the world forgot, and, as we stepped on shore, the amenities of civilization were offered to us in the shape of two tariff inspections, provincial and municipal.

These ceremonies over, a canvas-covered omnibus took us to the Fonda de Mallorca, the principal hotel of the city. Had we landed at night, we might have had some misgivings, as we were led to our room through many devious passages, down a slippery inclined plane, with a dove-cote *en route;* but daylight and an excellent breakfast helped us to view things with unprejudiced eyes. The streets were cheerful with busy life as we took our first walk in Palma, They are mostly very narrow and winding, with an absent-minded way of forgetting their original intention and leading the ignorant wayfarer into strange places. Many are so narrow as not to allow of two vehicles passing each other, and to avoid collisions a horse and cart are painted on the house-walls at the corners, with the head of the horse turned according as the word *entrada* (entrance) or *salida* (exit) is painted above. This would seem to indicate that many here who run cannot read. The old houses are low, with projecting eaves often curiously carved, which shelter the upper story, left open to the street and forming a pleasant, shady gallery. The more modern houses are high, with the ground floor given up to a variety of trades. Coopers, blacksmiths, carpenters, shoemakers, rope and basketmakers here ply their trades with observant eye on the world passing by. Intertwined in the balustrades of many of the houses were palm branches which, we were told, had been blessed on Palm Sunday and preserved throughout the year to keep out witches and ward off lightning. Stopping in the marketplace to indulge extravagantly in oranges at five cents a dozen, we saw one or two countrymen dressed in the old-time island costume—wide trousers gathered at the knee, short, loose jacket, shawl tied around the waist, and gay handkerchief wound about the head. Some, in lieu of jacket, wore a goatskin with the hair out and the tail hanging down. Maids, with hair in one long plait and wearing caps with deep frill at back and long ends crossed in front, soberly made their household purchases or filled their quaint water-jars at the cisterns, and, balancing them on their sturdy hips, bore them lightly away.

Turning into a street lined with small shops, with their one window hung with chains and dangling spoons, and where, in open doorways and under archways, jewellers were busily at work, we found ourselves in a quarter of the city where live descendants of the Jews forcibly converted to Christianity. It is said that they were once obliged to say their prayers in public lest they might be tempted to omit them altogether, but as they are now supposed to be well seasoned in Christian habits, they are left alone in the strictest sense, no intercourse being held with them except in the way of trade. They are known as *chuatas*, a term of reproach whose original signification is somewhat obscure. In a narrow street of tall, dark houses, the clacking of looms discovered men and women at work in small rooms, lighted only by the open door or grating in the wall, weaving a coarse native fabric of more durability than beauty, used for floor-coverings, folding-chairs, and so forth. The weavers gave us only a furtive glance, while the noise of the looms went on unceasingly.

Along the Rambla, the fashionable promenade, a wide avenue lined with plane trees, young girls and matrons were sauntering home from the daily Lenten service. A few wore hats of the latest Paris fashion, but the majority wore long black lace veils becomingly arranged over the head and shoulders. Some carried large fur muffs, which contrasted oddly with their light head-covering. Under the arm were carried folding-stools, richly upholstered, for use during service. We saw no strikingly beautiful faces or graceful forms; a certain heaviness both of form and feature seemed to prevail, though there were some happy exceptions. The men whom we met wore the long Spanish cloak.

Thus far the sense of sight had been so actively employed that we had been only vaguely conscious of a weird, monotonous sound that arose at frequent intervals and echoed dismally through the narrow streets and narrower alleys; but now a painful sense of prevailing lamentation assailed us. A prolonged wail drew us to a Moorish doorway opening into a courtyard, where we saw a woman vigorously scrubbing the flagstones and at the same time uttering sounds similar to those which had so mystified us. A little further on we came across a party of masons at work, who were lustily pouring forth the same lugubrious strains. We conclude that this is a native melody (!), born, perhaps, in the mountain fastnesses when wild tribes roamed over the country, but unsuited to civilization; it has gained nothing and lost everything in the transplanting. Through a maze of streets, where we caught fascinating glimpses of domestic life and hints of a remote civilization, past the grand cathedral, with a happy sense of ample time in which to study its beauties, we came to the ramparts, where the setting sun threw its own splendor on mountain, sea, and stately tower. At such an hour no term seemed too extravagant to apply to this land of beauty.

Strolling hotelward towards dusk, we had an opportunity of observing the original way in which Mallorcan chickens go home to roost. As our glance fell on the rear wall of one of the houses built on the old ramparts, we saw a man leaning out of a window in one of the upper stories and slowly drawing up a long rope, to which was attached a basket containing a fluttering and loquacious hen. On the ground below, another hen and a rooster were impatiently flapping their wings. As the empty basket descended, the rooster ungallantly got in first and was drawn up. We waited to watch the safe ascent of the remaining hen and then hastened to dinner. It was somewhat disagreeable to be obliged to sit through a table-d'hôte dinner in a thick fog of tobacco smoke, but this circumstance arose from no lack of politeness, for each guest saluted civilly on entering and leaving the room; but it seems to be the custom here for everybody to smoke everywhere. The dinner was all that could be desired, both as to cooking and serving. Soup, fish, fowl, beef, good wine, and several kinds of fruit were served in generous portions, and doubtless it was only a foolish prejudice that made it seem odd to have the fish appear immediately before dessert.

As night fell, a deadly chill pervaded the house, and we looked about for means for warmth, but there was no fireplace in dining-room, saloon, or sleeping-room. As we sat wrapped in our travelling-rugs, we mused over certain lines we had heard quoted descriptive of this land:

> "There the human kind
> Enjoy the easiest life: no snow is there,
> No biting winter, and no drenching shower,
> But zephyr always gently from the sea
> Breathes on them, to refresh the happy race."

But as we listened drowsily through the night to the watchman chanting the hours and the state of the weather, his continued assurance of serenity fell pleasantly on our ears and brightened our anticipations for the morrow.

S. G.

Correspondence.

THE 'A. L. A. INDEX.'

To the Editor of The Nation:

Sir: Your notice of the 'A. L. A. Index' (April 6) calls attention to several defects and deficiencies, of which none could be more painfully aware than the compilers, and most of which, it is hoped, may be removed in a second edition, which, however, can hardly be published for some years. But on two points criticised it seems that a simple word of explanation may remove the grounds of objection. The reviewer says: "Many works are analyzed which might properly be called non-indexable; for example, Adams's 'New Departure' and 'Chapters of Erie,' . . . Dilke's 'Greater Britain,' Brooke's 'Seven Months' Run' [etc.]. . . . We should have just as much right to expect Bonvalot's 'Across Asia,' or Cooke's 'Old Touraine,' and a thousand others to be indexed." (The difficulty of securing accuracy in such work is evidenced by the fact that you print "Brooke's" for "Brooks's" and "Cooke's" for "Cook's" in the few titles enumerated.)

Now, the volumes by Mr. Adams were indexed precisely for the reason that each of them contains "other essays" not suggested by the title, and on widely different subjects, such facts in book-making being the very *raison d'être* of the 'A. L. A. Index.' As to the books of travel, the intention was to include all "whose chapters or parts," to quote my preface, "are worthy of separate reference, etc." Of course many important books of travel were simply overlooked. (Cook's 'Old Touraine' is included in the Annual Index for 1892, just issuing as supplementary to both 'Poole' and 'A. L. A.') But those included were taken because they were so constructed that their chapters constitute monographs on different places or objects of interest. Many of the best books

of travel do not lend themselves to this treatment.

The other point on which explanation appears to be in order is that of abbreviations. I do not clearly see the ground on which some of my abbreviations are "objectionable." They are often ungainly, to be sure, but I hope they will always fulfil their mission, which is simply to furnish an unmistakable guide to the title intended, and to be self-explanatory to the average library attendant. Let the user of the Index draw off the references as they stand and send them in to a library or take them to a catalogue himself, and he will find them serving their purpose, which is more than can be said for any arbitrary scheme that can be devised. They represent the best compromise I could make in each case between giving the full title and the imperative demands of space in such a work. W. I. F.

To the Editor of The Nation:

Sir: I have read the review of the 'A. L. A. Index' in the *Nation* for April 6. Permit me to say in reply to one criticism there made, that Sparks's 'Library of American Biography' was indexed in the main volume of Poole's 'Index to Periodical Literature.'

Respectfully, Lodilla Ambrose,
Asst. Librarian.

Northwestern University Library,
Evanston, Ill., April 15, 1893.

EXTREMES OF CULTURE.

To the Editor of The Nation:

Sir: To those who realize the value of a careful study of literary tendencies, the following gem from a book review of recent date in the *Dial* of Chicago will be of interest:

"Under her [Mrs. Susannah Taylor] hospitable mahogany were frequently stretched the eminent legs of Mrs. Barbauld, Sir James Mackintosh, Dr. Southey, Amelia Opie, Crabb Robinson (the Wandering Jew of anecdote), etc."

We were told that the great University was speedily to erect Chicago into a centre of "culture." Can this be one of the first fruits of its influence? W. H. Johnson.

Granville, O., April 15, 1893.

GRASS-WIDOW AND *WIDOW BEWITCHED.*

To the Editor of The Nation:

Sir: In his letter to the *Nation* of March 23, Dr. Hall inquires as to the use of the term "grass-widow" in the United States. Proposing the question to about one hundred students, I found the term familiar to all. Nineteen understood it to mean a woman divorced (whether the divorce had been obtained by her or by her husband); to thirty-seven the term signified a woman divorced or informally separated from her husband, he usually being the deserting party; forty-two were familiar with the term only in reference to a woman who had been deserted by her husband or had left him, usually the former. In other words, four-fifths knew it in the sense of a woman informally separated from her husband, whether by mutual understanding or because one party, usually the husband, had deserted the other. It was reported as meaning "divorced" by one each from Virginia, Florida, Tennessee, Kentucky, Indiana, by two from Iowa, and by twelve from Michigan; "divorced or deserted" by one each from Massachusetts, Rhode Island, Indiana, Illinois, Iowa, Utah, Nevada, by three from Ohio, and by twelve from Michigan; "deserted" by one each from Vermont, Connecticut, Pennsylvania, Maryland, Minnesota, by three from Ohio, four from Indiana, eleven from Illinois, nineteen from Michigan,

To none was the ordinary meaning of the term "a wife whose husband is compelled by his duties to live abroad for a long time, and away from her"; but several had heard it used jocosely in that way, in which case the speaker would immediately after explain what he meant. One or two associated with the term a woman whose conjugal relations had been many or irregular. But no one knew it in the sense of an unmarried woman deserted by her lover.

Light might be thrown on the origin of the term by a consideration of corresponding terms in other languages, especially Germanic. I am familiar only with those in German, but the Century Dictionary cites also various Scandinavian forms; for example, Swedish *gräsenka*. In North Germany *Graswitwe* is used, and generally means a young woman who has lost her virginity. But in most parts of Germany the term is *Strohwitwe*, which means either a woman whose husband has left her, or one whose husband is much away from home. As is well known, it was formerly customary in parts of Germany to require of a bride who had been deflowered that she wear at her wedding a wreath of straw in place of the usual fresh green wreath, and the custom of strewing straw or chaff before the door of such a bride (cf. Goethe's 'Faust,' i, 3575) is said to linger in some villages. The straw and chaff are generally regarded as symbols of what is withered or deflowered. So, too, in England there was a time when to show a woman a tuft of straw was the greatest of insults (cf. "Henry the Sixth," Pt. III., ii, 2, 144, and Nares's 'Glossary.')

If this is the clue to the matter, the meanings of the term would appear to have this chronology: (1) unmarried woman deserted by her lover, (2) wife deserted by her husband or divorced from him, (3) wife temporarily deprived of the company of her husband.

Even if the English and the German terms be practically identical and arise from some such custom as that referred to, the idea that the grass or straw symbolizes what is no longer pure and fresh may be fanciful or secondary, and may have displaced an older notion, according to which it stood for a bed of grass or straw (cf. the use of the verb "grass," as reported by Mr. Carter* in the *Nation* for March 30, and the expression "to be in the straw" said of a pregnant woman).

Various other notions (through accidental verbal coincidence) may also have contributed to the use (cf. the German idiom "auf eines anderen Wiese grasen," literally "to graze one's cattle in another's field"—an offence provided for in the law of the ancient Scandinavians—but now generally used of encroaching upon another's connubial rights). The expression is a tempting one for would-be etymologists, so that one is not surprised to see that it has long been associated with "to turn to grass" (cf. Century Dictionary); but people who have not had the advantage of being brought up in Boston will, I hope, be pardoned if they do not readily accept manufactured Norman French in explanation of a widely spread Germanic expression.

"Widow bewitched"="grass-widow" I could trace only to English people settled in Utah and Idaho. As a half-reproachful designation of a widow whose manner betrays a desire to make a new match, I traced the term to Maine, Connecticut, and New York; but in each case the term was not used by those who reported it, but was remembered as having been used by parents or grandparents. One young lady living in Ann Arbor stated that her mother, a native of New York, is still in the habit of saying "You act like a widow bewitched" to a child whose manner betrays unusual exhilaration of spirits.

Cannot some one having access to a good folk-lore library, like that at Harvard, look the matter up? George Hempl.

Ann Arbor, April 7, 1893.

* Mr. Carter's definition, in implying the use of force, does not agree with the usual understanding of the word.

Notes.

Roberts Bros.' spring announcements include 'A. Bronson Alcott: His Life and Philosophy,' by F. B. Sanborn and William T. Harris, with portraits; and a "Columbian Knowledge Series," edited by Prof. D. P. Todd of Amherst College, and to be issued in 16mo volumes, bound in cloth.

'Art Out of Doors,' by Mrs. Schuyler Van Rensselaer, and 'Baedeker's Guide-Book to the United States' are in the press of Charles Scribner's Sons.

Henry Holt & Co. announce 'John Paget,' a story of New York and Newport life, by Miss S. B. Elliott; and Karpeles's Heine, an autobiography compiled from the poet's own writings, translated by Arthur Dexter.

Macmillan & Co. have in preparation a second series of William Winter's 'Shadows of the Stage,' papers on the elder Booth, Bernhardt, Ristori, Modjeska, and lesser lights.

Nearly two and a half years ago, in reviewing the final volumes of Lecky's 'History of England in the 18th Century,' we said, referring to the work as a whole: "His Irish chapters, which begin with Elizabeth and carry the story down to 1800, constitute by far the best consecutive history of Ireland during the two centuries from the Tudor conquest . . . till the Union to be found in our language"; and we strongly urged the author to publish these chapters in a separate book, prefixing to them a sketch of the earlier history of the island. In preparing a revised and popular edition of his History in twelve volumes (D. Appleton & Co.), Mr. Lecky has in fact divided it into two portions, England in seven and Ireland in five, but he has refrained from giving more than a mere glance at the pre-Elizabethan period, for which he finds four pages sufficient. The separation, however, was the main thing, and this is a great gain. The main work has undergone much retouching, but no material change. The volumes are handy, plainly yet not meanly printed, and presentably bound in olive green. Each series is indexed.

Mr. Symonds's 'Life of Michelangelo Buonarroti' has already passed into a second edition in consequence of the demand for it (Scribners). In an appendix, along with other matter, Mr. Symonds replies to some of his critics, especially in reference to the artist's attitude towards the other sex and to his treatment of the female figure. By so much the new edition is an improvement upon the first, and it is as handsome in every particular.

Substantially unaltered is the fourth edition of Prof. Sayce's 'Principles of Comparative Philology' (Scribners).

From the Longmans we have a fourth edition, slightly abridged in one volume, of the

translation of 'The Memoirs of Baron Marbot,' the permanent value of which is well established. The concise index is one of names, of persons and places—we were going to say exclusively, but Marbot's charger Azolan is "admitted to that equal sky."

Miss Burney's 'Evelina' has been reissued in two volumes companionable with those of Jane Austen so daintily produced, under the editorship of Mr. R. Brimley Johnson, by J. M. Dent & Co. (New York: Macmillan). An etched portrait of the author and half-a-dozen vignette illustrations adorn this edition, which is elegantly bound in pale-green cloth.

'The Letters of Charles Dickens (1833–1870)' takes its place in the popular reprint by Macmillan of Dickens's Works, on which we have remarked from time to time. The editors have revised the letters afresh, and more need not be said.

Frederick Warne & Co. send us their "Albion" edition of Dryden's Poetical Works in one volume of clear but pretty fine print, with memoir, notes, and an index of first lines. Songs and lyrics from the plays are here collected, and Dryden's classical translations. Much pains has been bestowed upon the collation of the text and upon the critical apparatus.

Mr. Henry Norman's 'Real Japan' has reached a third edition (Scribners) in a more popular form and price.

Houghton, Mifflin & Co. offer the second edition for 1893 of their 'Satchel Guide for the Vacation Tourist in Europe,' which a generation of travellers has put to the proof.

'A Visit to Java' (London: R. Bentley & Son), by W. B. Worsfold, is an entertaining, though slight and rather disconnected account of a singularly interesting country. A sketch of the history of the island is followed by a description of its government and inhabitants, its ancient literature and architecture, together with much useful information for intending travellers. There is an amusing chapter upon the somewhat curious social life of the Batavian Dutch, who are mostly natives of the island, and seem to have adapted themselves to its climatic conditions much more perfectly than the English have in India. This may be largely owing to the adoption of the native dress by the women and a still more primitive attire, except in the evening, by the men. A visit to a private coffee plantation leads naturally to an interesting account of the "culture system" which was maintained with great success for about forty years. Since 1871 it has been gradually abandoned, though the Government still produces about two-thirds of the coffee crop. Recently two new industries have been introduced, the cultivation of tea, which is still in its infancy, and cinchona bark. This has proved very successful, as in 1890 the area of cinchona plantations was 22,500 acres, and 6,000,000 pounds of bark were exported—an amount equivalent to half the world's supply for the year. The closing chapter narrates briefly the history of Singapore, founded by Sir Stamford Raffles on the retrocession of Java to the Dutch to compete with them for the commerce of the East Indies.

'Myamma' (London: W. H. Allen & Co.), by Surgeon-General C. T. Paske, is a somewhat rambling series of reminiscences of life and travel in Lower Burmah forty years ago. The most interesting chapters are those describing the march of an expedition through the jungle under the late Sir Arthur Phayre to attack a rebel stockade. Life at the stations of Rangoon, Prome, and Pegu is pictured with considerable vivacity, as is also an adventurous voyage up a river in a canoe. In giving an account of one of the annual fires which he witnessed at Rangoon, nearly destroying the native city, the author refers to the sanitary value of these fires in preventing the spread of epidemic diseases. Since the bamboo huts have been replaced by more substantial buildings, cholera has raged with great virulence—a disease almost unknown to the country before. The author evidently has a very kindly feeling for the Burmese of that day, whom he ranks in intelligence, honesty, and independence far above the Indian.

Dr. Fred. N. Scott's 'De Quincey's Essays on Style, Rhetoric, and Language' (Boston: Allyn & Bacon) is the third issue of a series which aims to contribute to the history of the *science* of Rhetoric. The present volume contains a selection of those of De Quincey's "essays which deal directly with the theory of literature," with the addition, in the form of an appendix, "of such passages from his other writings as will be of most assistance to the student." Of what use the reprint can be we fail to see. The essays are well known, and easily accessible to the advanced student of the history of criticism, for whom alone such reading would be profitable. The matter contained in Dr. Scott's preface, introduction, and notes is either easily obtainable from obvious sources, or is of a kind which would be much more appropriate in an essay, from the point of view of the student of comparative literature, on De Quincey's theories with regard to style, rhetoric, and language.

The plan of Mr. G. S. Newth's 'Chemical Lecture Experiments' (Longmans) is by no means new. There are at least two excellent German treatises on the same subject, and the work of Prof. S. P. Sadtler is well known in this country. Yet Mr. Newth's book is sure of a cordial reception from teachers and students of chemistry, and is in some respects the best which has yet appeared. It contains the details of over 600 experiments, very many of which are illustrated by good woodcuts, and almost all of which are well chosen. Any intelligent advanced student can make the greater number of these experiments for himself, as relatively few require expensive apparatus. To teachers the work will be especially useful. It may, indeed, to a certain extent, check the use of the inventive faculty, upon which most teachers now depend for the illustration of their lectures; but it will save a great amount of labor to the occupant of a laborious chemical chair in a college or high school, and will perhaps serve as a stimulus to the invention of new experiments even better adapted to illustrate special parts of the ever-expanding subject.

The late Édouard Goumy left an unfinished work entitled 'Les Latins,' which is now published by Hachette & Co. The preface, in which he champions the Latin classics, shows that the question as to their value in education is the same in France as in America, and it will be read with interest by those concerned in the problem. The book is a collection of familiar essays on Plautus, Terence, Cicero, Lucretius, Catullus, Cæsar, Sallust, Virgil, and Horace. Cicero is merely a manufacturer of perfect prose, *vox et præterea nihil;* the dramatists are inferior "adapters"; Lucretius is insufferably dull, though a poet; Catullus and Horace, Goumy evidently thinks, are almost worthy to be Frenchmen. Cæsar he justly praises for his chaste style, while he regards Sallust as alone worthy to be compared with Thucydides. The author's views are novel and interesting; but he is too prejudiced and too much given to exaggeration to be a trustworthy guide.

The unending series, "Les Artistes Célèbres," published by the Librairie de *l'Art* in Paris (New York: Macmillan), has just been extended for the seventeenth century by A. Gazier's 'Philippe et Jean-Baptiste de Champaigne'—uncle and nephew, natives of Brussels. The elder Champaigne, thanks to the friendship of Poussin, was appointed painter to the Queen, Marie de Médicis, in 1627, and directed the decoration of the Luxembourg; afterwards painter to Louis XIII. and to Richelieu. In the Cardinal's service he took to portrait-painting, and thus secured an immortality which his more perishable work would have forfeited. The present Life gives copious examples of his admirable portraiture of great personages. Drawn by his morals and his religious convictions to the Port-Royalists, he has left most precious memorials of this company, Pascal being a notable exception. Uncle and nephew became associated together in the service of Louis XIV., as well as in relations with Port Royal, and the latter did not long survive the former. Some few examples of Jean Baptiste's portraits and sacred compositions are reproduced by M. Gazier, always from engravings, and always carelessly printed, but French "process" work seldom receives the pains bestowed upon cuts in general in this country.

A very important historical work has recently been completed by the appearance of the fourth volume of Frederik Barford's 'Danmarks Historie fra 1536–1670.' While addressing himself chiefly to popular readers, the author has made a distinct contribution to the treatment of this difficult period in Danish history. The undertaking, which extended over many years, was assisted by several grants both from the State and from private foundations.

The *American Meteorological Journal* completes its ninth volume with the April number; this being its first volume since its removal from Ann Arbor to Boston in consequence of the appointment of its former editor, Prof. M. W. Harrington, to be Chief of the Weather Bureau. The present editor, R. DeC. Ward, announces a promising future, based on an increase of subscriptions during the past year, correspondence with meteorologists in many parts of the world, and an assurance from a number of investigators of contributions for the next volume. Compared with former years, there is an encouraging increase in the number of contributions from members of the Weather Bureau. The small share taken by students in our Universities in supplying essays is regrettable. Indeed, with the exception of Harvard, which contributes a number of articles, the only ones from other universities in this country are by Prof. Todd, and by R. S. Tarr of Cornell.

A recent report of the Rhode Island Map Commission, giving an account of the completion of their duties, closes with several maps, among which is an interesting sheet of the State, on a scale of 1:250,000, with the forest areas colored green. With the exception of Aquidneck (Newport) Island, the neighborhood of Providence, and a two or three-mile strip along the seashore, decidedly the greater part of the State is tree-covered. The cleared spaces are only patchy interruptions in the green area. The occupied land lies for the greater part along the valleys, leaving the uplands wooded; and thus recalling the association of the German term, *Wald*, with what we should call upland, hill, or mountain.

California's liberality in regard to information on products, lands, and opportunities

makes a good showing in the Annual Report of the State Board of Horticulture for 1892. The purpose is not simply advertisement, but to furnish carefully weighed facts and advice on culture, productiveness, values, etc., under the very diverse conditions obtaining in the different parts of the State. The report is a solid volume of 463 pages; it contains a general report on "California Horticulturally," and on the products and capabilities of each county, by Secretary B. M. Lelong, and also particular reports on the counties, by Quarantine Officer Alexander Craw and others detailed as special agents.

The prints of Hokusai, the great Japanese artist of the past hundred years, are well known, but his paintings have only now been brought together for exhibition with the prints, affording an opportunity for serious study. This has been done at the Boston Museum of Fine Arts, under the direction of Prof. E. F. Fenollosa, head of the Japanese Department, who furnishes the introduction and notes to the official catalogue of the exhibition of Hokusai and his school.

—The April *Atlantic* is distinguished by several fresh papers, of which Mr. Paul Ford's selection from the Pelham-Copley correspondence will, perhaps, be most attractive to its usual body of readers. These letters are part of the American documents which in some way came into the possession of the British Government and have remained unknown in its archives; they were written by Copley's half-brother, and describe the scenes of the opening days of the Revolution in Boston from the Tory point of view. The main incidents are the town-meeting in respect to "tea," the battles of Lexington and Bunker Hill, and the siege of Boston. The lamentations of the writer over the misguided people and their strange enthusiasm in their folly render the spirit of the loyalists with refreshing sincerity and a blindness to future events so complete as to yield a humorous enjoyment; and, altogether, the series is a leaf of Boston history that will prove delightful to the picturesque historian. Another series of letters is contributed from the Hazlitt papers, not of much consequence in themselves, but vividly illustrative of Hazlitt's temper, and of conditions of literary advertisement and reputation in the England of Hunt, Lamb, and the great Reviewers. Mr. Henry Van Brunt writes of what the poets have failed to do in using architecture as a motive of verse or even as a decorative subsidiary; and by way of example he prints at the end a long poem of his own, describing a doorway, which is well written and is of curious interest as a piece of technical expression and of literary treatment of a theme. Mr. Andrews also contributes a noticeable discussion of the money situation from an international point of view.

—In *Harper's* the rare note of literature is struck in a posthumous poem of Lowell—"An April Birthday at Sea." The artistic life of this city gives occasion for a review of its history, by Mr. George Parsons Lathrop, beginning with the "Düsseldorf" moment, and following the successive strains of new interest and the arrival of new personalities, through "the New Path" and the epoch of 1874 down to the variety of style and subject, the vitality of the art-organizations, the large product and the multitude of names that should be "mentioned," of the present year. The final pages of Mr. Lathrop, with their three-line notices and careful discrimination between the hundred or more noticeable artists, make a conspectus such as has not been seen in our æsthetic literature since Mr. Stedman's "Twilight of the Poets" article, in which he performed a similar office of nomenclator; but in Mr. Lathrop's instance it is a throng of the morning hour. The progress he definitely shows is what every observer has noted, but he masses the evidence and groups the details of facts with a most optimistic and pleasing effect, which must make every one look forward to more exhibition with heightened interest. The main material of the number is made up of ex-Senator Ingalls's account of Kansas, Mr. Ralph's of Brooklyn, Mr. Nelson's of Washington Society, and Mr. Bigelow's of certain aspects of Russian military life.

—*Scribner's* publishes a bundle of Carlyle's interminable correspondence, which is interesting in very many ways, but only illustrates further what was known before, and sheds no new light on his career or character. These letters were addressed to Edward Irving and David Hope, a merchant of Glasgow, and the best of them are from the early period of Carlyle's manhood. In the number at large the artistic element is strongly emphasized, as if for a special occasion. Mr. Robert Blum gives his own rendering of the fascination of the East, under the title "An Artist in Japan"; Mr. Frank French illustrates his own paper on "A New England Farm," which becomes in consequence mainly "marginal" in interest; "The Restoration House" is well described and beautifully illustrated, and a similar architectural subject is treated in "Anne of Brittany's Châteaux in the Valley of the Loire." Finally, Octave Uzanne writes of the exhibition of the arts relating to women, in Paris—a careful paper, full of instruction and suggestion, which should be of much service to those interested in women's work, as a means of comparison with the exhibition at Chicago. An archæological article upon the pueblos of New Mexico completes the list.

—The *Century* is distinguished by a very long, and conscientiously minute, account of the trial of the Anarchists in Chicago, and a justification of their condemnation on legal grounds, written by the judge who presided. The story, he thinks, is not sufficiently understood by the people at large, nor the fundamental reason why the Anarchists were found guilty sufficiently appreciated. He has no difficulty in showing that the leaders preached revolutionary violence, and had entered into an organization with such violence in view as the ultimate means of bringing about their ends. His citations are voluminous to this effect; but the weight of his argument, so far as the sentence was concerned, rests on the phases of the law of conspiracy which rendered these men technically and morally guilty for the act of the unidentified bomb-thrower by which the death of the policeman was caused. It is, perhaps, unfortunate that Judge Gary does not unfold more lucidly the cumulative and narrowing trend of the facts fixing special responsibility on the defendants, instead of dwelling on the general responsibility of "the whole body of conspirators" to such an extent as to imply that Judge Gary holds that all the Anarchists were equally responsible under the law, independently of any question of their degree of nearness to the particular crime charged. But he has performed a public service by setting forth the facts and the law, as these lie in his mind, and submitting to the judgment of that "common sense" which he invoked the question in issue. At the outset he states his own point of interest in declaring that the question is not whether the Anarchists deserved death, but whether they were convicted in accordance with law, and, secondly, that they were convicted not as Anarchists but as murderers. The paper might well occasion further examination of the present justice of the law of conspiracy as affecting responsibility for death in a riot, and also of the nature of treason in our form of the State; for it is evident that what distrust of the verdict, on the legal side, exists in intelligent minds, proceeds from something obscure, something possibly antiquated, in these conceptions.

—It is curious to find a scheme, originally suggested by an American author, first carried out practically in France. The idea, we believe, had already occurred to Mr. S. S. McClure, who may now be ready to realize it in his own magazine; but it was Mr. Howells who first drew up the plans for *Every Other Week*: "We've cut loose from the old traditional quarto literary newspaper size, and we've cut loose from the old two-column big-page magazine size," says Fulkerson in the 'Hazard of New Fortunes'; "we're going to have a duodecimo page, clear, black print that'll make your mouth water; and we're going to have a fresh illustration for the cover of each number, and we ain't a-going to give the public any rest at all." This describes exactly the new French magazine called *Le Bambou*, of which I entu has published the first two numbers. Whether Dentu had read Mr. Howells, or whether it was the merest coincidence, strangely enough, he, like Fulkerson, has taken 'Tartarin sur les Alpes,' or the "Collection Guillaume" to which it belongs, as his model. *Le Bambou* has the size of one of the ordinary volumes of this series; on each cover of the two numbers issued there is a different illustration; the page is not divided into the regulation columns; and the printing and paper are alike admirable. It is true there has been in London an attempt to do very much the same thing in the *Idler*, but in the latter publication illustrations and printing have been, as a rule, so very bad that, from this point of view, it cannot be considered seriously. The letter-press in *Le Bambou* would seem meagre enough to readers accustomed to the *Century*, *Harper's*, and *Scribner's*, though the price is rather more: it costs two francs and a half a number. Each contains but three articles: a paper on "Les Petits Théâtres et Grandes Baraques," a story, "Eyrimah," by Rosny, and a monthly chronicle of no very marked interest.

—It is to the illustrations that chief attention is paid. It is worth noting that these point already to a reaction against "process," which the "Collection Guillaume" first made popular. Many are fine drawings by Marold and Gambard, but by far the larger number are nothing more nor less than photographs. All, however, are engraved, and most exquisitely and delightfully engraved, by Florian and one or two other French engravers. Now that we have had more than our fill of books and periodicals illustrated with crude "process" blocks after commonplace photographs, it is a pleasure to see how great are the artistic possibilities of a photograph in the hands of an artist like Florian. Several in the theatrical article of the second number are a trifle vulgar, but the engraving itself is always most refined and accomplished. It will be interesting to see whether Dentu can maintain the high standard he has set up. In France there is more chance perhaps than elsewhere, since the competition among publishers of periodical literature is not so close and almost ruinous in that country as in America, and, even more,

in England, where illustrated weeklies and monthlies are multiplying at a rate that promises a crash in the immediate future.

—The French are straining every nerve to make good the lack of athletics in their educational system, and, with the sports, are importing the appropriate vocabulary from England. Thus we read of the fourth "cross-country interscolaire," run on March 16 at Chaville, when the Janson-de-Sailly team won the "challenge" for the fourth successive time, by a number of points which the reports in the daily papers are careful to explain the manner of reckoning, for the benefit of the "non initiés." The close of the French football season at Easter moved M. Pierre de Coubertin to give an historical account in the *Journal des Débats* of "the conquering march of football through our country." He himself, ten years before, in the course of a tour in England "to study her civilization," had been struck with the "strangely powerful rôle" which football played in English education. The introduction of the game into France was attended by many difficulties. "To our *chauvins* it was an outrage, to teachers a disturbance, and to parents a source of anxiety." However, patriotic sensibilities were somewhat calmed by the suggestion that the foreign sport was, after all, only the French *soule* coming back from England to its native home; and, once a start was made, it was not long before many of the teachers were won over, not a few university professors even soon figuring among the converts, while here and there was found one filled with a truly apostolic zeal. As for the mothers, they still object to the blackened eyes and broken arms of their boys, but the fathers now fairly drive forth their sons to the mêlée. Already two championships are established, "le championnat inter-clubs" and "le championnat interscolaire." The season just closed has been one of "matchs exceptionnellement brillants." International contests are yet in the future. As M. de Coubertin says: "Les forces sont trop inégales pour nous autoriser à jouer ainsi l'honneur de la France. Mais cela viendra, et la France gagnera!"

—The world will be the loser if Prof. Anton Dohrn, the busy founder of the Zoölogical Station at Naples, never finds time for the personal memoirs hinted at in his report on the past and present of the station, in the Naples *Courier* of January 2, 1893. Nothing more charming in the line of narration, exposition, apology, and propitiation could be looked for from any pen. Prof. Dohrn's tact shines through it all as do his buoyant temperament, his indomitable perseverance, his foresight, and his energy. To the Minister Delbrück, who threw cold water on his appeal for a subvention from the Imperial Government, he effectively repeated the remark of an English scientist (it was in 1871) — "One consequence of the German victories will be the end of your scientific leadership. You will fall into militarism and science will lag." He dissuaded the Marine Minister from placing two naturalists on board the corvette *Garibaldi*, in its voyage round the world, and induced him rather to send to the station a promising naval officer to learn the arts of dredging and preserving. This example has been followed by other nations, and, wherever tried, has had the result of interesting all on board and of making a wholesome break in the monotony of life on distant stations. Prof. Dohrn hopes to see a floating laboratory (*laboratorio—stazione zoologica—galleggiante*) instituted in the shape of a steam cruiser. He is also convinced that the scientific world must unite in sustaining a common news summary. His experience with his own *Zoologischer Jahresbericht*, of which the burden is great, both in editing and in containing the ever-increasing bulk of matter, and his observation of the duplication going on even in the same country, lead him to insist on the evil of the present insufficiency and superabundance. With pride, but modestly, he enumerates thirty zoölogical stations all over the world of which his has been the parent since its foundation in 1874, while as he writes he sees flocking to his tables thirty-seven beneficiaries of the wise liberality of the German and Italian Governments, viz., 13 Germans, 8 Italians, 4 Spaniards, 3 Englishmen, 2 North Americans, 2 Russians, and single representatives from Norway, Belgium, Switzerland, Hungary, and Rumania.

—Signor Egisto Rossi's 'Del patronato degli emigranti in Italia e all' estero' (Rome: Società Geografica Italiana) is a report recently presented to the Italian Geographical Congress on the best means for protecting Italian emigrants against the unnecessary hardships, disillusionments, and dangers from deceit and fraud incident upon their arrival in a distant and foreign land. While Italian emigration has gone on increasing until it now surpasses that from all the other Latin countries combined, no active measures have yet been taken, as has been the case in England and in Germany, for providing intending emigrants with unprejudiced and adequate information as to the geography, climate, and social conditions of the country where they mean to settle, and as to the chances of their finding there a demand for the labor which they can furnish. Under the circumstances now prevailing, Italian emigrants, from their ignorance and poverty, are particularly liable to come to grief, either through their own simplicity or the greedy fraudulence of agents, ticket-brokers, and contractors. Against these dangers Italian immigrants have in this country no other protection than the recently founded Italian Home in New York, which has accomplished much, although on a scale small in comparison with that of the much older and larger organization which looks to the welfare of the corresponding class of Germans. The report narrates the history of the somewhat unsuccessful agitation of the subject in Italy, and states in detail the conditions under which emigration from England, Germany, and France takes place, as well as the conditions under which immigrants are received in the United States, Canada, Australia, and the South American States. Signor Rossi's scheme for the protection of emigration provides for a general association, a central office in Rome, and sub-offices in the principal cities of the kingdom, all based on the general plan of the English Emigrant's Information Office, and supported by Government aid and public and private contributions. These he hopes to see supplemented by local societies in the chief ports of entry.

VAN DYKE ON PAINTING.

Art for Art's Sake: Seven University Lectures on the Technical Beauties of Painting. By John C. Van Dyke, L.H.D., Professor of the History of Art in Rutgers College. Charles Scribner's Sons. 1893.

Prof. Van Dyke has been a serious student of art and of criticism, and has shown a constant advance in breadth and justness of view. Every book that he has written has been an improvement on the last one, and his 'Art for Art's Sake' is both a praiseworthy and a daring effort. Critics who are not painters, as a rule, avoid all discussion of the "technical beauties of painting," and confine themselves to generalities about the "spirit of art" and the "ideal." When they do rashly touch upon matters of technic they are apt to blunder wofully and to expose themselves to the gleeful scorn of the painter. If more painters had the literary training, the life of the average art critic would be a burden to him. It is therefore no small achievement to have written, as Prof. Van Dyke has done, a series of lectures devoted to an exposition of the technical side of art in which, although there is matter for discussion as to proportion and incidence of stress, there are really no serious errors. There is an occasional vagueness and even confusion of thought and expression that betrays the lack of actual and practical knowledge of how the thing is done; but the degree of understanding of painting, as painters understand and love it, achieved by an outsider through the careful study of paintings, is both surprising and encouraging.

The lectures are seven in number and are entitled respectively "Art for Art's Sake," "Color," "Tone and Light and Shade," "Linear and Aerial Perspective," "Values," "Drawing and Composition," and "Textures, Surfaces, and Brush-work." The title of the initial lecture and of the volume is likely to provoke some antagonism, the phrase being a red rag to many, who think it conceals some dreadful immorality. Yet, if not for art's sake, for the sake of what else art should be pursued, it were difficult to say. The doctrine has, it is true, been used to cover a multitude of sins, yet it is the only true doctrine, and, as set forth by Prof. Van Dyke, is innocent enough. It is simply that the painter eternally deals with painting, and that subject and idea are indifferent to him except as they are pictorial subject and pictorial idea; that, consequently, the *motive* of a picture is often very different from the nominal subject of it, and that, if we are to have any real comprehension of painting, we must "take a lesson from the painter," and learn to enjoy his combinations of form and color in and for themselves and for the kind of pleasure that they alone can give, as we listen to music, and to consider any other ideas than purely pictorial ones as so much surplusage—tolerable and even enjoyable if they do not interfere with the pictorial ones, but never able to supply the place of the latter, or to make good art of anything that is not good in itself as form or color or light and shade. It does not follow from this, as it has sometimes been made to do, that well-painted still-life is as noble art as the ceiling of the Sistine Chapel, but only that the frescoes of Michael Angelo are nobler than the pictures of Vollon, not primarily from their subjects, but because grandeur of style, severity of line, power and mastery of composition, are rarer *artistic* qualities than brilliant rendering of textures and clever handling, and reveal a higher type of mind in the artist. Prof. Van Dyke expressly excepts "historical painting" from the rule of the supremacy of purely artistic motive, but he would, perhaps, have done better to adopt the bolder and more logical course of maintaining that historical painting, as generally understood, is a *genre faux* and is rarely good art. In so far as it is, as he says, "designedly more illustrative than creative," it is bad art.

Having thus cleared the ground, Prof. Van Dyke comes to the consideration of his main subject, "the technical beauties of painting."

Color is, undoubtedly, of all the qualities of painting, that which most readily and immediately appeals to the untrained sense, and it was therefore, perhaps, judicious to neglect the logical order, which would begin with drawing, and to appeal first to his hearers' color-sense in the effort to interest them in the technic of art. There are not wanting, however, some indications that the lecturer's own progress has not yet extended to a full enjoyment of the beauties of form, and we might venture to prophesy that in some future work he will modify his present emphasis upon other qualities, and come to give more importance to line and mass. The colorist, he says, is, like the poet, "born and not made," and the saying is a common one, but is untrue, at least in its implication. A colorist must be born with an eye as a musician with an ear, but he can no more achieve mastery than can the musician without a lifetime of study and application; while the draughtsman is as much "born" as the colorist; and drawing, in any fine sense, is as absolutely unteachable to him who has not the innate sense of beauty in form and line as is color to the color-blind.

"Good drawing," says the Professor, "is not infrequently met with among all schools, but how difficult of achievement is color-harmony may be indicated by simply reciting the names of the colorists during the last four or five centuries. From the years one might think the number might be large, but in reality among the thousands of painters who have lived and produced and died, we may count the great colorists on our fingers. They are Titian, Giorgione, Tintoretto, Paolo Veronese, Rubens, Velasquez, Delacroix, and perhaps some few others who had the color sense—the inclination rather than the consummation—like Rembrandt and Chardin."

This is grossly unfair. For one term of his comparison he takes that "good drawing" which "is not infrequently met with," *i. e.*, tolerable drawing, and for the other he selects the few supreme colorists and excludes all others—excludes even Correggio and Corot. The process might be reversed, with equal justice, as follows: Passable and even enjoyable coloring is not infrequent in either ancient or modern art, but we may count the masters of the line not only upon our fingers, but on the fingers of one hand and have the thumb over. They are Michael Angelo, Raphael, Lionardo, and perhaps Ingres or Baudry, though these last show "the inclination rather than the consummation." Such a judgment were partial, but not more so than the other. It is our own belief that really great draughtsmen have always been rather rarer than really great colorists, and that to be either is to be one of the bakers' dozen of inapproachable geniuses in the history of painting.

That Prof. Van Dyke does not succeed in giving any clear account of how color-harmony is produced is what was to be expected. He devotes a good deal more space than they are worth to various theories of color, only to conclude that they do not and cannot account for good coloring. The trouble with all theories of "complementaries" and the like is that they can deal only with those simple and unmixed hues which the painter never uses, and to reason about abstract red or green is a very different thing from producing and modulating those broken and constantly varied tints which in a picture are called by those names. Perhaps at some future date color harmony may be reduced to something like the system of musical harmony, but even then the artist will remain the creator, and work by natural and trained instinct. A contrapuntist is not a harmonist, even in music, but the painter works more like the melodist, and his work approaches inspiration. The color sense is aided and sharpened by practice and acquired habit, but no one has yet succeeded in accounting for its methods of production. As Prof. Van Dyke says: "For our practical use in trying to judge of harmonious coloring in pictures, perhaps we should pay less heed to theories than to our senses and our taste." If, then, he does not accomplish the impossible, he has given a good many hints that should be valuable to the audience for whom his work is intended, and his exposition of the theory of Fromentin (accepted by Corot and Stevens and many others), that color depends upon justness of value, is good and clear, though the theory in itself is insufficient.

The third lecture is on Tone and Light-and-Shade, and Prof. Van Dyke wrestles manfully and not unsuccessfully with the various meanings of that loosely used word "tone." We think a synthesis is possible, and that the various things called tone can be shown to be parts of tone only. Tone we take to be that quality of a painting which makes all objects in it appear to be seen under the same light and enveloped in the same atmosphere, yet each maintaining its own local color in light and in shadow. Now this is not merely a question of values, as some suppose, nor merely a question of color, as others suppose. It is values plus color that produces tone. In a black-and-white drawing, if the values are correct, the tone is good; the rendering of the exact amount of light received and reflected is sufficient. But in painting, not only must the *amount* of light be given, but its quality of warm or cold, or its *color*, and the exact way in which the color of the light affects the local color of objects in light and shadow. Add to this the effect of distance, or "aerial perspective," and if all these things are justly felt and rendered, the result is tone. In other words, tone is not one thing, but the resultant of many things. Leaving form aside, tone is simply *the whole art of painting;* and it was this that led Fromentin and Corot to speak of value as the essence of color. Beautiful color, as such, may coexist with false values, but tone cannot, and color without tone may make a rug or a stained-glass window, but not a picture.

Our author's treatment of light and shade is, on the whole, very satisfactory, though he considers it rather too much from the naturalistic point of view and not enough from the artistic. He mentions, without accepting, several rules for the proportion of light to shade in a picture, but does not clearly show how absurd they are from the lack of any method of deciding what is abstractly light or shade among the thousand varying gradations of value. Strictly speaking, there is, in good art, but a point of highest light and a point of deepest shadow, and everything else is in a middle tint of greater or less depth, so that a proportion of light to dark is nonsensical. Light-and-shade as a part of form, and as (by its definition of planes as they retreat from the light) the final essence of drawing, he does not consider.

Linear perspective is slightly treated, and it would have been better, even in so popular and unscientific a discussion of it, to have distinguished between the point of sight, which is one, and the vanishing points, which may be infinite in number. Parallel perspective is the only kind of linear perspective that Prof. Van Dyke seems to know, or at least to think it worth while to speak of. His treatment of aerial perspective is very good, and we have only to suggest that the theory of turbid media would help in the understanding of the effect of distance upon colors. This, however, is science and not art. From the point of view of art, the *reason* of the phenomena is immaterial. He is not quite right as to the order of disappearance of objects and their shadows. In broad sunlight the shadow is often much more important than the object that casts it, and will remain visible after the object has disappeared unless *linear* perspective intervenes.

The lecture on Values is excellent, and we have little criticism to make upon it beyond that implied in what we have said of the treatment of tone. The lecture on Drawing and Composition, as might be supposed from what we have said of that on color, is, perhaps, the least satisfactory in the book. The author's apparent lack of feeling for form, together with his tendency to derive his principles of art from a consideration of the facts of nature, leads him to consider drawing too much as a mere necessity of representation, and he shows little sympathy for or comprehension of beauty of line for its own sake. That harmony of arrangement in line is at least as rare and as lovely a quality as harmony of color, and that the modulation of line may be as subtle and as exquisite as the modulation of tint, he does not seem to feel or to understand. What he says is right, as far as it goes, but he does not say enough. He is better in what he has to say of composition, but does not escape a certain aridity which seems to attach to all discourses on that subject. In conclusion there is a discussion of Textures, Surfaces, and Brush-Work, which is as good as any one not a professional painter could be likely to make it. Texture is a very ticklish subject for the lay critic, and it is not surprising that while such a critic recognizes it when he sees it, he should be very vague as to how it is produced. In fact, texture is not, properly speaking, a separate quality at all. The differences between silk, velvet, and woollen, which are recognizable in a picture, are differences in form, in color, and in light and shade, and there is no way to produce texture but by study of these differences. If texture does not exist in the work of a man who can draw and paint, it is merely because, for some reason, he has not thought it worth while to study the specific forms, colors, or chiaroscuro of the particular objects he has introduced in his picture. The reason may be a deliberate choice of other and greater truths, or it may be laziness, but texture is drawing and painting and nothing else. As to brush-work, it is so inevitable that the critic who is not an artist should be unable to tell true from false mastery—not knowing what is to be represented well enough to judge of the economy of means in the representation—that this quality of painting may be said more than any other to be appreciable by the artist only. The rest of the world must be content to take his judgment on the matter. Prof. Van Dyke has made no blunders on this subject, but he does not give much help to the student.

We have necessarily devoted much of our space to a statement of those points on which we differ from Prof. Van Dyke, but it must not be supposed that we think ill of the book. On the contrary, we consider it the best treatise on the technic of painting, for general readers, that is at present obtainable, and the book most likely to aid the layman to some comprehension of the painter's view of painting—the view which is necessarily the right one, and which yet is the view that the literary

critics of art have constantly obscured rather than elucidated. Prof. Van Dyke's comprehension of this view we consider, as we have said, remarkable, and no painter of competent ability and literary training has ever tried systematically to cover the whole ground as he has done. The absolutely best writing on art has been done by painters, but it is fragmentary. Their golden words must be chosen and strung together on the thread of the reader's already acquired knowledge. It is doubtful if any painter will ever take the trouble to write a complete treatise on painting; "deeds not words" being the painter's motto. Hence we should be thankful for so good a book as this, which comes so near the truth. The illustrations, "half-tones" from well-known paintings, are twenty-four in number, well chosen and well executed, and add materially to the usefulness of the volume.

RECENT NOVELS.

The Children of the King. By F. Marion Crawford. Macmillan & Co.

Jean de Kerdren. By the author of 'Colette.' Translated by Mrs. Waugh. London: T. Fisher Unwin.

Catherine. By Frances M. Peard. Harper & Bros.

Keith Deramore. By the author of 'Miss Molly.' Longmans, Green & Co.

In the Bundle of Time. By Arlo Bates. Boston: Roberts Brothers.

Katharine North. By Maria Louise Pool. Harper & Bros. 1893.

It is a delicious picture of Calabria and Sorrento and Capri that Mr. Crawford gives us in the new book with the charming name. "The Children of the King" are not a brotherhood of philanthropists, but the descendants of a king or count or knight who settled in Calabria or conquered a bit of it—no one knows—and bequeathed to his posterity, even to the present time, his yellow hair and blue eyes and the only surname they know, "dei Figli del Rè." Two hardy sons of the tribe are brought by Fate into the extremely modern world of an extremely modern young woman, her mamma, and her jack-dandy, fortune-hunting lover. Mr. Crawford can do most things, but to our thinking he has not made one of his most notable successes in engrafting his romance upon a latest-day civilization. Murder does not sit easily upon shallow pates, particularly such chivalrous, high-minded murder as is dealt by one of the Children of the King. His single-ideaed passion for his beautiful employer is real enough to have manifested itself in some more probable way than drowning a fortune-hunter and himself merely to rid his beloved of an unwelcome husband. Of course, there is nothing too marvellous to happen; but the burden if not of probability, then of a temporarily illusive improbability, rests with the artist. Mr. Crawford's young girl is a pungent compound of sugar and spice with much that is nice, tempered with snaps and snails; her mercenary suitor is well drawn; the indolent, selfish mamma is a clever portrait. Ruggiero of the Children of the King and his brother Bastianello are fine types of the popular lifted out of commonplace by a legacy of the heroic; each is good in his own way, and yet they do not quite harmonize into illusion. Nor more do the two distinct styles of the book—the swift give-and-take of the conversation, and the reflections delivered in short sentences beginning with "And" which inevitably, yet inadequately, recall the Book of Acts. Yet for its virtues and attractions we commend the story to the reading public, which is not likely to wait upon commendation before reading anything from Mr. Crawford's pen.

'Jean de Kerdren' belongs to the class of pretty novels, nor is there any adjective to add to that one. If we remember aright, there was a touch of humor in its predecessor, 'Colette.' There is absolutely none in 'Jean de Kerdren.' Everything is pretty—the hero's behavior, the heroine's behavior, the landscape, the figures, the morals. The plot is quite simple. A man marries a woman out of chivalry. After marriage they fall in love with one another. She dies of consumption, and he becomes a priest—perhaps as the surest way of keeping him a widower; but this is only conjecture.

In any other connection 'Catherine' would seem a particularly bland work of fiction, but after 'Jean de Kerdren' it is almost animated. Catherine is a pretty and naughty, but not fatally naughty, little maid. Her lot is cast in Devonshire in the days of the Peninsular War and later, and her lover is fighting Bonaparte at Waterloo while she is forgetting him at home. The bitter lesson she learns, and the undeserved but expected happiness which follows the lesson, may be read in the story. The period is a becoming one for costuming and accessories, and there are graceful glimpses into both country life and the gayeties of Plymouth, with a suitably contrasting roar from the cannon of Wellington and Bony. Miss Peard is always a skilled writer, with a high-bred vocabulary, and her humor, if somewhat faded, is delicate.

'Keith Deramore' is a novel of considerable interest. It would have even more if there were less of the book and if the writing were winnowed in spots; if the hero had taken rather fewer journeys, and gone to rather fewer dinners, and stood a little less persistently with his back to the fire on the hearth-rug, that throne whence the modern hero bullies his womankind. Keith Deramore is a Prince Charming among bullies; every woman in the book is in love with him, and, of course, makes herself his footstool. When at last he marries and goes to Egypt, one is sure that the Sphinx will make eyes at him, and one trembles for Mrs. Keith. His charm is felt, however, as well as described, and extends to men as well as to women. The various other characters stand out well defined and lighted by originality, and there are frequent gleams of humor, insight, and wisdom, which, added to the fluency of the narrative, make an interesting story. It is not to be supposed that the hero is held up as an example, else one might criticise the standard of honor which permitted him to make love to his friend's betrothed while he indignantly broke his engagement with the girl who told a lie. He belongs to the type, "fascinating dog," who has made more than one novel readable, but he is less commonplace than many of his brothers, and the book is above the average in which they flourish.

Mr. Arlo Bates, in 'The Bundle of Time,' ranges over a very wide field of topics, giving us ten tales and nine interludes (a species of astral body of a play). There is child-teaching and love-making, and match-breaking and witch-burying, and tiger-killing and man-eating. Both tales and interludes are richly touched with wit and observation, and some of them are ingenious in construction and in invention. Some are delightfully true to nature, and all are deftly written, not only with a style from which mannerism is happily absent, but in trained and expressive English. We must in candor add that some of them are so frothy that it is difficult to see how they got themselves even so far solidified as to become ink; that around a few hangs an unpleasant taint; while some so closely border on silliness, and others which are good are so near to being better, that one is tempted to rechristen the contents of 'Time's Bundle' under the name of 'Narrow Escapes.'

It is as unfortunate for a heroine in fiction as it is for an actual participant in the human comedy, when she is put in situations that make demands too serious for her capabilities. In either case disappointment is inevitably the portion of those who are concerned in the results of her conduct. This is eminently true in regard to the young lady on whom Miss Pool has bestowed the somewhat stately cognomen of Katharine North. Nor is it she alone who, in the volume that bears her name, gives rise to expectations that events do not justify. Young Owen Llandaff, whose eyebrows are so exceptional as to promise for their owner something different in quality from the "rest of the lawn-tennis young men," performs nothing more remarkable than to break his engagement (in a scene of exceeding flatness) to one young woman, soon after the eyes under the conspicuous brows have become infatuated by the attractions of another. The "great public speaker," Mrs. Llandaff, lapses into the most desultory of European wanderers under the impulse of a lively sentiment for the niece discovered in the guise of a working-girl at Nantasket, where she herself thrills an audience with the working-girl theme. After much forecasting of her destiny to suffer, the heroine, who owes her birth to Roxy and Colburn North at Feeding Hills, and her complex psychology to some more inexplicable derivation, arrives merely at the anti-climax of waiving her scruples, upon the insistence of the aforesaid Owen, as to marriage after a divorce. The marriage, however, in her chrysalis period at the "Hills," to the elderly Deacon Marcellus Grove, has been no more than a forced ceremony, at the termination of which she has run away—to arrive eventually at Nantasket and mental illumination. Further absence of fulfilment awaits the hopes of humor or pathos held out by the introductions to the various whimsically dwarfed natures that people the quiet corner of the world in which the scene begins. A convincing story always strikes one as having grown, not been made. The comparisons that Miss Pool's latest venture suggests to the imagination are unfortunately with the mechanical arts rather than with nature.

SOME WASHINGTON BOOKS.

Itinerary of General Washington, from June 15, 1775, to December 23, 1783. By William S. Baker. Philadelphia: J. B. Lippincott Co. 1892.

The Story of Mary Washington. By Marion Harland. Boston: Houghton, Mifflin & Co. 1892.

Barons of the Potomac and the Rappahannock. By Moncure Daniel Conway. New York: The Grolier Club. 1892.

WHILE Mr. Baker's 'Itinerary of General Washington' was running through the *Pennsylvania Magazine*, we had occasion to study it carefully, and the high opinion then formed is confirmed upon its issue in a separate and much extended volume. It is exactly the work that the student requires, and it is so well done that a thorough examination has discovered

very few errors. It is because it is so good that a few improvements may be suggested. Mr. Baker has consulted printed authorities, but he seems to have paid little attention to manuscript material. Had he gone through the drafts of Washington's letters, he could have made his record even more full than it is, and it could hardly be too full for historical purposes. He could then have distinguished between headquarters, the central point of an army's activity, and the actual situation of the General—a matter that becomes of great importance at times. Thus, take the entries for October, 1777, when the letters are dated from Whitemarsh, beginning with the 21st of that month. Mr. Baker gives Whitpain from October 21 to November 1. Whitemarsh agrees with the location of Whitpain—that is, on the Skippack Road, fifteen miles from Philadelphia; but in no instance did Washington date from Whitpain, where Pickering located the army but not the General. Some confusion might occur by this use of Whitpain. It might also be wished that Mr. Baker had inserted a map of the territory covered by the General's movements. Any criticism, however, applies not to what has been done so much as to what might be done. As it is, the work is an extremely useful guide to Revolutionary history.

Of a very different quality is Marion Harland's essay on the mother of Washington. Written for the purpose of encouraging the erection of a monument to Mary Washington, it might disarm criticism did it not rest upon a tradition long since exploded. The mother shines in the light of her son. It is known that her character was a strong one; it is known that in features Washington was a Ball and not a Washington; and it is known that the mother's influence was potent in developing the remarkable balance shown by the son in whatever situation he was placed. The very few letters of Mary Washington preserved—not more than three or four—are in themselves an index to her character better than the hundred posthumous recollections of persons who began to tell of her a generation after she had passed away. Such recollections, bad as they are, are cast into shadow by the tale of Mrs. Terhune. Her research, ostentatiously heralded in the preface, has been confined, in the main, to the stupid forgeries of Walter, which were exposed as soon as published. The imaginative touches added present a picture of a matron so remarkable that we cannot but wonder that the admiration of the nation has not been turned to the mother instead of the son. Such indiscriminate praise is mischievous, and the more freely it is admitted that Washington came of very humble origin, the higher the estimation due to him for his remarkable qualities and career.

Mary Washington, as drawn in this book, never lived in Virginia. The one or two extant letters relating to her married life throw little light upon her position or training. She is best known in the last years of her life, when her son had returned from the war and found it difficult to raise money enough to meet the demands made upon him. It is not necessary to be squeamish in this matter, for the facts are accessible and are unfavorable to neither parent nor child. As early as 1756 Mary Washington borrowed money of the young soldier; and while the entries are very few before 1772, when she repaid the greater part of the sums charged against her, the borrowing becomes frequent after 1772 and continued till 1789—the year of her death. The frequent and heavy calls made upon him produced a little irritation in Washington, which was not soothed by the conduct of the mother. In 1772 he had taken her plantation at a rental, and purchased a house for her in Fredericksburg that she might be near her daughter, Betty Lewis. He was surprised, after supporting her for nine years in that condition, to learn that the Assembly of Virginia proposed to pension her because of her distresses! This reflection upon his supposed want of duty drew out a letter from him to Benjamin Harrison, asking that no such measure be even considered:

"Confident I am that she has not a child that would not divide the last six-pence to relieve her from *real* distress. This she has been repeatedly assured of by me; and all of us, I am sure, would feel much hurt at having our mother a pensioner while we had the means to support her; but, in fact, she has an ample income of her own."

Here was the index of her situation, and for two years after reports came to Washington of his mother's complaints. She wrote to his brother, John Augustine, in 1783: "I never lived soe poore in my life. Was it not for Mr. French and your sister Lewis, I should be almost starved, but I am like an old almanack quite out of date." And "upon all occasions and in all companies" she complained of the hardness of the times and of her wants and difficulties—talk which reflected not a little upon her children. Her real wants, the General thought, were fully supplied; but imaginary wants were boundless, and he intimated to his brother to "represent to her in delicate terms the impropriety of her complaints and *acceptance* of favors, even when they are voluntarily offered, from any but relations." The representations were of little effect, for, in 1787, Washington again recurs to the unreasonable demands made upon him. "I am viewed as a delinquent, and considered perhaps by the world as an unjust and undutiful son." And when she proposed to come and live with him at Mount Vernon, he frankly told her that while his house was at her service, and he would press her to accept it, it "will never answer your purposes in any shape whatsoever." For his house was like a "well-resorted tavern," and she could not be retired in any of its rooms. She remained in Fredericksburg, and, her ailment increasing, she died in 1789. The inventory of her estate would be a text for many an essay. There is no evidence that Washington was guilty of an unfilial act; but there is evidence that Mrs. Washington was not the ideal character that writers of the "sympathetic" school would have us believe. The portrait used in the book is fictitious.

Of a similar nature is Mr. Conway's 'Barons of the Potomac and the Rappahannock.' Great beauty of typography (the Grolier Club is responsible for the volume), choice illustrations, and a picturesque style cannot atone for poverty of matter. The leading contributions are some letters from Lawrence Washington, but they are buried in so many pages of rambling discourse as to be almost inaccessible, especially as the book lacks an index. With patience the reader can find some interesting and new letters; but he will be discouraged by much futile heraldic exposition and by some curious conjectures. Not content with having made the General a poet, Mr. Conway now accuses the father of the same amiable weakness. The labor and time spent upon this work are to be regretted as pretty much wasted.

Sixty Years of an Agitator's Life. By George Jacob Holyoake. London: T. Fisher Unwin; New York: Scribners. 2 vols. 1892.

THE great Liberal movement in England which filled the third and fourth decades of this century, and of which the chief fruits were Catholic Emancipation and the Reform Bill, naturally gave birth to a number of agitators, chiefly of a very unaristocratic class, who went beyond the orthodox programme of the aristocratic Whigs. The names of these men, once famous and hateful to Conservative minds, are now little remembered even in their own country. Among them were Francis Place, the Radical tailor of Charing Cross, who it seems was the author of the renowned placard, "To stop the Duke, run for gold"; Carlile the publisher, the political opposite of Carlyle the philosopher; Thomas Cooper, who still lives in literature as the author of 'The Purgatory of Suicides'; Ernest Jones, Henry Vincent, Feargus O'Connor, and, not least, Mr. George Jacob Holyoake himself. The individuals of this group, of course, varied much in ability, purity of aim, and the sanity of their character and objects. Some of them were mere agitators, or even worse; others were real though humble precursors of more extended reforms to come. In the whole group there is not a more respectable figure than that of our autobiographer. He is notable especially for his freedom from bitterness, social or industrial, and for the good humor with which he speaks even of those at whose hands he suffered oppression. Peace with justice evidently is, and appears always to have been, his aim. In this respect he presents an agreeable contrast to many labor journalists and other industrial agitators of the present day, whose object it seems to be to instil venom into the heart of the artisan, to lead him to fix his hopes not on self-help or self-improvement, but on confiscation, and to bring about a war of classes.

Mr. Holyoake gives us a dismal picture of artisan life and of the relations between employer and employed as they were in England half a century ago, but he does not deny that there has been a great change for the better, and he lets us see that even in those days intelligence and probity in the artisan had their reward. He was himself, however, better known as a preacher of secularism than as an industrial reformer. It was in lecturing on secularism at Cheltenham, which was a highly religious city and under the dominion of Close, a great Evangelical leader, that he committed the offence against the blasphemy laws which entailed on him some months of imprisonment. He does not tell us exactly what he said in his lecture, but it is clear that his offence did not go beyond heresy, whereas the offences of others mentioned by him as sufferers under the blasphemy laws did go beyond heresy, and amounted to positive outrage on the feelings of a religious community. It was so in the case of Pooley, the Cornish heretic, who was sentenced by the late Judge Coleridge, and about whom there was a fierce controversy between Buckle and the late Lord Chief Justice. Good sense and toleration had advanced so far that blasphemy was treated by the more enlightened judges at least as an offence not against the majesty of God, but against the King's peace, it being assumed that an attack upon the religious sentiments of the community would lead to a riot. Mr. Justice Erskine, in sentencing Mr. Holyoake, was careful to state that "the arm of the law was not stretched out to protect the character of the Almighty," and "the law did not assume to be a protector of God." The real fact was that the arm of the law was stretched out to protect the clergy and the privileges of a State church. About the last of religious prosecutions has now been heard, even in the Old World.

Mr. Holyoake came across a number of men of the highest eminence, English, French, and Italian, but he has naturally less to tell us about them than about those of his own circle. He, however, gives us some curious details concerning Italian and French conspirators and spies. It is rather strange to find in the autobiography of a social and philosophical reformer a prize-fight which the writer reported for a paper, narrated not only with full detail, but with evident gusto. This regenerator of the species had evidently not doffed the John Bull. There is also a rather equivocal passage in which Mr. Holyoake, with no less delight, recounts the part he played in the construction and testing of dynamite bombs, such as afterwards were used by Orsini. He seems, nevertheless, to have been persuaded that these were to be used in legitimate warfare and in the cause of Italian independence. At all events, he told his friends that "he had not made up his mind that murder was a mode of progress." The tyrannicides probably replied that when murder proved a mode of progress, it was not called murder.

A Japanese Bride. By Naomi Tamura. Harper & Bros.

THIS booklet of ninety-two pages, in Harpers' Black and White Series, has a value wholly out of proportion to its modest dimensions. It is probably the first revelation of the social life of Japan made by a native, frankly and without hesitation or fear. Indeed, even though it is written in English, one acquainted with the state of things in Japan wonders at the author's boldness. He does not spare criticism of the Government, which ordains and maintains the social laws. It is notorious that the Mikado, who still officially and ostentatiously claims descent from the heavenly gods, and is the legal and executive representative of deity, is a polygamist. He has, besides his legal wife, the Empress, in theory a dozen concubines, practically as many as he chooses. While Japan is outwardly adopting selected features of Western civilization, the practice of the Court is that of the average Asiatic or African despot. One of the curious anomalies of the time is, that while the question of the abolition of licensed prostitution has been won in general by the reformers, to be dealt with through local option, and by actual vote gained in five or six prefectures, the ultimate sanction must be given by a ruler who clings to the old traditions and practice. Fortunately, however, a law has been passed which, among the nobles, prevents any but the offspring of the true wife from inheriting a title. Whether this law will be cordially accepted and carried out in practice is one of the vital questions in Japan.

The author of this remarkable book is Mr. Naomi Tamura, who has a pure Japanese name, despite the nominal coincidence with one of the characters in the Book of Ruth. He is a member of a prominent family in Japan and came to America some years ago to be educated, spending at least four years, chiefly in the schools of theology at Princeton and Auburn. Evidently he has been stirred up by some of the glowing descriptions of Japan, in which the Oriental Islands appear as a paradise in which no serpent has trailed its slime. He is a genuine realist, and gives the facts as they are, without regard to mere sentiment. In his preface he pictures the age of danger and the age of confusion in the Japan of our day. Old men, he says, are content to marry in accordance with the old customs; but young men wish to marry in the foreign way, yet without any moral restraint. In a word, just as our young men go to Japan and wish to enjoy all that feasts the eyes without regard to moral sanctions, Occidental or Oriental, so in Japan the danger comes from the men of the new generation borrowing our social freedom without our restraints. Having both the native and the foreign vision, Mr. Tamura pictures the age of transition without admiration, yet without cynicism. In his treatment of the theme he shows that, despite the iron law of Confucianism, the poetry and sentiment based on the mythology of Shintō and the preaching and dogma of Buddhism, human nature in Japan is pretty much the same as everywhere under the sun. Without ridicule or bitterness, but faithfully acknowledging the facts, he declares that nine out of ten ladies in Japan obey their husbands, not joyfully, but unwillingly; that "the Japanese wedding solemnity does not indicate the purity of our hearts or the sacredness of the marriage institution." In his treatment of the subject, he discusses "why we marry," showing that it is not for the love of the individual, but for the maintenance of the family, and is largely an impersonal matter, in which the individual withers and the institution lives on. He describes the Japanese courting, showing what a formal and refrigerated thing it is compared with what the Irish call "sparking." The go-between and his or her work are described, the preparation for the wedding outlined, and the marriage ceremony pictured, not as it is caricatured or hopelessly jumbled in American church fairs or young ladies' money-raising tea-parties, but as it is in fact, with its artistic symbols and its social ceremonies. He tells of the honeymoon, which in reality does not exist in Japan; but he discusses the subject in order to show the difference between Western and Eastern customs, which, indeed, he does in detail throughout the book. The life of the bride and bridegroom at home is also described, and there are four or five passable illustrations to assist the imagination of the Western reader. The last chapter treats of the mother and grandmother, and shows beautifully that filial loyalty which is the strong base of Japanese civilization. The wife and mother in the far Oriental household looks forward to the time of her retirement from the active duties of her position as to the happiest period of her life, when she will receive the reverence and tender treatment of her sons and daughters.

Throughout the work the author shows that thorough acquaintance with the details of Japanese life which one would naturally expect, and he gives in condensed form the rules or commandments for the bride, wife, and daughter-in-law, specifies the grounds of divorce, and, with a very sparing use of native words, makes the subjects remarkably clear. Had Mr. Tamura quoted the official statistics, the divorces and marriages—one divorce to every three marriages—his statement would have received powerful reinforcement. In addition to the abundant information furnished and the light cast upon Japanese social life, there is evidence on every page that when in America Mr. Tamura must have made, by close observation and long experience, a careful study of our own social conditions. Furthermore, there is upon many pages a pleasing lambency of wit. Our Japanese, apparently, enjoys a joke, and does not object to telling one at his own expense or that of his country, while not sparing the hurried American. It may be that the author goes too far in his unconcealed admiration of social life in Christendom; and it is more than probable that while in America he saw in the homes he visited a condition of things above the average. But, apart from all criticism, this little book is a noteworthy addition to the knowledge we possess of the interior of homes in Japan. What Prof. Morse's book is for the outside, this monograph of Mr. Tamura's is for the inside, of 'Japanese Homes.'

The Private Life of the Great Composers. By J. F. Rowbotham. Thomas Whittaker. Pp. 340.

THE reader of this book, if he knows anything about its author, will be tempted to follow the example of many young ladies when they take up a novel—read the last chapter first. Five years ago Mr. Rowbotham wrote a remarkable magazine article entitled "The Wagner Bubble Burst." Now, if Wagner is merely a bubble, and burst at that, how does he happen to get into a list of fifteen "great composers" whose private life is to be commented on? Has Saul turned Paul? A glance at Mr. Rowbotham's pages acquits him of this suspicion; although he places Wagner among the "great composers," he still thinks very little of him. He has a perfect right to his opinion, but why does he make statements so utterly at variance with facts as this, for example, in speaking of the building of the Bayreuth Theatre—that Wagner pesters the architect "with all sorts of suggestions, which are courteously put aside by that functionary as totally impractical and undesirable"? He not only tells us that Wagner's poetry is "very poor stuff," but intimates rather strongly that Mr. Corder's translation is perhaps an improvement on it! One who has written a history of music should not make such an elementary mistake as to state (329) that "change of time" affects "tone-color." Mr. Rowbotham tries to give an account of the Tetralogy, but, "for the sake of brevity," omits mention of "Siegfried," which is very much like writing about Homer and omitting mention of the 'Iliad' for lack of space. But the funniest thing is a reference (327) to "the period of his [Wagner's] life which will commend itself most strongly to the sympathies of the world at large." What period? Why, the period when he was arranging popular operatic airs for the cornet-à-piston!

It would not be fair, however, to judge Mr. Rowbotham's book entirely by his puerile remarks on Wagner. The other composers included in his list—Beethoven, Mozart, Haydn, Bach, Handel, Gluck, Mendelssohn, Chopin, Schubert, Liszt, Rossini, Schumann, Donizetti, Meyerbeer—are much more sensibly dealt with. In the chapter on Liszt our author makes the startling assertion that "in the Symphonic Poem he has achieved the legitimate development of the symphony, and, we may add, the only form in which the symphony, if it is to last, can endure." This is quite true, but it is the rankest heresy to say so, for the Symphonic Poem is simply Wagnerism applied to the symphony. Evidently Mr. Rowbotham's critical equilibrium is somewhat unstable. His essays, on the whole, are readable, although they are simple compilations. They appear to have been written for some juvenile magazine. A useful feature is a concise list of important compositions appended to each chapter. There is no occasion, however, for a long disquisition on Beethoven's nine symphonies in a chapter purporting to be on his "private life."

The Land of Home Rule. An Essay on the History and Constitution of the Isle of Man. By Spencer Walpole. Longmans, Green & Co.

THE Isle of Man is a museum of constitutional antiquities. Usages which we associate with the political history of England in the seventeenth, the fifteenth, and even the thirteenth century are there to be found side by side with the most modern experiments. As in the great neighboring island in the early years of William III., there is still no Cabinet, and the Governor has a real power of veto; as there under Elizabeth, political parties still have no existence; as was largely the case in England in the later middle ages, the revenue is derived from permanent customs duties, and the Legislature "cannot stop the machinery of government by withholding supplies." The House of Keys has not yet, what the House of Commons acquired under Henry IV., the exclusive right of originating money bills; and it may cast some light on the still uncertain question whether the two English houses were ever united to learn that "when the Tynwald," the Manx Legislature, "meets for financial purposes, the two branches sit together." We may go even behind the period when Parliament was forming itself to the period when royal courts of justice were first making their appearance; for, in Man, the Governor still dispenses justice in person, and presides, like Henry the Second, over the courts of law. And, finally, the open-air meeting of the Tynwald on St. John's Day for the promulgation of the statutes passed during the year has an aspect so archaic that even courts of law seem modern in comparison.

The annals of the island, in like manner, read like an epitome of British history, though with the sequence of movements strangely distorted. The struggle between the saintly Bishop Wilson and the governors in the early years of the eighteenth century over ecclesiastical discipline involved the same principles and even touched some of the precise questions that had been at issue in the contest between Becket and Henry II.; and the words of Gov. Horne maintaining that "the Right Honourable the Lord of this Isle"—the Earl of Derby—was "Chief of the Holy Church of this Island," sound like an echo of Henry VIII.'s great Act of Supremacy. The Manx "Act of Settlement" in 1703, "converting a whole nation of leaseholders into perpetual tenants at a low quit-rent," presents an obvious parallel to recent Irish legislation. The refusal of the English Government in 1838 to allow the establishment of an elected Chamber, and its subsequent change of attitude, may almost be regarded as a mere reflection of the course of contemporary British colonial policy. To the statesmen of Downing Street the case of Canada and the case of Man presented features of similarity.

A country like this had an obvious claim upon a Governor who was also an historian of repute, and the present volume shows that Mr. Spencer Walpole has not been deaf to its appeal. It could be wished that he had not yielded to the temptation to give his book an attractive title. It is, of course, a striking thing that here, almost in the geographical centre of the British Isles, an island not so large as an average English county should have retained its own Legislature, while Scotland and Ireland, incomparably more powerful, should have lost theirs. It is interesting to know that the tendency during the last fifty years has been towards greater autonomy; that when the House of Keys was reformed in 1869, Tynwald was intrusted with larger financial powers, and that "there is an increasing indisposition on the part of the Tynwald to allow the English Parliament to legislate" for them. The feeling of nationality, even when it asserts itself in a very small field, is the same feeling at bottom as that which we admire in the case of Germany or Italy, and always needs to be taken into account. But there are two considerations which prevent even those who sympathize with the demand for Irish home rule, like the present writer, from drawing any lessons from the constitution of Man. The first is the character of that constitution itself. The House of Keys, though it has been allowed a voice in the disposition of a certain part of the public revenue, is very far indeed from controlling the purse-strings; the upper house, or Council, possesses coördinate authority with it, and seven out of the eight members of the Council are nominated by the Crown; while the Governor, a nominee of the English Ministry, possesses a right of veto which he would not hesitate to use. And, in the second place, the population numbers only some 54,000. In spite, therefore, of its separate history and curious constitution, its political interests cannot help being on very much the same scale as those which find expression in an English municipal or county council. It may be added that Mr. Spencer Walpole fails altogether in the attempt to present anything like a consistent theory of the constitutional relations of Man and England. Its constitutional history during the last two or three centuries is, in truth, made up of sheer forgetfulness on the part of the English Parliament, varied by acts of power for which a theoretic justification is hard to find; of insular independence and of insular adroitness in so quickly following in the train of English legislation as to prevent friction.

Mr. Walpole's book is a creditable piece of work, the result of a good deal of reading and careful thought. It belongs to the class of popular local histories, and it is a dignified and useful specimen of its class. Mr. Walpole does not succeed in rendering the centuries of Norse, of Scotch, and of Stanley rule interesting; to do that would require more knowledge of events than is as yet accessible, an eye for character and episode, and a moving style. He has, at any rate, tried to disentangle the threads already in our hands, and to present a tolerably continuous and intelligible story. What we are perhaps more justified in regretting is that Mr. Walpole has not perceived the peculiar interest of the social and economic history of his territory. Here was a Celtic population, subjected alternately to Norse, to Scotch, and to English influences. How did its social life shape itself? We are told of "manors"; were they like the English or like the Welsh? When did the term first appear? What were the classes of tenants, the extent of their holdings, and their relative numbers? All these are questions the answers to which would have more than an insular bearing. They would help us to solve the larger difficulties presented by the social development of the surrounding countries. Manx history, it is evident already, would present us with many suggestive parallels. Thus, the conversion by Lord Derby, in 1645, of his customary tenants into leaseholders was exactly what Queen Elizabeth did with some of her Welsh tenants in 1562, and what Fitzherbert recommended to English landlords generally in 1539. The main difference was that the tenants in Man, aided by the influence of Bishop Wilson, were able afterwards to reverse the process, and obtain security of tenure at a quit-rent.

Still, we will be content with what we have if only in the second edition—which is sure to come, if a reasonable proportion of the hundreds of thousands of Lancashire tourists do their duty—Mr. Walpole will provide an index. When will authors, especially authors who do not belong to the professional writer or scholar class, feel the exceeding sinfulness of this little sin of omission?

How to Know the Wild Flowers. By Mrs. William Starr Dana. Illustrated by Marion Satterlee. Charles Scribner's Sons.

EVERY flower-lover who has spent weary and sometimes fruitless hours puzzling over a botanical key in the effort to name unknown plants, will welcome this modest but satisfactory book, which stands ready to lead him to the desired knowledge by a royal road. The excellent pictures alone, of which there are 104, nearly all original drawings from nature, are generally sufficient to identify the flowers they represent, and the butterfly weed, the touch-me-not, some orchids, and some of the compositæ and umbelliferæ, any of which it might baffle the inexpert to analyze, are thus recognized at a glance. The arrangement is by colors (a plan suggested by a chance paragraph of John Burroughs's); and the happy device of printing in capitals at the upper corner of each page the color of the flowers described below makes it possible to let the leaves fly like a windmill while you search for a particular flower, without risk of passing the place. A secondary principle of arrangement is by seasons. In each section the flowers are described as nearly as possible in the order of their blossoming.

The descriptions are not too coldly scientific to be interesting. A thousand little peculiarities of habit are mentioned, besides medicinal or magical virtues real or supposed. Occasional bits of poetry and curious information about various plants are sprinkled over the pages. It has not escaped notice, for instance, that the violet sometimes carries her proverbial modesty so far as to attend to the fertilization of her flowers in the bud, and actually under ground at that, finally pushing up a pod of seeds where we expected a flower. Altogether the book is well fitted to the need of many who have no botanical knowledge and yet are interested in wild flowers; and it will both help them to name the plants which naturally attract their attention, and point out the rarer ones which may be searched for with hopes of success at any given time and place. The region whose flowers are described is not very exactly defined, but seems to include the Northern and Middle States as far west as Chicago.

The German Allied Troops in the North American War of Independence. Translated by J. G. Rosengarten from Max von Elling's 'Die Deutschen Hilfstruppen in Nordamerikanischen Freiheitskrieg.' [Munsell's Historical Series, No. 12.] Albany. 1892.

ELLING'S work, originally published in 1863, is a standard one, and most of its material has been used by later writers, but this paraphrase, though not so valuable as it would have been before the appearance of Mr. Lowell's book on the Hessian troops, forms a useful pendant to Stone's 'Letters of Brunswick and Hessian Officers' in the same series. It will afford some who would not consult the original a chance for nearer acquaintance with those once dreaded Hessians, whose evil repute still shadowed the school-books of our boyhood. Thus approached, they turn out a commonplace Ger-

man soldiery, whose adventures are not very striking, and whose lives would seem to have been no bad risk for the underwriters of their day. They fought, and fought well, in a good many battles, and if not many were killed, a goodly number were captured, particularly at Saratoga. The history of these troops and their detention at Cambridge is famous through the memoirs of the Riedesels. It is to be regretted that the troops were ill-housed and ill-treated; that the officers could find no fit society among generals and colonels who came from the shop and the hayfield and had never "followed the wars abroad"; but much must be pardoned the colonial militiamen, who, not being versed in European codes of military honor, looked upon the strangers as hirelings and intruders in a family quarrel. After all, many of the Germans remained here as settlers at the close of the war.

The translation is accurate, but the book, of course, has suffered greatly in the process of condensation. The original, like most German histories, had little to lose in style, but that little is here lost. The roster of German officers has been considerably enlarged, and the addition of indexes of places and of names is much to be commended.

BOOKS OF THE WEEK.

Adams, W. I. L. Amateur Photography. Baker & Taylor Co. 50 cents.
Appleton, Prof. W. H. Greek Poets in English Verse. Boston: Houghton, Mifflin & Co. $1.50.
A Satchel Guide for the Vacation Tourist in Europe. 2d ed. for 1893. Boston: Houghton, Mifflin & Co. $1.50.
Assollant, Alfred. Une Aventure du Célèbre Pierrot. Boston: D. C. Heath & Co. 25 cents.
Atkinson, Edward. The Science of Nutrition. Boston: Damrell & Upham. 75 cents.
Balfour, Henry. The Evolution of Decorative Art. Macmillan. $1.25.
Barker, E. H. Wanderings by Southern Waters: Eastern Aquitaine. Appletons.
Benton, Joel. Greeley on Lincoln. With Mr. Greeley's Letters to C. A. Dana and a Lady Friend. Baker & Taylor Co. $1.25.
Billings, Dr. J. S. Ventilation and Heating. The *Engineering Record.*
Blackburn, Henry. Artistic Travel in Normandy, Brittany, the Pyrenees, Spain and Algeria. London: Sampson Low, Marston & Co.; New York: Scribners. $3.75.
Black, W. Shandon Bells. New and revised ed. Harpers.
Bourget, Paul. Un Scrupule. Paris: Alphonse Lemerre; New York: Amblard & Meyer Frères.
Brewer, R. F. Orthometry: A Treatise on the Art of Versification. With a new and complete Rhyming Dictionary. Putnams. $2.
Bridge, Horatio. Personal Recollections of Nathaniel Hawthorne. Harpers.
Bright, Prof. J. W. The Gospel of St. Luke in Anglo-Saxon. Oxford: Clarendon Press; New York: Macmillan. $1.30.

CHARLES SCRIBNER'S SONS, Publishers.

CROSBY'S VITALIZED PHOSPHITES.

From the nerve-feeding principle of the ox brain and wheat germ.

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

A Tonic

For Brain-Workers, the Weak and Debilitated.

Horsford's Acid Phosphate

is without exception the Best Remedy for relieving Mental and Nervous Exhaustion; and where the system has become debilitated by disease, it acts as a general tonic and vitalizer, affording sustenance to both brain and body.

Dr. J. C. Wilson, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

Descriptive Pamphlet free.

Charles Scribner's Sons'

NEW PUBLICATIONS.

Wagner and His Works.

The Story of his Life, with Critical Comments. By HENRY T. FINCK. With Portraits. 2 vols., crown 8vo, $4.00.

Mr. Finck's familiarity with the vast volume of Wagner literature, his ardent and uncompromising admiration for Wagner's genius, and his aggressive, racy style, give to his book both a lasting value and a piquant flavor which every music lover will appreciate. The book is both a full review of Wagner's life, and a summary and critical analysis of the musical and poetic contents of his writings, rich in anecdote and apposite quotation.

Homes in City and Country

By RUSSELL STURGIS, JOHN W. ROOT, BRUCE PRICE, DONALD G. MITCHELL, SAMUEL PARSONS, JR., and W. A. LINN. With 100 illustrations. 8vo, $2.00.

This book relates to home winning and to the characteristic features of city, suburban, and country-houses, with suggestions by acknowledged authorities as to the most desirable features of each class. Coöperative house-building is fully explained. The illustrations represent American architecture from Colonial times to the present.

Art Out of Doors.

Hints on Good Taste in Gardening. By Mrs. SCHUYLER VAN RENSSELAER. 12mo, $1.50.

Landscape gardening as an art, in its practical application to the beautifying of country-places, is the subject of this book. Mrs. Van Rensselaer discusses the treatment of the grounds, roads, and paths, plazzas, pattern beds, trees and shrubs, etc., with a fine artistic taste and a very genuine love of nature.

How to Know the Wild Flowers.

A Guide to the Names, Haunts, and Habits of our Common Wild Flowers. By Mrs. WILLIAM STARR DANA. With over 100 illustrations by MARION SATTERLEE. Square 12mo, $1.50 *net*.

"With this compact and intelligible guide the least learned lover of floral beauty may acquire with ease and pleasure a store of information of lasting benefit. Over 400 flowers are described. The book is got up in excellent style, and the illustrations are real works of art."—*Boston Beacon.*

Social Strugglers.

By Prof. H. H. BOYESEN. 12mo, $1.25.

Prof. Boyesen's story is an account of the struggles of a Western family transplanted to New York to attain social distinction. The book is both entertaining as a picture of life, involving a delightful love story, and valuable as a study of contemporary social tendencies.

Stories of a Western Town.

By OCTAVE THANET. Illustrated by A. B. Frost. 12mo, $1.25.

"It is a genuine pleasure to have the opportunity of calling attention to a volume of tales so good, so wholesome, and so fresh as these. The book should become a general favorite."—*Boston Courier.*

Island Nights' Entertainments.

The Beach of Falesá, The Bottle Imp, and Isle of Voices. By ROBERT LOUIS STEVENSON. Illustrated. 12mo, $1.25.

"Some of the most characteristic and best work of Robert Louis Stevenson is found in the volume. It is most delightful."—*Boston Traveller.*

Life of Michel Angelo.

By JOHN ADDINGTON SYMONDS. With 50 illustrations. New and cheaper edition. 2 vols., 8vo, $7.50.

"Mr. Symonds's knowledge of Renaissance history and literature is vast, and his competence as critic and investigator is undoubted. His 'Life' is an admirable and solid work."—*The Nation.*

*** *Sold by all booksellers, or sent, postpaid, by*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

NEW BOOKS.

A PATHFINDER IN AMERICAN HISTORY.

For the use of Teachers and Normal Schools. By W. F. GORDY and W. I. TWITCHELL. Complete in one volume, $1.20 net.

The authors tell when and where and how to begin the study of history, how to use pictures, group topics, describe manners and customs, collect facts, use supplementary reading, etc., and lay out a complete course of reading in United States History, etc.

"It is the completest handbook of United States History we have ever seen, and it should be in the hands of every teacher in schools where history is taught."—*Teachers' World.*

CARPENTRY FOR BOYS.

ELEMENTARY WOODWORK FOR MANUAL TRAINING CLASSES.

Designed to give fundamental instruction in the use of the principal tools needed in Carpentry and Joinery. By GEORGE B. KILBON, Principal of Manual Training, Springfield, Mass. Cloth, 75 cents net; by mail, 85 cents.

This work, which consists of a series of sixteen lessons, is the result of several years experience in Manual Training. The arrangement is from the easy to the difficult by successive steps, and it is designed to give boys of twelve years and upwards a command of the use of the principal woodworking tools. The work is very fully illustrated.

FOR PARENTS AND KINDERGARTENERS

FROEBEL LETTERS.

With Explanatory Notes and Additional Matter, by A. H. HEINEMANN. Portraits and illustrations. Cloth, $1.25.

The universal interest in the system of Kindergartens leads teachers and parents to study the ideas of the Founder, and to welcome any elucidation of the subject. The letters, never before published, with the copious explanatory notes of the editor, will be invaluable to all who are interested in the training of children.

PRICE REDUCED.

METHODS AND AIDS IN GEOGRAPHY

For the use of Teachers. By CHARLES F. KING, author of "Picturesque Geographical Readers," etc. Cloth. Illustrated. $1.20 net. A revised edition containing much new matter.

"This is a practical book for the use of practical teachers. It is evidently a working book in geography. It is prepared to help teachers 'to help pupils to help themselves,' according to the true spirit of the new education. Mr. King tells what illustrations to use, what selections to read from other books, what topics to treat in detail, and what to pass over hastily. A well-arranged course of study is given, with all necessary adjuncts for carrying it out."—*Education.*

LET HIM FIRST BE A MAN!

Essays chiefly relating to education and culture, by W. H. VENABLE, LL.D. Price, $1.25.

"It would be difficult to name a modern book upon the subject of education which is more charming, useful, and original. It takes a broad view of the subject, and gathers all into the thought which is expressed by the title—'Let Him First Be a Man!'"—*Boston Times.*

THE SPIRIT OF THE NEW EDUCATION.

By LOUISA PARSONS HOPKINS, Supervisor of Boston Public Schools. Price, $1.50.

"A series of thoughtful essays are presented by Louisa Parsons Hopkins in book form under the title given above. Some of the subjects are 'Manual Training,' 'The Moral Problem in the Public Schools,' 'Woman's Work in Education,' 'Secret of the Kindergarten.' The position of the writer as a supervisor of public schools in Boston and as the author of a series of valuable educational works gives an authority and importance to this little volume that cannot be questioned."—*Boston Transcript.*

METHODS OF INSTRUCTION AND ORGANIZATION IN THE SCHOOLS OF GERMANY.

By JOHN T. PRINCE, Mass. State Board of Education. A new edition revised. Cloth, $1.00 net. By mail, $1.15.

"Mr. Prince has peculiar fitness for writing such a book as this. The book is plainly written, and is suited to the requirements of those who wish to know what the German teacher does and how he does it. In his final chapter he institutes some comparisons between their schools and ours, and gives some hints that will be exceedingly valuable to every intelligent reader. This is one of the books every teacher should read."—*Educational Courant.*

Our New Books.

JUST OUT:

Completion of Pierce's Life of Sumner.

Memoir and Letters of Charles Sumner.

Volumes III. (1845 1860) and IV. (1860 1874). By EDWARD L. PIERCE. 8vo. Cloth. Uniform with Volumes I. and II. With two portraits. $6.00.

The entire manuscript of the work was read by George William Curtis some months before he died. Mr. Curtis took a deep interest in the book, and in criticism of it wrote to Mr. Pierce the following appreciative words: "In commenting upon your work I have spoken plainly of any suggestions that occurred to me, but I am afraid that I have not taken care to express my admiration of it as the most thorough and conscientious biography of a public man that we have. Your patient diligence and complete research are without example in uch work, and I think often of your remark to me that it had taken your life to write Sumner's."

Mr. Pierce, as is well known, was designated in Mr. Sumner's will as one of his literary executors, but he desired having Motley or Curtis or Dana prepare the biography. They turned the request, however, back to Mr. Pierce, and so in 1877 he began that work which he has now completed. As Mr. Pierce is an extremely conscientious writer and an ardent admirer of Mr. Sumner, he spared no pains in preparing the book, and read nearly all the 40,000 letters which Mr. Sumner left in his library—the sum total of nearly all that statesman's correspondence.

Complete sets of the MEMOIR AND LETTERS OF CHARLES SUMNER, 4 vols., cloth, in box. $12.00.

PROFESSOR TOTTEN'S WRITINGS

have been grossly misrepresented by the Public Press. You have probably never seen a good word said for him! *Must there not be another side to such a matter?* He believes in the Bible as written; in the Public School as established; and in Anglo-Saxon principles as inherited! His enemies are the **Three Great Perils** which threaten our land! Will you not, for very fairness' sake, examine his words of warning for yourself? We are his sole publishers. Send stamp for circulars, or 50 cts. for a sample volume. We conjure all those who hold American traditions sacred to give this fearless author a preliminary hearing without the medium of any third party.

London's Latest Success.

"I FORBID THE BANNS."

The story of a comedy which was played seriously. By FRANK FRANKFORT MOORE. 1 vol., 12mo, cloth, $1.00.

Three editions of 3 vols., at 31s., sold in six weeks in London.

Read what is said of it:

The London Athenæum says: "So racy and brilliant a novel. . . . At times there are positive flashes of wit. Most of the people interest one. . . . The women are, perhaps, more cleverly done than the male characters."

The London Literary World says: "There is no question at all that 'I Forbid the Banns' is an uncommonly clever book. The subject chosen is an audacious one, but it is treated in a masterly manner."

The London World says: "Mr. Moore is to be congratulated upon the originality of his novel, and also the skill with which he depicts a young woman so thoroughly emancipated, . . . who is yet charming."

The London Daily Telegraph says: "It is daring in conception, brilliant in execution, and altogether fascinating in treatment; told with infinite delicacy and masterful skill. The dialogue is apt and often brilliant; there can be but one verdict, and that is distinct success."

The London Daily Chronicle says: "This book has given us so much genuine pleasure and amusement. . . . A book which abounds in good things."

Illustrated Catalogue.

Containing 44 Full-page Portraits of Prominent American and European Authors, is now ready, and will be forwarded to any address on receipt of two 2-cent stamps.

London: 30 Wellington Street, Strand, W.C.
Leipzig: 10 Hospital Strasse.

Historical Register of Officers of the Continental Army during the War of the Revolution, April, 1775, to December, 1783.

By F. B. Heitman. This is a new book of the greatest historical interest, as it gives the name, rank, regiment, date of service, and promotion of every officer who served the United States during the Revolutionary War—so far as shown by the rolls. Descendants can find the official status of their ancestors. Price $5.00.

MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."

"The New York NATION—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art, both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American, desirous of keeping abreast of the best political and literary thought of the day, can afford to be without it. Subscription price, $3.00 a year, postpaid.

SOME NEW BOOKS.

NAPOLEON,
Warrior and Ruler, and the Military Supremacy of Revolutionary France.
By W. O'CONNOR MORRIS. (Heroes of the Nations Series, No. VIII.) One volume, with maps and illustrations. 12mo, cloth, $1 50. Half leather, gilt top, $1 75.

"It is no easy task to present to the reader an accurate and lifelike image of this extraordinary man, and to disengage his personality from the masses of details and of exaggerated fictions which have gathered round it."—*Extract from Author's Preface.*

THE STORY OF POLAND.
By W. R. MORFILL, author of "The Story of Russia," etc., etc. (No. 36 in the Story of the Nations Series.) 12mo, illustrated, with maps and plans. Cloth, $1.50; half leather, gilt top, $1 75.

"The plan of the work is to give a readable history of the country by bringing into prominence the more stirring episodes and salient characteristics and putting in the background the details, which must prove less interesting."—*From Author's Preface.*

THE CHURCH IN THE ROMAN EMPIRE, A.D. 64-170.
With Chapters of Later Christian History in Asia Minor. By Prof. W. H RAMSAY, of the University of Aberdeen and Mansfield College, Oxford. 8vo, with maps, $2.50.

PARTIAL CONTENTS: St. Paul's Journeys in Asia Minor—St. Paul at Ephesus—The Action of Nero towards the Christians—The Policy of the Flavian Emperors towards the Church—The Policy of Hadrian, Pius, and Marcus—The Acts of Paul and Thekla—The State Religion of the Empire—The Jews in Asia Minor in the First Two Centuries—Inscriptions of the Catholic Church—The Miracle at Colossæ, etc.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

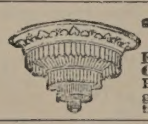
An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVI. comprising the first half-year of 1893.]



The Great Church LIGHT.

FRINK'S Patent Reflectors give the Most Powerful, the Softest, Cheapest and the Best Light known for Churches, Stores, Show Windows, Parlors, Banks, Offices, Picture Galleries, Theatres, Depots, etc. New and elegant designs. Send size of room. Get circular and estimate. A liberal discount to churches and the trade. I. P. FRINK, 551 Pearl Street, N. Y.

WATER CLOSETS

Cholera has but little chance if your sanitary arrangements are perfect. Your water-closet, if defective, is dangerous. Write us.

WILLIAM S. COOPER BRASS WORKS, PHILADELPHIA, PA.

SULLIVAN CO. CLUB.

"Capital is like water. If you do no violence to it, and attempt to grasp a handful of it, it will escape through your fingers. But take it gently, dig a canal, and it will go wherever you wish to lead it, docilely and without resistance."
—*Baron Rothschild.*

I have been drawn into real-estate development in the most natural way, by a process of evolution. I took up sanitary engineering eleven years ago, because I wanted to get out doors, away from desk-work. I found plenty to do; was sent for from Beverly Farms to the heart of Georgia, and found myself recognized as an expert—that is, "experienced."

I was paid $500 to revise the plans of one building, and received like fees for certifying to the healthfulness of hotels, apartment-houses, summer settlements, and public institutions. The thought then came, if my name and indorsement are worth anything to others, they are worth still more to myself. So I determined to develop property on my own account.

This led to the founding of Twilight Park in the Catskills, which has proved a valuable training-school, and now that it is a success, I have taken an interest in the Sullivan County Club, which owns free and clear a tract of nearly 5,000 acres, on high ground. with numerous lakes, only eighty-eight miles from New York, in the healthiest section of the Empire State, with fishing and hunting privileges. One hundred and twenty-five dollars will pay for an original, full-paid, non-assessable membership share, with a half-acre building site and an interest in the entire tract as well.

One of the best known business-men in New York ascribes his success to having early adopted this practical principle: "ALWAYS GIVE THE OTHER FELLOW A GOOD BARGAIN," and this is the principle which I have always tried to follow.

Hitherto women have objected to Park and Club schemes because they were "stag" affairs which fostered dissipation. But now that they are started on the Family plan, as in the case of the Sullivan County Club, their success is assured.

Stock in well-managed Clubs pays good dividends, and is an excellent investment.

Robbins Island was bought for $25,000, and within a year $100,000 was offered for it. The Adirondack League has an income of $35,000 from timber privileges alone. Land at Twilight Park has advanced from $10 to $2,000 an acre in four years.

The property of the Sullivan County Club will increase proportionately in value.

The plan is similar to Twilight Park, where meals and social entertainment are furnished in a central Inn at moderate rates. One can thus enjoy all the freedom and privacy of family life without the cares of housekeeping, and yet secure the advantages of a community where roads, drainage, water-supply, and other sanitary essentials are provided. This is the most rational, inexpensive, and wholesome way of summering, especially for children.

We shall build a clubhouse on Masten Lake Hill, 1,750 feet high, with a view of the entire surrounding country, including Liberty Mountain and the Walnut Hill House, the Mamakating Valley, and the Shawangunk Mountains. Masten Lake, about 4,000 feet in length, lies almost entirely within the club tract.

Lots will be assigned in the order of subscriptions, but preference will be given to members *who will build immediately.*

Over Three Hundred Shares have been taken in twelve weeks, and on April 15 the price was raised to $125.

No Mortgage. No Malaria. No Personal Liability.

SEND FOR CIRCULAR.

CHAS. F. WINGATE,
Consulting Sanitary Engineer,
119 Pearl St. (Hanover Sq.),
New York.

On Saturday a party of 40, including 8 ladies, braved the rain and hail and selected SEVENTEEN *sites on which to build at once.* ONE HUNDRED AND SEVEN *shares have been sold the past week, and when another hundred are taken the price will be advanced to $150. Better remit at once.*

ROYAL BAKING POWDER Co., 106 Wall Street, N. Y.

RURAL ENGLAND.

LEISURELY CARRIAGE DRIVES FOR *PRIVATE PARTIES.*

The cities, towns, and villages of England are connected by roads so good that driving over them is a luxury. They lead through scenes of rural life that have not been altered for centuries. The country abounds in historic seats, Gothic churches, Feudal and Monastic ruins, Saxon, Roman, British, and Druid remains, sites of battles, sieges, and treaties, Cathedral cities, and historic market towns.

Well-Equipped Carriages,

Well appointed and suitable for parties of from three to ten persons each, at a stated charge, including all expense of providing and maintaining horses, carriage, and coachmen for drives of one, two, or three weeks or longer, offered by a firm with **first-class American references.** Correspondence invited by MR. HALFORD L. MILLS WITH HIS AMERICAN ANNEX,
Cambridge Place, Paddington, London.

THE SEASIDE.—FOR SALE OR rent at Pigeon Cove, Mass.—Charmingly situated house of 11 rooms; stable; furnished; superb view of ocean. G. P. PUTNAM'S SONS, 27 West 23d St., New York.

Where for Your Vacation? The Travelers' Bureaus of The News Series (Herkimer, N. Y., Office) may help you decide. Inquiries should be accompanied by 10c. in stamps.

MAINE COAST.

LANDS at and around CAPE ROSIER and Castine, Me., on this boldest and most beautiful section of Penobscot Bay, 50 miles nearer Boston and the West than Mt. Desert—southwesterly exposures, fine harbor fronts, bold rocks, beaches, and fine trees, broad views of mountains and islands, extended drives along the shore and among the hills, new wharves, and good daily connection by boat and rail. These lands are offered at low prices to persons intending to build and occupy. A very few hundred dollars will buy a fine high shore lot of several acres. Several tracts of from 20 to 50 acres are offered at low prices. Send for descriptive pamphlet and further details to
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

PENINSULA.

FOR SALE—One of the most beautiful peninsulas on the Maine Coast, situated on Penobscot Bay. This property is nearly a mile in length, and comprises 100 acres of land. Controls on its inner side a land-locked harbor with deep water for its whole length, has fine views of the mountains, and the land is wonderfully diversified comprising fine cliffs, ravines, hills, beaches, green slopes, woods, and uninterrupted view across the open sea.

It is within an hour's sail by steamboats plying several times daily from the railroad terminus to Rockland, where there is excellent day and night Pullman car service from Boston.

Price, $8,500.
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

FOX ISLANDS.

TO LET—for the summer—Two very charmingly situated cottages, directly upon the water; grounds occupying exclusively a peninsula of 50 acres on Fox Island Thoroughfare, Maine, in the large island township of Vinal Haven. Each house is fully furnished-has a boat harbor, barn, etc., and boat houses, half-a-mile from village and steamboat landing; houses contain 7 and 10 rooms; rents $175 and $225; exceptional chance for two families wishing to be near together; will be let together or separately.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

NORTHAMPTON, MASS.

TO LET—Furnished, the new cottage of the late Mrs. Harrison O. Apthorp; contains nine rooms, is fully and tastefully furnished and beautifully situated on high land, with broad view of the Connecticut Valley and Mts. Tom and Holyoke; has all modern conveniences and is within a short distance of railroad station; rent low to a careful tenant for two or three years. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ISLESBORO, ME.

TO LET—for the summer—A cottage of 10 rooms fully furnished; stable, boat-house, and ample grounds; most beautiful views of bays, islands, and mountains; within a short distance of Islesboro Inn and Steamboat Landing; rent $375.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ASHFIELD, MASS.

TO LET—Furnished, for the summer, a very attractive old-fashioned house in the beautiful hill township of Ashfield, Mass., near the summer home of the late George William Curtis. House contains 12 rooms; ample land, stable, etc.
J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

BEVERLY SHORE, MASS.

FOR SALE OR TO LET—An estate of 20 acres of very high land, directly on the water. Large house, fully furnished, stable, gardener's cottage, gardens, and beautiful trees. Will be sold at a low price to settle an estate. J. MURRAY HOWE & BRADLEE,
27 School St., Boston.

ADIRONDACKS.

TO LET, furnished, at Lake Placid, a most beautifully situated cottage of 8 rooms, commanding an extended view of mountains and lakes, with grounds running to the water. Rent low.
J. MURRAY HOWE & BRADLEE,
27 School Street, Boston.

New California

$50 a share.

The best California product, so far, is oranges, lemons, prunes, figs, olives, grapes, almonds, etc. The fruit-growing center is in the southern part, at Riverside. Unimproved land there is worth $200 to $600 an acre. An acre of orchard yields $100 to $2,500 a year.

A still better place for these fruits and nuts is about to be opened 150 miles southeast, along the Southern Pacific R.R. The first thing to do is to water the land by canal from the Colorado River, a quick and easy job, involving great profit. Unlimited fruit land; nothing but water lacking, ready to plant as soon as the water is there; and car-loads of vegetables will grow between trees in three to six months.

The most precious thing in the world is water, and that is our merchandise. It enriches all that buy or sell it. With water, within five years, the land will bring $500 an acre, some of it. Water creates incredible values.

We want a share of our stock in good hands at every post-office. In a year we shall want the people to know we are ready for settlers.

Send for pamphlet and map. We want you to know what wealth and health await our partners and customers there.

THE COLORADO RIVER IRRIGATION CO.
66 Broad Street, New York.

To Travellers Visiting Japan.

The Nation

VOL. LVI—NO. 1452. THURSDAY, APRIL 27, 1893. PRICE 10 CENTS.

THE

Popular Science Monthly

FOR MAY.

Japanese Home Life. By Dr. W. DELANO EASTLAKE. A charming picture of life in the garden land, with many characteristic illustrations.

The Inadequacy of Natural Selection. II. By HERBERT SPENCER. A continuation of an able argument.

The Oswego State Normal School. By Prof WILLIAM M. ABER. Describes the career of this prominent institution, and gives many views and portraits.

Decay in the Apple Barrel. By Prof. B D. HALSTED. Novel and practical information, fully illustrated.

Other Articles on

DISCOVERY OF ALCOHOL AND DISTILLATION; TRIBUTE OF THE FRENCH ACADEMY TO AMERICAN GEOLOGY; HOW SCIENCE IS HELPING THE FARMER; DIETARY FOR THE SICK; SKETCH OF SAMUEL WILLIAM JOHNSON (with Portrait).

50 cents a number; $5.00 a year.

D. APPLETON & CO.,

NEW YORK.

RECENT IMPORTANT BOOKS.

A New Volume in Herbert Spencer's System of Synthetic Philosophy.

The Principles of Ethics,

VOL. II.

By HERBERT SPENCER. 12mo. Cloth, 2.00.

This volume consists of three parts, the first of which, "Justice," has been previously published separately. The parts which the author has now completed are entitled respectively "Negative Beneficence" and "Positive Beneficence."

For convenience of those who have already purchased the first part, the two others are bound together in a separate volume; price, $1.25.

Handbook of Greek and Latin Palæography.

By EDWARD MAUNDE THOMPSON, D.C.L., Principal Librarian of the British Museum. No. 70, International Scientific Series. 12mo. Cloth, $2.00.

This interesting volume outlines a history of the Greek and Latin alphabets, and describes various writing instruments, materials used to receive writing, forms of books, abbreviations and contractions, numerals, etc., related to the study of Roman and Grecian documents. A valuable index is appended.

Laws and Properties of Matter.

By R. T. GLAZEBROOK, F.R.S., Fellow of Trinity College, Cambridge. A new volume in the Modern Science Series, edited by Sir JOHN LUBBOCK. 12mo. Cloth, $1.00.

This book, while not pretending to be a complete treatise, aims at making clear to one who wishes to understand something of physics the meaning of the terms applied to matter, and the principal properties it possesses.

Wanderings by Southern Waters.

By EDWARD HARRISON BARKER, author of 'Wayfaring in France.' Illustrated. 8vo. Cloth, $4.50.

"Emphatically the book of the romantic traveller. . . . Altogether, Mr. Barker's journal of wanderings by French waters is a charming book."—*London Saturday Review.*

"The name of the book conveys no idea of the freshness, the originality, and the romance of its pages. The region in which the author has lived, sharing the existence of the peasants, and tramping over its byways, is a district rarely traversed by English people even on the railway. Visitors to the Puy de Dôme stop short a hundred kilometres north of it. Travellers to eastern Spain by way of Toulouse cross the Dordogne at a most picturesque point, but never alight there."—*London Athenæum.*

Columbian Edition.

Appleton's Dictionary of New York and its Vicinity.

An Alphabetically Arranged Index to all Places, Societies, Institutions, Amusements, etc. With Maps and Illustrations. Revised annually. 16mo. Paper, 30 cents; flexible cloth, 60 cents.

An Atlas of Astronomy.

By Sir ROBERT S. BALL, F.R.S., Professor of Astronomy and Geometry at the University of Cambridge, author of 'Starland,' 'The Cause of an Ice Age,' etc. With 72 Plates, Explanatory Text, and Complete Index. Small 4to. Cloth, $4.00.

"To be commended as a most trustworthy guide to the study of the heavens."—*Philadelphia Press.*

"Will prove simply invaluable to the earnest student of astronomy."—*N. Y. Observer.*

"The scope of this atlas is such as to render it widely serviceable; the set of charts forms a repertory of exact astronomical representation."—*Philadelphia Ledger.*

GREAT COMMANDERS SERIES.

Edited by Gen. JAMES GRANT WILSON.

Admiral Farragut.

By Captain A. T. MAHAN, U. S. N., author of 'The Gulf and Inland Waters,' etc. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

"A careful and conscientious biography of one of the most distinguished as well as picturesque figures of the late war."—*Detroit Free Press.*

General Taylor.

By Major-General O. O. HOWARD, U. S. A. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

"The career of 'Old Rough and Ready' is extremely interesting. General Howard takes equal pride and pleasure in offering his salute of honor to the hero of Monterey and Buena Vista. This is good reading for American youth."—*Philadelphia Ledger.*

General Jackson.

By JAMES PARTON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

"Mr. Parton's Life of Jackson has been prepared with great care and with an evident desire on the part of the author to be historically exact in his statement of facts."—*Charleston News and Courier.*

IN PRESS:

The Simple Adventures of a Memsahib.

By SARA JEANETTE DUNCAN, author of 'A Social Departure,' 'An American Girl in London,' etc.

The Misses Ely's School for Girls,
RIVERSIDE DRIVE,
85th and 86th Sts., New York.

Schools Will Find it Both Convenient and Economical

to place their newspaper and magazine advertising in the hands of an experienced and reliable advertisement agency. We have been established in this business for nearly thirty years, during which we have certainly acquired the necessary experience, in looking after the advertising of many prominent schools, to whom we can refer as to our reliability and carefulness. We have also sufficient capital (see any commercial agency rating) to enable us to meet the wants of our customers as to time of payment, and to carry their accounts when desired.

Full particulars and estimates furnished on request.

DAUCHY & CO.,
Newspaper Advertisement Agents,
27 Park Place and 24-26 Murray St., New York.

DE *pluribus unum*. It is a curious paradox that the more candidates an Agency has, the fewer it will recommend for a particular place. The Irish steward apologized for writing so long a letter because he had not time to write a shorter one. So some Agencies have to send notices to every Tom, Dick, and Harry on their list, because they have not a large enough registration to pick out just *the* man. Here are a few places filled by us in 1892, where (1) application was made to us, (2) we recommended a candidate as *the one*, and (3) he was elected. MEN.—(1) Ass't Sup't, Cleveland, O., $2,700; Principals of Academies, (2) Factoryville, Pa., $1,800; (3) Hiawatha, Ks., $1,300. Principals of High Schools, (4) N. Y., $1,300; (6) Onondaga Valley, N. Y., Pueblo, Col., $1,800; (5) Suspension Bridge, $1,100; (7) Granville, N. Y., $1,100. Assistant Teachers, (8) Winona Normal, $1,500; (9) Omaha, Neb., $1,500; (10) Pueblo, Col., $1,200. WOMEN.—Teachers of Methods, (11) Davenport, Ia., $1,200; (12) Utica, N. Y., $1,000; (13) Cedar Falls, Ia., $1,000; (14) Grand Forks, No. Dak., $1,000; (15) Winona, Minn., $900; (16) Emporia, Ks., $900. Other Assistant Teachers, Baton Rouge, La., $900; (17) St. Cloud, Minn., $750; (18) Salt Lake City, Utah, $600. In many places where salary was not fixed we named three candidates at different salaries, and one was selected, usually at the highest. We seldom name more than three candidates, and if sufficient details are given can usually fix on just one. PLURIBUS UNUM.

THE SCHOOL BULLETIN AGENCY, C. W. BARDEEN, SYRACUSE, N. Y.

ROBERTS BROTHERS,
Publishers, Boston.

Charles L. Webster & Co.

NEW BOOKS.

Elizabeth: Christian Scientist.

By MATT CRIM, author of "Adventures of a Fair Rebel," "In Beaver Cove," etc. 12mo, cloth, $1.00; paper, 50 cents.

The story deals with the career of a refined and deeply religious girl, who leaves her home in the Georgia mountains with the object of converting the world to Christian Science. The true aims and spirit of Christian Science are set forth by Miss Crim in a manner calculated to do away with many false impressions.

Stories from the Rabbis.

By ABRAM S. ISAACS, Ph.D., professor of German and Hebrew in the University of the City of New York. 12mo, cloth, $1.25.

Dr. Isaacs has gathered from the Talmud and Midrash a most entertaining collection of non-sectarian stories, and has retold them in genial prose. This book is a capital companion for an hour's relaxation, and is also suited for reading purposes in schools and colleges.

The Art of Sketching.

By G. FRAIPONT, with fifty illustrations from drawings by the author. Translated from the French by Clara Bell. With preface by Edwin Bale, R. I. 12mo, cloth, $1.00.

This little book will be found invaluable to amateurs in Black and White, and of great service and interest to artists and those desiring a text-book on this branch of art.

The £1,000,000 Bank-Note

And Other New Sketches.

By MARK TWAIN. With frontispiece. Small 8vo, cloth, $1.00; stamped leather, $1.50.

This volume contains Mark Twain's new story of 'The £1,000,000 Bank-Note,' together with several other stories by the same author, which have never before appeared in book form. They include: 'Mental Telegraphy,' 'Playing Courier,' 'A Letter to Queen Victoria,' 'About Ships,' 'The German Chicago,' and 'A Majestic Literary Fossil.'

Tenting on the Plains.

By ELIZABETH B. CUSTER, author of 'Boots and Saddles.' New cheap edition. Illustrated by Frederic Remington. 12mo, cloth, $1.00.

The edition is printed from new plates, with the original illustrations, and bound in a handsome and appropriate cover. It is one of Mrs. Custer's best books, and can be very favorably compared with her 'Boots and Saddles.'

The Legends and Myths of Hawaii:

The Fables and Folk-Lore of a Strange People.

Edited, with an Introduction, by the Hon. R. M. DAGGETT, late U. S. Minister to the Hawaiian Islands. Two steel portraits, and twenty-five other illustrations. Cloth, 8vo, 530 pages, $3.00.

The present interest felt in Hawaiian matters makes this a very timely volume. Scholars will read this book with interest, and the general reader will find in these weird legends a charm lacking in modern romances.

SEND FOR OUR ILLUSTRATED CATALOGUE.

*** *Our publications are for sale by all booksellers, or are mailed postpaid on receipt of price.*

Charles L. Webster & Co.,

HOUGHTON, MIFFLIN & CO.'S
NEW BOOKS.

The Life and Work of John Ruskin.

By W. G. COLLINGWOOD. With Portraits and other Illustrations. 2 vols. 8vo, $5.00. A biography of this illustrious man by one who was for many years Mr. Ruskin's private secretary. It contains letters by Ruskin, Carlyle, Browning, with much other new matter, and will be most welcome to all who appreciate Ruskin's unique greatness.
Large-Paper Edition. Limited to 200 copies. Beautifully printed, with Portraits and other Illustrations not included in the Library Edition. 2 vols., octavo, $15.00, *net.*

Donald Marcy.

A story largely of college life, full of energy and enthusiasm, deepening in character as responsibilities arise; a story of much power and interest. By ELIZABETH STUART PHELPS. 16mo, $1.25.

A Cathedral Courtship,

and Penelope's English Experiences. Two very bright and entertaining stories, by KATE DOUGLAS WIGGIN, author of "The Birds' Christmas Carol," "Timothy's Quest," etc. With illustrations. 16mo, $1.00.

Sally Dows and Other Stories.

By BRET HARTE. 16mo, $1.25. The first story is of Georgia, in the period following the war; the three others relate to California, and are in the style in which Mr. Harte is unrivalled, both in the stories and in the art with which they are told.

From Chattanooga to Petersburg,

under Generals Grant and Butler. An important Contribution to the History of the War, and a Personal Vindication. By WILLIAM FARRAR SMITH, Brevet Major-General U.S.A., and late Major-General of Volunteers. With four Maps and Plans. Crown 8vo, $1.25.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.
11 East 17th Street, New York.

WAGNER AND HIS WORKS.

The Story of His Life, with Critical Comments.

By HENRY T. FINCK.

With Portraits. 2 vols., cr. 8vo, $4.00.

Mr. Finck's familiarity with the vast volume of Wagner literature, his ardent and uncompromising admiration for Wagner's genius, and his aggressive, racy style, give to his book both a lasting value and a piquant flavor which every music lover will appreciate. The book is both a full review of Wagner's life and a summary and critical analysis of the musical and poetic contents of his writings, rich in anecdote and apposite quotation.

*** *Sold by all booksellers, or sent postpaid by*

Charles Scribner's Sons,
743-745 Broadway, New York.

Cassell Publishing Co.

HAVE JUST ISSUED:

By ANNIE THOMAS.

UTTERLY MISTAKEN.

A Novel. By ANNIE THOMAS (Mrs. Pender Cudlep), author of "Playing for High Stakes," "That Other Woman," "He Cometh Not, She Said," etc., etc. 1 vol., 12mo, extra cloth, $1.00.

In this, her latest novel, we find Annie Thomas at her best. The unique features of the plot, and the thoroughly original style of treatment, would be sure to enlist favorable attention, even though the author were not already a popular favorite.

By MRS. PARR.

THE SQUIRE.

A Novel. By Mrs. PARR, author of "Dorothy Fox," etc., etc. 1 vol., 12mo, paper, *Cassell's Sunshine Series*, 50 cents; 12mo, extra cloth, $1.00.

"Intensely interesting."—*Boston Home Journal*

"Mrs. Parr's is a practiced hand."—*Springfield Republican.*

"At once touching and ennobling."—*The Congregationalist.*

By JUHANI AHO.

SQUIRE HELLMAN,

And Other Stories. By JUHANI AHO. 1 vol., 16mo, cloth, unique, 50 cents. *Cassell's "Unknown" Library.*

Deserves, and is sure to awaken, far more than ordinary interest, not only by its intrinsic literary charms, but because it presents the *first* English translation of a Finnish novel.

By B. L. FARJEON.

THE LAST TENANT.

A Novel. By B. L. FARJEON, author of "Bread-and-Cheese and Kisses," "Great Porter Square," "Griff," "Blade-o'-Grass," "The Sacred Nugget," etc. 1 vol., 12mo, cloth, $1.00.

This is the best thing Mr. Farjeon has written in many a day—the story of a haunted house, told with such matter-of-fact detail that, once begun, it must be read to the end.

By MRS. ALEXANDER.

THE SNARE OF THE FOWLER.

By MRS. ALEXANDER, author of "The Wooing O't," "Which Shall it Be?" etc., etc. 1 vol., 12mo. *Cassell's Sunshine Series*; paper, 50 cents; extra cloth, $1.00.

"The different characters are outlined with that art of brilliant contrasts which the author employs with unfailing felicity."—*Boston Beacon.*

By MRS. W. K. CLIFFORD.

A WILD PROXY.

A Tragic Comedy of To-Day. By Mrs. W. K. CLIFFORD, author of "Mrs. Keith's Crime," "Aunt Anne," etc. 1 vol., 12mo, cloth, $1.00.

Mrs. W. K. Clifford is one of the most popular novelists of the day, possessing a style of her own, which is at once bright and entertaining.

By E. W. HORNUNG.

TINY LUTTRELL.

A Novel. By E. W. HORNUNG. 1 vol., 12mo, cloth, $1.00.

A Story of Australian life, with a turn at England to give it contrast. The book promises to be a favorite.

London's Latest Success.

"I FORBID THE BANNS."

The story of a comedy which was played seriously. By FRANK FRANKFORT MOORE. 1 vol., 12mo, cloth, $1.00.

Three editions of 3 vols., at 31s., sold in six weeks in London.

FOR SALE BY ALL BOOKSELLERS.

Cassell Publishing Company,

104 and 106 Fourth Ave., N. Y.

The **Exhibition Number of Scribner's** will contain in addition to the original manuscript by George Washington, on the Braddock campaign, contributions from the following authors and artists:

W. D. Howells,
Boutet de Monvel,
Howard Pyle,
Bret Harte,
George H. Boughton,
Thomas Bailey Aldrich,
A. B. Frost,
F. S. Church,
Thomas Hardy,
William Hatherell,
Albert Lynch,
Henry James,
E. H. Blashfield,
Walter Besant,
L. Marchetti,
Alfred Parsons,
Robert Blum,
Robert Louis Stevenson,

W. T. Smedley,
W. L. Metcalf,
Sarah Orne Jewett,
C. D. Gibson,
C. S. Reinhart,
Frances Hodgson Burnett,
R. B. Birch,
Irving R. Wiles,
H. S. Mowbray.
H. C. Bunner,
J. Alden Weir,
George W. Cable,
W. B. Closson,
Elbridge Kingsley.

This number will be enlarged nearly one-third. Price as usual 25 cents.

A. C. McCLURG & CO.'S NEW BOOKS.

The Law of Psychic Phenomena.

A Working Hypothesis for the Systematic Study of Hypnotism, Spiritism, Mental Therapeutics, etc. By THOMSON JAY HUDSON. 12mo. $1.50.

The aim of this work is to show that the whole range of hypnotic, mesmeric, and so-called spiritual manifestations, together with the phenomena commonly associated with the subject of mental therapeutics, are referable to two or three fundamental principles, which constitute a working hypothesis, and in accordance with which they can be satisfactorily explained. The author's calm, unprejudiced attitude of mind and strictly scientific method of investigation remove his work far from the regions of irresponsible speculation and vagary. The book has a significant and profound bearing upon subjects which are just now of rapidly increasing importance, and is withal thoroughly reverent in spirit. The perusal of this work in the manuscript by several specialists of national reputation in their several departments of science and philosophy drew from them the strongest expressions of interest and approbation.

Echoes from the Sabine Farm.

Being certain Horatian Lyrics done into English by EUGENE and ROSWELL M. FIELD. With illustrations by Edmund H. Garrett. Large paper edition, limited to 500 numbered copies. 8vo, gilt top, *net*, $5.00.

It is perhaps needless to say that these translations are quite free from pedantry and mere literalness, and that while some of the lyrics are singularly perfect reproductions of the originals, others are free adaptations to the spirit, the forms, and the speech of to-day. In them the poet boldly interprets the poet.

Bernardin de St. Pierre.

From the French of ARVEDE BARINE. With an introduction by AUGUSTIN BIRRELL. 12mo. *The Great French Writers.* $1.00.

The life of the author of 'Paul and Virginia' is so unusual, so interesting, so suggestive and amusing, that it is sure to meet with a cordial reception. The introduction, by the author of 'Obiter Dicta,' is a careful and discriminating estimate of St. Pierre and his work.

Counterparts.

By ELIZABETH SHEPPARD. With an Introduction and Notes by GEORGE P. UPTON. With Portraits 2 vols. $2.50.

This edition of 'Counterparts' is issued in the same beautiful style as 'Charles Auchester,' published last year. Though music plays an important part in 'Counterparts,' it is still, as its title indicates, a romance of temperaments, an ideal study of contrasting characters, embellished with all those charms of imagination and picturesque descriptions for which this young and gifted idealist and romancer was so famous.

The Best Letters of Wm. Cowper.

Edited with an Introduction by ANNA B. M'MAHAN. "Laurel-Crowned Letters." 12mo, gilt top. $1 00.

Cowper might be called, with little exaggeration, the prince of letter-writers, so elegant and classic are his epistles. These letters show him, as a rule, to be a gentle, lovable nature, guided by a cheerful philosophy, and possessing a sound good sense. Apart from their literary charm they give a more satisfactory picture of the man than any "Life" of him that has yet been written.

For sale by Booksellers generally, or sent, postpaid, on receipt of price, by the Publishers.

A. C. McCLURG & CO.,

CHICAGO.

EIGHT GREAT DICTIONARIES

FOR SCHOOLS AND PRIVATE LEARNERS.

Liddell and Scott's Greek Lexicon.

Revised and Enlarged. A Greek-English Lexicon. Compiled by HENRY GEORGE LIDDELL, D.D., and ROBERT SCOTT, D.D. With Co-operation of HENRY DRISLER, Jay Professor of Greek in Columbia College, New York. pp. xiv., 1776. Seventh Edition, Revised and Augmented throughout. 4to, Sheep, $10 00.

Liddell and Scott's Intermediate Greek Lexicon.

An Intermediate Greek-English Lexicon, founded upon the Seventh Edition of Liddell and Scott's Greek-English Lexicon. pp. iv., 910. Small 4to, Cloth, $3 50; Linen, $3 75; Sheep, $4 00.

"I have seen so much evil from the use of the little abridged lexicon by college students, and have had so much difficulty in persuading all to use the large lexicon, that I shall be glad to exert my influence in favor of the 'Intermediate Greek Lexicon' for ordinary college students."—T. D. SEYMOUR, *Professor of Greek, Yale College.*

Liddell and Scott's Greek Lexicon.

Abridged. A Lexicon Abridged from Liddell and Scott's Greek-English Lexicon. The *Twentieth Edition*, carefully Revised throughout. With an Appendix of Proper and Geographical Names, prepared by the Rev. JAMES M. WHITON, Ph.D. pp. 832. Small 4to, half leather, $1 25.

Harper's Latin Dictionary.

Founded on the translation of "Freund's Latin-German Lexicon." Edited by E. A. ANDREWS, LL.D. Revised, Enlarged, and in great part Rewritten, by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D. pp. xiv., 2020. Royal 8vo, Sheep, $6 50; Full Russia, $10 00.

Lewis's Latin Dictionary.

A Latin Dictionary for Schools. By CHARLTON T. LEWIS, Ph.D. pp. 1192. Large 8vo, Cloth, $5 50; Sheep, $6 00.

"This dictionary is not an abridgment, but an entirely new and independent work, designed to explain every word or phrase in the Latin literature commonly read in schools, viz., the complete works of Cæsar, Terence, Cicero, Livy, Nepos, Virgil, Horace, Ovid, Juvenal, Phædrus, and Curtius, the Catiline and Jugurtha of Sallust, the Germania and Agricola of Tacitus, and a few words found in some extracts of Florus, Eutropius, and Justinus. The original meaning of every word is first given, and then the modifications which it underwent in usage."—*From Preface.*

Lewis's Elementary Latin Dictionary.

An Elementary Latin Dictionary. By CHARLTON T. LEWIS, Ph.D. pp. 952. Small 4to, half leather, $2 00.

"I have put it to the test of constant use over the range of authors now read by my classes, Cicero, Horace, Tacitus, Plautus, Terence, and Juvenal, and have found it ample. The definitions are clear, and the interpretation of passages often very happy."—J. HOWARD STOUGH, *Professor of Latin, Midland College.*

Thayer's Greek-English Lexicon.

Greek-English Lexicon of the New Testament; being Grimm's Wilke's Clavis Novi Testamenti, Translated, Revised, and Enlarged by JOSEPH HENRY THAYER, D.D., Bussey Professor of New Testament Criticism and Interpretation in the Divinity School of Harvard University. pp. 746. 4to, Cloth, $5 00; Half Roan, $6 00; Sheep, $6 50.

"Altogether the volume is one of great value, and the eminent scholars who have been concerned in its production should have the thanks of all who love the study of the New Testament in the Greek tongue."—*Presbyterian, Philadelphia.*

Yonge's English-Greek Lexicon.

An English-Greek Lexicon. By C. D. YONGE. With Many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonymes. To which is prefixed an Essay on the Order of Words in Attic-Greek Prose, by CHARLES SHORT, LL.D. Edited by HENRY DRISLER, LL.D. pp. 894. Royal 8vo, Sheep, $4 50.

"This work is not a mere collection of Greek words which may be equivalents of certain English words, thrown carelessly together without system, but a carefully arranged lexicon, in which a scholar can see the *nature* of the word he is employing, whether it is poetic or specially Homeric, or philosophic, or peculiar to comedy, or colloquial. The work is certainly a great accession to our apparatus of classical instruction."—W. W. GOODWIN, Ph.D., *Eliot Professor of Greek Literature in Harvard College.*

☞ *The above books may be had of all booksellers, or will be sent by the publishers, on receipt of price. If ordered sent by mail, 10 per cent should be added to the price to pay postage.*

HARPER & BROTHERS, Publishers, Franklin Square, New York.

The Nation.

NEW YORK, THURSDAY, APRIL 27, 1893.

The Week.

THE doorkeeper of the British House of Commons retired the other day after a service of thirty-seven years, and was succeeded by his first assistant. The place is a valuable one, both because of its salary, its permanence, and its dignity. Now, suppose Mr. Gladstone, and Mr. Balfour, and all the other leaders on both sides of the House had, on hearing that the doorkeepership was vacant, laid aside the home-rule question, and the liquor question, and the parish councils, and the Uganda question, and engaged in a general "fight" over the appointment, and obstructed, and combined, and dickered, and intrigued week after week as to who should have the place, and tried to bargain that if A got it, D should be first assistant and C should be second, and that if Gladstone were allowed to "name" the head, Balfour should get the second place for his "man," and that Chamberlain and the Liberal Unionists should have at least two sweepers and dusters, and that the towel-washer should be the perquisite of the Nationalists, what should we here think of it? About the feelings of the British public we shall say nothing. But is there an intelligent man or woman in the United States who would not feel sorry and ashamed over the spectacle, and would not think that England was going, or rather had gone, to the dogs? If so, how is it that we have a standard of conduct for foreign legislators so much higher than we have for our own? How is it that we recently witnessed a display of childish neglect of public interests on the part of our own Senate, precisely similar to that we have pictured above on the part of British legislators, without more indignation? How is it we allow the attention of the President and Cabinet to be absorbed for months after an important election in settling the trumpery claims of a lot of shiftless people to a lot of small places, without more indignant remonstrance? What traveller from Mars, who saw nothing but the Executive of the United States Government during the month or two following a Presidential election, would suppose that there stood behind him a nation of particularly grave and serious business men, who allowed no playing or loafing in their offices, or factories, or farms in working hours, and always sought to pay their notes at maturity?

We are glad to learn that the State Department has on foot an investigation into the working of the various reciprocity agreements, and we can well believe the report that Secretary Gresham has already found that there is a good deal in reciprocity that is not reciprocal. It has long been known to houses doing business with Cuba and Porto Rico that the new tariff for those colonies was expressly designed to nullify certain advantages which American exporters thought they were to enjoy under the treaty. This was done by the very simple plan of putting such enormous duties on some articles that they remained practically prohibitory, and left the monopoly of the trade with Spain even after the agreed reduction of 25 or 50 per cent. had been made on American importations. Similar methods are said to have been followed, though to a less extent, in Brazil. But it is clear that the treaty with the latter country has been a disastrous failure, judged by the reasons given for negotiating it and the results which it was asserted the treaty would bring about. The great evil of our Brazilian trade, according to the Republican oracles of 1890, was that it left such a fearful balance against us—from $50,000,000 to $75,000,000 yearly. This was intolerable. Brazil must be made to buy more goods of us and redress this adverse balance. Under the treaty this was all to be changed. As a matter of fact, however, in the first full year of the operation of the treaty, Brazil bought of us exactly $171,627 more goods than she had in the foregoing year, while she cruelly unloaded upon us $35,403,009 more of her own products. Instead of the adverse balance of $69,110,349 in 1891, we had one of $104,341,731 in 1892. If the Republicans were telling the truth in 1890, they must admit that their treaty with Brazil ought to be repealed at once, on the ground that it has made matters worse instead of better.

But the Administration has far better ground for reversing the action of President Harrison under the reciprocity clause of the McKinley Bill in imposing a tax upon the hides and coffee of Colombia and Venezuela and Hayti. That tax may slightly graze the heads of the people it was aimed at, but there is no doubt that it hits the American consumer full in the face. What damage it inflicts upon the other fellows is highly problematical, but it is certain that it is costing us $5,000,000 a year. More than that, the tax is not persuading the Colombians and the rest to change their minds in the least. Those naughty boys go on just as if their teacher was not rapping himself over the knuckles to bring them to their senses. They seem able to stand no end of that kind of vicarious suffering. We hope that the Administration will speedily see its way to repealing a tax which is not only burdensome, but utterly fruitless and absurd, as far as accomplishing what it was intended to is concerned.

The "Papers relating to the Annexation of the Hawaiian Islands" contain much curious reading. Probably the most remarkable thing in them is the confession of the Provisional Government that it was not a *de facto* government when the protectorate flag was raised by Mr. Stevens. Mr. Foster, writing to Mr. Stevens on the 28th of January in reply to the announcement of the revolution, said:

> "Your course in recognizing an unopposed *de-facto* government appears to have been discreet and in accordance with the facts. The rule of this Government has uniformly been to recognize and enter into relation with any actual government in full possession of effective power, with the assent of the people. You will continue to recognize the new Government under such conditions."

Mr. Foster need not have added the qualification "with the assent of the people." It is always proper to recognize a *de-facto* government, whether it has the assent of the people or not, provided it be "in full possession of actual power"; that is, power to maintain order, protect life and property, and make itself obeyed. On the 1st of February, however, two days after Mr. Foster's despatch was written, Mr. Stevens wrote to Capt. Wiltse of the *Boston* that he had heard from the Provisional Government that it was "unable to protect life and property and to prevent civil disorder" in Honolulu, and therefore it requested that "the flag of the United States might be raised for the protection of the Hawaiian Islands," and Mr. Stevens directed Capt. Wiltse to comply with this request. He enclosed the letter of the Provisional Government, which says: "Believing that we are unable to satisfactorily protect life and property and prevent civil disorders in Honolulu and throughout the Hawaiian Islands, we pray, etc., etc." So that the Government which Mr. Stevens recognized was not a *de-facto* government at all, or any other kind of government, and had, a few days after the recognition, to ask for armed protection from its enemies, at the hands of the United States Navy. This reminds one somewhat of the Irishman who said that "if it wasn't for the police, the Irish would rise and sweep the British garrison into the sea." A *de facto* government protected by foreign troops is a fraud on the Powers which recognize it, for the first essential of a *de-facto* government is ability to enforce its authority, at least in the city in which it sits.

The true inwardness of republican institutions in Hawaii is becoming every day more apparent. The newspaper correspondents think that Commissioner Blount's policy is deeply mysterious, but it is really simplicity itself. He is merely standing off and letting the experiment work itself out. If the Hawaiians are ever to come into the American Union, they must come in as a self-governing community. We have no

provisions for ruling a State or Territory by brute force. The very first thing to be done, therefore, in finding out whether the Hawaiians are capable of self-government, is to remove every kind and show of outside compulsion. This has now been done, and the result is, according to the desponding correspondent of the *Tribune*, that "President Dole has lost standing," and, worse still, "many whom he has alienated by refusing to give them office, have gone over to the Queen's party." Alienation on account of not getting office does, it is true, look as if republican institutions were in good working order, but to "go over to the Queen's party" is the work of a tyro in republicanism. What these disappointed Hawaiian patriots should have done was to prepare for vigorous "knifing," and take to gloomy prediction, and speak of President Dole's "ingratitude," and hint at perfect knowledge of those who had "poisoned" his mind. Such unsophisticated fellows as they have shown themselves to be would never be at home with our politicians.

The *Hawaiian Gazette* of April 4 puts the best face possible on the hauling down of the American flag on the preceding Saturday, but shows how little it believes its own assertion that the event "need alarm no one" by advising the Provisional Government to swear in the 2,000 members of the Annexation Club "as a military reserve." This would seem to confirm President Dole's admission that his Government was not able to protect life and property without the aid of the United States, and also that he is getting ready to set up that "republic" which he has frankly said would "necessarily be a government of force." The *Gazette* also shows its desperation by bringing out again the spectre of "English intrigues." In this it resembles the *Sun*, which is suffering fearfully nowadays from suppressed patriotism, and asks, "What will English possession of Hawaii mean to the United States?" But the question is, How is England going to get the Islands? As far as the latter are concerned, they are tied up by treaty with the United States never to cede a foot of territory to any other foreign Power, or to seek a protectorate; and as for England, she has bound herself by a solemn treaty with France, "never to take possession, either directly or under the title of a protectorate, or under any other form, of any part of the territory of which they [the Sandwich Islands] are composed." The English scarecrow is too obviously a thing of rags and sticks to frighten anybody but a professional patriot.

The decision of the United States Supreme Court a few days ago in the case of a Texas liquor-dealer who had challenged the validity of a law of that commonwealth, is of interest for its bearing upon the State-rights question. Liquor-dealers in Texas are not only taxed higher than other people, but are also required to pay their taxes sooner, while there are other discriminations against them. A dealer set up the claim that this legislation against his class was in violation of the fourteenth amendment to the Federal Constitution, which declares that no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor deprive any person of life, liberty, or property without due process of law; nor deny to any person the equal protection of the laws. The Court made short work of this claim. It pointed out that the privileges and immunities of citizens of the United States spoken of in this amendment are privileges and immunities arising out of the nature and essential character of the National Government, and granted or secured by the Constitution; and declared that the right to sell intoxicants is not one of the rights growing out of such citizenship. While admitting that the fourteenth amendment forbids any arbitrary deprivation of life, liberty, or property, it held that it was not designed to interfere with the power of the State to protect the lives and property of its citizens and to promote their health and morals. Nor was the provision in regard to the equal protection of the laws intended to compel a State to adopt an iron rule of equality in regard to taxation, or to prevent the classification of property at different rates, so long as there is no discrimination in favor of one as against another person of the same class. As the statute in question affects all liquor-dealers in Texas alike, it is within the prerogative of the State.

The Musical Mutual Protective Union played its usual farce on Friday in trying to prevent the Imperial German infantry and cavalry bands from entering this country as artists, on the ground that they are not artists, but contract laborers. Their Secretary, Mr. Hunt, delivered himself of the extraordinary opinion that there were only three artists, as far as he knew—Paderewski, Patti, and Nikisch! It will be an astounding bit of news to the Germans to read of the examination as to their ability to play their instruments to which their imperial musicians were subjected on our immigrant island before they were permitted to enter this city. Can we wonder that the opinion is still widely prevalent in Germany that to hunt the buffalo one need only go to the suburbs of New York, and that Indian scalping raids are still frequent in Broadway? Dr. Senner, of course, decided that Emperor William's musicians are artists, and admitted them.

Every reputable citizen of New York must experience a feeling of humiliation as he reads the "reasons" which Gov. Flower gave to the citizens of Buffalo who asked him for a hearing in opposition to Mr. Sheehan's second bill depriving their Mayor of appointing powers which they had elected him to exercise. That such an announcement could be put forth publicly by the Governor of the first State in the Union, apparently without any consciousness of its undignified and disgraceful character, shows the level to which the Hill Machine has brought our public affairs. From one point of view we are glad that the Governor has taken this position. He is now stripped of all pretence of being any more decent than the Machine leaders who put him in nomination for office. No one can henceforth make any plausible claim that there are possibilities of useful or honorable public service in him. He has taken his stand squarely with Sheehan and the others of the Hill band of political pirates, and he will be judged hereafter on his merits. In all probability he has by his recent performances made certain his renomination next year, and we have hopes, somewhat uncertain, we must confess, that when he comes before the people for reëlection, the Democratic journals that are now denouncing him will not be "brought into line" again in his support.

Mr. Sulzer, the Tammany Speaker of the late Assembly, is a very silly young man, but it seems scarcely credible that he should have declared publicly on Monday night, as the *Tribune* reports him to have done, that "all legislation of the last session came from Tammany Hall and was dictated by that great statesman Richard Croker." That Mr. Sulzer says this privately, and that it is strictly true, we do not question for a moment; but great as the ex-Speaker's capacity for foolishness is, we find it difficult to believe that he could have given public utterance to such a confession of his own slavery and that of his fellow-members in the Legislature. From the time that Sulzer met Croker in the café of the Hoffman House, immediately after his election to the Speakership, and there arranged the committees of the Assembly, there was no serious question as to who was "running" the Assembly. The subsequent legislation confirmed the impression produced by that meeting. Croker did dictate everything. If any one had doubts about the matter, the fate of bills before the Legislature during the session would have removed it. Nothing that Croker desired to pass failed of passage, and nothing that he objected to was able to get even a hearing.

There was one notable peculiarity about the bills presented to the last Legislature which must have struck everybody who examined a file of them. We do not believe there has been a previous session of the Legislature for many years at which so few bills affecting railway and insurance companies were presented. The familiar "strikes" against such companies and corporations generally were scarcely seen at all. What was the reason for this? At Albany the

members themselves declared that the reason was to be found in the fact that the bosses were controlling everything this year, and that there was nothing in the business for the members themselves. How was this control established and what were the terms? We believe it is a fact also that the railway, insurance, and other companies kept no agents at Albany during the late session, and that they did not, as during previous sessions, find themselves obliged to send up counsel to oppose in committee the progress of legislation hostile to themselves. Had this unusual situation anything to do with the alleged claim of Mr. Sulzer that "all legislation of the last session came from Tammany Hall, and was dictated by that great statesman Richard Croker"? If so, what was the compensation, or inducement, which Mr. Croker received for his great services? We ask for information, and shall be glad to receive light from any quarter.

At the recent election in Michigan an amendment to the Constitution was submitted which proposed a new method of securing highway improvement. It seems to have been carried by a small majority, although the vote of the whole State must be known before the result can be definitely stated. The extraordinary feature of the division is the fact that the affirmative majorities came from the counties which contain Detroit and the other chief cities, while the negative majorities appear almost wholly in the most prosperous and intelligent farming communities, one such county giving a negative majority of 1,014. If the new system for securing good roads throughout the rural districts is adopted, therefore, it will be only by the votes of city people, a very small percentage of whom ever use such roads. In other words, the farmers, who are most interested in the improvement, are the last to appreciate its importance.

The new system of a qualified suffrage in Mississippi is producing some results which were not anticipated when the new Constitution was adopted. The change was made primarily to prevent a minority of intelligent whites from being subject to the political rule of a majority of ignorant blacks; but as the system appears to be applied with reasonable fairness, it is relieving the community from the dominance of the worst elements among the whites as well. The ignorant and shiftless elements in both races fail to qualify themselves as voters, and thereby lose their former power to settle various questions of local administration. The change is most marked in the treatment of the liquor question. Mississippi has long had a local-option system, but under the old Constitution the saloon party was apt to get a majority in a county where the respectable people of both races were against license, through its control of the ignorant and irresponsible voters. Now these men are not qualified to exercise the suffrage, and seven counties which had formerly been "wet" have gone "dry" during the last twelve months, because the majority of those who now possess the ballot are opposed to saloons. The change is felt in the cities as well as in the rural districts, and Meridian and Columbus, the two largest and most prosperous cities in the eastern portion of the State, have lately gone "dry" because the saloon men could not secure the signatures of a majority of the registered voters to their petitions for renewal, as the law requires.

The recent commencement exercises of the Law Department of Shaw University at Raleigh, N. C., merit attention for the evidence which they furnished of the better feeling between the two races. The University is an institution for the education of colored youth, but many of the most prominent whites in the capital were among the audience on this occasion. The annual address was delivered by James C. MacRae, a Democratic lawyer who was elected a judge of the Supreme Court last fall; and George H. Snow, another leading lawyer and an ex-member of the State Senate, was on the programme for an address. In the latter's absence, Maj. E. G. Harrell, who is on the staff of the Democratic Governor, was called upon, and responded by saying that, "if there was any school in North Carolina that was doing more good than any other, it was Shaw University; that he met its graduates in various parts of the State, and they were doing a great and grand work which was reflecting high honor upon the University and its friends." This is a very different attitude from that occupied by the representative whites of Raleigh and North Carolina when the University was established, which was that of suspicion, if not open hostility, and the change is a notable sign of progress.

Gen. Weaver has never made a more statesmanlike proposition than the one he put forward on Monday, for the establishment of an "independent school of political science." As he justly observes, those who now "control the colleges and universities of the country" are "adversaries of human liberty," and hence it becomes necessary to have a place where political science can be taught in a way that is not only free, but free and easy. Seven professors could do the work, he believes, and he marks out the different departments in which they would disport themselves. One of them is to be "applied Christianity," which all will admit is excellent if we only know who is going to apply it. The department of "constitutional legislation" is significant of much, from the Populist point of view, and we should expect to see the occupant of this chair imitate the French judge who said it was necessary to twist the law so that he could have a proper respect for it. We think the General should have given a separate department to "patriotism," which is one of the most important divisions of political science, and urgently calls for exposition in these days when it is so important to know which precious metal and what kind of paper money are truly patriotic, how much better terms at a note-broker's a firm patriot can get than one who is a little shaky, and so on. But Gen. Weaver's plan as it is is most praiseworthy. It would be hard to name a public want more imperative than that of getting men into professors' chairs to give a rational account of Populist ideas. Gen. Weaver's seven men that can render a reason, with himself as director of them all, which he offers to be "without salary," would speedily depopulate the lecture-rooms of Vienna and Berlin.

It is said that a Dundee whaling vessel has returned from the Antarctic Ocean with sixty thousand sealskins, and that the captain refuses to tell where he obtained them. This accounts for the scarcity of seals in Bering Sea lately. They left the islands of St. Paul and St. George *animo revertendi*, but they were driven out of those waters by poachers and continued their march to the south, where they were slaughtered by this Dundee whaler. Now, ought not this matter to be brought before the Paris Court of Arbitration? The fact that the Dundee skipper refuses to tell where he found these seals is a suspicious circumstance anyhow. *Prima facie*, all seals found without an owner belong to Uncle Sam. He is the great keeper of the seal.

The great interest taken a few years ago in Père Hyacinthe by the Protestants of this country and England, as well as by those of France, has mostly expired with the lapse of time. It long ago became evident that he was not going to lead any considerable defection from the Catholic Church, and that his somewhat fantastic attempt to restore the "Gallican liberties" in France was doomed to settle down into an isolated and dwindling congregation held together for a time by his personality. Now comes the announcement that he has cast in his lot with the Old Catholics. On Palm Sunday he informed his audience that "the Bishops of the Catholic Church of the Low Countries have decided to take this work under their jurisdiction." Father Hyacinthe expressed great satisfaction at thus being incorporated with an ecclesiastical body in which the episcopal succession has been maintained, and through which he would be brought into relation with the Old Catholics of Germany and Switzerland. He thought the result would be to give a new impulse as well as durability to his work in Paris. However that may be, the end of his experiment in independence comes to show afresh that the age of sect-making has gone.

THE GOVERNMENT'S CREDIT.

THE statement given to the press by President Cleveland, saying that there never was any intention on the part of the Government to refuse gold in the redemption of Treasury notes, and that the public credit will be maintained at all hazards, is all that could be desired, and is the only thing needed, so far as the Executive is concerned, to assure business stability and prosperity. That priceless legacy, the Government's credit, which has come down to us unimpaired, will be passed on to the next generation without spot or blemish.

Let us take a glance at the Government's credit in the past. During the war, and after the suspension of specie payments, certain old loans fell due, among them one known as the Oregon war debt, and the question was raised whether they were not payable in greenbacks. These bits of paper were legal tender for all debts, public and private, except duties on imports and *interest* on the public debt. Interest is not principal, said some people, therefore the principal of these debts is payable in greenbacks. Not so, said Secretary Chase. The greenback itself is a debt. To pay greenbacks for maturing bonds without the consent of the holder is to offer him one form of Government debt for another. That would be repudiation to the extent of the difference in value between greenbacks and gold. Moreover, continued Mr. Chase in closing the debate, I am Secretary of the Treasury and you are not; all maturing loans will be paid in gold. And so they were paid.

Nothing did more to support the Government's credit during that trying period than Secretary Chase's decision to pay the Oregon war debt in gold. There were not wanting, even then, demagogues to cry out against the injustice of paying better money to bondholders than to soldiers, but their cries were unheeded. The Secretary, perhaps, made some mistakes in his financial policy, but upon this fundamental point he was both clear in judgment and firm in principle. He was establishing a precedent. He was protecting the country's credit. He was laying a foundation for such loans as he and his successors in office might need in time to come, down to the latest hour of the republic. We all owe Mr. Chase a debt for that.

We need not recount the greenback controversies that supervened after the close of the war. Although during a considerable period the Government suspended payment on its notes, it did eventually redeem them in gold, and so it continues to do. All of its maturing bonds and all the interest on its bonds have been paid in gold. Its greenbacks, its Treasury notes, its silver certificates, and every other obligation have been and are to-day redeemable in gold. There is not now a blemish on the national credit. Foolishness there is in the financial legislation of the country, but not a blot on its 'scutcheon. How proud we all ought to be that we can say this with truth.

There were a few hours last Friday when it seemed possible that this untarnished record might be soiled. It was reported from Washington that the Secretary of the Treasury doubted his legal power to apply any portion of the $100,000,000 gold reserve to the redemption of Treasury notes issued under the act of 1890. When the test came, however, it was found that he did redeem out of that reserve every Treasury note presented for redemption. So all doubts were solved by an experiment. The precedent established by Secretary Chase, that all maturing Government obligations are payable in gold, is unbroken and will remain so.

Under any circumstances the credit of individuals is much tied up with the Government's credit, but under present circumstances the two are so involved that they must stand or fall together. In one way and another, most unwisely as we think, the Treasury has become the United States Bank, with far greater powers and responsibilities than either of the old banks of the United States ever had. The Treasury issues all the money we use except a mere bagatelle ($130,000,000) of national-bank notes. It holds the ultimate coin reserve of the nation. It maintains the standard of value. What is done in this behalf by the Bank of England and the Bank of France in those countries respectively is done here by the Treasury Department. This is unfortunate. It is most unfortunate that such responsibilities should rest with the political power when they have no political character whatever. Such responsibilities are of a business sort only, and they should rest with business men solely. By this we mean not that the Secretary of the Treasury should be a business man necessarily, but that the entire function of regulating and maintaining the standard of value should be lodged in the business world and not in the political world. The only proper function of the Treasury Department is to collect the taxes and pay the dues of the Government. Some incidental duties, such as the light-house and life-saving service and the care of public buildings, may properly enough be put upon it for want of a better place, but to charge it with the functions of legal-tender and currency and an overshadowing bank is unscientific in the last degree.

But since things are as they are, since the Treasury is so interwoven with private business that every tremor in its framework is projected along the nerves of the whole community, it is all the more necessary that the Government's credit should continue to be, like Cæsar's wife, above suspicion. President Cleveland's statement of intentions gives assurance that it will so continue. The assurance is absolute because the means in his hands are ample. With the Government's credit unimpaired, he can draw gold from every chest in Europe, but if that credit had been stabbed by a refusal to redeem Treasury notes in gold, the money markets of both America and Europe would have been closed against us. It follows from what Mr. Cleveland has said that he will issue bonds whenever it becomes necessary in order to replenish his stock of gold. But sufficient unto the day is the evil thereof.

NEWSPAPER PICTURES.

HARPER'S WEEKLY, a highly respectable authority on matters of periodical art, lately gave its approval to "cuts in the columns of the daily newspapers," and added:

> "There is no more reason why the reader should not receive accurate information or pleasing or satisfying impressions through the fruits of the engraver's art than there is why he should not be given in legible type the printed matter that is suited to his needs and tastes."

If the readers of our morning contemporaries which have gone into the "cut" business really "receive accurate information or pleasing or satisfying impressions" through the fruits of the engraver's art now furnished us every morning, it shows that the "printed matter" has done the work which many observers have long feared it was doing among the newspaper readers of this city. The "printed matter" of some of them has for a good while been doing all that printed matter can do to reduce the popular intelligence to that early stage which makes the life of nursery governesses and mistresses of kindergartens so hard, in which all the resources of pedagogy have to be exhausted to keep the child's attention fixed on anything. In the first attempts to get him to read, as every teacher of infants knows, pictures are a powerful help in explaining the combinations of letters which make up words. Who among us has not been indebted greatly to "cuts" in making his first intelligent acquaintance with "printed matter"? What a light, for instance, was thrown on the uses of the letter A by the little picture reproducing the Ass that Eat the Hay; on B by the Bull that Tossed the Man; on C by the Cat that Killed the Mouse; on D by the Dog that Barked at the Goose.

Children of an older growth are in like manner immensely aided in grasping the leading facts of such an incident as the Craven wedding, for example, by appropriate illustrations. One paper devoted a column or two to the question whether the bride's wedding dress had paid duty, and maintained that if it had not paid duty because already worn, it showed that she was to be married in a "soiled gown." But this contention—long and ably argued—was necessarily confused by the cross issue, whether the bridegroom was really tattooed, as was represented by some rival sheets. The refusal of the bridegroom to answer categorically on this point led to the consultation of all the local ex-

perts touching the attitude of the British nobility towards the practice of tattooing, but their opinions were conflicting. The perusal of the pros and cons of these matters naturally confused even the brightest minds among our newspaper readers. The printed matter having done what it could for them, the pictures were brought into play and lighted up the whole subject. The great question of cabmen's beards also might have been discussed indefinitely in the text without the thorough elucidation given by a picture of a cabman with a beard, of a shaven cabman, and of two or three cabmen prominent in the agitation. In like manner, how could any of us who were not there have ever got a clear idea of what the reception at the Hotel Waldorf was like without a picture of six or seven women three-quarters' length, three men full-length, and eight or ten blurred heads, male and female—all done nicely in bad printer's ink by a Hoe press?

The solemn truth is, that the printed matter of some of our metropolitan dailies has now for a dozen years been making it impossible for the people of this city to read anything very long on any subject, or read anything, long or short, on any serious subject. The young people who leave the public schools with reading and little else, make the newspaper their only literature. After they have been stuffed for a few years with the comic view of every institution, from Christianity down, and with burlesque reports of meetings, with bogus interviews with all public men, in which they are made to appear either knaves or fools, with accounts columns long of how one man hit another in the stomach, and how the other man objected, and how the names of the Park animals were changed, and how Johnny Malone jilted the widow Jones, and how the hackmen feel about beards, and how a red-faced man pursued a small man with a knife, the children get tired, and have to have their jaded attention roused by something which will not need to be followed with the eye like printed lines.

No one who has observed New York journalism for the last few years could fail to perceive that pictures had to come sooner or later. The childish view of the world is, so to speak, "on top." The youth does not want to read about Bering Sea, and is satisfied with a picture of Mr. Carter. He would like to know something about the disturbances in Brussels, and is satisfied with a picture of the King's palace. He does not care to look into the merits of the Webster Bill, and is content with a picture of some of the nuisances on the Croton River. As to the Hawaiian trouble, he makes up his mind by means of a "cut" of the American flag floating on the Government buildings, and feels sure that nobody but a bad American would "haul down" anything so pretty. But newspaper proprietors who think they have finally solved the problem of sensational journalism by seasoning the printed matter with "cuts," make, we are sure, a great mistake. Cuts will pall before long, as reporter's burlesque and Tom and Jerry philosophy have palled. The "cuts" will in their turn have to be supplemented by something more infantile still. The reader will demand and have to get a rattle, or a colored India-rubber balloon, or a bright ball of worsted, or a jack-in-the-box, with each year's subscription. The monopoly of *Babyhood* is nearly over.

CORPORATION STOCK-WATERING.

THE question of stock-watering is perennial in Massachusetts, principally for the reason that the railroads of that State were built through subscriptions to the capital stock and not by bonds, as is the modern fashion. Hence the increase in values which on Western roads is represented by an advance towards the par of the stock (which at first cost nothing) is registered in Massachusetts by an increase much above par. This quotation above par gives an opportunity to the railway of watering its capital by issuing to present holders new stock at par which can be sold immediately at a large advance. Around the bill before the Massachusetts General Court to prevent such sales the fight against watering has centred. Last week the State Board of Trade held a meeting at which ex-Railroad Commissioner George G. Crocker delivered an address. Since all seemed to agree with the speaker, he may be supposed to represent the business interests of Massachusetts.

The general subject has been so often discussed that it is unnecessary to go over the whole ground further than to say that stock and bond-watering has given rise to evils which should be restrained if this can be done without doing more harm than good. But if anything of the sort is to be attempted, it is well to clear the ground by asserting that nothing can be gained by arguments so sweeping as to defeat their purpose; and this is the defect of Mr. Crocker's reasoning and that of all who think with him. Shakspere's phrase, "there is some soul of goodness in things evil," is as applicable to commerce as to morals, and the best course in discussing this business problem is to ask one's self why, in spite of much denunciation and innumerable statutes, corporate stock-watering is still persisted in. We may be sure, from the constant instances we hear of, that there is some business principle at the bottom which is asserting itself, even though we may be hostile to the form which it publicly assumes.

When a dry-goods partnership is successful, each partner obtains his due share of the accumulated profits. No legal machinery is necessary to accomplish this result, and no one complains because the firm has grown wealthy in legitimate trade. For well-known reasons suppose that a dry-goods house turn themselves into a corporation, and issue stock in amount equal to the value of the business as it is at the time of incorporation—not as it was when they started as a firm. We will assume that their success still continues, and in a few years the value of the corporation assets is doubled. When the firm's property doubled there was no occasion for any difficulty, but the corporate form has changed the position. If we followed the practice of the first partnership, we should double the stock, for undeniably the best theory of corporation finance requires that the share capital should stand at or near par. But, while doubling the partnership value is legitimate, doubling the shares of the corporation without payment for them is "watering." Stock-watering, then, in its innocent form may be defined as an attempt to make the nominal capitalization of a corporation conform to the real value of the property and assets. As thus stated, the business reason for watering is good, yet the principle in practice has been subject to much abuse—to the loss of the investor, however, oftener than of the consumer.

Mr. Crocker, in his address, laid down one or two axioms about "water." He said "the amount of stock and debt outstanding should be a basis for estimating what charges such corporations should fairly be allowed to make for services rendered," referring to all corporations having public duties, such as railways, gas companies, and the like. This assertion is only partly true. The possibility of greater profit is essential to progress. What business corporation will strive to perfect its process or invent new machinery if all the saving is to go to the public in the shape of a reduction of fares or prices? It is truer to say that the interests of corporation and customer are reciprocal. If the public could buy its hats or shoes at half our present prices, it ought to be willing that the enterprising corporation introducing the improvement should make large profits at the same time, even if it trebled its stock. And while a railway is not the same as a manufacturer, we cannot afford to ignore the point altogether. Farrer, in his book 'The State in relation to Trade,' gives instances where gas companies in England were allowed to pay higher dividends in proportion as they reduced the price of gas. It would be easy to show that the local (station to station) rates of the Fitchburg Railroad are double those of the Boston and Albany; a resident along the former road might well agree that the Fitchburg should be allowed to increase its capital indefinitely if only his charges fell in inverse proportion. Now, if we prevent the Fitchburg or any railway under any circumstances from stock watering—*i. e.*, giving a share of increasing profits to its stockholders—we may postpone the resident's hopes for lower freights; for in the long run the two things influence each other. Then, too, what becomes of Mr. Crocker's contention in the face of the fact, brought out in the statistics of the Inter-State Commerce Com-

mission, that the groups of railways having the largest capitalization per mile have also the lowest average tariffs?

If, then, we assume that corporations must be given the chance to make better profits in order that the public may have better service or lower prices, how should those increases in profits be registered? As we saw in the case of the dry-goods house, the corporate form does not lend itself easily to this registering. The trouble mainly springs from the wholly wrong idea often entertained that the ruling rate of interest for borrowed money should be the measure of a corporation's dividends. It is to conform the rate of the dividend to 4 or 5 per cent. that the amount of the corporation's stock is increased. But this interest rate has nothing to do with the question of profits. The percentage paid for money borrowed on good collateral bears no relation to the percentage of profit to which a partner in an enterprise is entitled who assumes all the risks. If the original projectors of or investors in our elevated railway system had been in any way limited to a return of only 5 per cent. on their money, that system would not have been built. These men demand—and rightly—a profit commensurate with their risk of loss in going into a costly experiment. As public opinion would not allow of high dividends, the stock had to be watered, while at the same time the present fare is only 5 cents for all hours and for any distance. Would it really have been a commercial sin if, concurrently with a reduction in fares, the dividend had been increased say to 12 per cent. without water?

There is, of course, possible abuse in corporation stock-watering, a discussion of the remedies for which is always in order. But no true understanding of our commercial conditions can be had, and no true relief devised, so long as would be reformers take the extreme ground that all attempts on the part of corporations to pay high dividends, or to adjust capital and profits, are wrongs against the State.

PADEREWSKI AND LISZT.

THE question of nationality plays a curious rôle in the history of pianoforte playing. For a long time most of the great pianoforte composers and players—the Bachs, Mozart, Beethoven, Weber, Schubert, Mendelssohn, Schumann—were Germans. But with Schumann the list of Germans great in this department practically came to an end (unless we except Bülow and Brahms), and the field was left open for Slavic and Hungarian competitors. Russia gave us Rubinstein and Pachmann; Hungary, Liszt and Joseffy; Scotland, D'Albert; but the land preëminent for pianists is Poland. Chopin was a Pole, and so was the brilliant young Tausig, who, had he not died at the age of thirty, would, in the opinion of his pupil, Mr. Joseffy, and many others, have surpassed even his master, Liszt. Rubinstein, too, was half a Pole by descent. Little Josef Hoffman is a Pole, and now, to cap the climax, Mr. Paderewski has appeared; so that musically speaking, at any rate, it is safe to say, "Noch ist Polen nicht verloren."

Poland will some day honor Paderewski as it now honors Chopin; but in order to win the great fame and wealth which have fallen to his lot at the early age of thirty-two, he was of course obliged, like Chopin, to leave his native country and seek the great musical centres of the world. Three years ago he played in London to a $50 audience. To-day he often makes $5,000 in two hours, with $7,000 for the high-water mark. This profitableness of his art is a phenomenon worth mentioning, because he never resorts to claptrap, trickiness, or sensationalism in order to win success and applause. In this respect he is superior to Liszt, who, in his early period, did sometimes resort to sensationalism, which, however, was less a sign of immature taste than the wild exuberance of technical mastery bent on a frolic, and therefore not to be judged more severely than young Mozart's feat of playing on a piano the keys of which were covered with a cloth. The conditions in those days were not the same as at present. How eager the world was for Liszt's show pieces may be inferred from the fact that when, in the pressure of concert-giving and travelling, he sometimes kept his operatic arrangements in his head a few months before writing them down, the publishers pursued him from town to town urging him to put them into shape for the printer.

To offset this early sensationalism, Liszt did more than any other musician to popularize the best music by playing his later splendid and thoroughly artistic arrangements all over Europe. To us it seems strange that he should have played Beethoven's symphonies on the piano at Viennese concerts; but the truth is that the orchestras and conductors of that time were unable to interpret those symphonies satisfactorily, and many persons exclaimed, after hearing Liszt's inspired performance, that now for the first time was Beethoven's genius fully revealed to them. Mr. Paderewski would never imitate Liszt's example of playing a Beethoven symphony on the piano, for the simple reason that such a thing is no longer necessary. Our instrumentalists have improved immeasurably since the time—not much more than half a century ago—when the leading orchestra in Vienna put aside Schubert's ninth symphony as too difficult to be played. But Mr. Paderewski does play, and most properly, Liszt's superb arrangements of songs and operatic melodies. Schumann once said of Thalberg that he had the gift of dressing up commonplace ideas in such a way as to make them interesting. Liszt had the higher gift of taking the ideas of the greatest composers and transcribing them for the piano in such a way as to make them even superior to the original. Thus he succeeded in doing with music what no poet has ever succeeded in doing with poetry—translate it successfully into another language. His happiest translations were the Magyar melodies, with their Asiatic gypsy ornaments, which he welded into his Hungarian rhapsodies for the delight of all whose musical enjoyment does not consist in the pedantic analyzing of sonatas, but who take pleasure in the spontaneous melodies in which the naïve populace, in its moments of poetic emotion, has embodied its joys and sorrows. Mr. Paderewski has revealed to us the true spirit of this delightful Hungarian folk-music as no pianist or gypsy band has ever done.

Liszt had the mocking-bird gift of imitating the style of all the great pianists, and generally surpassed them on their own ground. Mr. Paderewski has inherited this trait, as well as Liszt's amazing and unobtrusive technique and the art of getting orchestral effects from the piano, while in the magic of producing exquisite tone colors he even surpasses Liszt. In regard to their early career these great pianists present a considerable contrast. Mr. Paderewski was almost thirty before he won universal fame, while Liszt was the pet of all Europe as a boy. At nine, if he was asked to play a Bach fugue, he would boldly ask, "In what key?" At sixteen he had earned $20,000. But at present Mr. Paderewski is undergoing the same experiences that Liszt did, in the way of artistic, pecuniary, and social successes. That some foolish persons participate in the new "cult" is not his fault, nor is it gallant or just to sneer at it as a feminine fad. Were it not for the women, music in America and England would soon come to an end Wagner understood this when he wrote: "With women's hearts it has always gone well with my art; and probably because, amid the prevailing vulgarity, it is always most difficult for women to let their souls become as thoroughly hardened as has been so completely the case with our political menfolk."

In local musical annals the season of 1892–1893 will go down as the Paderewski year. The Polish pianist will take his farewell of New York next Saturday, not to be heard again for several years, as he intends to devote his time to composition. No doubt it is more important for the cause of music that he should do so than that he should continue playing; yet it would be an incalculable loss if he should present one more parallel to Liszt by abandoning public playing altogether while he is the greatest living interpreter of the genius of the great masters. It is to be hoped that he will combine the functions of composer and pianist, giving concerts when his brain needs time for the maturing of new ideas.

VIRGINIAN VOTING IN THE COLONIAL PERIOD (1744–1774).

PROVIDENCE, April 12, 1893.

To the Northern mind, the standing puzzle of Southern history is the existence, side by side, of aristocratic social institutions and democratic political theories. We admit the presence of both. As for the former, we easily perceive the causes, and see that they must have existed from the beginning. With respect to the latter, we feel ourselves to be on less certain ground. One of the most important and interesting problems confronting any one who approaches the history of Virginia in the times before the Revolution is that of the origin of Virginian democracy. We do not certainly know either when or why it came into existence. The prevailing assumption is, that it was the invention of Thomas Jefferson, or at least that it was the product of the Revolutionary movement. I do not believe that this is the true theory. To prove, or even to formulate, any other theory, would require a long-continued inquiry. In the present writing nothing more is attempted than to make a slight contribution to the investigation of the question.

It may be of some service towards this end if a partial answer is given to the question, to what extent Virginian politics had already become democratic in the period just preceding the outbreak of the Revolution. The mode by which I shall hope to cast a little light on this subordinate question is by the inquiry whether, in the last generation of the colonial period in Virginia, the years between 1744 and 1774, the exercise of the right of suffrage was in practice confined to the few. Did the Virginians of that period vote? Did they, for instance, vote in as large numbers proportionally as did the men of Massachusetts, which we know to have been highly democratic? At any rate we know that Massachusetts in the years from 1778 on was highly democratic, and it is these years, rather than those of the period preceding the Revolution, for which we have satisfactory data concerning voting in Massachusetts, and which we shall make the basis of our comparison. I have shown elsewhere (*New England Magazine*, January, 1890), that in the votes upon constitutions in 1778, 1779, and 1780, the total vote cast in Massachusetts amounted to but about 5 per cent. of the population, though it is probable that about 16 per cent. possessed the franchise; that in the voting for Governor in 1780 about 3 per cent. of the population participated, in the next six years about 2 per cent.; that Shays's Rebellion and the discussions respecting the Federal Constitution brought the figure up to 5 per cent. in the next three elections; and that then it sank to between 3 and 4, and there remained until 1794 and the disputes engendered by the French Revolution.

How many inhabitants of colonial Virginia could vote, it is impossible to say. At the opening of the period chosen, the qualifications of an elector in a county were those prescribed by the act of August, 1736, namely, "an estate of freehold, or other greater estate, in one hundred acres of land, at least, if no settlement be made upon it; or twenty-five acres with a house and plantation," in the county where he was proposing to vote. So far as the comparison can be made, it would appear that the Virginian qualification in real estate was somewhat higher than that established in Massachusetts. Moreover, the addition of a possible qualification in personal property in Massachusetts gave the suffrage to a certain number of the landless, especially to adult sons of freeholders who were not themselves freeholders. In 1762 the Virginia qualification in unimproved land was reduced from one hundred acres to fifty, that in improved land remaining still at twenty-five. The election law of 1769 effected no change in these respects.

But how many of the inhabitants of the Virginian counties actually voted? Statistics are available for certain counties only, and for only a few of the elections to the House of Burgesses. In a few county court-houses the figures have been preserved, and I have taken pains, by inspection or correspondence, to obtain these. The reports of contested-election cases in the Journals of the House of Burgesses contain a few others, and a few have been obtained from certain materials published in Mr. Ford's edition of Washington's writings.

First in the order of time comes a vote in Fairfax County in 1744, which the clerk of Fairfax has lately sent me. But leaving that for the present, I take up, first of all, certain votes in Spottsylvania and Westmoreland Counties. The records of a contested-election case in Spottsylvania in 1748, as given in the Journal of the House of Burgesses, show that the sitting members, William Waller and Rice Curtis, had received at the recent election 188 and 137 votes respectively, and that the petitioner or contestant, Benjamin Grymes, had received 60. He declares that more were coming in a wagon, ready to vote for him, at the time when the sheriff closed the polls, but we can make no allowance for these. The total of 385 is of course to be divided by two, since each voter had the right to vote for two candidates. As probably some did not, it is obvious that at least 193 of the freeholders of Spottsylvania voted at this election of 1748. Now we do not know the white population of Spottsylvania County at this time (white population is of course alone to be reckoned), but we do know the number of its white tithables. White tithables included, according to the act of 1705 (and the act of this same session of 1748 repeated the same definition), all white males of sixteen and upwards. Of such, Spottsylvania in 1756 had 665, as we learn from a return which Governor Dinwiddie sent to the Lords of Trade in that year. How large a population does this imply? In Massachusetts of the present day, according to the census of 1885, the males of sixteen and more years constituted about one-third of the population. The proportion of such persons is considerably greater in these days of greater longevity, diminished infant mortality, and smaller families. The population of a Virginian county a hundred and forty years ago was probably considerably more than three times as great as its number of tithables. Governor Dinwiddie computed it at four times as great. Comparison of the white tithables of 1790, 1800, and 1810, as given in document 31 of the appendix to the Journal of the Virginian Convention of 1829–30, with the white population of those years, shows the latter 4.1 times the former. Suppose, then, that Spottsylvania had a white population of 2,500. We have seen that in the election of 1748 she cast a vote of at least 193. This is a vote of presumably more than seven per cent. of the population. That would be a light vote in these days—in the census year of 1880 eighteen per cent. of our population voted; but, after every deduction, the figure is one which much surpasses that found for democratic Massachusetts in the years immediately after the close of the Revolution.

To turn to other instances. In the old court-house of Westmoreland County I was so fortunate as to discover the statements of the polling at four elections for the House of Burgesses, namely, in 1748, in 1752, in 1754, and in 1755. In 1748 there were 294 votes cast for John Bushrod and 233 for George Lee, from which it may be inferred that 264 men voted. In 1752 there were 262 votes cast for John Bushrod, 207 for Robert Vaulx, apparently 163 for Richard Lee ("Squire Lee"), and 34 for Robert Carter ("Councillor Carter"). The voters then numbered at least 333. In 1754 194 voted for Col. Augustine Washington (to be distinguished from the General's father), and 130 for Richard Lee, and there would appear to have been 162 voting. In 1755 there would appear to have been at least 338, for 186 votes were cast for Col. Augustine Washington, 183 for Philip Ludwell Lee, 168 for Richard Lee, and 138 for William Bernard. Now Dinwiddie's return of the next year, 1756, credits Westmoreland County with 944 white tithables, and it may therefore be presumed to have had a population of not more than 3,700 white inhabitants.

Another series of recorded votes comes to us from those occasions on which Washington himself stood for the House of Burgesses. The first such occasion seems to have been one of which our record is undated, occurring in Frederick County. The record is from a poll-list of voters in that county, found among his papers. It shows 271 votes for Hugh West and 270 for Thomas Swearingen, while Washington himself was vouchsafed but 40. This must have been in 1757, in which year the Virginia Almanac shows Frederick represented by West and Swearingen. Next year the county triumphantly elected Washington, the poll standing: Washington 307, Col. Martin 240, Hugh West 199, and Capt. Swearingen 45. It appears that 396 men voted. In 1761 their number rose to 600, for 505 votes were cast for Col. Washington, 400 for Col. George Mercer, and 294 for Col. Adam Stephens. Dinwiddie's contemporary list assigns to Frederick 2,173 white tithables, representing probably a population of 8,000. In the next two elections Washington stood for the county of Fairfax, the county in which Mt. Vernon was situated. (The Fairfax return already mentioned shows 239 freeholders voting in 1744.) In 1765, he writes to Col. Burwell Bassett: "I changed the scene from Frederick to this county, and had an easy and creditable poll." He received 201 votes, 148 going to one competitor and 131 to another. In 1768 the total vote was a little smaller. He then received 185 votes, the same competitors obtaining respectively 142 and 87. He records in his diary: "Went to the Election of Burgesses for this County and was there with Colo. West, chosen. Stayd all Night to a Ball wch. I had given." The average of the two occasions seems to give 224 voters, though, according to the Governor's return of ten years before, there were in the county 1,372 white tithables and presumably 5,000 inhabitants. But the General's own statement indicates that the vote was unusually light.

The next case for which I have figures is that of the election of 1769 in Fauquier County, a case in which Thomas H. Harrison contested the seats of Col. Thomas Marshall, father of the great Chief Justice, and of James Scott, because Marshall, being Sheriff of Farquier up to September 2, had appointed September 18 as the day for the election, and this, since that was also the day of election in Stafford, had prevented some electors from coming thence. The case occurs in the Journals of the House of Burgesses. It was held that, though

Col. Marshall had acted improperly in so doing, the number thus virtually excluded was not enough to alter the vote, which stood: Marshall 329, Scott 273, Harrison 196. Apparently, therefore, 399 freeholders of Fauquier voted on this occasion. Unfortunately, the population of Fauquier at this time is omitted in Dinwiddie's return as printed. If it bore the same proportion to that of all Virginia in 1769 which it did in 1790, the number would have been a little over four thousand.

The last case in which I have found figures quoted is a case in Surry in 1772, where about 240 voted in a population which must have been by that time about 2,500. Summing up all the cases, thirteen in number, we find that, if they are to be taken as a fair guide, about 6 per cent. of the white inhabitants of colonial Virginia voted at the elections for the House of Burgesses in the last decades of the colonial period. This was a larger proportion than was usual in Massachusetts and other parts of America at a period a little later, with a sufficient margin to allow for the possibility that the populations we have assumed are underestimates. We are obliged to conclude one of two things—either that the suffrage was wider in Virginia than elsewhere, or that there was a fuller participation in its exercise by those qualified. Either supposition is adverse to the view that Virginia was a country of purely aristocratic government before the Revolution, and that the poor and the middle classes had little share in the management of public affairs. No doubt the poor man was subject in a great degree to the influence of his rich neighbor, under the system of viva-voce voting. Yet, all deductions made, it seems that the facts brought forward do something to support the theory that Virginian democracy was in some respects already in operation before the Revolution.

J. Franklin Jameson.

TOCQUEVILLE'S SOUVENIRS.—II.

Paris, April 13, 1893.

We left Tocqueville on the day after the Revolution of 1848. Paris was to him a curious subject of observation; he was struck by the character of the revolution which had just been accomplished, and by the absolute power which it had momentarily given to the people, and to those classes of the people which live by the work of their hands.

"Though," says he, "the working classes had often played a principal part in the events of the great Revolution, they had never become the conductors and the sole masters of the State, either *de jure* or *de facto*. The Convention contained, perhaps, not a single man of the people; it was full of bourgeois and of lettered men. The war between the Mountain and the Gironde was conducted on both sides by members of the bourgeoisie, and the triumph of the former never placed the power solely in the hands of the people. The Revolution of July, 1830, was made by the people, but the middle classes had prepared it, conducted it, and reaped the principal fruits of it. The February Revolution, on the contrary, seemed to have been made entirely outside of the bourgeoisie and against it. In this great struggle, the two parts which in France chiefly composed the social body had separated, and the people, remaining alone, was alone in possession of the power. Nothing could be more novel in our annals."

Tocqueville notes that, during the Revolution and immediately afterwards, all the agents of public security had disappeared; the city was patrolled by armed workingmen. The terror of the other classes was intense—it probably never was so great at the time of the first Revolution; it is compared by Tocqueville to the terror which must have been felt in the civilized cities of the Roman world when they suddenly found themselves in the hands of the Vandals and the Goths.

What Tocqueville sees and explains with the cold lucidity of his talent is the socialistic character of the new revolution. After the right of universal suffrage had been proclaimed—and it was proclaimed immediately—the people had no further civil rights to conquer; nevertheless, a hundred systems sprang out of the minds of the Socialists. There was a sort of spontaneous generation of plans for the reorganization of society.

"Everything," says Tocqueville, "was still erect except royalty and Parliament; but it seemed as if the shock of the Revolution had changed everything into dust, and as if a prize had been offered to the best form to be given to the new edifice. Each man had his plan: one offered it in the newspapers, another in placards, which covered the walls; another in speeches made in the open air. One wanted to suppress the inequality of fortunes, another the inequality of instruction, another undertook to destroy the most ancient of inequalities, the differences between man and woman. Specifics were presented against poverty, remedies given for the evil of work, which torments inequality since it exists. . . . Socialism will remain the essential character of the February Revolution; the Republic of 1848 will appear at a distance not as a means but as an end."

If Tocqueville were still alive, he might draw a curious parallel between the Socialism of 1848 and the Socialism of our time. The Socialists of 1848 had definite systems, they had formulas. We still remember, though a little vaguely, the *phalanstère* of Fourier and Considérant, the People's Bank of Proudhon, etc. The modern Socialists (I speak of the workingmen) have renounced all these empty theories; they think only of destroying, not of constructing. They look on society as divided into two classes, those who possess and those who do not possess; they consider capital and labor as antagonistic forces, and they imagine that labor is enslaved by capital. Force, brute force, seems to be their last resort against the tyranny of the middle classes. They can hardly be said to have any political opinions, and if they are Republican, it is simply because the Republic appears to them more destructive than the monarchy.

Few people in 1848 understood as well as Tocqueville the dangers of Socialism. As he says:

"The people at first tried to better its condition by means of political institutions; but, after every change, it found that its condition had not become any better, or was becoming better only with a slowness which seemed insupportable to the precipitancy of its desires. It was inevitable that it should, some day or other, discover that what made its condition narrow was not the constitution of the Government—that it was a result of the immutable laws of society; and it was natural that it should ask itself if it had not the power and the right to change these laws, as it had changed the others. And to speak specially of the right of property, which is the foundation of our social order, all the privileges which covered up and, so to speak, concealed this right having been destroyed, the right of property remained, in their eyes, the principal obstacle to a perfect equality of man, and was its only apparent sign; was it not necessary that it, too, should be abolished in its turn?"

No cry found more favor in 1848 than Proudhon's "La propriété, c'est le vol" (Property is robbery), and M. Thiers found it necessary to write a pamphlet in defence of property. The academic discussions which ensued between the Economists and the Socialists soon took a dramatic form in the streets. The Constituant Assembly which had been sent up to Paris by the country, found itself confronted by the Socialists. Tocqueville had been elected Deputy from the Department of the Manche. He gives a very vivid description of the elections, of the first meetings of the Constituant Assembly, of the invasion of the Assembly on the 15th of May by the populace of Paris, headed by its Socialist leaders. One of them, in the midst of a great tumult, declared, "in the name of the people," the dissolution of the National Assembly. The Assembly was saved by the National Guards, but it was clear that this great Socialist demonstration was the first act of a tremendous drama.

The drama took place in June; for a whole week, Paris became a great battlefield. Tocqueville says with reason that

"The insurrection of June was the greatest and the most singular in French history and perhaps in any history; the greatest, since, for four days, more than a hundred thousand men were engaged in it; the most singular, inasmuch as the insurgents fought without any war cry, without any chiefs, without any flags, and nevertheless with a marvellous *ensemble* and with a military experience which astonished the oldest officers. What also distinguished this insurrection among all the events of the same kind which have followed each other for sixty years, was the fact that its object was not to change the form of government, but to alter the state of society. It was not a political struggle, it was a conflict of classes, a servile war."

The philosophical mind of Tocqueville would soon have seen the secret connection between the insurrection of June and the Commune of 1871. The army which had no chiefs, no flag, no war cry in 1848, had found chiefs in 1871, it had the red flag, it had a war cry, "Vive la Commune!" And what meant this word commune? It was a word which in reality covered all the false theories, all the false hopes, all the jealousies, all the hatreds, all the aspirations of the classes which live by the toil of their hands. Now, as in 1848, these classes are told every day that the fortune of the rich is, as it were, something stolen from them; they are told that the inequality of fortunes is as contrary to justice and to morality as it is to nature itself. "The women," says Tocqueville, "took as much part in the insurrection of June as the men; while the men fought, the women prepared and brought the munitions, and when the necessity to surrender came, the women were the last to accept it."

Gen. Cavaignac fought the terrible battle of June with much ability and decision; he became a virtual dictator. Lamartine, and all the other members of the Government which had been formed after the Revolution of 1848, disappeared, so to speak, before him. Tocqueville had accepted the Republic without any enthusiasm, but with a conviction that the monarchy had become impossible. After the insurrection of June, he saw at once that the Republic was in danger, though the Constituant Assembly had won the victory. "The love of independence was to be replaced by fear, perhaps by some disgust of free institutions; after such an abuse of liberty, a reaction was inevitable. The movement of retreat began at once: first slow, almost invisible to the naked eye, afterwards rapid, finally, impetuous and irresistible."

It was well prophesied, and we know where the movement of retreat stopped: it brought France successively to the *coup d'état* of December, then to the proclamation of the Empire. Tocqueville, who was a Liberal, was to be one of the Ministers of Prince Louis Napoleon when the Prince was elected President of the Republic. His memoirs are interrupted after the insurrection of June. He jumps over

the period which extends from that epoch till June, 1849. "I will," he says, "return to it later, if I have time. It has seemed more important to me, while my recollections were still fresh, to retrace the five months which I spent in the Government." The short-lived Cabinet in which Tocqueville was Minister of Foreign Affairs was composed of himself; of Odilon Barrot, President of the Council; of Passy, head of the Finances; of Dufaure, head of the Home Office, and a few others, now forgotten. The portrait which Tocqueville gives of the Prince-President is very interesting, as he was, of all Napoleon's ministers, and perhaps of all the men who would not take part in his conspiracy against the Republic, the politician who was the highest advanced in his favor, who saw the most of him and could best judge him.

"He was very superior to what people could have judged from his previous life and his mad enterprises. . . . He had, as a private person, some engaging qualities: an easy and benevolent disposition, a humane character, a kind and even somewhat tender though not delicate soul, . . . perfect simplicity, a certain modesty in the midst of the immense pride which his origin gave him. Capable of feeling affection, he could inspire it among those who approached him. His conversation was rare and sterile; he had not the art of making others talk and enter into intimate relations with him, nor any facility in speaking, but writing habits and a certain vanity of authorship. His dissimulation, which was profound, like that of a man who had spent his life in plotting, was singularly aided by his motionless features and expressionless gaze, for his eyes were dull and opaque, like ground glass, which lets the light pass, but through which you see nothing. Very indifferent to danger, he had a fine and cool courage in a crisis, and at the same time (which is a common thing) he was very vacillating in his designs. . . . His intelligence was incoherent, confused, full of great thoughts badly put together, sometimes borrowed from the examples of Napoleon, sometimes from Socialistic theories, sometimes from the memories of England, a country in which he had lived; from very different and often contrary sources. He had with difficulty collected his ideas in solitary meditation, apart from men and things, for he was naturally a dreamer, fond of chimeras. . . . But, when he was forced to leave these vague and vast regions and to keep within the limits of business, his mind was found capable of a just conclusion, often with finesse and even a certain depth, but never quite safe, and always ready to couple an odd idea with a just one."

The portrait is very long, and I can give only a part of it; it is delineated with much care.

Tocqueville had, in his short career as Minister of Foreign Affairs, to study all the affairs of Europe. With his usual depth of thought, he foresaw many of the transformations which have taken place since the proclamation of the Second Empire. This part of his Memoirs, which ends them, is not the least interesting, and, at times, it is truly prophetic.

Correspondence.

THE CHICAGO MAYORALTY.

To the Editor of The Nation:

Sir: The following from the last issue of the *Nation* is misleading:

"The defeat of the better element in Chicago by the bummer and semi-criminal element under Mr. Carter Harrison—and in the Exposition year, too—has naturally excited much attention in this city. Some solved the problem by throwing doubt on the existence of a better element in Chicago."

Harrison's election was due not to his being satisfactory to the voters, but to the fact of his opponent being very unsatisfactory. It is generally conceded that had Mr. Lyman J. Gage, the President of the First National Bank, been persuaded to run against Harrison, the latter would have stood no chance at all. But "Sam" Allerton—that is the way he is always designated—is, for business reasons, particularly obnoxious to the labor element. Then, for social reasons, he was unsatisfactory to a large number of the "better element." Perhaps it might be said that in his business record he represents the better element, and thereby lost a large vote, while in his social qualifications he does not represent the "better element," and thereby lost another large vote.

It is precisely because this is "Exposition year" that this latter objection told heavily against him. Many who go to make up "the better element," and who in ordinary years would have voted for "Sam" Allerton, for this particular year preferred Harrison, and for the simple reason that he is, in the conventional sense, a scholar and a gentleman. No one questions his education, nor—barring his egotism—his evidences of culture; while his long and varied experience as Congressman, Mayor, traveller, writer, and entertainer, coupled with his natural fitness for social intercourse, qualifies him to welcome any and all of the men, women, and children who visit the World's Fair this summer.

Aside from all this, Mr. Allerton, though undoubtedly an honest, well-meaning man, is, as the executive head of public affairs, an unknown quantity; and this is not the time for Chicago to make experiments.

F. I. Nance.

Chicago, April 16, 1893.

DANTE AT OXFORD.

To the Editor of The Nation:

Sir: In your review of the 'Translatio et Comentum totius Libri Dantis' of Johannes de Serravallé, I notice the following passage: "But the chief interest in the commentary for English readers is that in it is the only bit of evidence that can possibly be cited for what Englishmen sometimes try hard to believe—that Dante studied at Oxford, or at least visited it." I venture to call your attention to the fact that this statement is not strictly and absolutely true. It is, indeed, true that no early authority except this distinctly mentions Dante's studies at Oxford; but there is a much earlier passage implying a visit of Dante to England, which, considering Dante's character, it might not unfairly be argued, carried with it a visit at least to Oxford. This is to be found in the famous 'Carmen in laudem Dantis,' written by Boccaccio to accompany a copy of Dante sent to Petrarch. The lines are as follows:

"Novisti forsan et ipse,
Traxerit ut iuvenem Phœbus per celsa nivosi
Cyrrheos, mediosque sinus tacitosque recessus
Naturæ, cælique vias, terræque, marisque,
Aonios fontes, Parnassi culmen, et antra
Julia, Pariseos dudum, extremosque Britannos."

There exist of the "Carmen" two somewhat divergent texts, both of which have often been printed (see A. Hortis's 'Studj sulle opere Latine del Boccaccio,' Trieste, 1879, p. 791, for an enumeration of the editions. The texts have both been printed by Carducci, 'Studi Letterari,' 2d ed., Leghorn, 1880, pp. 357–8–9). So far as I know, this is the only statement from a writer of the *trecento* which can be cited as evidence of Dante's visit to England. A passage in Witte's 'Dante-Forschungen,' I., 433, has, to be sure, sometimes been used carelessly as corroborative. It is the following: "Il dotto Inglese Taeffe lo conduce nel 1313 a Venezia, Parigi, Avignone, 'forse' a Oxford, fondandosi sopra un aneddoto riferito dal così detto Ottimo." But Witte must have been quoting from memory when he wrote this. What he had in mind was undoubtedly the following from Count Taafe's (*not* Taeffe) 'Comment on the Divine Comedy of Dante Alighieri,' London, 1822, p. 48: "In 1313 he was in Venice and Paris and Avignon and, perhaps, Oxford." Taafe says nothing about an anecdote from the 'Ottimo'; and at the bottom of the page he cites *Serravalle ap. Cancel.*, p. 44 (*i. e.*, Fr. Cancellieri, 'Osservazioni, etc., sopra l'Originalità della Divina Commedia di Dante,' Rome, 1814—where again no such anecdote is mentioned). I know of no such anecdote myself, and I find that Bartoli ('Storia della Letteratura italiana,' t. v., p. 219, note) has also been unable to find it.

Perhaps it should be added that even Boccaccio's statement has been regarded by good scholars as rather rhetorical than trustworthy—as, for example, by Bartoli. Still, the statement of your reviewer remains somewhat too sweeping. It is only too easy, at present, however, unguardedly to neglect bits of evidence in regard to Dante's life. Thus, in the article Dante in 'La Grande Encyclopédie,' by M. Jeanroy, which was rightly praised by you in a note some months ago, I find it said: "C'est à cette époque seulement [1307–10] que pourrait se placer son voyage à Paris, qui est assez problématique. Ceux que l'ont admis ne s'appuient que sur un passage de la lettre de Fra Ilario, sur les quelques vers du Paradis (X) relatifs à Siger de Brabant, et surtout sur l'étendue des connaissances théologiques du poète." M. Jeanroy must mean to exclude all but contemporary evidence, for Boccaccio, Benvenuto da Imola, Manetti, and other later writers speak of Dante's studies in Paris. Yet there is one bit of contemporary evidence of prime importance that has escaped his notice. It is the statement of Giovanni Villani (ix, 136): "E però sanza altra colpa colla detta parte bianca fu cacciato e sbandito di Firenze, e andossene allo studio a Bologna, e poi a Parigi, e in più parti del mondo." This last clause, by the way, might be used without too great violence by the believers in Dante's English pilgrimage, as in a general way strengthening their case.

Perhaps the moral of all this is that the next great task to be undertaken for the advancement of the study of Dante is a collection of all the passages, at least from the *trecento*, that bear upon the poet's life. These passages are indeed now accessible. But until they are printed completely and systematically together, even the best scholars will occasionally make slips.

I am, sir, very truly yours,
Arthur Richmond Marsh.

Cambridge, Mass., April 13, 1893.

[We had in mind, while writing, the well-known passage to which Prof. Marsh kindly calls our attention. But we concluded, after deliberation, not to consider it as evidence, on the ground—to which Prof. Marsh himself refers—that Boccaccio's verses are obviously "rather rhetorical than trustworthy," and the phrase *extremosque Britannos* merely equivalent to Ultima Thule; especially as the passage, if taken literally, involves a statement inconsistent with Boccaccio's distinct assertions, both in his Life and in his Com-

ment. Dr. Edward Moore, in tr ating the question in his 'Dan.e and his Early Biographers,' decides that this fact alone makes even the genuineness of the verses doubtful.—Ed. Nation.]

THE CLEFT INFINITIVE.

To the Editor of The Nation:

Sir: After reading Dr. Fitzedward Hall's long communication in your issue of April 13, I was inclined to leave the question about "the cleft infinitive" where he has left it: but, on second thoughts, I have decided to ask you to print what I mean to print in the next edition of 'The Foundations of Rhetoric':

"Since the last edition of this book was published, Dr. Fitzedward Hall has contributed to the *Nation* (New York) of April 13, 1893, a paper on what he calls 'the cleft infinitive.' The citations in this paper, which come from various sources, confirm Dr. Hall's assertion that the practice of putting the adverb between *to* and the infinitive has existed from an early date, and is supported by a body of writers respectable both in numbers and in position. It is clear that usage is, to a certain extent, divided; but it is also clear that the writers who are of the highest authority, and who decide what is the best use, either do not employ this locution at all or employ it very sparingly. It may, moreover, be noted that Dr. Hall is careful to say that he himself habitually avoids 'the cleft infinitive.' On the whole, the safest conclusion still seems to be that arrived at in the text, namely, that a careful writer will do well to avoid the construction which places the adverb between *to* and the infinitive. It is true that the construction in question is a common one; but it is also true that those who are most addicted to the practice are not those who count most as authorities on questions of good usage."

I will not end this communication without expressing my regret that Dr. Fitzedward Hall should have seen anything in my references to him to lead him to think that I intended to treat him with disrespect. For many years I have read his writings on questions of language with interest and profit, and I have always regarded him as among the scholars whose opinion on any subject is entitled to great weight. I regret particularly that he should put an interpretation on the word *naïvely* which is very far from my meaning. As regards the truth of his charge that my book suffers from a "plerophory of cocksureness," I must leave my readers to judge for themselves. If I have sometimes fallen into this fault, I can only plead by way of defence that it is extremely difficult when one has to deal briefly with a great many questions, small and great, to avoid the appearance of dogmatism altogether.—Very truly yours,

A. S. Hill.

Harvard University,
Cambridge, Mass., April 19, 1893.

Notes.

Robert Clarke & Co., Cincinnati, have in preparation 'The History of Illinois and Louisiana under the French Rule,' by Jos. Wallace; and in press a limited edition of three companion volumes—'Donn Piatt, His Work and His Ways,' by Charles Grant Miller; Col. Piatt's 'Sunday Meditations' and his 'Plays and Poems.' The same firm have just issued their new trade catalogue, 'Bibliotheca Americana,' whose appearance is always a notable event.

Capt. R. H. Raymond Smythies, Curragh Camp, Ireland, announces that he has in preparation a history of the Fortieth Regiment, now the First Battalion of the South Lancashire Regiment. The early career of this regiment is closely connected with our colonial history, as it was formed in the very early part of the last century out of companies stationed in this country. The first colonel was Gen. Richard Phillips, who was, from 1717 to 1749, the Governor of Nova Scotia. The first senior captain, and afterwards for many years Lieutenant-Colonel, was Gen. Paul Mascarene, Acting-Governor of the province during a considerable portion of this time. Gen. Phillips, who very much neglected the regiment, was succeeded in the command by Col. Edward Cornwallis, the founder of Halifax. The regiment formed for many years the garrison of the posts at Annapolis, Canso, and Placentia. The author hopes to publish the work about the end of the year.

Houghton, Mifflin & Co. have in press 'From Chattanooga to Petersburg under Generals Grant and Butler: A Contribution to the History of the War and a Personal Vindication,' by Gen. William Farrar Smith, with maps and plans.

The Graduate Club of Harvard, in conjunction with like clubs at Cornell and at Johns Hopkins, will issue in July a handbook for the use of students who are pursuing or who mean to pursue graduate studies. The first part will be historical and statistical; the second will contain a list of lecture and research courses of advanced character open to graduate students in 1893-'94, conveniently arranged, in connection with "the names and scholastic record of the instructors giving them." The committee's secretary is Mr. A. W. Weysse, Hollis Hall, Cambridge, Mass.

Yale University has just issued a pamphlet 'Bibliographies' of its present officers, which is retrospective and will be hereafter succeeded by annual bibliographies. We remark the omission of Prof. Lounsbury's name without being able to account for it. The general list is preceded by that of the late Noah Porter, going back to 1834, and casting much light on the scope of his intellectual and public interests. To one who knows what the years 1850, 1851, stand for in our political history, and what the attitude of the New York *Observer* was on the slavery question, the following innocent entries speak volumes as to Prof. Porter's share in the great struggle: 1850—"The Conflict of Laws," New York *Observer*, November 30, December 7. 1851—"The Atrocious Doctrine," *ibid.*, January 9, January 16; "Our Duty to the State," *ibid.*, January 30; "Dr. Bacon on the Fugitive Slave Law," *ibid.*, February 27, March 20. The last three articles were anonymous (editorial) contributions, and we suspect the writer to have been much exercised by the conflict between the Higher Law and the Fugitive Slave Law, with clerical prepossessions in favor of the latter.

D. D. Merrill Co. will have ready next month 'Out of the Sunset Sea,' by Judge A. W. Tourgée, illustrated by his daughter.

The series of short stories which Mr. H. C. Bunner has been contributing to *Puck* under the title of "Made in France," and which are daring adaptations from the French of Guy de Maupassant, will be published in a volume by Keppler & Schwarzmann, uniform with Mr. Bunner's 'Short Sixes' and 'The Runaway Browns.'

D. C. Heath & Co. are about to bring out a 'Petite Histoire de la Littérature Française,' by Prof. Delphine Duval of Smith College.

The sixth volume of Perrot and Chipiez's "Histoire de l'Art dans l'Antiquité," viz., 'La Grèce Primitive—L'Art Mycénien,' has begun to be published in instalments (Paris: Hachette; New York: Christern).

Hachette & Co. have just published Victor Cherbuliez's latest novel, 'Le Secret du Précepteur,' and a pleasure it is to read a tale which is filled neither with obscenity nor with an overabundance of minute analysis of sentiment or passion. 'Le Secret' does not equal 'Meta Holdenis,' perhaps, but it is a well-told story, very interesting, and very much more real and natural than much of the stuff the realists and naturalists have given us of late. The character of the *précepteur* himself and that of the lovable and lovely Monique are drawn in Cherbuliez's best style. There is a tenderness in the way the secret is revealed bit by bit and a firmness in the conduct of the story, an avoidance of the romantic and a fidelity to life as it is, which will commend the book to the author's numerous admirers. It is not a great novel, but it is a good one, well composed, well written, and clean—for which last quality one is profoundly thankful in these days.

The twenty-third volume to appear of M. Jusserand's "Grands Écrivains Français," is the 'Lesage' of M. Eugène Lintilhac (Paris: Hachette; New York: F. W. Christern). The average merit of this series is surprisingly high, but the present work is not one of the best. The structure of the biography is solid enough, and the criticism is adequate in the main, but the style is not easy. M. Lintilhac points out, what is often overlooked, that 'Gil Blas' is not only a most original work (in spite of its borrowed incidents), but a novel of great importance in the history of the development of the art of fiction.

The first complete translation of 'War and Peace' has just appeared in the series of Tolstoi's works edited by Raphael Löwenfeld (Berlin: Richard Wilhelmi), of which it occupies four volumes (v.—viii.), or something like 2,000 pages. The larger half of the version is by Claire von Glümer; the remainder is Löwenfeld's, and is rather severely criticised by a reviewer in the Berlin *Nation*, who can say no more of it than that it can be read (*lesbar*)—and this is surely a pity in the case of an authorized edition.

There is nothing very fresh or valuable in Mr. H. M. Stanley's 'Slavery and the Slave Trade in Africa' (Harper's Black and White Series, into which it has been taken over from the *Monthly* for March). A brief sketch of the history of slavery in modern times, which is marred by several errors, is followed by an interesting account of some noted Arab slave-hunters and their methods. The work of the Congo Free State is described at some length, but we suspect Mr. Stanley, very naturally, takes too roseate a view of its present condition and prospects. The energy of the Germans in suppressing the slave trade on the east coast is contrasted, not quite fairly, with the comparative, but possibly prudent, inactivity of the English. Uganda is barely mentioned, but the familiar moral arguments for the construction of a railway to the Victoria Nyanza are stated, not very forcibly. Though Mr. Stanley attempts to review the present situation in the whole of Africa, he omits to call attention to the fact that slavery, apparently in its worst forms, still exists in some parts of the Portuguese possessions. Several of the illustrations, by Remington, are strikingly good.

'Civilization's Inferno; or, Studies in the Social Cellar,' by B. O. Flower (Boston: Arena Publishing Company), is an attempt "to portray the infinite misery which is the lot of tens
